So it was with Moldova in the more-or-less immediate aftermath of the conclusion of the 2009 anti-PCRM regime change there.

The budget that the Filat government voted for and put into effect on November 18, 2009 contained a wide array of austerity measures whose implementation the IMF demanded in exchange for its granting of a $574 million loan to the state (OMG 2010e). Besides mandating the closure of 60 schools and the "reorganization" of 130 other ones, the respective budget, among its various other austere features, significantly reduced the amount of money which had previously gone to agriculture and also increased taxes on different kinds of fuel, which immediately increased their prices by 7–8%; similarly, funds which under the PCRM had been utilized for the construction of aqueducts in as well as for the "gasification" of rural areas were either totally missing from the new budget or were cut back sharply (OMG 2009c, d, 2010c).

The austerity agenda of the AIE was not only advanced through the regressive tax increases and various spending cuts contained in the budget that was briefly described above; as a condition for the receipt of the IMF loan, the Filat government, in alliance with the Central Bank (the National Bank of Moldova or BNM in Romanian, whose "Governor" Filat and his Cabinet chose shortly after coming to power), facilitated a 13–14% depreciation in the value of the Moldovan Leu over the course of the two-month period from early December of 2009 to early February of 2010 (OMG 2010d).

Austerity – an integral part of "The Washington Consensus" (the IMF is, after all, headquartered there) – was pushed forward rather quickly by the Filat Government via the method of "a thousand cuts." Yet another one of the (social) "cuts" came in the form of the sharp hiking of the prices that final consumers (that is, residents of different parts of Moldova) had to pay for natural gas, and electric, and thermal energy.

On January 14, 2010, The National Agency for Energy Regulation (ANRE in Romanian) announced that, retroactive to January 1 of that year, the prices that consumers would have to pay for natural gas, electric, and thermal energy would be increased by 16.5%, 21%, and 29%, respectively (OMG 2010b).

The sharp increases in utility prices did not merely reduce living standards for large sections of Moldova's already-suffering population; they were a reflection of how IMF-demanded austerity measures which provoke public opposition often cannot be implemented via democratic means.

Up until right before the pushing through of the above-mentioned utility price hikes, the Chisinau Municipal Council (CMC), in coordination with the Mayor, was responsible for determining, at least within that city, the prices that consumers would pay for thermal energy in their residences. As described by then CMC member Valeriu Klimenco, the CMC's reluctance to jack up thermal energy prices as much as the IMF demanded led the Filat government to transfer the responsibility for their determination from the popularly-elected CMC to ANRE, which is an unelected body (OMG 2010a).

Incredibly, exactly four months after the January 14 session in which it decided to put the just-

mentioned utility price increases in effect, ANRE made another move on May 14 towards "economic liberalization" by not only further hiking consumer prices for natural gas by around 14%, but also for thermal energy by about 17% (OMG 2010f).

The subordination of the new AIE regime to the IMF is made clear by the sequence of events; on September 20, 2009, Filat becomes Prime Minister; on October 28 of that year, he met with Nicolai Gheorgiev, who was then the head of the IMF Mission to Moldova; following that meeting, Filat declared that: "Utility prices need to be brought into accord with their real cost . . . [so that] the companies which produce electric or thermal energy can cover their costs;" almost immediately thereafter, the Filat Cabinet passes responsibility for the determination of utility prices from the (elected) local authorities to ANRE; in mid-late November, the Government passes a budget which hikes various regressive taxes and cuts back a number of kinds of socially-oriented public spending; by no later than early December, the Moldovan Leu begins to sink quickly against the US Dollar, losing 13–14% of its value against it in two months' time; in mid-January 2010 and again in mid-May of that year, ANRE imposes utility price hikes on consumers that amount to around 21% for electric energy, 32.6% for natural gas, and about 51% for thermal energy (OMG 2010a).

It is obvious that the IMF-demanded and AIE-implemented economic measures quickly and powerfully negatively impacted on the living standards of large sections of Moldova's predominantly impoverished population.

Stopping "the Communists" . . . by Pursuing More Authoritarian Forms of Rule

To consolidate its grip on power in conditions in which large portions of the population were sinking even more deeply into poverty, the AIE regime oriented itself, and in several different ways, towards the adoption of more authoritarian forms of rule.

From the beginning, despite the open and obvious support that it enjoyed from Washington and the EU, the AIE regime was mired in crisis; the 53 seats that its constituent parties controlled in the Parliament meant that the AIE's chosen candidate for President, Marian Lupu, would only be elected if at least eight MPs from the PCRM decided to defy their party's leadership and vote for him.

As that didn't occur, the Constitution mandated that the AIE would have to call, certainly no later than the early summer of 2010, early Parliamentary elections. None of the AIE's constituent parties had any interest in that and they all sought, in spite of the seemingly well constitutionally grounded protests from the PCRM, to circumvent what appeared to be their unambiguous legal obligation to organize just such elections.

Finally, the AIE's four leaders came up with a plan; before organizing any such constitutionally mandated Parliamentary elections, they would first organize a national referendum in which the country's adult (18 and over years of age) citizens would be asked if they favored electing the President by means of a popular vote; interestingly enough, the long-time leader of the PCRM, Vladimir Voronin had argued earlier in 2010 that, as long as the Parliament was dissolved and early elections for it called, he would instruct his party to vote for the reinstitution of the popular vote as the means of choosing the country's President (OMG 2010i).

Operating with the evident support of Brussels and Washington, the AIE's four leaders – Filat (PLDM), then Interim-President Ghimpu (PL, just like his nephew, Chisinau Mayor Chirtoaca), Lupu (PDM), and Serafim Urechean (AMN) – ignored the requirement that they organize Parliamentary elections and simply decided to first hold a Referendum on the modality of choosing the President.

Favoring, at least at that point in time, the direct election of the President by popular vote, the leaders of the AIE pushed a law through the Parliament which seemed to make the success of their referendum (at which they called the population to vote "Yes") a virtual inevitability; up to the summer of 2010, the legal-constitutional

changes proposed in a referendum would have been enacted if a simple majority of at least 50% +1 of the eligible voters cast a ballot in favor of them (a "yes" vote). However, the AIE regime pushed a measure through Parliament whereby its referendum on the direct election of the President would have been validated if a simple majority of at least 1/3+1 of the eligible voters turned out to vote "Yes" on it (OMG 2010g, j).

In other words, if 1/6 + 1 (at least 16.67%) of the eligible voters in Moldova voted "Yes" on the AIE's Referendum, which was scheduled for September 5, 2010, the Constitution would be changed, direct Presidential elections would be organized relatively quickly thereafter, and the AIE could put off the holding of parliamentary elections (at which its narrow majority might disappear) for another three or four years (OMG 2010h, j).

Clearly seeing the Referendum as a threat to its interests (former Moldovan President and long-time PCRM leader Vladimir Voronin would not be able to run in Presidential elections as he had already served two terms in that office) and publicly arguing that it merely served to unconstitutionally delay the holding of obligatory Parliamentary elections, the PCRM called on the population to boycott the Referendum (OMG 2010i, j).

The general consensus within the PCRM at this time was not only that it was quite likely that at least 1/3 of the eligible voters would indeed participate in the Referendum, but also that it was a virtual certainty that the overwhelming majority of the participants would vote "Yes." Thus, while not resigned to defeat, various PCRM members consoled themselves with the notion that their party's boycott could be regarded as having achieved a sort of moral victory if turnout fell under the 50% threshold.

In a surprise for all concerned, the turnout on the day of the Referendum was around 30% (of those who participated, something like 87% did indeed vote "Yes") (OMG 2010m). Thus, the AIE was thrown into a significant political crisis which it had not anticipated having to confront; with no other even remotely constitutionally valid options that they could resort to, the AIE's leaders conceded to the PCRM the need to hold, and in relatively short order, Parliamentary elections.

Forced to call the Parliamentary elections which should have taken place not more than seven weeks or so after the December of 2009 development whereby Lupu's candidacy for the Presidency was defeated by the PCRM's refusal in the Parliament to grant him any of the eight extra votes that he needed from it, the AIE regime did everything that it could – including via the adoption of a plainly anti-democratic election law – to effectively guarantee that it would never lose its majority in the legislature to the PCRM.

The law in question radically and utterly undemocratically changed the manner in which parliamentary mandates would be distributed to those parties that did indeed surpass the threshold for representation in the legislature; while previously, the votes received by parties which did not enter the Parliament would be transformed into extra mandates for the parliamentary parties in relation to the number of votes that the latter received, under the measure that the AIE passed roughly 10 days after the failure of its referendum, all the "extra" votes obtained by non-Parliamentary parties would be transformed into mandates, which would then be divided equally among the parties in the legislature, regardless of the number of votes that they had received (OMG 2010n, o).

The blatantly partisan (in this case, anti-PCRM) and grossly anti-democratic character of this law can be better understood if one realizes that, at the time, the PCRM was by far Moldova's largest party and capable of being defeated only by an alliance of multiple parliamentary parties.

A short example will suffice: if the PCRM got 40% of the vote in the November 28, 2010 elections, and the four parties of the AIE once again entered the Parliament with a combined 32% of the vote, the AIE would once again control either 53 or 54 of the 101 seats in Parliament. Such a counter-intuitive and anti-democratic result would be arrived at because the 28% of the vote that went to parties that did not enter the Parliament would be transformed in 29 mandates (again, there are 101 in the Parliament), of which the PCRM would either receive seven or, in "the best case scenario," eight.

Unsurprisingly, the AIE's open trampling on the most fundamental principles and practices of modern representative democracy did not elicit any kind of criticism from ruling circles in either Brussels or Washington; the repudiation of the most basic principles which necessarily must undergird any modern system of representative democracy was, apparently, not worthy of comment or criticism by the Western Powers that, financially and in terms of "political capital," had invested a great deal in the "AIE Project" and that were loath to see their investment in that alliance go to waste after it had only held power for slightly over a year.

The Client Regime's Stability Remains in Doubt . . . and Joe Biden Is Dispatched to Try to Shore It Up

The November 28, 2010 Parliamentary elections in Moldova did not in any way put an end to the political instability that, ever since the chaos and violence of April 7, 2009, the country had been struggling with.

The 39.34% share of the vote that the PCRM received in the November 28, 2010 elections resulted in the party's receipt of 42 seats in the next Parliament – no majority, clearly, but once again enough – if the party so chose and remained united – to block whomever the AIE decided to put forward as its candidate for the Presidency (E-Democracy 2010). Sure enough, the AIE (reduced to just three parties – the PLDM, the PDM, and the PL – after the AMN did not meet the 4% share of the vote for parliamentary representation at the November 28, 2010 elections) would eventually again select Marian Lupu as its candidate for the Presidency of the country though, according to the constitutional and legal provisions that then governed the election of the head of state in Moldova, the next time that the Parliament would vote on his candidacy could not be before late 2011 (see, for example, OLD.OMG; Ziare; OMG 2010p through OMG 2010v).

The fact that, from late December of 2010, just as in November and December of 2009, the AIE (or AIE-2, given the reduction in the number of its constituent parties from four to three) had no real possibility to "deliver" the 61 votes in Parliament necessary to make Lupu the President meant that the country's political-institutional crisis would continue and deepen; there was no end in sight to the situation whereby from mid-September of 2009, the office of the Presidency of the country had effectively remained vacant. (The President of the PL, Mihai Ghimpu, served as the country's Interim President from mid-September of 2009 until December 30, 2010 when that position, with the limited powers that it offered to whoever occupied it, was transferred over to Lupu.)

None of this would deter Western officials from lavishly praising Moldova (actually, its ever-more provisional political leaders from the AIE) as a "success story."

The visit that, in early March of 2011, then US Vice President Joe Biden paid to Moldova and, even more than that, the speech that he gave before an assembled crowd in PMAN showed rather clearly why Washington, along with the EU, was intent on backing the AIE to the hilt.

While "impressively" rife with more-or-less meaningless generalities and profoundly banal stock phrases, Biden's speech was revealing in that he indicated clearly enough through it not only that Washington generally had a favorable view of the AIE regime, but that the respective view was largely based on economic and geostrategic considerations.

While completely devoid of any direct criticisms of the Russian government, the speech that Biden gave in (or right next to) PMAN was notable for its numerous and highly positive references to Eastern European and Caucasus-region governments and political developments that were and are widely perceived as having been significantly and clearly hostile to the Putin regime's strategic position.

For example, Biden stated that: "In Georgia, we support the emergence of a strong democracy and free markets, and the integrity of Georgia's territory" (Obama WH). It is worth stating here that, at the point that Biden gave this speech in Chisinau, the Georgian state had already been run for over seven years in a plainly less-than-fully

democratic manner by then President Mikheil Saakashvili. Saakashvili, who ended up serving as Georgia's President for nearly 10 years (he was in office as the head of state from early 2004 to late 2013), ran a state which, when confronted with large street demonstrations, used the police to brutalize hundreds of protesters and close down independent media outlets (WSWS 2008). While nominally democratic, Saakashvili's regime was, it seems undeniable, far more authoritarian and repressive in practice than, say, the government that Voronin headed in Moldova from 2001 to 2009.

There is little question that the effectively authoritarian regime that Saakashvili led did indeed largely pursue "free-market" economic policies and that, whatever their success or failure in raising the living standards of Georgia's still predominantly quite poor populace, the implementation of such measures was, as Biden stated openly, looked on very favorably by Washington (Ibid.).

Similarly, Biden's reference in his speech to "the integrity of Georgia's territory" can and probably should be understood to mean that Washington will not hesitate to provide backing to countries such as Georgia (and Moldova), should they find themselves locked in conflicts with separatist forces and enclaves that are supported by Moscow (as occurred in the short war in 2008 between Russia and Georgia that started when the latter sought – and ultimately failed – to reconquer its "renegade" territory of South Ossetia). In the context of Moldovan politics, this statement of Biden should be interpreted as meaning that, in the event of the outbreak of a conflict between Chisinau and the Russian-backed separatist administration that is based out of Tiraspol, Washington would definitely come to the aid of the former.

The remarks that Biden made in his speech in Chisinau about Ukraine and Belarus provide further evidence for the argument that Washington crafts its policies towards countries in Central and Eastern Europe (and the Caucasus) to a great extent on the basis of the nature of those countries' relations with Moscow; Washington will support (adopt a more-or-less hostile position towards) those countries whose governments have a basically rivalrous (friendly) stance vis-à-vis Moscow.

In saying in his speech in Chisinau that: "In Ukraine, the world welcomed the Orange Revolution, but there is much hard work remaining to be done to sustain its success," Biden can be "accused," at a minimum, of having a less-than-perfect sense of timing. The so-called Orange Revolution began in late November of 2004 and, after roughly two months, finally came to a "successful" conclusion when the strongly pro-Western and pro-capitalist politicians Viktor Yuschenko and Yulia Tymoshenko took office as President and Prime Minister, respectively (see, for example Hahn 2018; Rudling 2011).

When the first round of Presidential elections were held in Ukraine in mid-January of 2010, the country's then-serving head of state Yuschenko came in fifth place and only received about 5.5% of the vote; when the run-off between the two top finishers was held two weeks later, the "bête noire" of the Orange Revolution, the relatively pro-Russian politician Viktor Yanukovych, edged one of its two main protagonists, Tymoshenko.

While Yanukovych's formal assumption of the office of the Presidency in late February of 2010 would have seemed to have clearly sounded the "death knell" of the Orange Revolution, Biden was still – and rather oddly and, one might add, suspiciously – speaking over a year later of "sustain[ing] its success."

Though Biden almost certainly did not intend for this to be the case, the speech that he gave in Chisinau can indeed serve as an extremely useful source for researchers intent on learning more about the forces that actually drive Washington's (and the EU's) policies towards countries in the "post-Soviet space" and Eastern and Central Europe more generally. Somewhat less politely, Biden's Chisinau speech gave off the distinct stench of rank political hypocrisy.

For example, among all the post-Soviet Republics that Biden mentioned in his speech, Belarus was the only one whose government he subjected to (quite harsh) criticism; more specifically, he stated that: "We have condemned the

government of Belarus for the repression of its own citizens. We've joined the European Union in imposing sanctions against that government, and we call for the immediate release of all political prisoners."

That the government of Belarus (still headed today as it was at the time of Biden's speech by Aleksander Lukashenko) is no Jeffersonian Democracy is obvious enough, but it is not at all clear if it was radically (or really any) more repressive than the Saakashvili regime which, again, Biden said in Chisinau represented "the emergence of a strong democracy."

The most significant contrasts between Lukashenko's regime and that of Saakashvili in Georgia lay, it would seem, not in the sphere of political democracy, but in the latter's clearly much stronger orientation towards both a largely deregulated "neoliberal" economy and Western-dominated multinational organizations like NATO and the EU (see, for example, The Plundering; WSWS 2008, 2011, 2012, 2017).

The speech that Biden gave in Chisinau certainly served as recognition that a regime change had taken place in Moldova in 2009, that it had been, to some extent at least, consolidated, and that Washington was definitely supportive of the new AIE government; however, through this speech, Biden stressed that the AIE still had a lot of work to do in the future to ensure that Moldova would eventually become a stalwart and more-or-less irreversibly pro-Western and economically neoliberal outpost in the former Soviet space.

A clear indication from Biden's speech that, at least at that particular point in time, Washington viewed AIE-governed Moldova as a "star pupil" who hadn't, however, graduated yet came from the frequency with which he stressed how important it was for the country to continue implementing (the never explicitly defined) "economic reforms."

For example, about midway through his speech, Biden said that: "We strongly support your commitment to political and economic reforms and taking on hard issues." What, one may ask, were the "hard issues" that Biden made mention of? As he never defined that term, it is impossible to know.

What Biden meant when he spoke of "political ... reforms" is also hard to determine, as in his speech he didn't mention any concrete policies in the recent history of Moldova or, actually, of any other country which might have served as examples. Perhaps this was for the best as, per the analysis presented above, one of the most significant changes to the country's political-electoral system that the AIE government had made was based on plainly undemocratically manipulating the system of parliamentary mandate-distribution so that it would be virtually impossible for the then PCRM-dominated opposition to ever take power again.

In his speech, Biden did, however, provide some clues about what he saw as the content and likely implications of the "economic reforms" that the AIE government apparently had a "commitment to." The basic contours of the economic (and political) policy path that, in his Chisinau speech, Biden not too terribly subtly indicated that Washington wanted the Moldovan government to follow were outlined in the following passage: "Economic reform can be even harder [than political reform], especially when unemployment is high and prices are rising. People everywhere, including in my own country, America, worry about jobs and prices, as well. But as you reform your economy, more foreign investment will flow into Moldova ..." (Obama WH).

In other words, Biden knew that the IMF-demanded austerity measures that, going back to late 2009, the AIE had first started pushing through had already generated "unemployment ... and [high] prices" in the country, but that mustn't under any circumstances dissuade the heads of the Moldovan government from continuing to "reform your economy"; apparently, in then-Vice President Biden's view, persevering with moves to "reform your economy" is the only way to ensure that "more foreign investment will flow into Moldova."

There is little question that Biden saw the "foreign investment" about which he spoke on that March day in Chisinau as originating primarily from the US and other "Western" countries; given the text of his speech and the entire political and economic history outlined in this article, it seems

M

extremely unlikely that he and other leading US and EU policymakers would be pleased if the "foreign investment ... flow into Moldova" increasingly started coming from, say, Russia and China or, for example, Iran.

To be continued . . .

▶ Lenin (1870–1924) on Imperialism

Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex

Efe Can Gürcan
Istinye University, Istanbul, Turkey

Synonyms

Globalization; Neoliberalism; Periphery; Political economy; World economy

Definition/Description

Discussions on the changing forms of imperialism have retained their relevance in the face of stupendous upheavals of the world economy and geopolitics since the 1970s. This article aims to contribute to these discussions from the perspective of the monopoly-capital school. In the first place, I analyse the stagnating nature of US monopoly capitalism since the 1970s using data obtained from primary sources. In the second, I assess the growing importance of NGO-isation for imperialist interventions geared toward advancing the global interests of monopoly capitalism. My findings suggest that monopoly capitalism cannot extricate itself from the trap of stagnation, economic crisis, and inequality despite soaring profit and monopolisation levels under neoliberalism. This situation forces US imperialism to increasingly rely on military aggression, media manipulation, and colonisation of the non-profit sector.

Introduction

Discussions on the changing forms of imperialism have retained their relevance in the face of

stupendous upheavals of the world economy and geopolitics since the 1970s. This article aims to contribute to these discussions from the perspective of the monopoly-capital school. More precisely, its contribution is twofold. In the first place, I analyse the stagnating nature of US monopoly capitalism since the 1970s using data obtained from primary sources. By stagnation, I do not only mean the slowing down of economic growth, but also an amalgamation of declining production levels below the economic potential, significant levels of (long-term) unemployment, and rising inequality (Foster and Magdoff 2009). This is despite soaring corporate profits in the context of financialisation. Stagnation is then associated with escalating imperialist aggression and the intensification of contradictions between US imperialism and the Third World. This helps explain why US imperialism increasingly relies on interventions abroad by means of the non-profit sector as a more cost-effective method than military invasion.

In the second place, I assess the growing importance of NGO-isation for imperialist interventions geared toward advancing the interests of monopoly capitalism. Besides presenting empirical evidence on the global NGO boom since the 1980s, I argue that corporate foundations and the US state apparatus assume a key economic role in the non-profit industrial complex (NPIC) as the agents of monopoly capitalism. I identify three historical moments that underlie the emergence and consolidation of the NPIC. First, the Cold War conjuncture allowed US imperialism to develop new strategies of regime change employing the resources of such actors as the George Soros Foundation (GSF), National Endowment for Democracy (NED), and United States Agency for International Development (USAID). Second, the advancement of the neoliberal agenda led dominant international institutions such as the International Monetary Fund (IMF) and World Bank (WB) to prioritise nongovernmental organisations (NGOs) as an alternative to state-centred welfare regimes. Third, the need to pacify growing social unrest – caused by neo-liberalism's failure to overcome inequality

M

and stagnation – was satisfied based on strategies of co-optation and the professionalisation of NGO cadres.

My argument on NGO-isation is inspired by John Bellamy Foster's Kalecki-informed analysis of the triangular structure of contemporary imperialism. According to Michal Kalecki, the imperialist system of the Keynesian era rested on a triangular structure that was composed of: (a) state-financed military production (i.e., the military-corporate complex, often called the 'military-industrial complex'); (b) media propaganda (media-corporate complex); and (c) a putative full-employment/welfare-oriented superstructure (Keynesianism) underpinned by the war machine, serving to justify it (Kalecki 1972). Building on Kalecki's work, Foster provides an updated version of the theory of imperialism of the monopolycapital tradition by laying emphasis on the primary role of the above triangle in the restructuring and preservation of the contemporary imperialist system (Foster 2006, 2008). Expanding on his work, I argue that one of the most significant changes in the triangular structure of contemporary imperialism is in its third pillar, particularly with the abandonment of the welfare-oriented paradigm and the adoption of the neo-liberal globalisation project. In this article, neoliberalism is simply referred to as a set of institutional structures, norms, and unwritten rules that regulate the global political economy of the post-1980 era based on the principles of capital and trade liberalisation, privatisation and financialisation. It is spearheaded by US imperialism and its global network represented by the IMF, World Bank, World Trade Organisation, etc.

The article is divided into three parts. The first provides a theoretical and empirical discussion of contemporary imperialism. Not only do I address the stagnating nature of US monopoly capitalism, but I also touch on its aspects related to military and media power. The second section shifts the focus to the NPIC by assessing the global NGO boom with respect to its economic and conjunctural background. The third section examines the co-optative effects of the NPIC on NGO leaders and Third-World countries. In the conclusion, I discuss the importance of popular struggles for the transformation of the non-profit sector into

a popular-democratic domain. I conclude by drawing attention to emerging alternatives to the NPIC in Latin America. This region has become a mainstay for the global anti-imperialist struggle with the rise of leftward social movements and centre-left governments since the 2000s (Gürcan 2013).

The Metamorphosis of Monopoly Capitalism and Restructuring of the Triangular Structure of Imperialism

The neo-liberalisation of the world economy under the US leadership represents a landmark in the history of modern imperialism. As portrayed by John Bellamy Foster, neoliberalism corresponds to 'the most recent manifestation of imperialism: capital (large corporations, both financial and non-financial) using governments, and especially the leadership of the US government, to make it easier to exploit the world's resources and people' (Foster and Magdoff 2009, p. 41). A defining feature of the neo-liberal era is the financialisation of the world capitalist system since the 1970s. For the specific purposes of this article, it is sufficient to illustrate financialisation based on the growing total value of all traded shares in the US stock market exchange as a percentage of GDP. The World Bank data indicate that there has been a value growth of almost 100% between 1988 and 2012 (Fig. 1):

The neo-liberal era has been marked by a general economic tendency toward stagnation as the economy functions below its productive potential, while suffering from significant levels of unemployment and inequality. The data suggest that the US economic growth (taken as GDP per capita growth) has tended to stagnate below 4% in most of the period 1961–2012 (Fig. 2), although corporate profits have seen record uptrends (Fig. 3). This goes hand in hand with declining levels of industrial production (Fig. 4), a rising share of long-term unemployment in total unemployment (Figs. 5 and 6), and growing income inequality (Fig. 7).

The neo-liberal transformation of the imperialist system has not altered the real essence of
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 1 Stocks traded, total value (% of GDP). (Source: http://data.worldbank.org/indicator/CM.MKT.TRAD.GD.ZS)
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 2 US GDP per capita growh (annual %). (Source: http://data.worldbank.org/indicator/NY.GDP.PCAP.KD.ZG)
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 3 US Corporate Profits (1950–2014, in USD Million). (Source: Bureau of Economic Analysis: http://www.bea.gov/national/nipaweb/DownSS2.asp#XLS)

imperialism, which manifests itself in the growth of monopoly capitalism as the dominant form of capital. For the purposes of this chapter, monopoly capitalism can be defined as a capitalist system dominated by giant (i.e., highly bureaucratised, hierarchical, management-controlled and financially independent) corporations and strong imperialist states that further the interests of giant corporations (Sweezy and Baran 1968). Driven by the need to retain control over raw materials
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 4 Industry, value added (% of GDP). (Source: World Bank, http://data.worldbank.org/indicator/NV.IND.TOTL.ZS)
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 5 US long-term unemployment (% of total unemployment). (Source: World Bank, http://data.worldbank.org/indicator/SL.UEM.LTRM.ZS)
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 6 US Unemployment Rate (% of Total Employment). (Source: Bureau of Labour Statistics http://data.bls.gov/pdq/SurveyOutputServlet)

and labour, and to generate surplus-absorption opportunities in peripheral areas, monopoly capitalist imperialism is characterised by the further polarisation of the world economy into centre and periphery (Foster 2006).

Data on the concentration ratio of US industries can provide a provisional depiction of monopoly capitalism and its inherent drive for monopolisation, albeit at the national level. Given that the US economy is the powerhouse of the global economy, one could assume a symmetry for the monopoly power of US-centred firms at both the national and international levels. According to the US Census data, the four largest firms in national commercial banking and savings have monopolised 55.7% and 41.1% of the total sectorial revenue in their respective areas. The same rates for software publishing, motion picture and sound recording, newspaper and book publishing (nerve centres for the manufacturing of consent) are 38.9%, 34.5%, 29.4% and 33.4%. In the agrifood sector, a vital sector for the reproduction of labour power and continuation of the economy, the four largest companies have monopolised sectorial revenues as follows: animal food processing

(43.9%), grain and oilseed milling (54.2%), flour milling (52.1%), rice milling (55.4), starch and vegetable fats and oils manufacturing (69.3%), fats and oils refining and blending (53.8%), soybean processing (85.4%), breakfast cereal manufacturing (85%), and sugar manufacturing (51.9%) (USEconomicCensus 2007).

As the data on economic growth, inequality and unemployment demonstrate, significant levels of financialisation, monopolisation, and corporate profits could not provide a tangible solution to the stagnation problem of US capitalism. The stagnating state of monopoly capitalism is the underlying reason for imperialist aggression and the intensification of contradictions between US imperialism and the Third World. Relatedly, it is important to stress that imperialist aggression cannot be reduced to the individual policies of certain 'ambitious' states or the personality of policymakers. It is rather a systematic result of the logic of monopoly capitalism as a historical/structural formation (Foster 2006, p. 13).

As mentioned earlier, the defining components of the historical structure of monopoly capitalism include the military- and media-industrial

complexes. As far as the military-industrial complex is concerned, Foster points to the fact that the US remains the world leader in military spending (Foster 2008). The US leadership came to keep its leading position thanks to record levels of budgetary increase. Between 2001 and 2007, US national defence spending soared by 60% in real dollar terms, reaching a level of $553 billion (Foster 2008). It is thus no coincidence that the US Department of Defense has become the world's largest employer by providing work for 3.2 million people (BBC 2012). Figure 8 reveals that US military expenditure has tended to exceed that of the BRIC countries (Brazil, Russia, India, and China) between 1991 and 2013. Clearly, high levels of military spending are a chief indicator of the extent to which military and industrial sectors are intertwined within the US state and economy (Foster 2008).

The imperialist tendency toward militarisation stimulates the decline of US global hegemony, which in turn further intensifies military escalation (Foster 2006). According to István Mészáros, the military aspects of today's imperialism are one of the most crucial components of monopoly capitalism. Considering the current state of military technology:

> '... We have entered the most dangerous phase of imperialism in all history. For what is at stake today is not the control of a particular part of the planet ... but the control of its totality by one hegemonic economic and military superpower, with all means – even the most extreme authoritarian and, if needed, violent military ones. This is what the ultimate rationality of globally developed capital requires ...' (Mészáros 2001, p. 37)
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 8 Military expenditure (% of GDP). (Source: World Bank, http://data.worldbank.org/indicator/MS.MIL.XPND.GD.ZS)

As for the media-industrial complex, US corporate/imperialist media are among the primary beneficiaries of the US-led neo-liberal globalisation, as their revenues outside the US are soaring at a rapid pace and the US government itself is lending support to media monopolies in trade deals and intellectual property agreements (Foster 2006). According to the US Census data, the media, information and arts/entertainment industry provides employment for almost 5.5 million persons (USCensus 2007). The essential role of the media-industrial complex consists of the depoliticisation of the masses as well as the provision of ideological support for the US war machine through all sorts of propaganda and disinformation (Foster 2006). As such, the media-industrial complex expresses itself most clearly in the extensive use of media during such imperialist wars of aggression as NATO's war against Yugoslavia in 1999 (Foerstel 2007). The imperialist media's role was not only revealed in the stigmatisation of the Serbs, but also in the legitimisation of the Wars on Iraq (1990 and 2003), known as the first widely televised wars in history. There is no need for further clarification as to the role of the media-industrial complex in manipulating public opinion on the so-called Arab Spring, Libya, and Syria. Indeed, the same goes for imperialist attempts to stigmatise the so-called 'rogue states' such as Venezuela, Cuba, and North Korea.

As Philips remarks, the US media industry is being increasingly centralised and monopolised by fewer than a dozen media corporations that dominate the worldwide flow of news. It is also striking to notice that the board members of the largest 11 media corporations in the US (a total of 155 people) are intertwined with the top echelons of monopoly-finance capital, the Central Intelligence Agency, and other key sectors of the state apparatus (Philips 2007, pp. 59–60). As a result of monopolisation, entertainment and news services are being intertwined to multiply the profits of monopoly capitalists and expand the reach of imperialism. This is perfectly exemplified in the case of Time Warner Inc., one of the world's largest media conglomerates, whose reach includes television and film production, publishing, and cable channel services (Foerstel 2007, p. 10).

The Non-profit Industrial Complex: The NGO Boom and its Origins

The non-profit industrial complex (NPIC) complements the power of the US military and media in the quest for world domination. The NPIC is better conceptualised as a 'set of symbiotic relationships that link together political and financial technologies of state and owning-class proctorship and surveillance over public political discourse, including and especially emergent progressive and leftist social movements, since the mid-1970s' (Rodríguez 2007, pp. 21–22). Thanks to the active support of the US and monopoly capitalists themselves, the NPIC grew to be a vehicle for the disintegration of nation states in the Third World.

There are sufficient data to assess the NGO boom under neo-liberal globalisation. In OECD countries, the number of development NGOs rose from 1600 to 2500 between 1980 and 1990. A similar trend was observed in Canada, where the number of development NGOs climbed from 107 in 1980 to 240 in 1990 and to more than 500 in 2005. The Third World was not exempt from this trend. Bolivia registered a rise from 100 NGOs in 1980 to 530 NGOs in 1994. The NGO boom in Tanzania recorded a growth from 41 NGOs in 1990 to more than 10,000 by 2000. Similarly, Kenya witnessed a rise from 511 in 1996 to 2511 in 2003. The worldwide reach of development NGOs during the 1980s was 100 million people, whilst this number grew to around 250 million in the 1990s and more than 600 million in 2007 (Barry-Shaw and Jay 2012, pp. 77–78). Indeed, external funding was crucial for the global NGO boom (Choudry and Kapoor 2013). Figure 9 illustrates the spectacular rise of official US funding to governments and civil society, a great number of which can be assumed to be proxies of US imperialism. In turn, Fig. 10 provides more detailed data as to how the significantly growing US aid contributes to NGO-isation.

Therefore, Barry-Shaw and Jay rightfully argue that NGOs have become a major player in the neo-liberal 'development industry':

> One study showed that by 2002 the NGO sector across 37 countries had an estimated operating expenditure of $1.6 trillion. Other estimates are

M
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 9 US Official Development Assistance Net Disbursements, in current USD million. (Source: http://stats.oecd.org/)
Monopoly-Capitalist Imperialism and the Non-profit Industrial Complex, Fig. 10 US Disbursements to US, Non-US and International NGOs (in current US Dollars). (Source: https://eads.usaid.gov/gbk/data/explore.cfm)

higher, with some studies showing an overall increase in the flow of funding through NGOs from 4,200 billion in 1970 to $2.6 trillion in 1997... the seven largest NGOs had a combined income of $2.5 billion in 1999. (Barry-Shaw and Jay 2012, pp. 16–17).

Other data reveal that the financial assets of NPICs exceeded $1.59 trillion, whereas their expenditure was more than $822 billion in 2000 (Kivel 2007, p. 138).

The NGO boom did not merely originate from state support. On the contrary, the direct role of monopoly capitalism cannot be underestimated. Corporate foundations are thus an important element of the NPIC as the long arm of monopoly capitalism. It is noteworthy that the net worth of

monopoly-capitalist foundations rose by 400% between 1981 and 1996, to $200 billion in total (Barry-Shaw and Jay 2012, pp. 24–25). As Christine E. Ahn asserts, 'with few exceptions, foundation trustees are extensions of America's banks, brokerage houses, law firms, universities and businesses' (Ahn 2007, p. 66). Ahn also adds that NPIC resources are controlled by a narrow elite of corporate foundation boards and staff. They are mostly composed of white, middle-aged and upper-class individuals, who are prone to undermining the public accountability of foundations. Ahn goes on to refer to research conducted in 1997 involving 12 prominent conservative foundations. The study reveals that these

institutions 'controlled over $1.1 billion in assets and awarded $300 million in grants from 1992 to 1994' (Ahn 2007, p. 68). According to other research (carried out in 1995), 'conservative multiissue policy institutions such as the Heritage Foundation, the American Enterprise Institute, the Free Congress Research and Education Foundation, the Cato Institute, and Citizens for a Sound Economy collectively had a revenue base of over $77 million' (Ahn 2007, pp. 69–70). Ahn highlights the individual example of the Heritage Foundation, which received around $28 million in grants from numerous conservative foundations from 1999–2001. She points out the fact that liberal foundations (such as the Rockefeller, Ford, and Bill and Melinda Gates foundations) are no less innocent of advancing a monopoly-capitalist/imperialist agenda. The role of the Rockefeller Foundation in the capitalist Green Revolution against the spread of communism is exemplary of the ways in which liberal foundations also serve to advance monopoly-capitalist/imperialist interests (Ahn 2007, pp. 70–72).

Three conjunctural factors can be identified to explain the historical emergence of the NPIC with active state and corporate support. A key factor that has led to the rise of the NPIC is the Reagan Administration's efforts to destabilise the former Soviet Union and East European socialist regimes. In his book, MacKinnon gives evidence of how George Soros financially supported Solidarnosc, a key actor which served to weaken the socialist regime in Poland. Similar support was provided for Charter 77, one of the leading actors of the Czechoslovakian Velvet Revolution in 1989. What is also worthy of mention is the efforts of the Soros Foundation to spend millions of dollars to publish non-Marxist textbooks and support Alexander Yakovlev.

Similar methods were also replicated in the overthrow of the Slobodan Milošević Government in Serbia, after which the Soros-funded Otpor! became a global model of mobilisation for pro-US regime change during the Colour Revolutions in the 2000s (MacKinnon 2007, pp. 24–25, 42–45; Vukov 2013). As depicted in Tamara Vukov's interviews with Serbian NGO activists, Western NGO funding came with bags of cash rather than via legitimate bank transfers, with the sole condition of engaging in anti-Milosevic actions. The funding of those who wanted to diversify their actions toward larger issues (including human rights, education, the judiciary, etc.) was cut by the donors. Moreover, project-based funding served to divert the attention of Serbian NGOs from long-term to short-term strategies compatible with capitalist market adaptation (Vukov 2013).

An equally important actor in the development of the NPIC is the NED. The NED was created in 1982 as a non-profit and government-funded organisation aiming to counter the spread of communism in the world. Having started with a budget of $18 million, it reached a budget of $80 million in the 2000s. The NED funds contributed to the strengthening of such organisations as the Andrei Sakharov Institute, the Center for Democracy, Charter 77 and Solidarność, which specialised in mobilising dissidents of socialist regimes. Similarly, the NED funds nowadays serve to support dissidents in 'rogue states' such as Venezuela and Cuba (MacKinnon 2007). The track record of the USAID is no less impressive. The WikiLeaks documents and many other credible sources have revealed how the USAID as a 'civilian foreign aid agency' transferred millions of dollars to Cuban and Venezuelan NGOs for pro-US regime change (Beeton 2014; Bigwood 2014; Mallett-Outtrim 2013).

Whereas the first factor leading to the NGO boom speaks to geopolitics, the second can be linked to the global political economic conjuncture characterised by the advance of neoliberalism (Kamat 2013). Therefore, NGO-isation is greatly indebted to the support of US-dominated international institutions such as the International Monetary Fund (IMF) and World Bank (WB). According to Barry-Shaw and Jay, these institutions see NGOs as 'ideal vehicles for tackling social costs' of the structural adjustment, which has led to worsened levels of poverty and unemployment. NGOs have become a preferred channel for the provision of welfare services that used to be assumed by the state. They are seen as superior to the public sector in terms of their alleged ability to provide more cost-effective

M

and better targeted services, as opposed to inherently 'corrupted' and 'inefficient' state bureaucracies. This helps conceal the fact that a great number of Western-supported NGOs are nothing like 'value-driven' and 'bottom-up' organisations, but they rather rest on bureaucratic, hierarchical and professionally staffed agencies (Barry-Shaw and Jay 2012, p. 23, 34–35, 40, 68–69). In this sense, the NGO boom can be viewed as an integral component of neo-liberal globalisation (Petras 1997).

A third factor is the need to pacify popular-democratic upheavals that arise out of a conjuncture marked by long-term stagnation, rising inequality, and imperialist aggression. Movements of popular-democratic potential have been a primary target of corporate and foundation funding, which aims to transform these movements into non-antagonistic and reformist agencies of social service (ibid.). The absorption of radical movements is ensured through the establishment of patronage relationships between the state/private capital and social movements. The co-optation of radical movements is further consolidated via ideological repression and institutional subordination thanks to 'a bureaucratised management of fear that mitigates against the radical break with owning-class capital (read: foundation support) and hegemonic common sense (read: law and order)' (Rodríguez 2007. p. 31). Rodríguez states that the active involvement of monopoly capital (namely such actors as the Mellon, Ford, and Soros foundations) in the nonprofit sector serves to assimilate 'political resistance projects into quasi-entrepreneurial, corporate-style ventures' (Rodríguez 2007, pp. 27–28).

NPIC as a Co-Optative Mechanism: Evidence from the Third World

Militants of radical movements are either coopted into the NPIC or replaced by new cadres. The co-optation of militants occurs with the professionalisation and depoliticisation of movement leadership (Choudry and Kapoor 2013):

> The non-profit structure is predicated on a corporate structure and hierarchy that rewards 'bourgeois

credentials' and 'upward mobility'; the non-profit model makes it easier for young economically privileged people just coming out of college to start a non-profit than to engage in long-term established movements; the mode is obsessed with institution-building rather than organizing; and it forces social injustice activists to become more accountable to funders rather than to our communities. (King and Osayande 2007, p. 83)

Nikolas Barry-Shaw and Dru Oja Jay point to the fact that the contemporary development discourse rests on a language of 'empowerment' and 'capacity building' through NGOs. However, in practice, most NGO programmes have ended up disempowering civil society groups insofar as they have been rendered more accountable to donors and less responsive to their constituencies. Whilst genuine social justice movements depend on gaining wider popular support to engage in an empowering practice, a great number of NGOs prefer to depend on external donors. They do not necessarily feel the need to win the support and encourage the active participation of popular masses into their ranks (Barry-Shaw and Jay 2012, pp. 76–78).

The so-called 'empowering' capacity-building practices of mainstream NGOs prioritise the acquirement of 'skills and organizational set-up necessary to meet the punishing bureaucratic demands of the donors'. The aim is to create '(self-)disciplined clients of donor agencies' (Barry-Shaw and Jay 2012, p. 81). Relatedly, the process of professionalisation of NGO cadres is further accelerated with a flurry of sectorial experts and the opening-up of business schools, the curricula of which are devoted to training high-profile 'managers' in the sector (Gilmore 2007, pp. 45–47). The managerial profile of leaders mostly reflects a technocratic view of development, which reduces global issues such as poverty to a quantitative problem rather than viewing them as a product of unequal social relations. As such, development is considered to be a purely technical matter that is to be isolated from ideology and politics (Barry-Shaw and Jay 2012, pp. 7–8).

The co-optative structure of the NPIC also serves to replace social mobilisation with social service. Social service work has become a distinct

employment sector that generates philanthropic relief at the expense of reproducing previously existing structures of inequality and injustice:

> The existence of these jobs serves to convince people that tremendous inequalities of wealth are natural and inevitable. Institutionalizing soup kitchens leads people to expect that inevitably there will be people without enough to eat; establishing permanent homeless shelters leads people to think that it is normal for there not to be enough affordable housing. (Kivel 2007, pp. 139–40)

Technocratic and social service-centred approaches to the problems of development turn movement leaders into social service workers who are entirely differentiated from their membership base. In turn, the NGO-led social service work is confined to satisfying the daily needs of atomised individuals or communities rather than addressing the root causes of exploitation and violence. Such a narrow focus leads civil society organizations to become the defenders of the status quo (Kivel 2007).

A prime example of the absorption of radical movements by the NPIC is Palestine. According to Andrea Smith, the fact that the vast majority of Palestine NGOs adhere to a 'two-state solution' is not pure coincidence. Such adherence legitimises colonisation and occupation policies, while ensuring full control of Palestinian resources by the Israeli state. Many NGOs operating in Palestine avoid addressing the issue of occupation, and devote their attention to developing joint 'Israeli-Palestinian' projects. In terms of stressing the symbiotic existence of imperialism and the NPIC, it is worth noticing that 80% of the Palestinian infrastructure is funded by international granting agencies that seek to impede anti-capitalist sentiments and establish free-market mechanisms integrated to the world economy (Smith 2007). Similarly, Barry-Shaw and Jay argue that the First Intifada, which erupted in 1987 as a nonviolent popular uprising against the Israeli occupation, was led by a network of grassroots committees and left-wing organisations (Barry-Shaw and Jay 2012). The period following the First Intifada saw a far-reaching NGO boom which redirected Western development aid for the co-optation of radical anti-Israeli movements.

Western funding for Palestinian 'civil society' grew exponentially after 1993, and the number of Palestinian NGOs skyrocketed from 444 in 1992 to over 1,400 in 2005. Palestinian NGOs benefiting from the deluge of Western funding became some of 'the largest, and therefore the most significant' organisations in the Occupied Territories. By 2005, the NGO sector employed more than 20,000 people, and NGO service provision covered 60% of all health care services, 80% of all rehabilitation services, and almost 100% of all preschool education. (Barry-Shaw and Jay 2012, p. 92)

As such, the Second Intifada (which erupted in 2000) was led by Islamist groups left outside the NGO sector. NGO-ised organisations could not provide support to the Intifada movement for fear of losing their Western funding (Barry-Shaw and Jay 2012).

The Palestine case is not an exception in the Third World. Haiti, as the poorest country in the Americas, has been one of the biggest victims of neo-liberalism in the continent. The country qualifies as an 'NGO Republic' because it has the world's highest concentration of NGOs per capita, 'with over 900 foreign development NGOs and an estimated 10,000 NGOs overall operating in the small Caribbean nation of 8 million inhabitants' (Barry-Shaw and Jay 2012, pp. 43–44). What are the results of the NGOs presence? 'Nearly 80% of Haiti's basic services (healthcare, education, sanitation etc.) are provided by NGOs.' In 2005, over 74% of all 'help wanted' advertisements were for jobs working for NGOs or other international organisations (Barry-Shaw and Jay 2012).

In the case of India, key NGOs – which used to pretend to sympathise with antidisplacement movements such as the Lok Adhikar Manch (LAM) – have easily been coopted by state and corporate actors because they fear being de-registered or blacklisted as 'anti-industrial NGOs'. The co-optation of NGOs resulted in the formation of a prodisplacement forum in favour of the mining industry. The LAM activists also complain about large NGOs that engage in corporate espionage. According to the activists, it is common for companies to hire NGOs to conduct surveys and interact with the local population in order to reveal the strengths and weaknesses of communities for co-optation purposes. Workshops and other

educational activities are used to create favourable opinion regarding capitalist industrialisation, and local people are lured by material incentives such as free health check-ups, clothing, bikes, micro-credit, etc. (Kapoor 2013).

Widely advertised as one of the World Bank and IMF's success stories in sub-Saharan Africa in the early 1980s, Ghana suffered from growing popular discontent under structural adjustment programmes. The figures show the extent to which neo-liberal policies eradicated public services: 'Enrolment rates fell and primary school dropout rates climbed to as high as 40%. In 1990, 80.5% of children reached fifth grade, but by 2000 the figure had fallen to 66.3% . . . visits to clinics and hospitals fell by as much as 33%' (Barry-Shaw and Jay 2012, pp. 25–26). The Program of Action to Mitigate the Social Costs of Adjustment (PAMSCAD) was created in 1987 as a counteraction against growing popular unrest under neo-liberalism. PAMSCAD's social funds, which amounted to $85.7 million, stimulated a countrywide NGO boom. The NGO number increased from 17 in 1987 to 120 by the early 1990s, and to 400 by the second half of the 2000s. Whilst access to public services witnessed a considerable decline, the growth of regime-friendly NGOs started to fill the empty place left by the state, contributing to the silencing and co-optation of the popular opposition in Ghana (Barry-Shaw and Jay 2012).

Prior to the 1990s, radical NGOs that fought for land reform were a critical element of Bangladeshi civil society. The transfer of millions of development dollars to NGO-led microcredit programmes helped pacify mobilisations for land reform: 'Today, virtually all of Bangladesh's 2,000 NGOs are "involved in microfinance in one way or another"' (Barry-Shaw and Jay 2012, p. 108). The microcredit movement propagated the misguided conviction that rural poverty does not emanate from unequal distribution of wealth, but from inadequate access to the credit market and lack of individual responsibility and entrepreneurship. Thanks to massive external funding, NGOs have ultimately become one of the most popular job markets in the country (Barry-Shaw and Jay 2012).

In the Philippines, the colonisation of civil society goes back to the 1980s and 1990s, during which international institutions transferred tens of millions of development dollars to create a neo-liberal non-profit sector. As a result, the Philippines today enjoys the presence of over 60,000 NGOs. A World Bank report dating from 2009 reveals that 75% of its loans and 87% of its country assistance strategies involve 'civil society engagement' (Africa 2013). Nowadays, 48% of NGOs are believed to rely on foreign funding, whereas 12% benefit from corporate funds as their core source of funding. Africa Sonny draws attention to how mainstream NGOs are partnered with the military's counter-insurgency programmes, particularly in conflict zones, with the aim of inhibiting genuine grass-roots initiatives and covering up human-rights violations. Rather than mobilise local communities against neo-liberal policies and structural inequalities, mainstream NGOs act as charity intermediaries for cash transfers that are provided by the World Bank and the Asian Development Bank (ADB) (Africa 2013).

Finally, the Afghani case is a clear example of how NGO-isation ends up generating a new comprador class compatible with the interests of imperialism:

> University educated Afghan people (less than 1% of the population has any university education) working for NGOs and other international agencies were one of the few social groups that strongly supported the occupation forces. While government civil servants were paid $60 per month on average, Afghans working for NGOs earned an average of $1,000 per month. (Barry-Shaw and Jay 2012, p. 223)

Barry-Shaw and Jay assert that NGOs have assumed a key role in implementing the Karzai Government's development programmes, particularly the flagship rural programme called the National Solidarity Programme (NSP). It was created in 2003 with Western funds, and launched as a 'participatory grassroots initiative' (Barry-Shaw and Jay 2012). An equally striking fact about the Afghani case is how the military uses NGOs as a strategic asset for counterinsurgency and intelligence. The Canadian counter-insurgency manual stresses the central role of NGOs in winning over

hearts and minds. More strikingly, it was revealed that 90% of the coalition forces' intelligence in Afghanistan came from aid organisations on the ground (Barry-Shaw and Jay 2012).

Conclusion: Popular Alternatives to the NPIC

Monopoly capitalism cannot extricate itself from the trap of stagnation, economic crisis, and inequality despite soaring profit and monopolisation levels. This situation forces US imperialism to increasingly rely on military aggression, media manipulation, and colonisation of the non-profit sector. Military aggression is used to control the world's resources and prevent the emergence of potential rivals at the expense of eroding US hegemony. However, the rise of potential rivals cannot be prevented, as witnessed in the case of the emerging economies of the BRIC. Faced with intensifying global competition, US imperialism feels greater need to disintegrate the nation states of the Third World. Meanwhile, media power alone cannot regenerate consent for a US-centred world order. This is where the crucial role of the NPIC comes in. The colonisation of the non-profit sector serves to pacify those who cannot be directly persuaded by the media, and disintegrates the nation states of the Third World in the interests of monopoly capitalism. Similar to the media-industrial complex, the NPIC also provides political and ideological support to militaristic practices.

The cases from Third-World countries expose the imperialist drive to impose regime change, advance the neo-liberal agenda and pacify social unrest via the NPIC. Each of the three motives of the NPIC (geopolitics, global political economy, and co-optation) is also a leading factor in the historical emergence and consolidation of the NPIC. Whereas the Afghani and Philippine cases mainly reflect the geopolitical factors with regard to military-NGO co-operation, the Haitian case invokes the role of neo-liberalism in dismantling the welfare apparatus and turning Third-World countries into 'NGO republics'. The Bangladeshi, Indian, Ghanaian, and Palestine cases lend evidential support to the imperialist drive to co-opt radical

movements with respect to land reform and social mobilisation.

Despite the strength of the global nonprofit sector, the antidote for the decolonisation of the popular sector is already available. We have the guiding example of the global peasants' movement, which is highly instructive concerning the way civil society can be liberated from the yoke of the non-profit sector. La Vía Campesina is the world's largest global social movement, connecting more than 150 peasants' organisations in over 70 countries. This movement is known for its refusal of NGO-isation as well as its bottom-up decision-making model based on the principles of inclusion and consensus. According to La Vía Campesina, mainstream NGOs tend to manipulate and dominate the discussions on behalf of the peasants with their technocratic and top-down approach (Desmarais 2007).

What are the specifics of the alternative represented by La Vía Campesina? What clues can it provide about the peoples' liberation from the non-profit sector? A number of insightful pointers can be drawn from the case of the Movimiento Nacional Campesino Indígena (National Peasant and Indigenous Movement, MNCI), a member organisation of La Vía Campesina, with which I have worked during my fieldwork in 2014. The MNCI is Argentina's largest peasant movement with more than 20,000 member families. Rather than integrate itself in the NGO/charity sector, the MNCI prefers to organise rural communities as a class organisation in a constant state of mobilisation. This is sustained by bottom-up decision-making processes, which start at the community level and spread to the provincial and national levels. No hierarchical leadership practices are encouraged, as the membership base relies on 'peasant militancy' rather than narrow and educated NGO cadres and 'activists'. The strength of the movement also emanates from strong class alliances that link different sectors of the Argentine working classes. While recognising the potential contributions of state-sponsored cash transfers and microcredit that are free of the World Bank's yoke, the MNCI struggles for a radical agrarian reform by relying on a broader alliance with the urban informal

M

proletariat of shanty towns, particularly with the Confederación de Trabajadores de la Economía Popular (CTEP, Confederation of the Workers of the Popular Economy). Agrarian reform is seen as the only way to address the structural roots of inequality. In other words, unlike the NGO model of charity for atomised communities, the MNCI relies on class action that not only unites peasant communities at the national and global levels, but also connects with the other subordinate segments of Argentine working classes in urban areas.

The MNCI movement is extremely cautious in establishing relationships with NGOs, other international institutions, and state actors. A few militants come from a social service or university background, but most of them share the same living conditions as the rest of the militants with no privileged position. The movement insists on self-management and bottom-up decision making, although it benefits from the technical expertise and resources of a limited number of international organisations and state actors. Thanks to its emphasis on organisational autonomy, the MNCI has led countless land occupations and national-level protests, and come to establish its own officially recognised elementary schools and university with its own teaching staff and curriculum. The case of the MNCI alone demonstrates that working classes are capable of liberating themselves and bringing about social change by reversing the relations of power. Indeed, these achievements have been made possible without the 'prescriptions' of the World Bank and the 'professional help' of NGO technocrats. They lie rather in preventing externally funded projects from becoming a core resource of organisation and in prioritising social mobilisation as a means to subordinate state power.

Mozambique, Imperialism and

Joseph Hanlon
Department of International Development, London School of Economics and Political Science, London, UK
Open University, Milton Keynes, UK

Mozambique has been exploited for slaves and ivory in the eighteenth and nineteenth centuries: sugar, labor for the South African mines, and land in the twentieth century and energy and minerals in the twenty-first century. Independence in 1975 brought a brief window of local control, but imperialism fought a decade-long war in 1982–1992 which killed one million Mozambicans and regained control. This new control is managed through a comprador elite which has become the new wealthy oligarchs, while Mozambique remains one of the poorest countries in the world.

Mozambique in Southeast Africa has always been shaped by its 2470 km coastline. There were Arab traders and coastal settlements from the tenth century followed by Persian and Indian traders. Chinese explorers arrived in the fifteenth

century and the Portuguese in the sixteenth century. This generated an important Mozambican trade between the coast and the interior and linked commercial farming. Portugal became dominant but did not have territorial control. Instead it increasingly traded in slaves and ivory. In 1807, Britain abolished the Atlantic slave trade, but it continued in Mozambique for another century. Between 1800 and 1850, Brazil imported 2,460,000 slaves, most of whom passed through Mozambican ports (Newitt 2017). The ivory trade in this period was over 100 tonnes per year.

At the Berlin Conference of 1884–1885, the imperial powers divided up Africa between them. Portugal was given Mozambique and Angola, as well as the connecting territory. But the conference also agreed the "Principle of Effective Occupation" which required the colonizing power to exercise strong and effective control of its colonies. Portugal was always the weakest of the imperial powers and did even not effectively occupy Mozambique. Britain soon claimed the interior areas – now Malawi, Zimbabwe, and Zambia – leaving Portugal with just coastal Mozambique and Angola. Portugal then leased vast tracts of land to British concession and sugar companies as a way of bringing it under occupation. Although the Berlin conference gave Britain the best land, it also left its colonies land-locked, and it was the British capital that developed colonial Mozambique's ports and railways. Thus Mozambique was effectively a colony of two imperial powers, Britain and Portugal.

Portugal was never rich enough to develop Mozambique, so its colonization was built on people. Up to 500,000 Mozambicans worked as migrant labor on South African and Rhodesian mines and farms. Inside the country, Mozambicans had to produce cash crops or do forced labor on plantations or on construction projects. Fascist Portugal refused to do a land reform and could not create enough jobs, and instead between 1943 and 1975, Portugal sent 164,000 people to Mozambique to become peasant farmers or to take the lower-level jobs still reserved for Portuguese. Most returned "home" to Portugal at independence.

Portugal may have been poor and marginal, but in World War II, it became important by remaining neutral, in contrast to its neighboring fascist state Spain which joined the German-Italian "axis." In 1942, the United States agreed "to respect Portuguese sovereignty in all Portuguese colonies" which was confirmed to gain Portugal's 1949 agreement to join the North Atlantic Treaty Organization (NATO) and to allow the Azores in the mid-Atlantic to be used as a stopping and refuelling place during the 1948–1949 airlift to Berlin, a key event in the early Cold War. Thus the United States agreed not to push for decolonization of Portugal's African colonies, which included Mozambique. Independence and majority rule came to most of Africa, but white rule continued in Mozambique, Angola, Southern Rhodesia (now Zimbabwe), South Africa, and Namibia. By the early 1960s, the liberation movements in all five countries were receiving support from the then communist countries, as well as clandestine support from the Nordic states. Portuguese soldiers refused to continue to die in the colonial wars and overthrew the Portuguese government in the 1974 "Carnation Revolution."

Independence

Mozambique came to independence in 1975 under the single liberation movement Frelimo (Frente de Libertação de Moçambique) and President Samora Machel. Most Portuguese fled, frightened by Portuguese anti-communist propaganda. Businesses were abandoned overnight and sometimes smashed up before the owner departed. Key administrative posts as well as middle-level positions such as railway ticket collectors had all been reserved for Portuguese, and most Mozambicans had been limited to 4 years of primary school, although in response to the liberation war, Portugal had made major changes including ending forced labor and allowing secondary and university education for Mozambicans. Nonetheless, there were not enough educated Mozambicans to fill all the gaps; however workers took over factories, and newly named teachers took over the schools.

The new Mozambique was nominally socialist, but its image of socialism was Nordic social democracy. Frelimo tried not to interfere in economic sectors, and few companies were nationalized; old colonial companies such as Entreposto and João Ferreira dos Santos continued to operate and still do. Machel even promoted a new factory by the US company General Tire (Hanlon 2017b).

Mozambique's neighbors were hostile. South Africa was a white-ruled "apartheid" state; the white government of Rhodesia (now Zimbabwe) had declared independence, and Malawi although independent was allied to the white states. Although the Cold War was still on, the United States was chastened by its defeat in Vietnam in 1975, and US Presidents Gerald Ford (1974–1977) and Jimmy Carter (1977–1981) did not take strong international positions. Although South Africa invaded Angola with US support (under Ford) after its independence in 1975, neither took military action against Mozambique. However, Carter refused to continue the past practice of overlooking the human rights abuses of US allies and put pressure on South Africa and Rhodesia – which did provide a partial check on South Africa and promote the settlement of the war and then independence in Rhodesia. The nonaligned movement and the Brandt Commission were both influential, and a real change in North-South relations seemed possible in the late 1970s.

In Rhodesia the liberation war was increasing, and Mozambique imposed United Nations sanctions on Rhodesia and allowed the liberation movement ZANU to have bases in Mozambique. Rhodesia responded by some attacks into Mozambique and by creating an opposition guerrilla force, the Mozambique Resistance or Renamo. This caused some problems in the center of the country, but was not serious.

Thus independent Mozambique had a 6-year window (1975–1981) without major imperial pressure. Actions were taken to keep the economy running, to make some changes, and to look ahead to development and industrialization. The only university was closed for a year, and university students were sent into rural areas to do literacy training. Internationally, sympathetic governments and solidarity movements sent technicians to be employed by the state, not aid agencies, to support the new managers. The economy declined until 1978, but as the new managers and bureaucrats began to learn their jobs from experience, the economy picked up and by 1981 had returned to pre-independence levels.

By the end of this period, it was becoming clear that the initial emergency measures were no longer needed. Hundreds of small businesses had been abandoned at independence with workers not knowing how to run them, so state officials took over. By 1979, long before privatization was pushed by the IMF, Samora Machel said "the state does not sell needles" and handed state-run shops and small businesses to local private businesspeople – either workers who now had the skills and confidence to run their own business, or small businesspeople who now had enough trust in Frelimo and its mixed economy to take over these businesses, despite price and market controls.

Zimbabwe's independence at the beginning of 1980 brought peace and optimism. For a year, Mozambique had a chance to dream and plan a future.

Mozambique had become a serious challenge to apartheid South Africa. It was a multiracial country with a mixed government, with a rapid spread of public health and education services, and with a growing economy. Of course, not without problems. But Frelimo and the government were popular and trusted as shown by the currency change in June 1980. Changing the currency was never a priority, and Mozambique continued to use the colonial Mozambican escudo. Then suddenly Samora Machel went onto the radio to announce a new currency, the metical, with money converted one for one over the next 3 days. Banks would be open 11 h, and government officials have been sent to the most remote areas with new banknotes. Thousands of people knew; hundreds of people were unexpectedly sent on trips to rural areas, but no one was worried, and it never leaked. At workplaces, people were told to hand in all their money to the office on Monday. A junior official then queued all day Tuesday to change everyone's money, took all the money home, and then handed it out on

Wednesday when the new currency could be used in shops. There were no reports of thefts, despite millions of dollars in banknotes moving around the streets and remote rural areas. And there was no panic – Frelimo was trusted to be doing the right thing (Hanlon 1996).

But popular, non-corrupt, multiracial socialism with health and education for all and a growing economy challenged the apartheid and imperial agendas. And in the background, change was already happening. In the newly independent Zimbabwe in early 1980, the British governor's staff did not disband Renamo but instead allowed 1000 trained insurgents to be transferred from the Odzi base in Zimbabwe to the South African Department of Military Intelligence base at Phalaborwa (Hall and Young 1997).

Imperialism Comes Back from Its Holiday

Under President Richard Nixon (1969–1974), the United States had pushed the imperial project, backing the coup in Chile on 11 September 1973 (the first "9/11"). And it became the model for neoliberal economics. From the 1950s, the US State Department Chile Project had included training Chilean economists at the ultra-conservative University of Chicago school of economics, which promoted the neoliberal package of deregulation, privatization, and extreme free market of what were called the "Chicago boys" in charge of the economy, and Chile became the test bed for these policies.

The 1973–1975 defeat in Vietnam temporarily curbed imperial ambitions. But free elections and independence in Zimbabwe in 1980 were the end of that hiatus. The 1970s ended with a new conservative and imperial agenda, built around neoliberalism and intensifying the cold war. Margaret Thatcher was elected prime minister of the United Kingdom in 1979 and Ronald Reagan president of the United States in late 1980.

When Ronald Reagan took office as US president in January 1981, he escalated the Cold War and began a massive military buildup to confront the Soviet Union. This had a dramatic impact in Southern Africa. Under a policy of "constructive engagement," white apartheid South Africa was seen as the bulwark against "communist"

governments in Mozambique, Zimbabwe, Zambia, and Angola. A Cold War proxy war was launched in Mozambique with apartheid South Africa permitted to back Renamo. Other proxy wars were being waged in Afghanistan, Cambodia, El Salvador, Nicaragua, and Angola.

Just 10 days after the Reagan inauguration, lorryloads of South African commandos came over the border and raided Matola, a suburb of Maputo. They killed 13 members of the African National Congress and a Portuguese electricity technician and left behind one of their own, a dead British mercenary whose helmet was painted with swastikas and the words "sieg heil." It was clearly a very public test of US government response, and the United States did nothing to discourage similar actions. Other major commando raids included destruction of bridges carrying the main road, railway, and oil pipeline from Beira port to Zimbabwe as well as cutting the main railway bridge across the Zambezi River and destroying the oil tank farm in Beira (Hanlon 1991).

The fighting on the ground was done by Renamo, a proxy force of Mozambicans trained, supplied, and controlled by South Africa. In early 1981 the Renamo guerrillas who had been delivered to South Africa were flown by helicopter to a new base at Garagua inside Mozambique (Hall and Young 1997). By late 1981, South Africa had established Renamo bases in Manica and Sofala provinces in the center of the country. There were regular supply flights to the interior as well as seaborne landings, including by submarines. By 1982 Malawi has been pressured by South Africa to allow Renamo bases, which made cross border raids into Tete and Zambézia provinces. There were two initial goals. First, Frelimo had won popularity by a major expansion of health and education, so the first target of Renamo was to destroy schools and health posts. Second, Renamo wanted to stop transport, and this was done by making people afraid to travel. For example, buses would be stopped, and the passengers burned alive inside the bus – but a few survivors were allowed to leave first, to tell the story. The railways were attacked with rocket launchers, and lorries were ambushed. Renamo also attacked any

private business, burning shops and farm machinery (Hanlon 1991, 1996).

The end of the Cold War and the fall of the Berlin Wall in 1989 brought dramatic change in Southern Africa. In Mozambique, Malawi, Angola, Namibia, and South Africa, parties backed by the United States lost elections. Mozambique's war ended with a peace accord in 1992. But the price of the US's proxy war was very high: one million Mozambicans died in the 1981–1992 war (8% of the population), and damage exceeded US$20 billion. And the proxy war had been effective. At the end of the war, the United Nations estimated that Renamo controlled 23% of the land, but only 6% of the population. But transport had been made almost impossible, and the economy was devastated; 3000 rural shops were closed or destroyed. And Renamo was successful in destroying social fabric: of 1200 health posts in the country, 500 were closed or destroyed (Hanlon 1996).

During the entire decade-long war, the US government was divided. The conservative Heritage Foundation wanted the United States to openly back Renamo and gained supporters in congress. The Defense Department and the Defense Intelligence Agency (DIA) wanted to back Renamo and thought it could win the war. The Central Intelligence Agency opposed Renamo and thought it could not win. The White House and State Department were divided and for the most part did not want to openly back Renamo. A State Department report by Robert Gersony in 1988 said "the level of violence reported to be conducted by Renamo against civilians is extraordinarily high." Also in 1988 US Deputy Assistant Secretary of State for African Affairs, Roy Stacey, said Renamo was carrying out "one of the most brutal holocausts against ordinary human beings since World War II" (Hanlon 1991).

The Economic Component

There was an economic component to this. In 1971 Richard Nixon ended the convertibility of the US dollar to the gold, which had the effect of making the dollar the international reserve instead of gold. That meant countries all over the world

had to hold billions of dollars – these were dollars which were not being used to purchase US good and were, in effect, giant loans to the United States and thus major transfers of wealth to the United States – in part to help pay the huge cost of the Vietnam War. Nevertheless, by the late 1970s, interest rates for developing countries were negative – that is, less than the rate of inflation – and developing countries were receiving $25 bn per year in new loan money for development. Reagan pushed up US and global interest rates, and real interest rates reached 12% in 1984. Developing countries could not pay, so interest payments were simply added to the debt. In the years 1984–1993, developing countries transferred $81 billion to the rich countries, yet their long-term debt increased by $675 billion (Hanlon 2017a).

In Mozambique the war was causing major economic damage by 1982. In 1984, Mozambique defaulted on its debts – higher interest rates combined with a war damaged economy meant Mozambique could not pay. President Samora Machel toured Europe trying to obtain money, only to be told that Mozambique first had to join the IMF and World Bank – the main enforcers of the new neoliberalism. It joined in 1984. Drought combined with the war and refugees to the cities to cause food shortages, which were largely filled with aid. But to put pressure on Mozambique to "turn to the west," food aid was withheld in 1983 and again in 1986 (Hanlon 2004).

The United States imposed an interesting additional condition – the acceptance of US NGOs. In the late 1970s, Mozambique had thousands of foreign technicians, sent by solidarity groups in Europe as well as fraternal governments like Cuba. But all worked directly for the government and reported to Mozambican department heads. Nongovernment organizations, who sent technicians that reported to the NGO and not the government, were banned. This reflected both the fear that US NGOs were linked to the security services and unwillingness to allow foreign agencies to take control of development policy. But the United States demanded that two of its NGOs, Care and World Vision, be allowed to work in Mozambique, which was allowed in 1983 and 1986.

M

"Shock therapy," the sudden and dramatic change in national economic policy to turn a state-controlled economy into a free-market one, built on privatization and ending financial controls, was already being tried in Chile after the US-backed coup and was being discussed for the post-socialist countries. China's slower and more considered reforms have already started but were not recognized in the West. So Mozambique became the first test of shock therapy in a socialist country. Through 1985–1987, while the war continued, the IMF and World Bank pushed shock therapy, while Mozambique recognized that the war-battered economy needed change but wanted to move cautiously. In late 1986, both Bank and Fund demanded major policy changes. Finally in January 1987, without consulting the Bank and Fund, the government announced its own Economic Reform Programme (PRE) which included devaluation, a freer market, reduced subsidies, and higher wages – but not at levels demanded by Bank and Fund. However, they accepted. Mozambique became the first country in the world to impose structural adjustment in time of war.

It was not enough. In 1990, with the war going on, the IMF imposed stabilization in order to cut inflation and money supply. Most important were sharp cuts to government wages. In January 1991 the civil service wage range was $31–$500 per month. Five years later it was $20–$150. A 1995 UNDP/Unicef report "Pay, Productivity and Public Service: Priorities for Recovery in SubSaharan Africa" estimated the "absolute minimum wage" for Mozambique to be $75 per month (two-thirds of civil servants were below that) and the "abject poverty line" of $50 per month, with half of civil servants including nurses and teachers below that. The result was many civil servants taking time off work to do other jobs or grow food or taking bribes. The report called for the hiring of more civil servants and paying them more in Mozambique (Hanlon 1996). The report was published, but then suppressed under pressure from the IMF, and has never appeared on the web.

With the end of the war with the 1992 cease fire, the IMF stepped up its demands and began to impose shock therapy. It wanted much higher tax payments and a sharp cut in government investment. In particular, it opposed repairs of the massive war damage because they would be inflationary. Such repairs were being paid for by aid, so it imposed an unprecedented cap on aid, actually demanding a reduction in aid (Hanlon 1996).

Creating Capitalists and Oligarchs

Agreement to accept structural adjustment during war led to a more than doubling of aid and a crash course in capitalism for Mozambicans who had run businesses, ministries, and the military but had never been capitalists. And the lesson was that capitalism is not about profit but about patronage – state assets are "privatized," and people are given "loans" that need never be repaid entirely based on who you know and donor whim.

The first priority was privatization, and in the years 1989–1998, over 800 of the 1250 public companies were sold. Haste was the first rule. The second was that big companies such as cement, beer, and food processing be sold to foreign companies. The third was the companies should go to the *nomenklatura* – the Frelimo elite and their friends and family. This continued through the 1990s, with the family and close associates of President Joaquim Chissano becoming shareholders in a range of businesses. As late as 1999, the World Bank promoted a less than transparent part-privatization of part of Maputo port to a consortium involving a senior politician.

Second was providing money to the new capitalists. In 1988 the Agricultural and Rural Development Fund was set up using donor funds to give "loans" to military men and party officials, with no intention that the loans would be repaid. Donors accepted that the money was being used to buy out military people and Frelimo party officials opposed to ending the war and abandoning socialism. The World Bank's 1989 Small and Medium Enterprise Development Project was intended to help the new owners of privatized businesses. Nearly $33 million was lent, and the World Bank's 1998 evaluation admitted that 90% of the loans would never be repaid. The bank

admitted it put "substantial pressure" on honest Mozambican bankers to bend the rules to give loans they knew could not be repaid.

This was the start of the creation of the oligarchs.

Meanwhile in early 1990s, banking was being liberalized. The governor of the Bank of Mozambique, Adriano Maleiane, was trying to clean up the two state-owned commercial banks to privatize them, preferably to foreign banks. In 1995–1996 the IMF and World Bank forced the privatization of both banks, even though Maleiane knew they were not ready. Only corrupt groups including part of the Frelimo elite would take them. They were looted for $400 mn and collapsed and handed back to the state in 2000. Four people revealing details of the corruption were murdered: a bank managing director, José Alberto de Lima Félix; a branch manager, Passarinho Fumo; António Siba-Siba Macuácua, Bank of Mozambique director of banking supervision who had been named president of one of the banks to clean up the mess; and Mozambique's most important journalist, Carlos Cardoso. Only Cardoso's killers were tried and killed; the others were protected.

The donor Consultative Group (CG) met in Maputo 25–26 October 2001 just 2 months after the murder of Siba-Siba Macuácua; no investigation was underway, and his efforts to collect bad debts had been stopped. Mozambique asked for $600 million in aid and was given $722 million – the extra money was enough to plug the hole in the banking system. After this, former security minister Sergio Vieira wrote that the donors recognize "the good performance of the government" and this "overrides the bank scandal and the assassinations of Siba-Siba Macuacua and Carlos Cardoso." Not only could the new oligarchs steal, they could get away with murder.

Speaking at a Maputo press conference on 11 July 2003, IMF managing director Horst Kohler said "it is our conviction that the government, under the leadership of President Joaquim Chissano, has done a fine job in defining and implementing the fundamentals for growth and for reducing poverty." Nothing was said about corruption and the failure to investigate the Siba-Siba murder, even after journalists raised the issue; instead Kohler called only for "deeper reform" in the financial sector.

Becoming a Mineral-Energy Exporter

At independence Mozambique was not seen as an important natural resource producer, with only limited mining. The Portuguese built the giant Cahora Bassa dam on the Zambezi River to supply cheap electricity to apartheid South Africa, but it only began operating at the time of independence in 1975. After the end of the war in 1992, the Mozal aluminum smelter opened near the capital, Maputo, in 2000. It was promoted by the IMF which said the foreign owners had been given a good deal to prove that Mozambique was open to foreign companies at the end of the socialist era. Production of a small gas field in Inhambane province began in 2004, and the gas was shipped by pipe to Sasol in South Africa. All three projects were for foreign benefit, and Mozambique gained little.

The picture changed when large amounts of coal, including high-quality coking coal, were found in Tete province around 2000. Brazilian, Australian, and Indian companies invested and coal exports began in 2012. Meanwhile gas explorations off the coast of Cabo Delgado in the north of Mozambique began in 2006, and by 2012, US-based Anadarko and Italian-based Eni announced huge discoveries which will make Mozambique one of the largest gas producers in Africa. Production and gas liquefaction investment will exceed $100 bn with production due to start in 2025. This transforms Mozambique into a major natural resource country.

As well as coal and gas, mining has also developed for rubies, graphite, titanium, and other minerals.

In contrast to Russia, natural resources in Mozambique are largely controlled by foreign companies, not domestic oligarchs. Even the elite is subject to the demands of imperialism as enforced by the World Bank and IMF. Local oligarchs do have interests in some mining, notably rubies, and have some shares in foreign-

owned companies, but their main involvement has been in contracts to service the mineral-energy sector.

Teaching Subservience

A major increase in bilateral and multilateral aid and the opening of international non-governmental organization (INGO) offices in the late 1980s and early 1990s brought a massive change. Previously technicians and officials, including the "cooperantes" from foreign countries, worked for the government with the same wages and conditions as local staff. Now each agency and INGO had its own programs and large office and paid much higher salaries just at a time that the IMF was suppressing government salaries to below the poverty line. The impact of lack of education in the Portuguese era was still felt, and there was a shortage of skilled people. Senior Mozambicans officials became secretaries in aid agencies to earn higher salaries in dollars. Health and agricultural workers moved from government to aid projects.

The World Bank and other agencies began to notice that key ministries were being stripped of skilled staff, which made it increasingly difficult to get projects implemented. So it was decided to try to keep key people in ministries with "top-ups" – extra salary payments. All of the donors and INGOs began running seminars on their pet projects and paid per diems for those who attended. Consultancies were commissioned, usually from government staff, who often wrote the report in work time.

Not everyone could obtain these jobs, top-ups and consultancies. It required agreement with the new agenda, of transferring power away from government to the private sector and international agencies and INGOs. And it was those who seemed the most committed to the imperial agenda who were sent to Europe and the United States for conferences and training, who were promoted, and who won university scholarships. International agencies and INGOs also watched the staff they sent to Mozambique; those who were seen to support the government were

accused of "going native" and recalled or did not have their contracts renewed.

The World Bank became powerful in several areas and imposed policies and projects over strong initial domestic opposition. A deputy minister and a national director were forced to be dismissed because they opposed a World Bank policy. Resistance withered.

In the 1990s, donors introduced a new form of aid, "budget support," in which money was given directly to the government for its budget. That became between one-quarter and one-third of non-emergency aid. In exchange, the donors had "advisors" inside ministries, involved in setting and implementing policies. In some cases, these "advisors" had to be included on internal e-mail lists. At the Ministry of Planning, internal meetings were held at the nearby Café Nautilus so that discussions could be held out of hearing of the "advisors." There was a donor budget support group which increasingly set policy. Of course, the donors had to approve the national budget before it was sent to parliament (which was not allowed changes – donor interest overrode democracy). After an incident in 2005 when the government sneaked into the budget a rural development fund opposed by donors, the budget support group added to its conditions that the group not just see and approve the budget before it went to parliament but must each draft of the national budget.

Mozambique did have a nascent domestic NGO sector – a national peasants association and a national cooperative association linked to peri-urban food producers, and a vibrant women's association linked to the ruling party Frelimo. But the northern donors and INGOs wanted to create domestic NGOs that would be explicitly apart from government and perhaps hostile to government and would carry out northern imposed programs – on environment, HIV/AIDS, governance, gender, etc. Dozens of domestic NGOs were created and were and are dependent on foreign funding for their survival. Funding is sometimes withdrawn from domestic NGOs that become too outspoken. And the salaries are high – staff in donor-funded Mozambican NGOs earn more in dollars than would be paid for similar posts in Europe.

The broad outlines of neoliberalism are still sometimes criticized, but it is very difficult to criticize the policies of the IMF, World Bank, bilateral donors, or INGOs for fear of losing funding, perks, and protection.

Over 20 years, this created a climate of subservience. At top level the government was constantly praised for being the "best pupil," parroting the neo-liberal rhetoric and officially introducing neo-liberal policies. In private, the real praise was for allowing the World Bank, bilateral donors, and INGOs to carry out whatever programs and projects they wanted. Health, for example, for the first 20 years was an integrated national health service. But by the 2000s, it had become a fragmented set of vertical programs run by foreign foundations and agencies.

The period since the 1992 peace agreement has slowly molded a new elite and a growing middle class whose status depends on being subservient to foreign, imperial interests. This is a comprador elite. But it is more complex, because built into this new structure is also subservience to Frelimo and deepening corruption.

Corruption and the Power of a Comprador Ruling Party

The new elite's growth was based on corruption. The baby oligarchs were growing up based on government contracts and loans and land and mining exploration licenses – which naturally required payments to the ruling party, Frelimo. There was a tacit agreement that as long as the government said the right things and adopted the right policies, corruption would not be challenged. Indeed, in 2002, the World Bank, the United Kingdom, and Norway all had policies **not** to challenge corruption. World Bank policy said: "It is not the Bank's role to identify and prosecute individual offenders, but rather to address the various aspects of policy and institutional reform that are likely to be critical in reducing corruption" (Hanlon 2004). The message is clear – the new oligarchs can steal and even kill, as long as Frelimo is seen to adopt the correct policies and reforms, even if they are never implemented.

For the elections in 1994 and subsequently, many NGOs and other agencies ran competing seminars for journalists, paying up to $100 per day. Similar competing seminars were held on gender, HIV/AIDS, and other fashionable subjects, and government staff and journalists attended just to collect the per diems. It became quite brazen with people just arriving to sign in and staying long enough to collect their envelope and, not caring to hear the same thing again, simply leaving. The agencies did not care – they also only wanted the attendance sheets to present to headquarters. Thus comprador corruption extended to the new middle class in the donor-dependent NGOs and ministries who skipped work for the day and to Mozambican and foreign staff who only wanted to tick the boxes in report to their headquarters in the United States or Europe.

And the corruption extends to projects. Relatives, friends, and lovers of NGO and donor staff are given jobs on the projects that the donors and NGOs have funded. Consultancy and evaluation contracts are only given to those Mozambicans who say that the project was good.

This develops into a dense network of patron-client relations, at all levels. The ultimate imperial patrons sit in the headquarters of international agencies such as the World Bank, IMF, and European Union, as well as those in the headquarters of bilateral government donors and INGOs. Their clients are lower-level staff, including in Mozambique, and increasingly intermediate contractors who have taken over the implementation of aid. Below them are a set of Mozambican subcontractors and facilitators – in ministries, in NGOs, or in some cases with tiny one-person "briefcase" NGOs. At each level, they are clients of those above and patrons of those below. But as with capitalism and business itself, complexity leads to less rigor and more personal intervention. And the clients become more subservient and the patrons more powerful.

The final piece of the subservience jigsaw is Frelimo, the ruling party, itself. In exchange for subservience in key places, Frelimo has been allowed to build its own patron-client relations. Contracts and jobs are dependent on having Frelimo

patrons. Sometimes it is quite simple – teachers cannot stand for or work for opposition parties in elections; if they do, they are transferred to a school far away. But if they properly support the party, they are allowed to ask bribes for school places and to pass courses.

The demands of imperialism change over time. Just after the war in the 1990s, it was to covert the socialists to capitalists and create a comprador elite, as well as accepting the basic rules of neoliberalism. A decade later, Mozambique suddenly became important as a mineral-energy producer, and the demand was to give free access to transnational capital.

Mozambique's new oligarchs often sit on Frelimo's Political Commission, the ruling body, or the Central Committee – or they are close to those who hold those seats. They know they will be supported to build their businesses if they use their political role to allow imperial dominance. Thus they are "comprador oligarchs" – both clients and patrons. And Mozambican society is being shaped in their image, at all levels.

Mozambique is unusual in being treated both as a post-Socialist country needing "shock therapy" like Russia and Eastern Europe and also as an African developing country. The result has been the creation of what might be called "comprador oligarchs." Their wealth comes partly from control of state assets and contracts, but, unlike Russia, not from control of the mineral-energy resources, which are instead controlled by international capital. History, a proxy war, and the aid industry have ensured that the end of colonialism did not mean the end of imperialism in Mozambique.

Definition/Description

This chapter examines musical forms from the 18th to 21st centuries. In each zone, the chapter asserts an imperial force is designated from Britain, the United States, and other heartlands of imeperialism in opposition to musical forms from dissenting peoples resisting imperial exploitation across the world.

Introduction

This essay explores the opposing uses to which musical forms are put within three key historic and contemporary zones which span the 18th and 21st centuries.

These zones designate imperial force, as it is embodied by Britain and America, as well as the oppressed communities of the heartlands of imperialism, in African America, and dissenting and dissident Britain; imperial agency, such as Chile and Israel, as well as the interior, subaltern, and exterior zones of exile, through which resistance takes place, particularly in the instance of Palestine, and the zones of imperial exploitation and resistance, in Kenya, Venezuela, Palestine, Vietnam, and India.

This exploration takes place through the interweaving of thematic concerns, exemplary musicians, musical forms, and modes of practice, inclusive of.

Through this approach, the essay describes the complex and contradictory uses to which music is put in the formation of the British and American empires, and the struggles of groups such as the Mau Mau, the Black Panthers, the peoples of the Occupied Territories of Palestine, the revolution of Venezuela, and the cultural project of the Communist Party of India.

Isaac Watts: Hymnody, Empire, and Voices of Dissent

The publication in 1707 of English hymnodist Isaac Watts's songbook *The Psalms & Hymns of Isaac Watts (aka Isaac Watts' Hymns & Spiritual Songs)* (Watts 2004/1707a) and the publication the same year of the *Union with England Act* (Estates of Parliament 2004/1707), through which the kingdom of Great Britain was established, mark a founding intersection of music in the service of imperialism.

This intersection is grounded by an emphasis on the idea, present in the Acts of Union's synonym of divine and temporal rule, symbolised in its adoption of the crosses of Saints George and Andrew as the official emblem 'in all Flags, Banners, Standards, and Ensigns both at Sea and Land' (2004/1707: xxv), and noted in Watts in *The Psalms of David, Imitated in the Language of the New Testament and Apply'd to the Christian State and Worship* (1717), of Britain as a divine elect. Watts's centrality in the formation of this intersection of music, scripture, and imperialism is documented in Hull (2008).

This intersection is characterised, through Watts, by a break with the idea present in hymnody since the publication in 1562 of Thomas Sternhold and John Hopkins's *The Whole Book of Psalms Collected into English Metre* (1812), that hymnody was the sole practice of the clergy and that its songs comprised the setting to music of Biblical texts: in his *Psalms and Bibles* (2009/1707) Watts presented hymnody as a secular writing practice that was inclusive of the use of subjectivity.

It is, however, unlikely that the subjectivities Watts had in mind were those of the African slaves

upon which the expansion of the British Empire was dependent: Watts's rationale for their location 'in the confines of hell' was 'because it pleased thee, whose counsels are unsearchable' (Watts 1812/1723: 173).

Nevertheless, the adoption of Watts's ideas on hymnody by African slaves in the British Empire's North American colonies and in the subsequent 'nascent' (Washington 1786), 'infant' (Washington 1788) American Empire gave Watts's idea historic force: Boyer (2000/1995: 6,7) traces documentation of slaves' independent use of Watts's hymns to 1755. The violence of slavery and segregation ensured that subsequent expressions of dissent, in the negro spiritual of the nineteenth century and the gospel forms of the twentieth century, were governed by song writing and performance strategies cohered by what Brown (1953) describes as 'oblique' forms of musical expression.

This allusive, figurative use of language, particularly in its deployment for the founding of black pedagogic institutions, such as the Fisk University by the Fisk Jubilee Singers in, for example, *Great Camp Meeting (aka There's a Great Camp Meeting in the Promised Land)* (1997/1909), and its deployment for a global working-class solidarity in the performance of the form by Paul Robeson, in *There's No Hiding Place* (2008/1937) serves as evidence of the subversive use of a musical form compelled by an imperialist intent.

William Blake: *Jerusalem* and England Upside Down

Music is the medium through whose forms imperialist and anti-imperialist alike articulate their mutual antagonisms of interest, sometimes through the same song. Consider the case of William Blake's poem *Jerusalem* (Blake 1998/1810).

Blake relocates Jerusalem in England. This relocation designates a scriptural, biblical Jerusalem of the world before its destruction and reconstruction, described by John of Patmos, and presided over by a Satanic presence (Rev. 21: 7,8), which is present in Blake's anti-war poetry

in, for example, *Milton: Book the First* (Blake 2008/1804) as the 'dark satanic death' instituted through military and religious conflict (119) and the 'dark satanic mills' of *Jerusalem* (Blake 2008/1810: 95), which Blake historian Erdman describes as figurative of a critique of militarism (Erdman 1991: 396).

Jerusalem, in its orchestral version by Hubert Parry (1916) and Edward Elgar (1922) nonetheless found an advocate in King George V (Dent and Whittaker 2002: 89): *Jerusalem*'s subsequent use in the BBC's second *Empire* Day Royal Command Concert broadcast in 1938 (Richards 2001: 172) and its presence as a regular feature of the BBC's *Last Night of the Proms* comprise the most resonant examples of what Crocco describes as an erroneous perception of Blake's work as that of an imperialist in the service of the British Empire (Crocco 2014: 184, 185).

On the other hand, Mark Stewart's version of *Jerusalem* (Stewart and MAFFIA 1983) uses post-colonial, Jamaican dub process, and English post-punk performance technique to fracture and distort a recording of Elgar's orchestration of *Jerusalem,* through which Stewart disempowers the affirmation of empire present in Elgar's composition. Stewart's fragmented, reversed reading of the stanzas of Blake's poem creates a shattered figuration of a broken, post-imperial Britain, a sense of 'England's green and pleasant lands turned upside down' (Whitson and Whittaker 2013: 86). Stewart's version of *Jerusalem* thus uses an imperialist rendition of Blake's poem to restore Blake's intent to its context of anti-imperial dissent.

Silence I: Salim Joubran, *Hatikvah,* Israel, America

The function of music in the affirmation of empire is twofold: to sonify the aspirations and presence of imperialism, and to silence, if not subsume into its sonic presence, the dissenting sonic voices of the conquered. However, in the context of the mutuality of support between Israel and the post-Second World War realisation of George Washington's nascent, infant American imperialism, *Hatikvah*

(Imber 1878), the national anthem of Israel, performs the silencing function of imperialist music, against which the performance of silence can sometimes function as an articulation of dissent.

Such was the case in the refusal of the Israel Supreme Court's sole Arab judge, Salim Joubran, to sing *Hatikvah* with his colleagues in a public event marking the retirement of Supreme Court chief justice Dorit Beinisch. Joubran's silence signalled a reversal of the relation of the song to silence.

Hatikvah had, in its performance in 1945 by survivors of the Bergen-Belsen concentration camp on the day of the Allied liberation (BBC 1945) rendered, through sound, the failure of the Nazis to force an absolute silence on Jewish presence: *Hatikvah*, in this context, functioned in opposition to silence.

In 2004 *Hatikvah* was made the national anthem of the State of Israel. In this new context the song exists both as that which historically functioned against silence, and as that which also performs an advocacy of silence, that of a vocal Arab subjectivity in the expression of Israeli national presence. Here is the 'essential access' (Fein 2012) prohibited by the song's lyrics: 'As long as Jewish spirit/Yearns deep in the heart/With eyes turned East/Looking towards Zion/Our hope is not yet lost/The hope of two millennia/To be a free people in our land/The land of Zion and Jerusalem' (Imber 1787).

By making present a Palestinian silence in the song's performance, and thus performing a silence in the song which makes of the song a song of silence, a silent *Hatikvah*, Joubran extended *Hatikvah*'s historical opposition to silence to the very Palestinians whom the song, in its function as a national anthem, renders silent. By means of silence, Joubral's performance thus extends into the twenty-first century the intent of the 1945 Belsen survivors' performance: to affirm the presence of a people against attempts at their annihilation.

But Joubran's silence also serves as a counterpoint to a second historical silence, one which brings us back to the question of silence and its role in imperialism. Chomsky (1989; 1999/1983) identifies a silence in US political and media culture toward Israel's territorial expansion and the corresponding conduct of the Israeli military toward Palestinians. This silence, Chomsky writes, comprises 'an apologetics about the crimes of one's own state and its clients' (Chomsky 1989: 282). Its effect, in Israel, is to make possible further violence. In the US this silence serves to obscure from the American public, whose taxes ensure the continuity of this violence, both its scale and its cost (Chomsky 1989: 293; 1999/1983: 49).

Silence II: Victor Jara: Pinochet, Memory, Oblivion

In the case of Chilean music against the agencies of US imperialism, the secrecy with which the latter secured its interests in Chile, inclusive of its facilitating the overthrow of the democratically elected Allende Government, documented in Kornbuh (2004) and Dinges (2004), functioned as the modality through which the Chilean military dictatorship of Augusto Pinochet exerted its powers of silence.

In the Pinochet regime's murder of musician and theatre director Victor Jara, and its imprisonment and enforced exile of musicians and poets (e.g. Inti Illimani, Angel Parras, Patricio Manns, and Quilapayún, whose work comprised both univocal support for Allende and the Pan-Latin Americanism of the Nueva Cancion movement), there was an investment in secrecy which was concomitant with that of the White House.

However, whereas the White House articulated this investment through the labyrinthine paper trail of transmissions documented in *The Pinochet File: A Declassified Dossier on Atrocity and Accountability* (Kornbuh 2004), Pinochet expressed his investment through his antipathy to and subsequent censure of Nueva Cancion artists. This investment was characterised by Pinochet's attempts at secreting the sound of the Nueva Cancion's opposition in the noise of torture and the silence of death. The legacy of the relation between the Chilean expression of US imperialism and dissenting Chilean music is thus a microcosm of the broader legacy of American imperialism in Chile.

This legacy is one of silence, identified as such by exiled musician Horacio Salinas, one of the founders of Inti Illimani. Salinas (in Manz 1999: 4) located this silence in the collective memory of the half-a-million Chileans who experienced torture by the Pinochet regime. For Salinas, the memory of this mass trauma had yet to undergo catharsis, and was present only in the silence of memory. The problem for musicians in post-fascist Chile was thus one of speaking to and allowing for the expression of this trauma, which remained as silence precisely because it was too painful to exist as sound (ibid.).

With no small irony, Salinas noted that these reflections occurred to him during a 1999 performance by Inti Illimani at the National Stadium of Chile on the group's return from exile. Pinochet had used the stadium as a mass detention centre after his military coup. Jose Paredes Marquez, the first soldier to be charged with Jara's assassination, confirmed in 2009 that the stadium was the site of Jara's murder.

Paredes's confession to his role in Jara's death in 2009 (Morales 2009) marked the beginning of the end of Chilean military secrecy surrounding Jara's death. The indictment in 2012 of a further eight soldiers might be viewed as the beginning of the catharsis Salinas had hoped for ten years earlier, if not the restoration to justice of sound, that of the music and ideals of Jara and the Nueva Cancion movement.

These indictments certainly mark the triumph of memory, that of music over forgetting, in the rescue of Jara and the Nueva Cancion from what journalist Ramona Wadi called Pinochet's 'hope for oblivion' (Wadi 2013: 4), a term which might also describe the implementation of forgetting through the silencing of musicians.

Pham Tuyên: Borderless Music

Music against imperialism crosses national borders designated by imperialism and articulates an affinity of struggle against oppression. The anti-imperialist song functions as a space of connection and solidarity via the valorisation of a people through their political leaders. For example, Ho Chi Minh, leader of the Viet Minh independence movement and architect of the victory of the North Vietnamese against both France and the US, was the figure through whom a unity of political identification was established between Chile and Vietnam, in Victor Jara's *The Right to Live in Peace – a Song of Comrade Ho Chi Minh* (1971).

The Plastic Ono Band's *Give Peace a Chance* (1969) functioned as a catalyst between American folk music and Vietnamese liberation music. Pham Tuyên, founder of the Vietnam National Academy of Music and one of Vietnam's preeminent composers, many of whose 600-plus songs voiced Vietnam's aspirations for independence during the country's defence against French and US incursions, recalled seeing American folk singer Pete Seeger lead a massed audience through a rendition of *Give Peace a Chance* on a television broadcast of the momentous anti-war event 'Moratorium to End the War' in Washington DC. In a 2008 interview, Tuyên described being so affected by the song and Seeger's performance that he wrote *Play Music for Our Dear American Friends!* (1972), and dedicated the song to Seeger (Norton and Kutschke 2013: 105).

This was no small compliment. Tuyên's songs made an indelible imprint on Vietnamese consciousness. His composition *Hanoi Dien Bien Phu in the Air* (1972) served as an aid to morale in the face of Hanoi's bombing by the US in December 1972.

The bombing, a protracted 12-day attempt aimed at making the Vietnamese submit, deepened their resolve. In a 2012 interview, Tuyên said the song was 'strong and resolute to remind people that the Vietnamese people were determined to win. …. The song echoed throughout the city despite the tense situation. Our people in the south said that Hanoi sang while fighting and the U.S would be defeated. And yes, the U.S had to retreat the following day' (Lan 2012: 2).

Tuyên's composition *If Only Uncle Ho was Here on the Day of Victory* (written, recorded, and broadcast on 28 April 1975 on a Voice of Vietnam newscast), marked the defeat of the US's South Vietnamese allies and the official cessation of the Vietnam War.

Burning Spear: Citation, *Slavery Days*

In music against imperialism citation functions as an aid against imperialism's annihilating forces of forgetting by which histories of resistance are erased from popular memory. Through citation, a song, a line in a song, becomes present in another song, in the voice of another singer, in the absence of its author; and the memory of resistance carried by music against imperialism thereby crosses the spatio-temporal borders of imperial demarcation.

For example, Jones (2005/1941: 41) recounts that former African-American slave Lucy Adams, 104 years old 'and unable to control her memory', would sing fragments of songs: 'Her favourite was one she said her grandfather had sung: '... Keep your lamp trimmed and burning, for your work is almost done'. By 1941, when Jones interviewed Adams, this fragment had comprised a popular gospel song, *Keep your Lamp Trimmed and Burning,* recorded by African-American evangelist William 'Blind Willie' Johnson (1929). Johnson's song and an earlier version, *Let Every Lamp be Burning Bright*, written by Euro-American hymnodist Franklin E. Belden and published in the songbook *The Seventh Day Adventist Hymn and Tune Book for use in Divine Worship*, in 1886, when Adams was in her 30s, may have been the song Adams recalled her grandfather singing.

Johnson's refrain, 'the work is almost done' (Johnson 1929), is given apocalyptic expression in a 1956 version of the song by Reverend Gary Davis. That Davis sings 'this whole world is almost done' serves as an example of the oblique song-writing strategy referenced in Brown (1953), by which the desire for the absolute end of the work of slaves and their descendants in Johnson's recording and the world of slavery and segregation in Davis's version are rendered implicitly.

On the other hand, the repetition and difference of Johnson's line in Jamaican vocal group (latterly a solo artist) Burning Spear's *Zion Higher* (1971) relocates 'heaven's journey', the metaphysical trajectory of Johnson's song, to the terrestrial planes of Africa:

> Awake, Zion I, awake
>> Awake and trim your lamp
>> for I want to go
>> to the land
>> where the milk and honey flow. (Burning Spear 1971)

Zion, in Spear's subsequent songs (e.g. *Red, Green and Gold* [1975]) functions as the interchangeable name of Africa. Spear's citation of Johnson's line, in *Zion Higher,* thus grounds the space of post-imperialism in the nonmetaphysical, historical-material world.

Burning Spear's oeuvre also designates the beginning, in African diasporic music against imperialism, of an explicit reference to slavery as a question of historical memory. Spear begins his song *Slavery Days* (1975b) with a question: 'Do you remember the days of slavery?' The plea (to the listener as much to himself) with which Spear ends, 'Try and remember, please remember', makes the song an injunction against forgetting the transatlantic trade on which British imperialism was founded and through which the US 'infant empire' was realised.

Burning Spear's sustained engagement with the legacies of imperialism (including his name, which is the English translation of Jomo, the Kikuyu forename of Mau Mau leader and first president of independent Kenya, Jomo Kenyatta) and present in his earliest recording, *Door Peeper* (1969), prefigures that of The Wailers' *Soul Rebels* (1970), Fela Kuti and the Africa 70 with Ginger Baker's *Why Black Man Dey Suffer* (1971), and Sonny Okosun's *Fire in Soweto* (1978). Okuseinde and Olubomehin (2011) suggest that the lingering euphoria of independence may have been a contributory factor in Kuti and Okuson's late, but nonetheless vital, engagement with imperialism's reverberations.

However, Burning Spear's citational namesake Jomo Kenyatta was instrumental in suppressing the legacy of the Mau Mau and its heroes (see Durrani 2006: 15), and this was a major contributory factor in the deferral of Kenya's engagement with its own role in the defeat of British imperialism. In comparison to the wealth of songs composed during the Mau Mau rebellion waged against the British between 1922 and 1963 (documented in Clough

M

[1998]; Durrani [2006]; Kinyatti [2009/2001]; Njogu and Maupeu [2007]; Pugliese [2007]), the number of similarly themed recordings made since colonialism is relatively low. Two examples are Wanjau with the University Orchestra's *The Late (Marehemu) J.M Kariuku Pt.1* (1975) and Jabali Afrika's *Dedan Kimathi* (2013).

The simultaneity of memory and its suppression contained in the name 'Burning Spear' thus suggests that the relation of music to imperialism may be one of contradiction, in which is present the co-existence of opposing, yet nonetheless productive, meanings.

The 1857 Revolt and the Indian People's Theatre Association: The Archive and the Preservation of Memory

The Indian Revolt of 1857 is regarded in Marx, Engels, and Joshi, as India's first national armed insurrection against British colonial rule. Despite its defeat by the British, it succeeded in creating a unity of purpose across India's ethnic, linguistic, and religious divides, and in developing affiliations in the international anti-imperialist struggle (Engels [1858]; Joshi [1994; 2014/1954; 2014/1957]; Marx [1857a, b, c, d]).

Joshi observes that while British documentation of the revolt is plentiful, there is no corresponding Indian record (Joshi 1994: ix). Joshi's anthology *1857 in Folk Songs* serves as a counter-historical document in whose songs the British imperial presence is named Farangi, 'the foreign usurper', and is the subject of an incendiary 'burning hatred' (xvi).

The book commemorates the revolt through songs from the key locations in which the revolt took place (Delhi and its neighbouring vicinity, Oudh, and Rajasthan), and through songs that honour key leaders of the revolt such as Laxmi Bai, the Rani of Jhansen, and Kunwar Singh. The nature of the imperial violence that characterised the revolt is also recalled in these songs. The following untitled passage on Bai documents the British lynching of Indians:

Fell the trees,
    Commanded the Rani of Jhansi
    Lest the Farangi hang

Our soldiers on them
[…]
So that, in the hot sun
They may have no shade. (quoted in Joshi 1994: 61)

The following verse, from *The Battle Of Gangi,* documents Singh's first insurgency and also the finality of Indian hostility toward British rule.

Fire no more shots, oh Baba Kunwar Singh
    The Farngis are routed
    Oh Rama
    The Firanji's are finished
    Oh Baba Kunwar Singh
    Fire no more shots! (quoted in Joshi 1994: 84)

The book thus functions as an archive of the revolt, comprising Indian, anti-imperialist expressions of the beginning of a new 'tradition' (Joshi 2014/1957: viii) of insurgency, of national, armed insurrection. That these antiimperialist expressions take place through songs and are restored to public memory as songs suggests that the book also functions as an archive of expressions of a tradition of Indian anti-imperialist music.

The songs can also be regarded as an archive of the memory of defeat, through which the memory of imperial violence can constitute a galvanising force. Joshi writes, 'when the modern nationalist movement emerged and began rallying the mass of the people during the 1920s, the memory of the 1857 terror was recalled to warn the Indian people to get ready to face the worst' (212).

There is an autobiographical resonance to Joshi's claim. In 1929 he joined the Communist Party of India, and in 1935 became its leader. Formed in 1925, the Party, and Joshi, were part of the nationalist movement he describes. The memory of the 1857 rebellion was thus borne by Joshi. The commemorative work of *1857 in Folk Songs* thus includes its author's political formation within the broad context of the emergence of India's anti-imperialist movement.

On the other hand, the book was intended to be part of an archive, initiated by Joshi, of the history of communism in India (Panikkar 1994: v). The archive has remained unfinished since Joshi's death in 1980. The role of culture within India's anti-imperialist struggle and its broad socialist project would have been an essential concern of such an archive. This role would have been

embodied by the culturally diverse work of the Indian People's Theatre Association (IPTA).

Richmond locates IPTA's beginning as 'a low key affiliate of the Anti Fascist Artists and Writers' Association of Calcutta' (Richmond 1973: 323). Chowdhury cites the Bengal cultural Renaissance movement of the nineteenth century as a predecessor (Chowdhury in Biswas 1978: 1). IPTA National Congress (2015: 1) places its development in the context of Indian anti-colonial cultural activism: the first Progressive Writer's Association Conference (1936), the formation of the Youth Cultural Institute in Calcutta (1940), and the People's Theatre in Bangalore (1941). Chowdhury describes IPTA's aim, before and after India's independence, as 'Socialist revolution. And to awaken the people, to make them aware for it' (Chowdhury in Biswas 1978: 5).

The founding of IPTA in 1943 as a response to the Bengal famine of that year is documented in Chakravortty (2014). IPTA grew from the work of the Bengal Cultural Squad, a mobile theatre organised by Binoy Roy (IPTA National Congress 2015: 1). The Bengal Cultural Squad toured India performing, feeding, and raising money for the famine victims, and drawing national attention to the famine. Significantly, the Squad also inspired the formation of similar mobile theatre and musical units (Chakravortty 2014: 30–31; IPTA National Congress 2015: 1).

The theatrical work that comprised the main aspect of IPTA's output is documented in Bathia (2004), Gupta (2010/2008), and Richmond (1973). Damodaran notes that the musical aspect of IPTA's work 'remains largely undocumented in any systematic manner' (Damodaran 2008: 1). Dewri's text on IPTA's musical work in Assam (Dewri 2012) corrects this state of affairs, as do the downloads of revolutionary Indian songs stored in Soumya Chattopadhyay's *Ganasangeet Archive* (2011), and Damodaran's text, 'Protest Through Music' (2008), in which the author identifies four genres and forms of practice descriptive of a definitive IPTA musical tradition:

1. The folk genre, in which folk tunes provide the basis for new compositions. Damodaran cites Hemanga Biswas and Nirmalendu Chowdhury,

Nibaran Pandit and Gurudas Pal as writers and performers whose work illustrates this genre (Damodaran 2008: 1).

2. The classical music-based genre, which emerged in Bombay and Hindustani, and in which Hindustani classical musical was used as the basis for protest songs. Damodaran cites Pandit Ravi Shankar and Jyotirindra Moitra as exemplars of this genre (ibid.). Shankar was also involved with IPTA's theatrical and cinematic productions; he composed music for IPTA's ballet Amar Bharat [Immortal India] (1946) (Lavezzoli 1996; Ray 2012), was the musical director for filmmaker Chetan Anand's Neecha Nagar (1945), and K.K Abass's film on the Bengal famine Dharti Ke Lal (1946) (Gupta 2010/2008).

3. The nationalist genre, whose songs Damodaran describes as exhortations to colonial revolt, was also rooted in the Indian classical tradition, and characterised by 'uplifting tunes, sung at high scales and tempos to the accompaniment of large orchestras using instruments like the sitar, veena, violin, tabla and the bugle' (Damodaran 2008: 3).

4. The trans-generic activity of translating and adapting songs composed within the Western harmonic tradition, and drawn from the international communist and anti-fascist movements, as a way of identifying with the international protest music culture and its exponents, such as Bertolt Brecht and Paul Robeson.

Damodaran writes of 'the direct use of Western tunes such as from Paul Robeson, the writing of anti-fascist ballads in Malayalam and Bengali on the lines of Brechtian war ballads', and also notes that 'Hemanga Biswas wrote songs about Paul Robeson and the Chinese Revolution which had western tunes; Bhupen Hazarika adapted Paul Robeson's Mississippi to talk about the Ganga' (3–4).

Regarding the composition of protest songs within the Western harmonic tradition, Damodaran credits composer Salil Chowdhury with transforming the prevailing style of composition and vocal performance in Indian music during the 1940s (3). Chowdhury's oeuvre is the subject of

The World of Salil Chowdhury, an archival website by Gautam Choudhury (1998), which features interviews, overviews, and an extensive discography of phonographic singles recorded by Chowdhury for the Megaphone record label between 1944/45 and 1991.

The dispersal of Chowdhury's songs followed the same route as IPTA's theatrical productions. Choudhury writes that 'with IPTA comrades [Salil] took his songs to the masses. They traveled through the villages and the cities and his songs became the voice of the masses' (Choudhury 1998: n.p.).

Evidence of the claim by Chowdhury (in Biswas 1978) and Choudhury (cited in Mujumdar 2012) that many of the songs composed by Chowdhury during the struggle for independence remain popular in peasant communities can be found in *Chetonaar Gaan* [Songs of Consciousness], an album, produced by Choudhury (Chowdhury 2011).

Mujumdar (2012: 1) describes the making of the album: Choudhury used his extensive knowledge of Chowdhury's music as the basis of a 12-year search for the composer's songs in villages where Chowdhury's former comrades still resided. At his request, the villagers sang the songs: Choudhury recorded their performances and used them as the basis of re-recordings by IPTA singers. These were collected on the album.

As with *1857 in Songs, The World of Salil Chowdhury* was compelled by a concern that a significant cultural contribution to India's anti-imperial struggle would be lost to memory because of the absence in India of a culture of preservation (Choudhury in Mujumdar 2012: 1). Through Choudhury's archival work, Chowdhury's music is restored to Indian public culture, and the project of restoring India's anti-imperialist songs to memory, initiated by Joshi, is given a new expression in the twenty-first century.

Max Roach: Drum Culture

The anti-imperialist musician finds political fellowship and continuity through a listening informed by musical practice. This is the case with African-American jazz drummer, bandleader, and pedagogue Max Roach (1924–2007). With

trumpeter Dizzy Gillespie, saxophonist Charlie Parker, pianists Bud Powell and Thelonius Monk, and fellow percussionist Kenny Clarke, Roach was a pioneer of be bop, and thus an inventor of modern jazz.

Roach's commitment to anti-imperialism is embodied in percussion. His collaboration with vocalist and anti-imperialist collaborator Abbey Lincoln, *We Insist! Max Roach and Oscar Brown, Jr.'s Freedom Now Suite* (1960) expressed Roach's opposition to segregation in the US and South Africa. The album's artwork, comprising a photograph of African-Americans desegregating an American cafeteria, and the album's compositions (notably *Tears for Johannesburg, and Driva' Man*) offered its listeners parallels between apartheid and US segregation. Roach further developed these themes in *Percussion Bitter Suite* (1961).

Roach's explicit opposition to domestic and global expressions of US imperialism preceded subsequent work by jazz musicians. A key example is the quartet of albums composers Charlie Haden and Carla Bley collaboratively created as the Liberation Music Orchestra (Haden and Liberation Music Orchestra 1990, 2005; Liberation Music Orchestra 1969). The Orchestra's first and eponymously titled album was recorded in opposition to the Vietnam War (Haden in Goodman 2006: 4–5), commemorated the anti-Fascist Spanish Civil War, Che Guevara (*Song for Che*) (1969), and was dedicated to the anti-colonial movements of Mozambique and Angola (Goodman 2006: 8).

A second example is the work of Archie Shepp. Shepp's composition *Malcolm, Malcolm, Semper Malcolm* (1965) eulogised the slain Muslim internationalist; *Attica Blues* (1972) honoured George Jackson of the socialist organisation the Black Panther Party, who was slain in Attica prison in 1971. Roach's collaboration with Shepp, *Force: Sweet Mao-Suid Africa '76* (1976) was a product of a touring invitation by the Italian Communist Party, and commemorated the death of Mao Zedong, founder of the People's Republic of China, and the protests by the youth of Soweto against apartheid (Ho 2009: 124).

An anti-imperialist sensibility informed Roach's thinking about the political meaning of jazz: he considered it 'a democratic form … it means to listen, to respect, and harmonize together'

(Roach in Chénard 1978: 2). For Roach, jazz, understood as a dynamic, intergenerational musical process, was also antithetical to imperialism: 'Jazz is not an imperialistic way [of making music] where a conductor tells [you] that you are not doing it right. That is classical music. Jazz is fluid, and every generation has the opportunity to contribute something new (2).

The anti-imperialist thinking and practice of Roach, Shepp (in Kofsky 1983/1970: 20), and Haden (in Goodman 2006) runs counter to the use of jazz by the United States Information Service (USIA) and the Voice of America (VOA) during the Cold War. Willis Conover, the VOA's music consultant, describes this use: 'our music helps maintain contact with people already inclined to sympathise with the United States' (Conover in Kofsky [1983/1970: 109]. Kofsky describes the function of the USIA as supervising 'the dissemination of pro-U.S. and anti-socialist propaganda throughout the world' (110). Zolov (1999: 236–239) elaborates on this function.

When Roach listened to hip hop in 1985, two years prior to the emergence of Public Enemy, the genre's most politically confrontational and sonically dissonant group, he discerned in its sound a continuity with jazz, a radical capacity for invention from conditions of social and political disenfranchisement, for 'making something out of nothing ... which affected the whole world' (Roach in Owen 1988b: 60).

In the relentless percussive force of L.L. Cool J's album *Radio* (1985), Roach heard a martial sensibility which he associated with the transformative momentum of the civil rights movement: 'the sound was very militant to me because it was like marching, an army on the move. We lost Malcolm, we lost King and they thought they had blotted out everybody. But all of a sudden this new art form arises and the militancy is still there in the music' (72).

Bob Dylan, Public Enemy, Tupac Shakur, and the Black Panthers: Revolution and Reciprocity

An affective reciprocity between anti-imperial activism and popular music, which begins in the music of Bob Dylan and returns in hip hop through the music of Public Enemy and Tupac Shakur, illustrates an intertwining of personal and political experience in the relation between music and anti-imperialism.

Seale writes of members of the Black Panther Party (BPP) listening to Dylan's music over the course of three days while preparing their newspaper (Seale 1991/1971: 183). In a photograph by Steven Shames taken in the home of Black Panther co-founder Huey P Newton, Newton is about to play, or has already played, the album whose sleeve he casually brandishes as display and protection, between his body and the world: Bob Dylan's *Highway 61 Revisited* (1965) (Miss Rosen 2010: 3; Shames 1967).

Shames's photograph shows Dylan's music formed a part of the domestic space of the Panthers' political project, in the intimacy of which a consonance of his music with their view of the world took place. Seale describes Newton's detailed listening to one of the songs: *Ballad of a Thin Man* (Dylan 1965). In the song's narrative of voyeurism and horror, power and abjection, Newton found an intimate description of the relations between America's black working poor and its white middles classes (Seale 1991 [1970]: 183–184).

The Panthers' project of politicising the black poor, including the incarcerated, gave the organisation common ground with the work of prison activist George Jackson. A self-educated Marxist theoretician of imperialism's global, domestic, penal expressions, Jackson was serving a life sentence for stealing $60 while a teenager.

Jackson shared the Panthers' view of the US as a colonising country whose colonised subjects were African Americans, one of whose tasks was nonetheless to create an international anti-imperialist network through which revolution could take place (Jackson 1994/1970: 264). Newton (2009/1973) had offered to send Black Panther members to join the North Vietnamese in their war against the US; BPP co-founder Elaine Brown outlines the Panthers' affiliations with anti-colonial movements in Palestine, South Africa, Zimbabwe, Mozambique, and China (Brown 1990: xvii–xix).

In 1970 Newton invited Jackson to join the Black Panthers and integrate his prison activism

M

with theirs (Jackson in Wald 1993/1971: 7). The Panthers were by 1970 regarded as 'the most active and dangerous black extremist group in the United States' (FBI in Wolf 2001: 2). Their destruction is identified in Wolf (2001) as the chief objective of the FBI between 1968 and 1971: the Party was infiltrated; key members were hounded, harassed, and killed in a succession of attacks by the police. In August Jackson was shot and killed by guards during a riot at San Quentin prison.

In *George Jackson*, recorded in August that year, Dylan recounts Jackson's life, his death. Jackson was feared, Dylan tells us, because he was indomitable:

> He wouldn't take shit from no one
> He wouldn't bow down or kneel
> [...]
> They [the prison authorities] were frightened of his power
> They were scared of his love. (Dylan 1971)

Jackson had his own thoughts about music and death. He wrote, in a letter to attorney at law Fay Spender, on 17 April 1970, that he did not 'want to die and leave a few sad songs as [his] only monument' (Jackson 1994/1970: 266). The folk lineages of dissenting music through which Dylan voiced his empathy with Jackson and, earlier, the Civil Rights movement (Dylan 1963, 1964), and the lineages of politicised rap most forcefully defined within the genre by Public Enemy (1987, 1988, 1990a, b) can be figuratively regarded as guarantors of Jackson's wish.

So too can *The 2006 George Jackson Tribute Mixtape* (Ball 2006), compiled by Jared Ball, in which tracks by US MCs Dead Prez, Mos Def, RZA, Ghostface Killa, and Immortal Technique are interspersed with readings from Jackson's *Blood in My Eye* (1990/1972) and *Soledad Brother* (1994/1970). The MCs on Ball's mixtape are representative of a strand of politicised rap developed by Public Enemy, who are also featured. In the example of *The 2006 George Jackson Tribute Mixtape* the writing of Jackson the anti-imperialist functions as a discontinuous audio narrative whose vocal performance, assemblage, and inter-cutting renders Jackson's writing a component part of a musical process, to be consumed within the experience of listening to music. Jackson's writing thus functions as a musical guarantor of its writer's wish.

However, Dylan's, Public Enemy's, and Tupac Shakur's lineages of political dissent converge not in Jackson, but in Shames' image of Newton, in whose hands and hearing Dylan is present as phonographic music (in Seale 1991/1970) and photographic image (in Shames 1967), and whose body is recalled to music in the moment of his murder in 1989, 'from the hand of a nigger that pulled the trigger' (Public Enemy 1990b), in Public Enemy's *Welcome to the Terrordome* (1990b), and recalled again in Tupac Shakur's posthumously released *Changes* (1998):

> It's time to fight back
> That's what Huey said
> Two shots in the dark
> Now Huey's dead.

Public Enemy vocalist Chuck D, in Reynolds described liaising with the Panthers in order to 'spark a revival' (Reynolds 1987: 14), and in *Party For Your Right To Fight*, called for the Panther's return. Shakur, in *Changes,* represented a calling forth into the present, through 'two shots in the dark', the violent passing of the time in which the time for fighting back had been announced, and the end of the possibility of the presence in the present of the past in which the object of such retaliation was international socialist transformation, in Seale (1991/1970), Jackson (1990/1972, 1994/1970), Newton (2009/1973):

> That's just the way it is
> Things'll never be the same
> *That's just the way it is*. (Shakur 1998)

In the absence of the revolution advocated by the Panthers, the possibilities for social transformation Shakur suggests in *Changes* mark a shift from macropolitical to micropolitical change which nonetheless reflects the politicising of caring embodied in the Panthers' 1968 'Serve the People' activities, a key example of which was their national free breakfast project for the children of welfare recipients:

> Let's change the way we eat
> Let's change the way we live
> And let's change the way we treat each other.
> (Shakur 1998)

On the other hand, in *Wordz of Wisdom* (1991), Shakur uses the phrase, 'America's nightmare' to locate the past of the Panthers in the unconscious of the Euro-American imagination in its dreaming and waking states. Shakur achieves this by personifying a murderous, mnemonic dream figure, a 'nightmare' of the memory of slavery through which the rapper declares to the US that 'Just as you rose you will fall/By my hands'.

Shakur repeats the phrase to name and cohere a continuum of politicised MCs who are his contemporaries:

> Ice Cube and Da Lench Mob ... America's Nightmare
>> Above The Law ... America's Nightmare,
>> Paris ... America's Nightmare,
>> Public Enemy ... America's Nightmare,
>> KRS-*One* ... *America's Nightmare*

and political activists who are among the last physical embodiments of the Black Panthers, are bearers of the punitive force of the US government, and are also members of Shakur's family.

Shakur's godfather, Elmer 'Geronimo ji Jaga' Pratt, the Panthers' minister of defence, was sentenced to 27 years for murder under the FBI's illegal COunter INTELligence PROgramme (COINTELPRO) (Kleffner 1993; Wolf 2001). Pratt's conviction was overturned in 1997. Shakur's stepfather, Mutulu Shakur, was sentenced to 60 years for bank robbery and aiding the escape of Tupac's aunt, Assata Shakur.

Assata Shakur was sentenced to life imprisonment for the murder of a state trooper. Shakur escaped in 1979 and was granted asylum in Cuba. In 2013 she was placed on the FBI's Most Wanted Terrorist List. A \$2 m reward was issued for information leading to her capture (Walker 2013). Lawyer Ron Kuby suggested a context for Shakur's indictment that could also be applied to Mutulu Shakur and Elmer Pratt: 'Assata Shakur was the embodiment of the Black Panther Party ... at a time when there was a low intensity war between black radicals and the U.S.' (Kuby in Jones 2013: 1).

In his later work, the autobiographical component of Shakur's nightmare continuum grew to include his father, Billy Garland, in *Papaz Song* (1993), and his mother, Afeni Shakur, in *Dear Mama* (1995). Garland and Shakur were both Panthers: Shakur was incarcerated while pregnant with Tupac (Garland in George 1998; Shakur in Shakur 1995).

Shakur thus uses autobiographical writing to create an intimacy between politicised hip hop and the outlawed embodiments of the Panthers' project. Hip hop, through Shakur's early work, extends across genre and time the reciprocal relation between popular music and anti-imperialist activism articulated between Newton, Seale, Dylan, and Jackson, while also foregrounding the role of a lived experience within that reciprocity.

Hip Hop Revolución: Organisation, Pedagogy, and Practice

Music against imperialism comprises a multifaceted cultural activity that counters the prevailing forms imperialism's presence might assume in the absence of direct of indirect imperial domination. The practice, organisational and pedagogical work of Venezuela's socialist collective Hip Hop Revolución embodies this description.

US attempts to overthrow Venezuela's United Socialist Party, since its election in 1999, and its failure to achieve its intent are documented in Golinger (2007/2006) and Petras (2013). In Golinger (2010), US State Department documents declassified under the Freedom of Information Act show that between 2005 and 2007 the US State Department invested \$40 m in three American agencies, the Pan American Development Foundation (PADF), Freedom House, and the US Agency for International Development (USAID) (1).

The strategy of the funding was to target Venezuela's 18–25-year olds: its students, particularly students of journalism, and users of online and community media. The strategy would thus have sought to solicit the support of young Venezuelans of the age of Jorney Madriz, the rapper also known as Master. Madriz was 15 when Chavez was elected. He lived in low-income housing in one of Caracas' most deprived areas. 'I didn't care that he had won. Why? Venezuelan youth, myself included, lived in total

political apathy' (Madriz in Navarette 2015: 1) 'But I did pay attention when he was overthrown in 2002'. (Madriz in Terra 2012: 1).

Madriz was one of a generation politicised through its role in the popular revolt by which the US-backed opposition's attempted coup against Chavez was thwarted and Chavez returned to office, albeit not to the effect the US government's $40 million investment in coercing the hearts and mind of Venezuela's youth had been intended, particularly considering Madriz was a fan of America's biggest popular cultural export, hip hop. On the contrary, Madriz founded the collective Hip Hop Revolución in 2003 with Gustavo Borges.

In August 2005 the collective organised the First International Hip Hop Summit in support of Chavez, with three open-air concerts featuring over 100 hip-hop artists as part of the 16th World Youth Festival in Caracas. The size of the event suggests that the State Department's $40 million had missed a significant sector of its demographic: 17,000 participants from 144 countries attended the festival. The size and scale of the Hip Hop Summit suggests that Hip Hop Revolución's affirmation of socialism possessed an international appeal, as well as evidencing hip hop as a popular genre through which the ideas of a socialist revolution could be voiced and disseminated within and across national borders.

In January 2010, Hip Hop Revolución organised the first national conference of activists from the Venezuelan hip hop movement. The conference included political education, music production workshops, film screenings, and discussions for the founding of a national curriculum of urban art schools, Popular Schools for the Arts and Urban Traditions (EPATU), a joint project of Hip Hop Revolución and Venezuela's Ministry of Communes (Hip Hop Revolución 2010).

By 2011 there were 31 EPATU schools located across the most deprived areas of Venezuela. EPATU's curriculum comprises musical and political education; workshops and discussions include subjects such as racism, consumerism, and cultural imperialism, as well as the four disciplines of hip hop: breakdancing, rapping, graffiti, and DJing (Cassell 2011: para 15). Graduates are encouraged

to become teachers to the next group of students (McIntyre and Navarette 2012).

In this regard, Hip Hop Revolución's EPATU project constitutes a contemporary Latin American expression of an African-American cultural continuum of the intergenerational pedagogy Roach (in Owen 1988b) associates with the democratic aspect of jazz practice. This is one way in which the collective's work offers an example of antiimperialist music practice which forms a continuum extending across time and space through black musical genres, and which is both cultural and political.

Hip Hop Revolución's identification with Hugo Chavez and the broad project of socialism in Latin America (Navarette 2012) can, for example, be said to locate the collective in a Venezuelan political continuum of anti-imperialist activism whose forms, in Petras (2010) include the popular mass movements, guerrilla organisations, and trade unions of the 1960s.

These national expressions of dissent cohere with their contemporaneous African-American expressions through the collective's identification with the work of the BPP and Malcolm X: 'Hip Hop Nacido del seno de movimiento como Malcolm X y Panteras Negras' (Hip Hop Revolución 2010): the BPP's opposition to imperialism is documented in the writing of two of its key figures: George Jackson, in *Soledad Brother – the Prison Letters of George Jackson* (1994/1970), and Bobby Seale, BPP founder and national organiser, in *Seize the Time: The Story of the Black Panther Party and Huey P. Newton* (1991/1970).

Through their identification with the Black Panthers, Hip Hop Revolución's musical, pedagogic, and organisational activities can be viewed as a project in which two aspects of the politically engaged anti-imperialist sensibility present in Roach, Shepp, Haden, and Bley is condensed. Firstly, the militancy Roach accorded those killed or 'blotted out' during the African-American political struggle of the 1960s ('King . . . *Malcolm X* . . . [and] *everybody'* [Roach in Owen 1988b: 73]). Secondly, the return of this militancy, present as composition and its performance, within hip hop ('the militancy is still there *in* the music' [Roach in Owen 1988: 73]; my italics).

Through the figuration of militancy that conjoins Roach and Hip Hop Revolución, the ambitions of the dead can be said to return as an enervating musical force, albeit with the critical caveat that this reanimated presence of the dead as music is also a reanimation of failure: Hip Hop Revolución's work is directed at consolidating a socialist revolution, which unlike the Black Panthers, had won a substantial victory against US imperialism.

Consequently, the sense of loss that followed the murders of King, Malcolm X, and members of the Black Panthers, and which informed the recordings by Shepp, Haden, and Bley, and the subsequent sense of loss articulated in the enraged, retrospective evocation of these figures in African-American music, has yet to take place in Venezuela's revolution, and may not take place, should the Venezuelan revolution prevail.

This sense of loss is thus absent from the following examples of Venezuelan revolutionary rap: *Revolution* (Desde Guaraira 2009), *EPATU (1 Tema)* (Master, MC Arcades 2010), *Hijo de Lobo Caza* (Arte y Esencia 2012), *Patriotas (Agents of Change Remix) (Área 23 2012), Hip Hop Revolución: The Mixtape Volume One* (Various 2014), *Planetario el himno de la Revolución* (Muchocumo Official 2015).

However, the multivalent nature of America's ongoing attempts to destroy Venezuela's government, through external agencies and internal tensions (Ciccariello-Maher 2012), which Robinson, in Polychroniou (2010), describes as a 'war of attrition', suggests that it is precisely the potential presence of such a loss that informs the force with which these recordings affirm Venezuela's revolution.

USAID's covert deployment of Venezuelan youth to foment opposition toward the Cuban government suggests that the US views Hip Hop Revolución's indigenous audience as a possible agency of this loss. USAID's deployment began in 2008 but was not made public until 2014 (Bercovitch 2014): USAID also attempted to train anti-Castro rappers Los Aldeanos to become leaders of a movement for the overthrow of the Cuban government (Weaver 2014).

A Musical Intifada: Palestine in Electronica and Hip Hop

The support of musicians within the electronic and hip hop genres for the people of Palestine can be understood as an opposition to what Bashir (2007) describes as a geometrical relation of violence between US imperial interests and Israeli colonial interests which functions to sustain the economic interests of the former, and the territorial interests of the latter:

> U.S. support reinforces Israeli colonialism and occupation, which bolsters Israeli militarization of state and society, which generates new ideological and political justifications and breeds new religious fanaticisms, leading to further indigenous resistance and to more U.S. interventions in the region. A cycle of violence if ever there was one, ultimately determined by U.S. imperialism. (1)

Imperial America's determining role in the maintenance of Israeli colonialism includes the use within Israel of hip hop. One example, in Billet (2013), is a collaboration between Taglit Birthright, an organisation which sponsors heritage trips to Israel for young Jews in the US, and Artists 4 Israel, the aim of which is to arrange 'hip hop tours of Israel' for Israeli Zionist fans of hip hop (1). For Billet, the entrenchment of two kinds of colonialism is at work in this collaboration, that of Palestine and hip hop.

Billet also notes a contradiction in this use of hip hop, '[a] music and style that gestated in reaction to the wilful neglect and apartheid treatment of African-Americs and people of colour' to make popular 'the image of an apartheid regime among young people'. Importantly, Billet also observes that Taglit-Birthright and Artists 4 Israel's hip hop tours serve to overshadow Israel's indigenous Palestinian hip hop culture (1).

A second example is the placing of Israeli hip hop in the service of Zionism: Mumford cites the mobilising of homicidal anti-Palestinian sentiment in Tel Aviv by Israeli Zionist rapper Shadow, and the holocaustic demand by rapper Subliminal to '"burn the prisons" housing Palestinians and "destroy [the Palestinian city of] Jenin"' in the aftermath of the killing of an Israeli soldier by a

M

Palestinian man (Subliminal in Mumford 2014: 1). This service also includes the use of hip hop as a vehicle for the dissemination of Zionism: British Jewish rapper Antithesis dedicates his first video single *I'm a Zionist* (2010) to Theodore Herzl, the founder of Jewish Zionism's colonial project (Herzl 1988/1896).

Rap that voices support for Palestinian selfdetermination can be understood as an anti-imperialist and anti-colonial musical force which seeks to break the circular relation of violence kept in place through the interdependency of colonial Israel and imperial America.

However, while Palestinian hip hop in particular has an indigenous, Arab tradition of dissenting music, the history of which is documented in Kanaaneh et al.'s *Palestinian Music and Song: Expression and Resistance since 1900* (2014), and whose proponents, in Flow Motion's *promised lands* (2008–2010) include Mahmoud Salim al-Hout, Fairuz, Said Al Muzayin, Said Darwish, and Marcel Khalife. The identification with Palestine expressed by the broader rap community has a precedent in the recordings of British electronic musician Muslimgauze.

Within the many genres that comprise Euro-American and African-American electronic popular music, Muslimgauze's oeuvre is singular because it coheres around a single theme, that of Palestine and its liberation, through which he integrates an empathy with Middle Eastern politics and Arab history and culture.

Muslimgauze's music is instrumental. He communicated these themes through his album artwork, and elaborated on them through his album and composition titles. These include: 'Shadow of the West', in *The Rape of Palestine* (1988), 'Muslims of China', in *United States of Islam* (1991), 'Zion Poison', in *Vote Hezbollah* (1993), 'Yasser Arafat's Radio', in *Hamas Arc* (1993), 'Anti Arab Media Censor', in *Fatah Guerilla* (1996), 'Thuggee', in *Return of Black September* (1996), 'Strap Sticks of Dynamite Around Her Body', in *Vampire of Tehran* (1998), 'Every Grain of Palestinian Sand', in *Mullah Said* (1998), 'Zion Under Izlamic Law', in *Baghdad* (2000), 'Veiled Sisters Remix', in *Veiled Sisters Remix* (2002),' Refugee', in *No Human Rights for Arabs in Israel*

(2004), 'Hamas Internet, Gaza', in *Ingaza* (2006), 'Find Yugoslav Butcher of Muslims', in *Beirut Transfer* (2011), and 'All I Have is Sand', in *Al Jar Zia Audio* (2013).

Political solidarity is the driving force of his music: 'Without the politics, the music would not exist. The political fact is the starting point, from this I am pushed into a musical idea' (Muslimgauze in Malonee 1998: 1), Muslimgauze located the beginning of his solidarity with Palestine in the Israeli invasion of Lebanon in 1982 (Musilmgauze in Schefel 1998: 2). He thereafter refused to perform in Israel, telling an interviewer in 1998: 'I would never visit any occupied land, when Palestine is free, I would like to visit then' (1). Muslimgauze viewed his boycott of Israel in a prescriptive light, feeling that 'Others shouldn't [visit Israel]' (Muslimgauze in Urselli-Scarerer n.d.: 2). An early stirring of the imperatives of the Boycott, Disinvestment, and Sanctions movement can thus be detected in the thinking that informed Muslimgauze's music.

Muslimgauze's identification with Palestine offers a precedent for musicians who have worked within the genres that comprise electronic popular music and have affirmed the necessity of the Palestinian struggle. Brian Eno, rock music producer and founding figure of ambient electronic music, is a significant example. In a 2014 editorial titled 'Gaza and the Loss of Civilisation', published on the website of musician David Byrne, Eno expressed his outrage and confusion at what he described as a 'horrible one-sided colonialist war' (Eno 2014a: 1). That year Eno also condemned the BBC for what he viewed as partiality toward Israelis in its news reporting on Israel, against which 'Palestinian lives [are regarded] as less valuable, less newsworthy [than the lives of Israelis]' (Eno 2014b:1).

Eno was also one of a number of public figures who participated in # *Gazanames,* an online video produced by Freedom 4 Palestine and Jewish Voices for Peace (2014). Rebecca Vilkomerson, executive director of Jewish Voice for Peace, stated that the aim of the video was to convey the idea that 'securing freedom and justice for Palestinians is the only pathway to a lasting peace' (Vilkomerson in Surasky 2014: 1).

Released in July 2014, the political backdrop to *# Gazanames* was Israel's 'Operation Protective Edge', a military offensive instigated by the Israeli government against the people of Gaza. *Al Jazeera* reported that, by August that year, the mortality rate had reached 1,951 (Al Jazeera 2014).

 # Gazanames is significant for a consideration of hip hop as a vehicle for Palestinian liberation because it features two of the genre's most influential protagonists: Chuck D, lead vocalist of Public Enemy; and DAM, who are widely regarded as Palestine's first politically outspoken rap group.

In the documentary *film Slingshot Hip Hop* (Salloum 2008), DAM lyricist Suhell Nafar cites Public Enemy's *Fear of a Black Planet* as a conceptual influence in a personal continuum that includes Edward Said, Mahmoud Darwish, Tupac Shakur, Nawal el-Sadawi, and Malcolm X, among others. Tamer Nafar remarks that 'In this country [Israel], there's a fear of an Arabic nation'. (Nafar in Saloum 2008). A biographical synopsis of the Palestinian rap quintet Katibe 5, featured on the website *Cultures of Resistance Network*, states that the group 'see their music as a continuation of Public Enemy's legacy'. In an extract from the documentary, *Cultures of Resistance* (Lee 2010b), Katibe 5 describe their music as rap for people who do not listen to rap: 'Rap is not the main goal; the main goal is the cause for which we are singing' (Katibe 5 in Lee 2015). British-born Palestinian MC Shadia Mansour names Public Enemy as a source of conceptual 'discipline [. . .] their form of resistance was intellectual, and they managed to speak in a universal language. Hip-hop was a shelter that became a community' (Mansour 2011b: 1).

The community Mansour describes includes: socialist Palestinian/Jordanian group Torabyeh's *Ghorbah* (2012a), and their album *Mixtape Volume One* (2012b); Katibe 5's album *Ahla fik bil moukhayamat (Welcome to the Camps)* (2008); Ramallah Underground's MP3 releases, *From the Cave* (2007a), *Nateejeh bala shughol* (2007b), *Qararat* (2008), *Sijen ib Sijen (Prison Within a Prison)* (2011), their collaborations with DJ Lethal Skillz, Qararat (2008), and Kronos Quartet *Tashweesh (Interference)* (Kronos Quartet and Ramallah Underground 2009), group

cofounder Boikutt's *Letter From Boikutt* (2007) and *Hayawan Nateq* (2013), the E.P. of fellow co-founder Asifeh, a.k.a. Stormtrap, *Iradeh (Will)* (2012), and Asifeh Stormtrap's *Fi Hadal Habs* (2012).

Politicised indigenous Palestinian hip hop is nonetheless exemplified by DAM. Essential moments in the group's discography include DAM's first politically themed single *Posheem Hapim me Peshaa* (*Innocent Criminals*) (2008b). The track was compelled by the Israeli response to the second Intifada, in which the Israeli Defence Force killed over 1,000 Palestinians.

Also essential are DAM's: collaborations with Shadia Mansour *I Want Peace* (Jreiri and Mansour 2008/2007) and *They All Have Tanks* (2008); DAM's albums, *Ihdaa' – Dedication* (2006b) and *Dabke on the Moon* (2012); as well as their six tracks which, in addition to contributions from We7, PR, Mahmoud Shalabi, Arapayat, Abeer Alzinati, Shadia Mansour, and Sameh 'SAZ' Zakout, comprise the soundtrack album *Music from the Documentary Film Slingshot Hip Hop,* and include 'Born Here', 'Who is the Terrorist?' (2008a) and 'Freedom For My Sisters' (2008b).

Palestinian hip hop thus sonifies a politically informed cultural riposte to the multivalent privations and the forms of discrimination and militarised violence through which the State of Israel seeks to render its Arab population politically, economically, spatially, and culturally void of presence. In *Cultures of Resistance*, Mansour states that she regards Arab hip hop as a sonic intifada, 'an uprising in music' (Mansour in Lee 2010a).

Essential moments in Mansour's discography include *Assalamu Alaikum (Peace Be Unto You)* (2011a) and *Sho Eli Saar* (2013). The collaborative nature of Mansour's music's suggests that her musical intifada might also constitute a dissemination, a movement of an Arabic diaspora, determined as much by an immersion in hip hop as by migrant histories of exile and displacement. In Mansour's work there are collaborations with: Chilean Palestinian MC Ana Tijoux (*Somos Sur* [2014]); Iraqi-Canadian MC The Narcicyst (*Hamdulilah [Praise God]* and *Gaza Remix* (2009a; 2009b), M1 of U.S rap duo Dead Prez

M

(Al Lufiyyeh Arabeyyeh [*The Kufiyeh is Arab*] [2010]); Lebanese producer DJ Lethal Skillz (*Language of Peace*) (DJ Lethal Skillz and Mansour 2013); and Syrian-American MC Omar Effendum (*We Have to Change* [2013]).

Mansour's musical activity has a pedagogic and fundraising function which strikes a political contrast to Artists 4 Israel and aglit-Birthright's deployment of hip hop to further Israeli apartheid, as Billet (2013) observes. Mansour's pedagogic activism takes place through her work with Existence is Resistance, an organisation that organises hip hop tours in Occupied Palestinian Territories to enlighten hip hop fans about Palestine and the conditions against which the emergence of Palestinian hip hop has taken place.

British-Iraqi Lowkey, with whom Mansour collaborates, is also an exponent of Existence is Resistance's work. For Lowkey, hip hop is a means of establishing Palestinian presence against Israeli attempts at diminishment: hip hop, Lowkey says, is '[a] way of saying "I am here and I demand to be recognised"' (Lowkey in Lee 2010a).

Mansour and DAM collaborated with Lowkey on the two-part single 'Long Live Palestine Part 1' (Lowkey 2009) and 'Long Live Palestine Part 2' (Lowkey et al. 2009). The former is a Lowkey composition; the latter features Mansour, Lebanese-Syrian MC Eslam Jawwad, Iranian MC Hichkas, DAM's Mahmoud Jreiri and Tamer Naffar, British-Iranian MC Reveal, The Narcicyst, and African-Caucasian Muslim MC Hasan Salaam, a fragment of whose verse reads:

> There's no such thing as the Middle East
>   Brother they deceiving you
>   No matter where you stand there's always
>   something to the east of you
>   So whether it's Mossad or the FBI policing
>   you
>   It's all one struggle 'til the final breath is
>   leavin' you. (Salaam in Lowkey et al. 2009)

Salaam's verse illustrates what O'Keefe (2014) describes as a salutary effect of Arab hip hop's diasporic dissemination within the global hip hop community: 'Revolutionary rappers throughout the Middle East and the world . . . are associating their fights against their own societies' social

injustices with the Palestinian cause – a process that Palestinian hip-hop artists encourage and amplify'.

However, read with O'Keefe in mind, two lines from Tamer Naffar's verse reverse O'Keefe's observation, and show the DAM MC offering the listener a suggestion of comparisons between the struggles of Palestine and those of other displaced indigenes, and thereby articulating the interconnectedness and deathless significance of anti-imperialist struggle:

> They took my land from under my feet
>   And gave me only suffering. (Naffar in Lowkey et al. 2009)

Conclusion

This essay has elaborated on the role of musical forms and practices in the service of imperialism and the role of music in struggles against imperialism. It has displayed the interrelation between musical forms in forging unities of anti-imperialist struggle across place and time, and has also presented key examples of the contradictory nature of the relation between music and imperialism.

This elaboration has taken place through the interweaving of musical genres from the 18th to the twentieth century with themes of contradiction, dissent silence, the border, memory, citationality, listening, reciprocity, pedagogy, and uprising. It has conveyed, on the one hand, the uses of music as a subversive vehicle for the affirmation of presence within liberation movements and through individual agents of anti-imperialist transformation; and on the other, the use of music in the affirmation of imperial expansion.

Through this interweaving of themes and forms, historical agents, and moments, the essay has demonstrated music's subversive potential for functioning as a conveyor of opposing interests, and thus as a volatile cultural medium through which struggles for liberation can be articulated. However, it has also shown that music is a medium whose cultural and political use is as much the subject of contestation as the view of the world presented by music.

N

Nasser, Gamal Abd al- (1918–70)

Abdalla F. Hassan
Cairo, Egypt

Synonyms

Anti-colonial; Arab nationalism; Arab socialism; Aswan high dam; Baghdad pact; Black September; Censorship; Cold War politics; Free Officers; Hydroelectric power; Intelligence and Security Agencies; Islamism; Israel; Military junta; Monarchy; Muslim Brotherhood; Nasserism; Nationalisation; Non-Aligned Movement; Palestine; Pan-Arabism; Police state; Propaganda; Saudi Arabia; Six-Day War (1967); Soviet Union; Suez Canal; Syria; Tripartite Aggression (1956); United Arab Republic; United Nations; United States; War of Attrition; Yemen

Definition/Description

A conspiratorial group of military officers called the Free Officers, led by Gamal Abd al-Nasser, extended throughout the Egyptian military. In the evening of July 22, 1952, they effortlessly occupied key centres of power in Cairo and Alexandria, staging a quick and bloodless coup. Consolidating his rule, Nasser closed the opposition press and suppressing all forms of ideological dissent. He alone increasingly held the reigns of power through control of government ministries, the military, and security services.

Nasser's rhetoric promoted national independence and sovereignty for all Arab states. He sought to establish Egypt as the leader of the Arab nationalist movement. Immensely confident and charismatic, he spoke to the masses in other countries via the medium of radio, often over the heads of their leaders.

Nasser's crowning vision was the construction of the Aswan High Dam, which would vastly increase agricultural productivity and generate vast amounts of electricity that would power Egypt's industrial zenith. The High Dam was the highlight of Nasser's reign, shaping present-day Egypt.

Nasser tightened his grip on the Egyptian economy through sweeping changes: taking over industries and imposing state control over the whole of economic life. Nasser undertook measures to transform the economy and accelerated the pace of his socialist programs: education and health care were expanded; housing units for low-income families were built. Nonetheless, Nasser's social initiatives often faced problems in funding, staffing, and implementation. Security and intelligence services were dramatically expanded under Nasser's rule, pervasively used to keep tabs and silence dissent among factions of society. Having been a conspirator himself, Nasser was obsessed with preserving control.

Nasser adopted increasingly strident rhetoric toward Israel and its colonial designs, and called

for the liberation of Palestine. Egypt was taken by surprise when Israel struck in June 1967, disseminating in a coordinated air offensive the Egyptian air force on the ground within the first hours of the war. In 6 days, the Jewish state seized the Sinai Peninsula, Gaza, East Jerusalem, the West Bank, and Syria's Golan Heights. The outcome of the war was not only a military failure; it was a failure of the established political and social order.

The 1967 Six-Day War became a watershed as Nasser's Pan-Arabism began losing currency, seen as an illusion of the Egyptian leader's power or a ploy to seduce the masses. Islamism in its various forms would become a dominant force against occupation and authoritarianism in the Middle East for decades to come.

A conspiratorial group of young military officers called the Free Officers, led by Gamal Abd al-Nasser (Gamal Abdel Nasser), a young army officer born in 1918 in the coastal city of Alexandria and the son of a postal clerk, coalesced in the aftermath of the 1948 war that witnessed the creation and expansion of the state of Israel. The network of Free Officers' cells extended throughout the military services and excelled in planning, organisation, and timing. In the evening of 22 July 1952 they effortlessly occupied key centres of power in Cairo and Alexandria, beginning with the army headquarters and broadcast outlets, thereby staging a quick and bloodless coup. By the next morning, the Free Officers were in charge. The seeds of social change had been in the making. A huge polarisation of wealth existed. Many Egyptians lived in poverty as wealthy landlords controlled huge plots of arable land. Power was shared between the British occupiers, the monarch, and the Egyptian elite. Economic industrialisation progressed at a painfully slow pace, and dissatisfaction with an inept monarchy was growing. On 26 July King Farouk was exiled, sailing from Alexandria aboard a royal yacht.

A cascade of events followed the Free Officers' seizure of power in 23 July 1952. The military junta chose not to share power with former allies and had negligible regard for democratic principles, freedom of association, and freedom of expression. In October 1952, strict censorship was imposed. In December, the constitution was abolished. In January 1953, all existing political parties were banned and their publications ceased to exist. A year later, in January 1954, the Muslim Brotherhood, a potent, anti-colonial religious, social, and political movement formed in 1928, was outlawed.

Like any army force that suddenly finds itself in power, the Revolutionary Command Council, the central committee of the Free Officers, had no coherent agenda for governing Egypt. On the domestic front, it moved quickly to implement land reform in 1952, limiting the size of family holdings to 300 feddans. The army's stated goal was to retain power for three years, during which time a constitutional government would be established. Promises to restore an elective government were soon abandoned since society first needed to be reorganised according to revolutionary principles, the Free Officers argued. The revolutionary vanguard believed they had earned the right to rule; they were in charge of directing, controlling, and organising the masses.

Domestic and International Politics

Following the king's abdication, Muhammad Naguib, a highly regarded general, became president and prime minister. Nasser held the posts of deputy prime minister and minister of the interior. Quickly becoming popular among Egyptians, Naguib favoured a parliamentary democracy. Nasser evidently did not. Nasser began working behind the scenes to undermine Naguib's supporters within the army and police. The Revolutionary Command Council announced in March 1954 that elections would not be held and that it would remain in power. Naguib was deprived of the presidency a few months later and placed under house arrest. Nasser assumed executive powers, and the presidency would soon become his.

The Muslim Brotherhood's confrontation with the Free Officers' regime culminated in an assassination attempt by a Brotherhood member on 26 October 1954 against Prime Minister Gamal Abd al-Nasser as he delivered a speech in Alexandria. The eight shots fired – all of which

missed their target – were heard via radio across the Arab world, an incident that Nasser seized on to rally the Arab people. In an intense crackdown on the movement that followed, thousands of Brotherhood members were summarily rounded up and detained, critically shaping the development of Islamist groups for decades to come. Silencing dissent and consolidating his rule, Nasser went further by closing the opposition press and suppressing all forms of ideological dissent. He alone increasingly held the reins of power through control of government ministries, the military, and security services.

British troops finally left Egyptian soil in June 1956, and on 26 July 1956, the fourth anniversary of the last king's exodus from Egypt, Nasser challenged the French and British by nationalising the Suez Canal in a speech that he delivered in Alexandria and broadcast on live radio at 7.00 pm. It came as a response to the West's withdrawal of support for the Aswan High Dam, the mega-infrastructure project of the time that promised to modernise Egypt by harnessing the waters of the Nile to generate hydroelectric power. A code word in his speech – 'de Lesseps' (the name of the French developer of the canal) – was the signal for the Egyptian takeover of the Suez Canal Company, nominally an Egyptian shareholding consortium that had constructed and operated the canal but was in the overall control of the British and French. As Middle Eastern oil passed through the canal en route to industrialised Western economies, the value of the canal increased, with annual revenues reaching £36 million.

Colluding with Israel and France, the British invaded Egypt in November with the aim of seizing the Suez Canal and toppling Nasser. Traffic of oil tankers through the channel came to a standstill. The United Nations, the US, and international public opinion were overwhelmingly against the invasion. In the midst of the invasion, the Egyptians sunk 50 or so ships in the canal, and it took five months before they were cleared, by which time international quarters were in agreement on which country controlled the vital waterway. The incident accelerated the demise of traditional colonial power in the Middle East. British and French property was sequestered. Later, foreign business interests were nationalised, and new residency and citizenship requirements forced the expulsion of foreigners and Egyptian Jews.

Nasser's defiant resistance to the Tripartite Aggression of 1956 made him a hero in the developing world where anti-imperialism was on the march. His rhetoric promoted national independence and sovereignty for all Arab states, and he sought to establish Egypt as the leader of the Arab nationalist movement. But he was first and foremost an Egyptian nationalist who pursued policies guided by what he saw to be Egypt's interests. Nasser's relationship with the Soviet bloc grew as he sought to modernise the Egyptian army through arms purchases, although he would have preferred to buy them from the West had it not been for the foot-dragging and restrictive conditions they placed on weapons sales. A Soviet arms deal via Czechoslovakia in 1955 provided Egypt with 150 aeroplanes, 300 tanks, and a wide range of guns and rocket launchers.

Nasser's crowning vision was the construction of the Aswan High Dam, which would vastly increase agricultural productivity and generate vast amounts of electricity to power Egypt's industrial zenith. Nasser negotiated funding for the US$1-billion dam through the World Bank, with the US bankrolling most of the deal. At first the US signed on to the project, seeing it as a way to counterbalance growing Soviet influence in Egypt. Still, the US imposed a litany of conditions, which Nasser reluctantly accepted, only to be told that the US was pulling out of the arrangement, believing that Egypt lacked the means to repay the credit.

Revenue from the canal, when it reopened in 1957, was insufficient to build the Aswan High Dam, and Egypt lacked the technical expertise for its construction. The Soviet Union stepped in, providing funding and engineering, with the motive of extending its influence in Egypt and the Middle East. Construction began in 1960 and was completed a decade later, generating 10 billion kilowatt-hours of electricity annually, or half of the country's electricity requirement at the time. The dam was the highlight of Nasser's reign, shaping present-day Egypt.

N

In 1956, when a new constitution was finally drafted, it allowed for a representative assembly that served a consultative, not legislative, function. Political parties remained banned, save for the state-controlled National Unity Party. Unopposed, Nasser won with 99.9% of the vote in a plebiscite in the year the new constitution was adopted. With power firmly in his hands, Nasser undertook measures to transform the economy and accelerated the pace of his socialist programmes: education and health care were expanded, and housing units for low-income families were built. Nonetheless, Nasser's social initiatives often faced problems in funding, staffing, and implementation. His policies of socioeconomic levelling drew students to the fold of Nasserist-socialist principles. But he also reorganised universities, banned independent student movements, purged faculty members and administration, and placed the institutions of religion, including al-Azhar, the centuries-old seat of Sunni Islamic learning, firmly under state control.

Nasser's Cult of Personality

Gamal Abd al-Nasser emerged on the world stage leading a nationalist struggle and possessing the dream of Arab nationalism. He looked beyond Egypt's national borders. Either loved or despised, Nasser was a phenomenon unto himself. With Nasser's rise to power, Cairo became the fulcrum of Pan-Arab nationalism. Nasser's rhetoric promoted national independence and sovereignty for all Arab states. Beyond Egypt's national borders, Nasser was seen as leading a nationalist struggle and embodying the promise of Arab unity. Egypt's cinema, publishing, and broadcasting were outlets to spread his message. He captured hearts and minds, across generations, through hopes for greatness.

Once Nasser was firmly in power, his personality cult grew, with the state apparatus serving to underscore the leader's destiny, wisdom, and vision as a national icon. Immensely confident and charismatic, he spoke to the masses in other countries via the medium of radio, often over the heads of their leaders, seizing on a nostalgic longing among Arabs for a mythic hero, a modern-day Saladin. Sawt al-'Arab (Voice of the Arabs) carried his speeches of Pan-Arab nationalism to all corners of the Arab world. The Algerian novelist Ahlam Mosteghanemi writes in *Chaos of the Senses*:

> At the time, we could listen some evenings to Voice of the Arabs from Cairo, broadcasting Abd al-Nasser's speeches and inflamed anthem. I still remembered some of them, the way that children at that age memorized nursery rhymes – they were forever inscribed in my brain. Then we would go to sleep happily, with no need for a television, which we have never seen in our lives. (2004, p. 132)

Nasser showed concern for workers and farmers in a way the old political order had not done. Swept up by a vibrant sense of nationalism and enamoured of the first native son to rule Egypt in two millennia, singers and writers embraced the Arab nationalist cause. Umm Kalthoum, the superstar of Arabic song hailed as the 'pearl of the Orient', was closely tied to Nasser's Pan-Arabism, as was the singer, actor, and heartthrob Abd al- Halim Hafez, who crooned in praise of the Aswan High Dam. The acclaimed poet and lyricist Salah Jaheen was a devotee of Nasser's vision and penned the words of the national anthem.

Egypt's Union with Syria

Nasser spurned Western designs in the Middle East, and refused to sign up to the 1955 Baghdad Pact, a collective defence organisation which aimed to prevent Soviet encroachment in the region. He did not see the need for regional defence requiring the patronage of a superpower and felt that it carved up alliances that divided Arab states. Considering Israeli expansionism and imperialist powers the main threat, in 1961 Nasser instead cofounded the Non-Aligned Movement, which promoted a somewhat independent approach in Cold War politics. In his dealings, Nasser played one power off against another, but it was the Soviet pole that proved more beneficial, and Egypt under Nasser was seen as falling under the Soviet sphere of influence.

In a step towards Nasser's Arab nationalist vision, a short-lived union between Syria and

Egypt was declared in February 1958. In a plebiscite, Nasser was overwhelmingly chosen as the union's head of state, in a country he had never before set foot in. It seemed likely to some that Nasserism might sweep the Middle East, especially following a coup in Iraq inspired by Egypt's Free Officers revolution and dubbed the 14 July revolution, which ended a monarchy and removed Iraq from the Baghdad Pact. As president, Nasser remained firmly in charge of the newly created United Arab Republic, whose slogan was 'Freedom, socialism, unity'. It was the first test of Pan-Arabism and a harbinger of the future of Nasserism. Threatened by the union and Nasser's popularity in the region, King Saud of Saudi Arabia paid Syria's chief of military intelligence to place a bomb on Nasser's plane. But after the payments were cashed, the incident was made public.

Syria and Egypt formed a national assembly, yet Egypt retained the upper hand, including control of major ministerial posts. Syria's political parties were abolished and Egypt dominated the military, often imposing its will and bureaucracy on Syria's institutions. By 1961, the union was unravelling as sectors within Syria were disappointed with the progress of the United Arab Republic and resistant to socialist reforms decreed by Nasser. An army coup in Syria in September brought the union to an end. And by doling out generous payments to military leaders, King Saud helped to instigate the coup in Syria that dissolved the union with Egypt. (He was later forced to abdicate in favour of his brother Faisal and sought political asylum in Egypt.) Nasser decided against preserving the union through armed intervention; that would be the only occasion Nasser's brand of Pan-Arabism would see tangible fruits.

Economic Revolution

Nasser tightened his grip on the Egyptian economy through sweeping changes: taking over industries and imposing state control over the whole of economic life. Beginning in 1961, he nationalised businesses, banks, hotels, media outlets, and other economic sectors, and instituted heavy regulation on companies that were not nationalised. Properties of wealthy families were sequestered and further land reform was initiated. Even with the move towards socialism, inequalities remained, and with any change in social order, one ruling class was replaced with another. During the time of the monarchy, Egypt's elites were the landed gentry. Nasser's land reforms stripped them of their source of wealth, only to replace them with another elite: the officer class. Army officers, for example, were chosen to head nationalised companies. The military became the new route to social mobility and personal enrichment through graft.

While bringing businesses and major economic sectors under state control, Nasser's expansive economic reorganisation paid few long-term dividends. Instead, the state became the economy's prime mover. In the short term, the regime had new sources of revenue, but over time many government-owned businesses failed to turn a profit or had to be heavily subsidised; they were generally overstaffed under Nasser's policy of guaranteeing jobs to university graduates, and with no formidable competition there was no incentive for state-owned enterprises to upgrade products, services, or management practices.

Adding to the state's bureaucratic tentacles, a police state was created. Security and intelligence services were dramatically expanded under Nasser's rule. Their main function was to keep track of any subversive plotting against the regime within the military but they were also pervasively used to keep tabs and silence dissent among factions of society. Arbitrary arrest and imprisonment were common. Having been a conspirator himself, Nasser was obsessed with preserving control. Egypt's 1964 constitution added little by way of democracy; power remained with the presidency, and in a plebiscite Nasser again commanded 99.9% of the vote.

Media, the Arts, and Religion

In 1955 Nasser decreed a censorship law, which set the legal parameters for the arts. Filmmakers were co-opted to support Nasser's brand of socialism. Censorship was extended to cover broader

areas of artistic expression. Nasser nationalised the private press in 1960, bringing it under the control of the Arab Socialist Union, the sole political organisation, and branding it the 'media of mobilisation'. The move was justified within the socialist vein of being anti-capitalist. The press had lost touch, Nasser said, and was much too concerned with tantalising society gossip and Cairo nightlife instead of serving its public function by representing the ordinary struggles of rural Egypt.

The state media wholeheartedly embraced socialism and Pan-Arabism, becoming a filter of information and propaganda, instead of being transformed into an institution that would supposedly guide the public and build society. Critical voices were muted, the military junta was sacrosanct, and Nasser was fortified as a national hero. The failings of the regime were not attributed to the president, but to the reactionary and destructive forces of capitalism and feudalism.

The nationalisation of the film industry followed in 1961, and that of publishing houses from 1961 to 1965, even when books already required the approval of security agents before printing. Army officers were placed in charge of these nationalised businesses, which were also increasingly imbued with propaganda about Arab socialism. The monopoly that the state held on print media, books, television, and film served a more direct form of control than state rules of censorship. As in the times of the pharaohs millennia before, the function of art was to exalt the ruler's power, idealise his perfect administration, and serve the state. Self-censorship was already becoming engrained. A network of security and intelligence agencies made the domination of the media airtight, and a climate of fear was fortified.

The revered religious institution of al-Azhar was made an appendage of the state by Gamal Abd al-Nasser in June 1961. The head of al-Azhar was then appointed by the president, not internally as had been the practice for centuries. The 'ulama (religious scholars) were expected to give their unconditional support to the regime, with the understanding that they were given dominance in questions pertaining to religion and jurisprudence.

The 1961 law established the Islamic Research Academy at al-Azhar, comprising scholars who held sway on censorship matters when it came to Islamic texts, but that role was broadened at times to compete with other official censorship bodies. A civil court decided on matters of confiscation. The censorship authority and the secret police in Nasser's Egypt remained the major force behind the censorship of works of fiction and science that they found blasphemous or politically objectionable.

War and Intervention

In a failure of Pan-Arab nationalism, Nasser embroiled himself in a military quagmire in Yemen to prop up a regime that came to power through a violent military coup staged by General Abdallah al-Sallal, the commander of the royal guard, in 1962. King Muhammad al-Badr (who reigned for just over a week following his father's death) and loyal tribesmen continued to fight on. Fearful of the spread of Nasserism, Saudi Arabia and Jordan lent assistance to the royalists. By 1964, seventy thousand Egyptian troops were stationed in the harsh desert terrain of Yemen to maintain a floundering regime. Fearful of ruining his Pan-Arabist image, Nasser remained committed to a prolonged and hopeless struggle where the Egyptian army, under the command of his defence minister, vice president, and incompetent political ally Abd al-Hakim Amir, fought a five-year battle against a foe that had mastered guerilla tactics. The military confrontation was costly. Ten thousand Egyptian troops were wounded, captured, or killed before Egypt pulled out in 1968, after the humiliating defeat against Israel in the 1967 Six-Day War.

Arab opposition to Israel increased as the Palestinian refugee crisis festered. As the self-crowned Arab patriarch, Nasser linked a solution to the Palestine question with Arab honour. Nasser adopted increasingly strident rhetoric towards Israel and its colonial designs, and called for the liberation of Palestine. He contended that Arab puppet regimes and the division of the Arabs contributed to the Palestine defeat. Israel, as an

imperialist power, he thundered during speeches, represented a threat to the entire Arab world. Hostility to Israel centred on its displacement of the Palestinians from their homeland.

Nasser's bellicose posturing was confined to rhetoric; he was in no way prepared for a confrontation with Israel. Yet war seemed inevitable, as the Arabs believed they could change the balance of power to their favour. Nasser's military command assured him that they could match anything Israel's military forces could muster. Soviet intelligence falsely informed Nasser that an attack on Syria was imminent, claiming that Israel was concentrating troops on the Syrian border in response to attacks by Palestinian fighters. On 16 May 1967 the Egyptian leader demanded the withdrawal of the United Nations Emergency Force stationed on its border with Israel. Egypt's alliance with Syria, which was sponsoring Palestinian raids into Israel, pulled Nasser to impose a naval blockade of the Straits of Tiran on 22 May as Egyptian diplomats were seeking United Nations intervention to get around the impasse.

Egypt was taken by surprise when Israel struck in June 1967, disseminating in a coordinated air offensive the Egyptian air force on the ground within the first hours of the war, then burrowing across the Sinai Peninsula. In six days the Jewish state seized all of Sinai, Gaza, East Jerusalem, the West Bank, and Syria's Golan Heights. The brief and humbling war for Arab armies claimed the lives of some twelve thousand Egyptian troops, with another five thousand captured or missing; 80% of all military equipment was lost. During the conflict, as the Egyptian army, under Abd al-Hakim Amer's command, was wildly retreating from Sinai, broadcast outlets aired invented reports of fabulous victories against the Zionist foe. At no other moment did the state media prove so woefully deficient, contributing to a deep sense of public betrayal.

The defeat was an unforgivable embarrassment for Nasser, who on 9 June 1967, a day before the war came to an official end, took responsibility and told the Egyptian people that he was resigning from the presidency. 'My brothers, we are accustomed, in times of victory and in times of adversity, in sweet hours and in bitter hours, to sitting together and talking with open hearts, honestly stating the facts, believing that we are on the same path, always succeeding to find the true way, no matter how difficult the circumstances and no matter how faint the light', began a remorseful Nasser in a live radio and television broadcast at 6.30 pm. 'We cannot hide from ourselves that we've faced a devastating setback during the past few days', he continued. 'I have decided to step down completely and forever from any official position and any political role, and to return to the ranks of the masses to fulfill my duties as any other citizen.' The speech by Nasser in June 1967 was written for him by the prominent journalist Mohamed Hassanein Heikal, Nasser's personal confidant, editor-in-chief of the flagship daily *al-Ahram,* and chairman of the board of state-owned media and publishing houses.

It was a moment that served to shore up his support. Egyptians took to the streets demanding that their leader stay in power. Thousands of protesters surrounded the National Assembly. The Egyptian parliament demanded that Nasser withdraw his resignation, refusing to leave the building until he did so. It is difficult to say how populist and genuine the appeal was and how much of the public display of support for Nasser was the behind-the-scenes political machinations of the regime. While Nasser did stay in power, it was only later that Egyptians could comprehend the true extent of the defeat (especially in light of the propaganda on state-controlled media) and the institutional failures that placed the whole of Sinai under Israeli occupation. Believing that the US had colluded with Israel, Nasser ordered all Americans to be expelled from Egypt.

The outcome of the war was not only a military failure; it was a failure of the established political and social order. Waves of student protests erupted on college campuses in the war's aftermath. Nasser became the object of direct, public criticism. A campaign against student unrest was waged in the state-owned media, which labelled the activists as provocateurs and counter-revolutionaries goaded by foreign elements. Nasser found a way to crack down hard

N

on his opponents. Student unrest on university campuses was firmly suppressed. Clamouring for the rule of law and the adoption of liberal principles, judges blamed the defeat on the lack of political liberalisation. Dissenting judges were summarily dismissed or transferred to administrative posts.

The setback of 1967 reinforced a general distrust of reports on state-owned media, compelling Egyptians to tune to the shortwave transmission of the BBC World Service and French Monte Carlo to find out what was not being reported in the official press. Faced with the limited means of expression in the printed press, literature and film evolved into an abstract channel for social and political commentary. Accustomed to political censorship, film audiences have become attuned to uncovering subtle and hidden messages.

The decisiveness of the June 1967 war dramatically and irreversibly changed the balance of power in the region, fortifying Israel as a stalwart US ally in the strategic, oil-rich Middle East. Egypt became more reliant on the Soviet Union to rebuild its army and provide economic assistance. In contrast to the situation after the Tripartite Aggression of 1956, Nasser could not claim victory in defeat. The Suez Canal was closed, depriving the country of much-needed hard currency, tourist revenue ground to a halt, and Israel now occupied a sizeable chunk of Egypt's oil reserves. Nasser launched the War of Attrition in March 1969, which only served to increase the devastation. Reprisal raids intensified. For the sinking of one of their ships, Israel bombed canal cities and oil installations in Suez.

Nasser accepted the US-brokered Rogers Peace Plan in July 1970, effectively ending the War of Attrition and implementing a cease-fire. The Palestinians viewed Nasser's acceptance of the plan as turning his back on the Palestinian cause. Militant Palestinians increasingly used Jordan as a base of operations to launch attacks, and King Hussein of Jordan launched a full-scale attack against the Palestinians, an event that came to be known as Black September. Syria was set to intervene on behalf of the Palestinians,

which would have escalated the crises, pulling in other Arab states and making a mockery of any sense of Pan-Arabism. In his last foreign policy accomplishment, Nasser convened an Arab summit in Cairo that mediated between the parties and brought the simmering conflict to an end, his final move as the Pan-Arab leader. Nasser suffered a heart attack that ended his life just after the summit was concluded on 28 September 1970. He was 52.

The Legacy of Nasserism

Gamal Abd al-Nasser had an uncanny ability to communicate with the Arab public, yet his influence was in large measure due to complete state domination of the press and airwaves, leaving little room for dissent. Autocratic power was concentrated in the hands of the president. Nasser's control of the media buttressed this imagined dream state. In his novel *Before the Throne*, the Nobel laureate Naguib Mahfouz has Egypt's rulers critique one another: 'Unfortunately, you wasted an opportunity that had never appeared to the country before', went one rebuke of Nasser. 'For the first time, a native son ruled the land, without contention from king or colonizer. Yet rather than curing the disease-ridden citizen, he drove him into a competition for the world championship when he was hobbled by illness. The outcome was that the citizen lost the race, and himself, as well' (2009, p. 37).

The 1967 war became a watershed as Nasser's Pan-Arabism began to lose currency and to be seen as an illusion of the Egyptian leader's power or a ploy to seduce the masses. Defeat brought with it new realities – a wake-up call of sorts. The new force of Islamism began its evolution. A growing number of Muslims across the Arab world began holding the opinion that a humiliating defeat was possible because Muslims had strayed from their faith, embracing Nasser's secular nationalism over Pan-Islamism. Islamism in its various forms would become a dominant force against occupation and authoritarianism in the Middle East for decades to come.

Definition

This entry explains nationalisation, the act of seizing private property by public authorities, in its theoretical and historical dimensions. The justification of seizure has developed historically reflecting the changes in the public-private interest dichotomy since Ancient Rome. Class struggle and its political repercussions in the era of capitalism have impacted the methods and practices of nationalisation, especially in its imperialist stage. The entry first summarizes the theoretical approach of Marxism-Leninism towards the political act of seizure. Nationalisation is correlated with concepts such as socialisation, collectivisation, expropriation, confiscation, which may overlap or differentiate according to the type and objective of seizure. Nationalisation is also discussed in the context of international law, particularly in terms of compensation, and in the context of economic planning versus market policies. The entry demarcates the history of nationalisation into two periods, 1917–1950 and 1950–2000. While the 1917 October Revolution and the transition to socialism characterises the first; decolonisation and sovereignty rights characterises the latter. Individual country experiences throughout the twentieth century are summarized including prominent nationalisation cases in Latin America, Africa, Asia, Europe and the Middle East. Finally, the entry elaborates the current discussions on denationalisation (or privatisation) under the influence of neo-liberalism and renationalisation under the influence of the crisis of capitalism, at the turn of the twenty-first century.

Introduction

Nationalisation is the seizure of private property by public authorities. The political, economic, administrative and judicial character of a seizure can vary. The reason, aim, agent, and method of seizure determine whether it is a confiscation, socialisation, collectivisation, etatisation, or municipalisation. Technically, confiscation is seizure of a particular private property; collectivisation and socialisation diffuse ownership to certain sectors of society; etatisation and municipalisation reflect the central or decentralised character of the public authority; nationalisation indicates on whose behalf the seizure takes place.

The general judicial concept for seizures is expropriation. Literally, expropriation has transitivity with nationalisation and the two terms are used interchangeably in the broad meaning of seizure. The narrower terminology corresponding to expropriation is eminent domain, compulsory purchase, and acquisition; all of which involve delegation of this authority to third parties for specific public purposes. The justification for seizure is 'public interest', which represents the interests of a population specified in terms of social classes, administrative scales, or economic sectors. The seizure may produce permanent or temporary hybrid forms of ownership other than state ownership, such as co-operatives, quasi-public corporations, and autonomous institutions.

Expropriation is mainly theorised by Marxist political economy, which proposes the seizure of the means of production for the socialisation of private property. As a widespread political practice in the twentieth

century, nationalisation has been a process in decolonisation involving the seizure of foreign-owned property as a legitimate measure to consolidate national sovereignty. Current scholarly discussion focuses on the degree of compensation to be paid in nationalisations, determined by the conceptualisation of public interest and sovereignty.

Historical and Theoretical Background

The main premise of nationalisation is the nation state. The nation state is the modern form of state based on citizenship instead of kinship. Citizenship developed in the burgs of Europe under feudalism but its embryonic form was seen in Ancient Rome. Citizenship, which was not based on nations at this stage, conferred individual freedom and the right to ownership. Roman law restricted individual rights on behalf of common interest. The state's exceptional authority to seize private property (*imperium*) was based on sovereignty over the communities, whose members had the right to own property (*dominium*). The duality of *dominium–imperium* later transformed into the modern private–public dichotomy.

After the disintegration of the Roman Empire, the emerging feudal regimes in Europe did not distinguish between public and private interests in the modern sense. As the bourgeoisie ascended to the ruling position in the modern era, the 'private' came to correspond to the sphere of individual capitalist economic activities, and the 'public' to the common interests of society. Expropriation of private property by the nation state (i.e. nationalisation) became an exceptional procedure justified by public interest that was assumed to be above class interests.

In the building of nation states, the act of seizure functioned as a means of primitive accumulation and secularisation. The enclosure movement in England (which accelerated in the seventeenth century) expropriated small peasants' lands, while it played a secularising role during nationalisation of Church property during the French Revolution (1789). The same year, the Bill of Rights adopted by the US Congress approved the notion of 'eminent domain', restricting seizure of private land to the condition of public use and the payment of compensation. During decolonisation, nationalisation was utilised to seize foreign-owned property and in order to consolidate the emerging national bourgeoisie.

Marx (1978/1867) asserted that production was socialised as the development of capitalism centralised and concentrated production and at the same time private property. The centralisation and concentration of capital paved the way to mass production on an ever greater scale. Proletarian revolutions would 'expropriate the expropriators', thus completing the process of integration of production. Marx used the term 'socialisation' for the total transformation process. He anticipated that the first harsh phase of socialisation ('accumulation of capital') would inevitably lead to the second phase of socialisation ('expropriation of expropriators'), which would be easier, merely involving a transfer of ownership.

On the eve of the twentieth century, Hilferding (1910) explained the vertical and horizontal integration of industry under the dominance of financial capital. According to his terminology, 'socialisation' of banks through concentration of capital would lead to centralised control of large-scale production while the liquidation of small-scale production through competition would socialise the assets of such producers. Socialisation of production necessitated integration of individual production units. However, it is known that capitalist monopolisation does not carry integration through to fruition.

Lenin's (1964/1917) contribution to the discussion elucidated the economic and administrative organisation under working-class power. He asserted that Soviet power would disintegrate the capitalists' bureaucratic control over capital through workers and peasants' seizures, and reorganise production through planning. Indeed Marx (1966/1871) had also attributed the failure of the Paris Commune to not having organised co-operative production under a general plan.

Two approaches to nationalisation emerged in revolutionary movements. Syndicalism emphasised self-management of enterprises after being seized by workers as the breaking point from capitalism. This approach, inspired by the ideas of anarchism, opposed the centralisation of the control over production. In contrast, Bolshevism considered nationalisations a critical phase in the socialisation process, freeing the productive forces from the constraints of old production relations. According to orthodox Marxism, productive forces are expected to mature as they are integrated through planning, eventually closing the gap between ownership and management. Basically, the dispute was about who should lead nationalisations and organise nationalised enterprises: the workers of the enterprises or the political power.

The implications of these ideas have been challenged in two sets of nationalisation experiences throughout the twentieth century. The first comprises those in Europe that arose as a response to the consequences of the First World War and the ideological polarisation in the aftermath of the Second World War. The second comprises the rise of nationalisation in the decolonisation period and its retreat with the restoration of imperialist relations. The practice of nationalisation will be discussed in these two phases. Their residue is assessed in current discussions on the past and future of nationalisations in the early twenty-first century.

First Phase (1917–50)

In the run-up to the First World War and during the years after it nationalisations were carried out under different agendas. The Mexican Revolution established the 1917 Constitution, which gave the government an inalienable right to all underground resources, aimed at preventing oil exploitation by foreigners. Simultaneously, the nationalisation practices after the October Revolution in Russia laid the ground for the Soviet socialist state. On the other hand, partial nationalisations implemented in Germany after the First World War were influenced by the demand of unions to involve workers in enterprise management to promote the 'socialisation' of enterprises as autonomous units.

Systematic nationalisations were carried out by etatist and socialist regimes after 1929, particularly in countries devastated by the war and the Great Depression. Some of the nationalisations were aimed at saving bankrupt private enterprises by the injection of public funds, with the intention of eventually returning them to private ownership. However, these nationalisations to bail out firms were applied selectively. As relations between imperialist powers deteriorated, in fascist Italy and Germany, nationalised enterprises were integrated into the state-owned military industry and not reprivatised.

The rise in resort to protectionist measures during the Great Depression led to the fragmentation of the capitalist world economy, resulting in a loss of faith in liberal economic theories. Keynes (1936) pointed out that state regulation of aggregate expenditures could maintain high levels of employment and investment, thereby forestalling the pressure for nationalisation. In the aftermath of the Second World War, economic planning was introduced to avoid nationalisations in the reconstruction of war-ravaged capitalist economies.

The bureaucratisation theories posited by Rizzi (1985/1939) in the inter-war years, which connected the formation of a new management class to nationalisations, became more relevant in the post-war period as public enterprises flourished. Another analysis of nationalisation qualified it as a temporary measure serving capitalists' interests. Dobb (1958) pointed out that the function of the nationalised sector in capitalist economies was to purchase the outputs of, and to supply inputs to, the private sector. According to Dobb, enterprises nationalised because of bankruptcy could be expected to be reprivatised after their financial recovery under public management.

The nationalisation experiences in the wake of the Second World War developed in two grounds. In Western Europe where capitalism reigned, selective nationalisations were implemented

and commissions for selfmanagement were established along trade union demands. In Eastern Europe where the People's Democracies were founded, widespread nationalisations were reinforced with land reform and economic planning. The People's Republic of China (PRC), on the other hand, brought private enterprises into joint state-private management as a step towards nationalisation and delivered collectivised land to the communes.

Both in the capitalist and socialist countries, nationalisations had a confiscatory nature as a sanction for past national and public offences during fascist occupation. This opened a debate on the legitimacy of seizure and the liability of compensation. The peaceful co-existence policy in Europe resulted in attempts to merge communist principles with capitalist logic in international law.

Katzarov (1959) distinguished between nationalisation and expropriation, relating the former to a justified public issue and attributing a penal character to the latter. Bystricky (1957) on the other hand advocated the universal legitimacy of nationalisation without indemnity as a human right. In contrast, Seidl-Hohenveldern (1958) argued that both nationalisation and expropriation necessitated full compensation. Shao-chi (1956) theorised the redemption of the national bourgeoisie as a peaceful means of transition to socialism through state-capitalism. These diverse ideas had implications in the decolonisation process.

Second Phase (1950–2000)

International law specified 'prompt, adequate and effective compensation' (the Hull standard) as a condition for nationalisation in the wake of Mexico's nationalisation of US assets in 1936. In the post-war period, the United Nations (UN) recognised the right to nationalise in 1952 with Resolution No. 626 (VII) as part of permanent sovereignty over natural resources. A decade later, with Resolution No. 1803 (XVII), the justified grounds for nationalisation were stipulated as public purposes, security, or national interests,

and appropriate compensation was set as a condition. In 1974 the UN adopted the Calvo doctrine that recognised the validity of the legislation of the home country in cases of legal disputes, against the opposition of France, Germany, Britain, Japan, and the US.

In the implementation of nationalisation, the countries that gained independence from colonial rule were influenced by the development strategy propagated and exemplified by the Union of Soviet Socialist Republics (USSR). The Soviet industrialisation experience (the First Five Year Plan taking place between 1928 and 1932) was a development model based on planning in a nationalised economy. By contrast, the Tennessee Valley Authority (nationalising the Tennessee Electric Power Company in 1939) implemented during the New Deal was used by the US to show that capitalism could also use planning and public entrepreneurship for development.

The states that joined the Non-Aligned Movement (initiated in 1961) were attracted to the Soviet model in varying degrees, some using nationalisation as a political tool against imperialism and others as an economic tool for bargaining with foreign capital. The organisation of nationalised resources determined the orientation of the country towards the socialisation of the economy or towards reintegration into the world economy. In some countries the infusion of imperialist capital in the form of development funds from international financial institutions contributed to the rearticulation of capitalist relations.

Diverse experiences inspired controversial ideas on the role of nationalisations. Poulantzas (2000/1978) maintained that nationalisations in a capitalist context have to be distinguished from nationalisations for socialisation. When it came to the process of socialisation, Bettelheim (1975/1968) used the term 'chronological gap' for the historical delay in the development of socialist property relations from legal form to social reality. Guevara (1964) held that moral incentives in the planning process would close this time gap by accelerating the development of productive forces, mitigating the need for material incentives.

The discussion stemmed from the quest to follow a self-sufficient path of independent

N

development. The uneven development between economic and political structures in post-colonial countries necessitated revolutionary voluntarism to overcome economic deficiencies. This opened a theoretical polemic between the advocates of gradual economic development towards socialism through a transitional moment of private ownership accompanied by market relations, and the advocates of political acceleration of development transcending through social mobilisation the economic phases assumed to be historically imperative. The first approach led to the Liberman reforms in the USSR while the second approach was implemented in the Great Leap Forward in the People's Republic of China.

Among the 'Third-World' countries, the pragmatic-temporary implementation of nationalisation (namely selective expropriation) instead of its programmatic-institutional implementation (pursuit of socialisation) determined the persistence of the policy. In due course the former predisposition resulted in the competition among developing countries to attract foreign capital which they had previously considered an obstacle to independent development. After 1980 two important trends of neo-liberalism, namely globalisation and administrative decentralisation, advanced as the prospect of defending national public interests against the collaboration of international and local private interests waned.

The dissolution of socialism in the 1990s accelerated these trends. Commitments made to refrain from expropriations in bilateral and regional free-trade agreements invalidated the political legitimacy of nationalisations carried out in the past. The term 'seizure' now came to denote moderate measures against foreign investments ('creeping expropriations') with full compensation implied. According to UNCTAD (2012), foreign investments that were nationalised in the 1970s were subjected to indirect expropriations. The new grounds for nationalisations accepted as justified are motivated by environmental, public health, and welfare concerns.

The terminology of international law in the new millennium categorises seizures as direct expropriations and indirect expropriations which are defined variously in bilateral investment treaties, generally enlarging the scope of compensation. The International Centre for Settlement of Investment Disputes (ICSID), established to arbitrate disputes between home countries and investor firms, focuses on claims of indirect expropriation and discriminatory measures. The awards are especially biased against expropriations related to political reactions (Libya–BP, 1973), popular protests (Argentina–Vivendi, 2009), and protectionist policies (Hungary–ANC, 2006).

Individual Country Experiences

In the colonial period, the colonisers had used land seizures for primitive accumulation, such as the confiscation of land belonging to blacks by the British in South Africa (1870–85). As a reaction, anti-colonial movements took over property of foreign settlers, like those of the Europeans in Algeria (1962). In the age of imperialism, seizures became a means of maintaining national sovereignty, the foremost example being the nationalisation of the Suez Canal in Egypt (1956).

The legitimacy of nationalisation was manipulated in the confiscation of property of social minorities, perceived as exploiters and usurpers of national resources. An example of nationalisation of assets of economically dominated groups is the transfer of the Chinese-dominated financial sector to the indigenous privileged classes in Indonesia (1960s). By contrast, in the nationalisation of land belonging to Palestinians by Israel (1949), the expropriators were the economically dominant groups.

In Latin American countries, various national movements united against comprador political elites and limited the economic power of foreign investors over domestic resources. Land redistribution and nationalisations of natural resources were carried out by corporatist political leaders such as Peron in Argentina (presidency 1946–55, 1973–74), Cardenas in Mexico (presidency 1934–40), and Vargas in Brazil (presidency 1930–45, 1953–54).

Nationalisations implemented in revolutionary processes were carried out not only through administrative and legislative measures but also through organised mass movements. The seizure of colonisers' lands by Vietnamese peasants was organised during the 1930s by the Indochinese Communist Party; the Cominform decision in 1947 to implement further nationalisations was realised with the seizure of small-scale enterprises by the Communist government in Bulgaria. A singular example was seen in Ethiopia in 1974 where nationalisations were combined with the mobilisation for education.

In some developing countries, nationalist governments tried to create an economic model distinct from socialism. These were indigenous variations of the so-called 'third way' espoused by the Non-Aligned Movement established in 1961. Governments that implemented nationalisations without the aim of 'expropriating the expropriators' gave names to their regimes to indicate the singularity of their development models; such as Estato Novo (New State) in Brazil (1937–45), Demokrasi Terpimpin (Guided Democracy) in Indonesia (1957–66) and Ba'ath (Arab Socialist Resurrection) in several countries in the Middle East. In some countries, communist movements that pressed the moderate governments to continue nationalisation were either pacified (Portugal, 1974–75) or eliminated (Indonesia, 1965–66).

Religious institutions in some Christian and Muslim countries inhibited or even reversed nationalisations. Nationalisations were prohibited by the conception of Islamic finance in Sudan (1970s), and prevented by Islamic principles in Iran (1982). Catholicism was among the important factors in the restoration of previously nationalised private property under Falangism in Spain (1939) and after the dissolution of the People's Republic in Poland (1989).

In certain cases, public institutions created through nationalisations merged with traditional social structures, with varying results. The attempt in Iraq (1958) and Libya (1969, 1977) to liquidate feudal dominance while preserving the rural social structure to which egalitarian relations were attributed proved unsuccessful. In Hungary and Romania between the end of the Second World War and the mid-1980s, on the other hand, the collectivisation in land promoted the social position of women. However, in the socialist countries, the subsequent reintroduction of market relations in the 1980s generated pressure for the restoration of conservative social order.

The planning organisations that had consolidated the nationalised enterprises were later used in the restoration of private property. In Yugoslavia (1953) and Algeria (1988) decentralised planning that accompanied self-management of nationalised enterprises resulted in the revival of competitive relations. Granting autonomy to public enterprises was theorised as 'market socialism' in the People's Republics, where the endorsement of the profit maximisation principle ended the socialisation process.

The leaders of some national liberation movements that had achieved nationalisations in their countries later endorsed privatisations under the influence of neo-liberal thinking. As globalisation became the watchword, the pursuit of public interests and the concern for independence were degraded, paving the way for denationalisations. Exemplified by the Nationalist Revolutionary Movement in Bolivia, Ba'ath in Syria and the African National Congress in the Union of South Africa, they abandoned the non-capitalist development strategy in the wake of the dissolution of the actually existing socialist alternative (1990s).

Apart from the countries where counter-revolutionary governments eventually relinked them to the global capitalist system by forced marketisation 'reforms' such as Chile (1975), the main argument of the majority of post-colonial states for deregulating their economies was the need for capital investment. However, in order to attract foreign capital, it had to be indemnified from nationalisation. This necessitated acceptance of seizures as 'expropriations' that required prompt, adequate and effective compensation. Consequently, some countries (such as Bolivia and Ecuador in the early 2000s) rejected demands for compensation payment in seizures that they considered as a right of sovereignty.

N

Nationalisation as a makeshift towards reprivatisation was also applied in crisis-stricken peripheral countries as some post-colonial states sought financial aid from international financial institutions, thus renewing dependence on imperialist capital. However, economic crises triggered by foreign debt reintroduced nationalisation to bail out bankrupt private financial institutions through the injection of public funds. Banks in Mexico (1982) and Peru (1987) were nationalised, burdening the public sector with liabilities.

The privatisation of nationalised assets in various countries in the neo-liberal period was hindered by various factors. Argentina cancelled planned privatisations after the decision to renationalise the postal service (2003) following its refusal to go along with International Monetary Fund demands. Nationalist feelings against the Chinese minority in Indonesia and in the Philippines also slowed down the privatisation process when it was introduced in the 1980s. In some countries, some of the public enterprises whose seizure had been vital in the nationalisation process were protected against privatisation, as they were still qualified as 'strategic sectors'.

Current Discussions

The frequency of nationalisations throughout the twentieth century has been studied by many scholars. Minor (1994) carried on Kobrin's (1984) research, which covered the 1960–79 period, to the year of the collapse of the Soviet Union. Hajzler (2010) updated the research while Tomz and Wright (2010) extended it back to the beginning of the twentieth century. These studies subsume all seizures under the concept of expropriation. They thus reflect a shift in the scholarly perception of nationalisation policies and practices towards a framework that ignores the political antagonism between imperialism and anti-imperialism.

Kobrin uses the term 'expropriation' interchangeably with 'nationalisation'. He distinguishes between selective and massive expropriations, attributing an ideological character to the

latter. As developing countries find more effective ways to cope with foreign firms, nationalisations become less frequent. Reaching a peak during the mid- 1970s in Africa, Latin America, and Asia, the option of nationalisation was mostly used as a bargaining chip against core countries rather than being implemented for a political objective. This pragmatism was reflected in the levying of taxes on and the regulation of direct foreign investments in the 1980s. Kobrin points out that this tendency is the result of backsliding from the anti-imperialist stance that was the basis of most nationalisation.

Minor provides information on the privatisations in the 1980s of previously nationalised assets. Some selective expropriations were observed during this period. States which had previously conducted nationalisations on a broad scale (such as Egypt, Vietnam and China) enacted legislation prohibiting nationalisation of foreign investment. Minor anticipates that the results of privatisations may engender a new wave of nationalisations in the future.

Kobrin and Minor's framework, which had taken into consideration social movements politically inclined to anti-imperialism, underwent a change in the literature of the 2000s. The studies of nationalisation took a technical form, focusing on economics and management. This shift is peculiar because of its incongruity with new trends. On the one hand, many states are resorting to regulative measures in crises caused by neo-liberal policies. On the other hand, a new anti-imperialist political trend has emerged in Latin America where a resurgence of nationalisation measures has taken place. Although a Multilateral Investment Guarantee Agency (MIGA) was established to promote foreign investment in developing countries and press for protection from nationalisations, it seems not to have influenced the policies of some Latin American states.

Duncan (2006) argues that nationalisations are not prompted by political and economic crises but rather by fluctuations in the prices of raw materials. Against Kobrin's emphasis on the ideological aims of the nationalising state, he points out that the appeal of nationalisation is that

it can be used to satisfy popular expectations. According to Duncan, 'revolution' and 'sovereignty' are used only as pretexts to legitimise state intervention in the economy. Hence, in developing countries, nationalisation is not implemented to realise an anti-imperialist political strategy; rather it is utilised as a makeshift expedient.

Chang et al. (2009) conceptualise nationalisation in the same pragmatic framework. The swings between economic crises and institutional reform reflect the trade-off between 'efficiency' and 'equity'. The demand for equity motivates nationalisation, but efficiency necessitates privatisation; hence nationalization–privatisation cycles are generated. Chang et al. maintain that the nationalisations in Bolivia, Venezuela, and Zambia have been induced by fluctuations in raw material prices; therefore, these states may be expected to reverse this policy depending on market conditions.

Hajzler explains nationalisation policies from a technology angle: the preponderance of natural resources and public services subjected to nationalisation arises from their technology-intensiveness. It is the increasing profitability of certain economic sectors in private hands that generally induces nationalisations in developing countries. Tomz and Wright hold that nationalisation is 'sovereign theft', an act of expropriation that should be compensated. They ignore that those countries implementing nationalisations during the last century have been subject to colonisation and to unequal trade treaties under military threat. Therefore, the legacy of imperialism vanishes in this assessment of nationalisations.

Harvey (2007) explains the flux between nationalisation and privatisation as opportunities for the adjustment to changing imperialist hegemony and capital accumulation strategy. As an example he refers to the aftermath of the nationalisation of oil in Iran by the Mosaddegh Government (1951). A coup toppled the government and denationalisation transferred the oil assets to a US company instead of the previous British proprietor company, a change reflecting the new imperialist hierarchy. Likewise in Chile, General Augusto Pinochet reversed nationalisations carried out by Salvador Allende (1970–73) only after his rival (General Gustavo Leigh, a Keynesian) was sidelined in 1975 and export-led growth was favoured over import substitution.

Ha-Joon Chang (2007) analyses the utilisation of nationalisation by governments on behalf of capital when faced with national or sectoral crises. Interestingly, he uses arguments against state ownership put forth by market-oriented thinkers against policies of liberal governments. He suggests that Kornai's criticism of soft budget constraints in state enterprises in former socialist countries could be applied to the bailing-out of banks through nationalisation, which he describes as the privatisation of gains and socialisation of losses.

There appears to be an increasing mainstream concern to mitigate the pressures that make for the nationalization–privatisation cycle. This may reflect uneasiness over the discontent arising from the results of the deregulation policies advocated by the Washington Consensus. Chua (1995) proposes re-regulation, accompanied by 'institutional reforms' against the resurgence of protectionism and the rising awareness of 'ecological colonialism', in order to consolidate privatisations.

About two decades after the implementation of the Washington Consensus, the concern to sustain neo-liberalism in the face of a global economic crisis has again put nationalisation on the neo-liberal agenda under the premises of the post-Washington Consensus. Stiglitz advocates the nationalisation of banks subsidised by government in the US (2009) and also nationalisation of natural resources subject to inequitable contracts in Latin America (2006), in order to protect foreign investment on a broader scale (i.e. capital exports, the basic form of imperialism).

Naxalite Movement: An Anti-imperialist Perspective

Pradip Basu
Political science, Presidency University, Kolkata, India

N

Definition

Maoists of the 1960s and 1970s in India came to be known as 'Naxalites' after the uprising in Naxalbari. While the Naxalite movement was centring on the peasants and was indeed basically an anti-feudal movement, this essay attempts to highlight and analyse the anti-imperialist perspective of the Naxalite movement.

The Indian Communist movement, formed around the 1920s, is now fragmented. The undivided Communist Party of India (CPI) split after the Sino-Indian border war of 1962, which was simultaneous with the international communist schism of 1963–64; and a second party, the Communist Party of India-Marxist (CPI-M), was born in 1964. Both are non-Maoist parties. As regards Maoist organisations, there are now:

(a) various Naxalite groups of the now disintegrated CPI (Marxist-Leninist) or CPI-ML led by Charu Mazumdar, which was created in 1969 after the Naxalbari peasant uprising in 1967; (b) one major Maoist party, the CPI (Maoist), which was founded in 2004 through the merger of the CPI-ML People's War Group and the Maoist Communist Centre of India (MCCI). Maoists of the 1960s and 1970s came to be known as 'Naxalites' after the uprising in Naxalbari, and the CPI-ML was the predecessor of today's CPI (Maoist). While the Naxalite movement was centring on the peasants and was indeed basically an anti-feudal movement, this essay attempts to highlight and analyse the anti-imperialist perspective of the Naxalite movement.

Both the CPI and the CPI-M advocate a peaceful parliamentary path and have been totally involved in the parliamentary system. Contradictions between these two parties are non-antagonistic. Meanwhile, contradictions within the Maoist movement are also non-antagonistic insofar as all reject the parliamentary path and agree on a Maoist model of revolution.

Initially, the CPI had a confused understanding of the role of imperialism and India's independence in 1947. Adopting the 'Tito-ite' analysis, it concluded that India was already a fully capitalist country (rather than semi-feudal and semi-colonial) and therefore linked the two stages of the revolution (democratic and socialist) into a single stage through an attack on the whole Indian bourgeoisie.

This view was repudiated by the Andhra Communists, who had been conducting a peasant partisan war in Telengana since 1946. The Andhra Communists invoked Mao Zedong's 'New Democracy' and 'The Chinese Revolution and the Chinese Communist Party' to justify their strategy for a two-stage revolution in 'semi-feudal semi-colonial' India, involving a four-class alliance for agrarian revolution. It refers to an alliance led by the proletariat, with the peasants as their main allies, the petty bourgeoisie as allies to be won over through careful organisational work, and the non-monopoly bourgeoisie as potential but less reliable allies.

In 1950 the Cominform persuaded the CPI towards a two-stage revolution based on a four-class alliance. This was a vindication of the Andhra line, as opposed to the CPI central leadership's anti-capitalist struggle, based on urban insurrection and general strike. Soon, however, Soviet foreign-policy interests required that the CPI discard armed struggle in favour of peaceful constitutionalism since the USSR wanted to placate Nehru as a non-aligned ally in the peace front against imperialism. In 1951 the Cominform intervened and forced the CPI to abandon armed struggle. The CPI therefore participated in the country's first general elections in 1952.

The CPI and the CPI-M differed over their assessment with respect to the role of imperialist foreign finance capital in India's economy and polity. The CPI maintained that the Indian state is the organ of the national bourgeoisie as a whole, in which, however, the big bourgeoisie is powerful and has links with the landlords. In contrast, in the opinion of the CPI-M, the state is in the hands of both the bourgeoisie and the landlords, but it is actually led by the big bourgeoisie, which increasingly collaborates with foreign finance capital in pursuit of the capitalist path of development. According to the CPI, in order to go ahead on the socialist road, India must complete its present anti-imperialist, anti-feudal, and national democratic stage of revolution. The CPI programme, therefore, proposed an intermediate stage, the 'non-capitalist path of development', as distinct from the capitalist path pursued by the Indian ruling classes. This stage is to be attained through a national democratic front composed of the working class, the peasantry, the rising classes of urban and rural intelligentsia, and the national bourgeoisie (excluding the monopoly bourgeoisie). The leadership of the front will be shared by the national bourgeoisie and the proletariat. The CPI-M, however, advocated a narrower, people's democratic front. It believed that India must go for a people's democratic revolution in order to accomplish radical agrarian reforms and oust foreign capital from the country. Agrarian revolution is the axis of the revolution. The front will be led by the party, and comprise the working class and the peasantry. It will have agricultural labour and

poor peasantry. Attempts would later be made to include middle peasants to the front and the party even considered that rich peasants could be won over through suitable tactics. The urban and other middle classes are also to be recruited and attempts made to win over the non-monopoly section of the bourgeoisie. The character of the revolution is the same for both parties (anti-imperialist, anti-feudal, antimonopoly, and democratic), but they differ over the class composition of the front.

'Eight Documents' on Imperialism

After the brief Maoist interlude in the late 1940s in Telengana, the Maoist perspective began to develop in the 'Eight Documents' written by Charu Mazumdar during 1965–67, even before the Naxalbari uprising. As early as 1965, Charu Mazumdar in his famous 'Eight Documents' referred to the role of US imperialism behind the India-Pakistan war of 1965. He said: 'So it is in the interest of the reactionary bourgeoisie of India that India has attacked Pakistan. The US imperialist plan of the world war is also operating behind this war' ('What Possibility the Year 1965 is Indicating?' Document no. 5, secretly circulated during August–September 1965).

Regarding the true nature of Soviet aid, Charu Mazumdar referred to the collusion of US imperialism and the USSR. He said:

> If support is given to the government of India which is following the path of co-operation with imperialism, and feudalism, it is the reactionary class which is strengthened. So Soviet aid is not strengthening the democratic movement of India, but is increasing the strength of the reactionary forces in co-operation with US-led imperialism and the Soviets. It is the Soviet–US co-operation of modern revisionism that we are observing in India …. ('Carry on the Struggle Against Modern Revisionism', Document no. 4, secretly circulated during the middle of 1965)

Mazumdar further exposed the designs of imperialism behind bourgeois nationalism. He said:

> As the Indian Government is carrying on compromising with imperialism, that sense of unity is being struck at its root. … The consciousness of a new unity will come in the course of the

very struggle against this government of India of imperialism, feudalism and big monopolists …. (ibid.)

Mazumdar explained how Soviet revisionism presented new hopes for the neo-colonial forces and also how the Indian Government opened up India to imperialist exploitation:

> … no imperialism could wipe off the Chinese Revolution …. Decadent imperialism also realized that it was not possible to carry on in the old method. So it took a new form, introduced a new method of exploitation by giving dollars as gift. Neo-colonialism began. When imperialism and all the reactionaries of the world were groping for a way out, to save themselves, the revisionist policy of the traitor Khrushchev in 1956 made its appearance before them with a light of new hope. The reactionary government of India found a way to create illusions about Khrushchev's independent capitalist path. … The reactionary government of India's bourgeoisie entered into a secret pact with the US imperialism in 1958 …. This traitorous government … turned India into a playground of imperialist exploitation. It has converted the entire Indian people into a nation of beggars to the foreigners. ('What is the Source of the Spontaneous Revolutionary Outburst in India?' Document no. 3, 9 April 1965)

Mazumdar believed that the main aim of US imperialism was to establish India as the reactionary base in South-East Asia. He wrote:

> The Indian government has gradually become the chief political partner in the expansion of American imperialism's hegemony of the world. The main aim of American imperialism is to establish India as the chief reactionary base in South-East Asia. ('Our Tasks in the Present Situation', Document no. 1, 28 January 1965)

In the same document, Mazumdar further maintained that the Indian government was becoming more and more dependent on imperialism, hence the arrest of the communists under its instruction. He said:

> … there is no other way for the Indian bourgeoisie to come out from this crisis excepting importing more and more Anglo-American imperialist capital. As a result of this dependence on imperialism, the internal crisis of capitalism is bound to increase day by day. The Indian bourgeoisie has not been able to find out any other way except killing democracy, faced with the instructions of American imperialism and its own internal crisis. There were imperialist instructions behind these arrests, since the

American police chief 'Macbright' was in Delhi during the arrest of the communists, and the widespread arrests took place only after discussions with him. ... The more the Government will be dependent on imperialism, the more it will fail to solve its internal crisis. ... Imperialist capital demands the arrest of communists as a precondition before investing; ... American imperialism is writhing in death pangs, in keeping its commitment to those countries of the world which it has assured of giving aid. Meanwhile, an industrial crisis has developed in America. It can be seen from President Johnson's utterance itself that the number of unemployed is increasing in the country. According to the official statement, four million people are absolutely unemployed; 35 million people are semi-unemployed and in factories also semi-unemployment is continuing' (ibid.).

Charu Mazumdar also drew attention to how Soviet revisionism was colluding with US imperialism and how the revisionist party leaderships of the CPI and the CPI-M were concealing this fact. It should be noted that at this point he had not yet used the term 'Soviet Social Imperialism' as he would do later. Mazumdar now said:

> Soviet revisionist leadership in collaboration with the US imperialism is today trying for world hegemony. ... They are trying to establish the revisionist leadership by splitting the revolutionary parties and are shamelessly acing as agents of the US imperialism. ... So no struggles against American imperialism can be made without carrying out an open struggle against this Soviet revisionist leadership. ... The party leadership ... are trying to conceal in a cunning manner the fact that the Soviet leadership is transforming the Soviet Socialist State into a capitalist state gradually and that the Soviet-American collaboration itself is because of that. So, in the political and organizational analysis of India during the last two years [made by the party leadership], there has been no mention of imperialist, particularly American imperialist interference, although from Johnson to Humphrey, all the representatives of US imperialism have repeatedly declared that they will use India as a base against China ... in the political and organizational resolution [of the party leadership], no word of caution has been uttered for party members against the imperialist counter-offensive. ... In no part of their resolution it was mentioned that this election was being held to hide the exploitation and indirect rule by imperialism. The reactionary government of India ... under imperialist instructions wants to build up our country as a counterrevolutionary base of South East Asia .... The experience of Indonesia has taught us how violent today dying imperialism

can become. ('The Main Task Today is the Struggle to Build Up the True Revolutionary Party Through Uncompromising Struggle Against Revisionism', Document no. 6, 30 August 1966; circulated in a clandestine manner and published in the name of 'Maoist Center' of the CPI)

Charu Mazumdar's Later Writings on Imperialism

Apart from the 'Eight Documents', Charu Mazumdar wrote several other important documents before his death in police custody in 1972, after which the Naxalite movement of the first phase gradually subsided. In one such document written after the Naxalbari peasant uprising, he analysed how the Central Committee of the CPI-M proved to be an ally of US imperialism, Soviet revisionism and the Indian government. In his words:

> The ulterior motive of the ... C.C. Resolution (of the CPI-M) is ... to act secretly as a stooge in the interests of US imperialism, Soviet revisionism and Indian reactionary forces .... It has not explained the real character of the joint nuclear monopoly by America and Russia, but has only aired a semblance of criticism in this vein .... The collaboration between America and Russia turns out in fact to be a collaboration for world domination. ... The C.C. has ignored an event like exchange of nuclear secrets between America and Russia .... Even when American imperialism and Soviet revisionism in spite of their giving all possible help are failing to revive people's confidence in the government, the C.C. like a faithful lackey comes forward in defence of this reactionary government. The C.C. has thus proved to be an ally and friend of American imperialism, Soviet revisionism and the Indian reactionary government .... This vast country of fifty crore-strong population happens to be a strong base of the imperialist powers and the mainstay of Soviet revisionism. So with the victorious completion of the revolution in India the doomsday of imperialism as well as of Soviet revisionism would fast draw near. ... All the might of the imperialists and revisionists will fail to stop the tide of revolution in this country. ('It is Time to Build up a Revolutionary Party', Liberation, November 1967).

Mazumdar was very optimistic about the victory of revolution in India and the subsequent collapse of imperialism. He asserted:

The victory of the People's Democratic Revolution in this country of 500 million people will lead to the inevitable collapse of world imperialism and revisionism. The People's Democratic Revolution in this country can be led to a victorious end only in opposition to all the imperialist powers of the world. Particularly, we shall have to reckon with U.S. imperialism, the leader of world imperialism. U.S. imperialism has not only adopted all the aggressive features of pre-war Germany, Italy and Japan, but has further developed them to a great extent. It has extended its aggressive activities to all corners of the globe and has enmeshed India in its neocolonialist bondage. . . . The victorious Indian revolution will destroy this imperialist monster ('The Indian People's Democratic Revolution', *Liberation,* June 1968).

Mazumdar further explained at greater length how Soviet revisionism colaborated with US imperialism and how the leadership of the CPI and the CPI-M helped them. He said:

The People's Democratic Revolution in this country will have to be carried through to a victorious end by actively opposing the Soviet Union . . .. This is because the present leaders of the Soviet state, party and army have adopted a revisionist line and set up a bourgeois dictatorship in their country. In collusion with the U.S. imperialists, they have extended their exploitation and established their domination over various countries of Asia, Africa and Latin America. In India, the Soviet leaders have become the chief peddler of U.S. imperialism . . .. With the help of their stooges (the Dange clique [of the CPI] and the neo-revisionist clique [of the (CPI-M)]), nurtured by themselves, the Soviet leaders are turning India into a field for their unrestricted exploitation and are deceiving the fighting masses, thus proving themselves to be the running dogs of U.S. imperialism and friends of the Indian reactionaries. . . . Today, all the political parties of India have turned into active accomplices of US imperialism, Soviet revisionism and Indian reactionaries . . .. People engaged themselves in a heated controversy at Burdwan [Plenum of the CPI-M] over the extent of restoration of capitalism in the Soviet Union. To engage oneself in a controversy over the restoration of capitalism in a country where the proletarian dictatorship has already been abolished . . . is . . . to blunt the edge of struggle . . .. All the reactionaries of the world . . . are trying to use India as their base for supplying cannon-fodder for their aggression against the great Chinese people. It was precisely this that the renegade Kosygin, Tito and Chester Bowles conspired about with Indira Gandhi in New Delhi recently . . .'. ('The Indian People's Democratic Revolution', *Liberation,* June 1968)

In another article written after one year of the Naxalbari movement, Mazumdar mentioned the international significance of the Naxalbari struggle: 'India has been turned into a base of imperialism and revisionism . . .. That is why the Naxalbari struggle is not merely a national struggle; it is also an international struggle' ('One Year of Naxalbari Struggle', *Liberation,* June 1968).

Mazumdar vehemently criticised the Burdwan Plenum of the CPI-M and said:

They [the CPI-M] are merely the running dogs of foreign and Indian reaction and of the Soviet revisionists. It was on behalf of Indian and foreign reaction that Dinesh Singh came and warned Jyoti Basu not to expose their reactionary character too much at the Burdwan Plenum [of the CPI-M]. In this way the conspiracy of international revisionism was successful at the Burdwan Plenum, . . . even if temporarily, . . . to deceive the revolutionary masses of India'. ('The United Front and the Revolutionary Party', *Liberation,* July 1968).

Mazumdar branded the leaders of the CPI and the CPI-M as lackeys of the Soviet Union. He wrote:

US imperialism and Soviet revisionism are intensifying their oppression and exploitation in India . . . The Dangeite traitorous clique [of the CPI] and the neo-revisionist clique [of the CPI-M] are . . . trying to confuse the masses by . . . indulging in all sorts of pseudo-revolutionary talks. But the Soviet revisionists' fascist aggression against Czechoslovakia has torn off their mask and with each passing day they will be clearly shown up as mere lackeys of the Soviet Union, which is today a pedlar of neo-colonialism and one of the aggressive powers of the world. ('Develop Peasants' Class Struggle through Class Analysis, Investigation and Study', Liberation, November 1968).

In another essay written at the end of 1968, Charu Mazumdar repeated at length his assertion about the collusion of US imperialism and Soviet revisionism. He said:

The victory of the great Chinese revolution . . . stirred up . . . armed struggle . . . in every colony in Southeast Asia. . . . As world imperialism neared its final collapse, the revisionist leadership of the Communist Parties of the world began to betray the people's struggles. After the death of Stalin the Soviet revisionist renegade clique usurped the leadership of the Communist Party of the Soviet Union and the world's revisionist renegade cliques began to work jointly with a view to saving world

imperialism from its destruction. The renegade traitors in India . . . withdrew unconditionally from the Telengana struggle and took to the path of parliamentarism. After the twentieth congress of the Communist Party of the Soviet Union the Soviet revisionist renegade clique, in collusion with US imperialism, spread disruption and confusion among the people of the colonies and semicolonies wherever they were waging armed struggle. Chairman Mao has said that world imperialism today is like a house which rests on a solitary pillar: US imperialism. And so, the destruction of US imperialism will completely smash world imperialism. This is why the traitorous Khrushchev clique extended its hand of cooperation to US imperialism. . . . In the present era when imperialism is heading towards total collapse, revolutionary struggle in every country has taken the form of armed struggle; Soviet revisionism, unable to retain its mask of socialism, has been forced to adopt imperialist tactics . . . . ('"Boycott Elections!" International Significance of the Slogan', Liberation, December 1968).

In December 1968 Mazumdar repeated his views about US imperialism and Soviet revisionism but put forward a new term for the first time, namely that India had become a 'US-Soviet neo-colony'. He wrote:

> Without such a [revolutionary] party it is impossible to lead the . . . struggle against imperialism and its lackeys . . . . Chairman Mao has taught us that in a semi-feudal, semi-colonial country . . . the peasantry is exploited and ruled by three mountains, namely, imperialism, feudalism and bureaucrat capitalism. . . . .The Vietnamese people's struggle against the US imperialist aggressors has filled the minds of the oppressed people with a new hope. . . . Comrades, the events in Czechoslovakia have fully exposed the naked fascist nature of Soviet revisionism. These events have also clearly revealed the fact that the traitorous Dangeite clique [of the CPI] and the neo-revisionist clique [of the CPI-M] are obedient tools of the Soviet revisionists. . . . India has today become a US-Soviet neo-colony. With the help of the Indian reactionaries they have turned India into a base of counter-revolution in Southeast Asia. ('Undertake the Work of Building a Revolutionary Party', Liberation, December 1968)

In another article, Mazumdar repeated his view about India being a 'US-Soviet neocolony'. He said, 'Every Indian has the inalienable right to rise in revolt against the reactionary Indian government – a government that has again turned India into a colony, this time a neo-colony of US

imperialism and the Soviet revisionists . . .' ('We Salute the Peasant Revolutionaries of Kerala!', Liberation, December 1968).

On the eve of the installation of the CPI-ML, Mazumdar, while underscoring the need for formation of the new party, emphasised the importance of a successful Indian revolution against imperialism:

> All the imperialist powers of the world, whether the US imperialists or the Soviet social-fascists, are trying to win a fresh lease of life by exploiting the five hundred million people of India. They . . . are trying to use the 500 million people of India as cannon-fodder in a war to destroy the great Chinese Republic, the base of the world revolution . . . . By making the revolution we shall be able . . . to deal a staggering blow to world imperialism and revisionism . . . . ('Why Must We Form the Party Now?' Liberation, March 1969)

During the formation of the new party (the CPI-ML) in April 1969, Mazumdar reiterated his assessment of the collusion of US imperialism, the Soviet revisionists, and the leaders of the CPI and the CPI-M thus:

> After the death of . . . Stalin, the Soviet revisionist renegade clique usurped the leadership of the state, party and the army and established a bourgeois dictatorship in the Soviet Union . . . . They have become the No. 1 accomplice of the imperialists; particularly, they have advanced far along the road of collaboration with the US imperialists. This is because US imperialism is today the leader of the imperialist camp, and is pursuing even more fiercely and widely the aggressive policies of the German, Italian and Japanese imperialists. The traitorous leaders of the Soviet Union are supporting these aggressive activities and . . . carrying on colonial exploitation with various imperialist powers and, in particular, with US imperialism. . . . In India also they are acting as No. 1 accomplice of US imperialism and are directing the state power . . . . That is why India's liberation struggle can win victory only by fighting against the guns of the Soviet revisionists and . . . the Soviet revisionists' state power. This explains why the Dange clique [of the CPI] and the neo-revisionist leadership [of the CPI-M] have, by their actions, joined the Indian reactionary clique . . . . They . . . support the bourgeois and imperialist propaganda . . . (while) the thought of Chairman Mao can be called Marxism of the era of the total collapse of imperialism . . . . ('To the Youth and the Students', Liberation, April 1969).

After the formation of the CPI-ML, Mazumdar criticised Parimal Dasgupta, another Maoist radical, and for the first time asserted that the USSR was a social-imperialist country:

> ... Parimal Dasgupta ... has placed the recent happenings in Czechoslovakia on the same footing as the Hungarian event of 1956. ... [But] to place these two events on the same footing means denying the fact that the Soviet Union has degenerated into a social-imperialist country, and endorsing the Soviet imperialist aggression against Czechoslovakia as a correct action .... The fact that the Soviet aggression took place with the knowledge of Johnson has little importance for him. This is because he either rejects or fails to understand the fact that Soviet social-imperialism, in collaboration with US imperialism, is striving to dominate the world. This leads to one thing: to deny in effect the fact that the Soviet Union is a social-imperialist country. ('On Some Current Political and Organizational Problems', Liberation, July 1969).

During the First Congress of the CPI-ML held in May 1970, Mazumdar found a similarity between the international and the Indian situations. He said:

> On the one hand, there is US imperialism's naked aggression against Cambodia. ... On the other hand the revolutionary united front of the peoples of Vietnam, Cambodia and Laos, under the leadership of China, has been built up to fight the US aggressors .... The same kind of phenomenon exists in India also. India's reactionary ruling classes are making frenzied preparations to suit the global strategy of US imperialism and Soviet social-imperialism. They are hatching criminal war plans against China. But the emergence of the C.P.I. (M-L) has changed the internal situation in India. ('Hate, Stamp and Smash Centrism', May 1970)

Although the Andhra Maoists had already alleged that Charu Mazumdar was not vocal about British imperialism, here we find that Mazumdar clearly repudiated British imperialism:

> ... the Soviet State is today collaborating with British-American imperialists .... With the help of the native bourgeoisie the Soviet Union is also trying to invest capital in our country. In the sphere of trade and commerce with our country it has come to enjoy special facilities. ... That is why, as a collaborator of Britain and the U.S.A., the Soviet State also is our enemy'. ('Long Live the Heroic Peasants in Naxalbari!', Liberation, July 1971–January 1972)

Organisational Views on Imperialism

Like Charu Mazumdar's individual writings, the Maoists' organisations also expressed their deepest concern about imperialism in their various documents. In the 1967 general elections, the Congress Party lost its electoral monopoly. In Kerala and West Bengal, the CPI-M was the leading partner in coalition ministries, which also included the CPI. The peasant upheaval in Naxalbari, led by radicals still belonging to the CPI-M in West Bengal, put the CPI-M in a dilemma: if their ministry did not suppress the uprising, it would attract dismissal by the central government for failing to maintain law and order; but if it trampled the insurgency, the party would invoke the allegation that it was subordinating class struggle to the bourgeois parliamentary system and prioritising the maintenance of the governmental seat of power in the bourgeois state machine. The West Bengal government, led by the CPI-M, opted to suppress the rebellion.

The Communist Party of China (the CPC), endorsed the Naxalbari uprising and called upon the CPI-M cadres to oppose its leadership. The CPC held that India is a semi-feudal, semi-colonial, only nominally independent country; the Indian bourgeoisie have turned comprador. It further maintained that the objective conditions for a revolution existed in India.

Charu Mazumdar's theoretical leadership, Kanu Sanyal's mass leadership, inner-party ideological struggle of various Maoist radicals inside the CPI-M in West Bengal (namely, Asit Sen, Parimal Dasgupta, Souren Basu, Sushital Roy Choudhuri, Saroj Datta, Suniti Kumar Ghosh etc.), the consequent Naxalbari uprising in 1967 and a revolt by the Andhra Pradesh state unit of the CPI-M led by T. Nagi Reddy, D.V. Rao, Chandra Pulla Reddy etc. in 1968 all finally induced a powerful Maoist movement in different parts of India.

Shortly after the Naxalbari uprising, an All India Co-ordination Committee of Revolutionaries (AICCR) of the CPI-M was formed within the CPI-M to accelerate the struggle against revisionism and to launch mass struggles. Centring

around the Naxalbari revolt, most of the dissident radicals assembled together under this new committee, which was formed on 13 November 1967 in Calcutta. The AICCR issued a 'Declaration of the Revolutionaries of the CPI (M)' in which, inter alia, the neo-colonial nature of India was stated. It said:

> By disowning, in the name of independent analysis, the neo-colonial nature of our country and its semi-feudal, semi-colonial character . . . they [the neo-revisionist leadership of the CPI-M] indirectly indicated that what was being built up in India was an independent capitalist economy and that the Indian big bourgeoisie had not exhausted its anti-imperialist role . . . . ('Declaration of the Revolutionaries of the CPI (M)', AICCR, 13 November 1967, Liberation, vol. 1, no. 2, December 1967).

The Burdwan Plenum of the CPI-M was held in April 1968 and the breach was final. After leaving the CPI-M, on 14 May 1968, the AICCR expanded itself into the All India Co-ordination Committee of Communist Revolutionaries (AICCCR) under the leadership of Charu Mazumdar. Soon the Maoist dissidents centring around the AICCCR wanted to build up a new Maoist party through spreading Naxalbari-type peasant struggles all over the country. The emergence of a strong Maoist perspective during the Naxalbari uprising in 1967 resulted in the formation of the AICCCR comprising a large number of Maoists who either left the CPI-M or were expelled from it. The AICCCR, however, expelled its Andhra unit before converting itself into the CPI-ML. This soon led to a split within the CPI-M itself in 1969, but not all Maoist groups and individuals joined the CPI-ML (e.g. the Andhra Maoists).

The AICCCR issued the 'Second Declaration' on 14 May 1968. Along the lines of argument put forward by Charu Mazumdar, the document provided a detailed analysis of how the semi-colonial and semifeudal India has been turned into a neo-colony of some imperialist powers, the principal of them being the US and the Soviet Union. The document said:

> . . . the heroic peasants of Naxalbari rose in revolt . . . this event has caused panic in the minds of US imperialists, Soviet revisionists, the Indian big land-lord class, comprador-bureaucrat bourgeois class

. . . . A little over twenty years ago India was a colony of Britain; today India has been turned into a neo-colony of some imperialist powers, the principal of them being the United States and the Soviet Union. The US imperialists . . . are also the worst enemies of the Indian people. Their neo-colonial grip over India is now complete. The traitorous Soviet ruling clique . . . are today actively collaborating with the US imperialists and they have turned India into a neo-colony of both the United States and the Soviet Union. India is a perfect example of the entente into which the US imperialists and Soviet neo-colonialists have entered to jointly establish hegemony over the world . . . . In the semi-colonial and semi-feudal India, the contradiction between imperialist and neo-colonial powers and the people, the contradiction between feudal classes and the peasantry and the contradiction between comprador-bureaucratic capital and the working class have assumed the most acute form. Today, US imperialism, Soviet revisionism, the big landlord class and the comprador-bureaucrat bourgeoisie of India are the principal enemies of the Indian people – these are like four mountains . . . . Today India has a position of vital importance in the counter-revolutionary world strategy of US imperialists and Soviet neo-colonialists. They have reduced India to a powerful bastion of reaction . . . the Soviet betrayers, hand in gloves with the US imperialists, have increased their supply of military hardwares to the Indian reactionaries. Supersonic jet bombers and submarines are among those hardwares. They have set up MIG-factory and missile bases on the soil of India and have been trying to secure marine bases for their warships in the Andamans and Nicobar islands. (Sen Samar et al. 1978, pp. 196–201).

In his famous 'Terai Report', Kanu Sanyal, the mass leader of the Naxalbari uprising and a follower of Charu Mazumdar, explained how the armed revolt of the peasants in the Terai region centring around Naxalbari not only attacked feudalism but also imperialism. He said:

> The comprador-bureaucrat bourgeoisie, the land-lords and the jotedars have been carrying on their rule and exploitation through their political organization, the Congress party, by protecting fully and developing imperialist interests and by covering up the basis of feudalism with legal coatings . . . .The peasants of Terai not only dealt a fierce blow at feudalism, they also expressed their intense hatred for the imperialist exploitation of India, specially the exploitation by US imperialism . . . . It is never possible to overthrow the rule of the comprador-bureaucrat bourgeoisie and the landlords, who have come to terms with imperialism, without arming the peasants . . . because . . . the feudal landlord class is

the main social base of the imperialist and comprador-bureaucrat bourgeois exploitation …. At the present time, every antifeudal armed struggle is certain to be opposed by imperialism …. In the propaganda being carried on by the bourgeois papers, representing different imperialist interests, by the Voice of America and by the BBC, we are witnessing this opposition in an embryonic form … as soon as the antifeudal struggle of the workers and peasants of Terai grows more intense, it will have to face direct opposition from imperialism. ('Report on the Peasant Movement in the Terai Region', Kanu Sanyal, September 1968, Liberation, November 1968)

It should be noted that, meanwhile and throughout the first phase of the Naxalite movement, many scattered and small-scale agitations and protests especially of the students and youth were being organised by the Naxalites and more specifically the AICCCR against imperialism (apart from feudalism) in different corners of India. One massive demonstration took place in Kolkata in 1968 in order to protest against the visit of the World Bank President Robert McNamara.

CPI-ML on Imperialism

The new CPI-ML was created in April 1969. It excluded however the Andhra Maoists and some other Maoist radicals who considered its formation premature. The CPC, however, recognised the new party.

The CPI-ML, which followed the Chinese view, differed from the CPI-M. The CPI-ML held that India is a semi-feudal and neo-colonial country; its outdated semi-feudal system serves as a base for US imperialism and Soviet social imperialism. The big comprador-bureaucrat capitalists, the pawns of imperialism, are in state power. The basic task of the revolution is the elimination of feudalism, comprador-bureaucratic capitalism, and imperialism. Of the major contradictions, that between feudalism and the broad masses is principal. Thus, the present stage of the revolution is democratic, the essence of which is agrarian revolution. The peasantry is the main force of revolution, led by the working class through the CPI-ML. The working class must rely on landless and poor peasants, unite with middle peasants and

win a section of the rich peasants while neutralising the rest. Urban petty-bourgeoisie and revolutionary intellectuals will be reliable allies, while the small and middle bourgeoisie, the independent businessmen, and the bourgeois intellectuals will be vacillating allies. The CPI-ML sought to build a democratic front through worker-peasant unity, through the process of armed struggle and after red power has been established in some areas. The path is people's war, through creating bases of armed struggle and guerrilla warfare. This will remain the basic form of struggle throughout the democratic revolution.

Mohan Ram, however, pointed out the differences between the CPI-ML and the Andhra Maoists on the question of imperialism. In 1973 Mohan Ram commented:

The CPI-ML assertion that the principal contradiction is between feudalism and the broad masses of the people leaves unclear the anti-imperialist task of the democratic revolution …. It lays lopsided emphasis on the anti-feudal task. By contrast, Maoists of the Andhra Pradesh Revolutionary Communist Committee, who are outside the CPI-ML, hold that the main contradiction is between the Indian people and imperialism (including social imperialism) in alliance with feudalism. They see imperialism and comprador-bureaucrat capitalism as the props of feudalism. The CPI-ML does not regard the national bourgeoisie as an ally of the revolution, either firm or vacillating. But the Andhra Maoists want the national bourgeoisie in the front along with the workers, the poor peasantry, and the middle classes. Further, the CPI-ML is silent on the need to fight British imperialism; its references are limited to United States imperialism and Soviet social imperialism. The Andhra Maoists are more specific on this point. (Ram 1973, p. 348).

Visibly influenced by the formulations made by the CPC and its endorsement by Charu Mazumdar, the 'Political Resolution' of the new CPI-ML, adopted on 22 April 1969, described in detail the 'four mountains' weighing upon the Indian people, namely, US imperialism, Soviet social-imperialism, feudalism, and comprador-bureaucrat capitalism. It said:

… (Indian) government is a lackey of US imperialism and Soviet social-imperialism. The abject dependence of Indian economy on 'aid' from imperialist countries, chiefly from US imperialism and Soviet social-imperialism, the thousands of

N

collaboration agreements, the imperialist plunder of our country through unequal trade and 'aid', the utter dependence for food on P.L. 480 etc, go to prove the semi-colonial character of our country . . .. The fleecing of the Indian people by extracting the highest rate of profit, the concentration of much of India's wealth . . ., the utilization of the state sector in the interest of the foreign monopolies and domestic big business . . . all . . . prove that it is the big landlords and comprador-bureaucrat capitalists who run the state . . .. The political, economic, cultural and military grip of US imperialism and Soviet social-imperialism on the Indian State, the dovetailing of its foreign policy with the US-Soviet global strategy of encircling Socialist China and suppressing the national liberation struggle, the recent tours of Latin America and South East Asia by the Indian Prime Minister to further the interests of this counter-revolutionary strategy, the total support given by the Indian Govt. for the Soviet armed provocation against China, the fascist approval of Soviet aggression against Czechoslovakia and the active collaboration with the US imperialists against the national liberation struggle of Vietnam clearly show that the Indian Govt. is a lackey of US imperialism and Soviet revisionism . . .. To destroy feudalism, one of the two main props (comprador-bureaucrat capital being the other) of imperialism in our country, the Indian people will have to wage a bitter, protracted struggle against US and Soviet social-imperialism too. By liberating themselves from the yoke of feudalism, the Indian people will also liberate themselves from the yoke of imperialism and comprador-bureaucrat capital, because the struggle against feudalism is also a struggle against the other two enemies . . . the four mountains . . . are US Imperialism, Soviet Social-Imperialism, Feudalism, and Comprador-Bureaucrat Capitalism. (Liberation, vol. 2, no. 7, 20 May 1969)

The 'Programme' of the CPI-ML adopted at the First Party Congress held in May 1970 contained a more detailed analysis of India's situation vis-à-vis imperialism. It said:

10. During these years of sham independence the big comprador-bureaucrat bourgeoisie and big landlord ruling classes have been serving their imperialist masters quite faithfully. These lackeys of imperialism, while preserving the old British imperialist exploitation, have also brought US imperialist and Soviet social-imperialist exploiters to fleece our country. 11. They have mortgaged our country to the imperialist powers, mainly to the US imperialists and Soviet social-imperialists. With the weakening of the power of British imperialism the world over, the Indian ruling classes have now hired themselves out to US imperialism and Soviet

social-imperialism. ('Programme of the CPI-ML', Sen Samar et al. 1978, pp. 275–284)

Further, the connection among the 'four mountains' was discussed: 'Thus, . . . the Indian people are now weighed down under the four huge mountains, namely, imperialism headed by US imperialism and Soviet social-imperialism, feudalism and comprador-bureaucrat capital. Thus India has turned into a neo-colony of US imperialism and Soviet social-imperialism . . . ' (ibid.).

It further analysed the various contradictions in India, and detected that between feudalism and the broad masses as the principal one in the present phase. It said:

16. In brief, out of all the major contradictions in our country, that is, the contradiction between imperialism and social-imperialism on the one hand and our people on the other, the contradiction between feudalism and the broad masses of the people, the contradiction between capital and labour and the contradiction within the ruling classes, the one between the landlords and the peasantry, i.e., the contradiction between feudalism and the broad masses of the Indian people is the principal contradiction in the present phase. 17. The resolution of this contradiction will lead to the resolution of all other contradictions too. (ibid.)

The programme of the new party provided a detailed analysis of the economic aspects of the exploitation by imperialism thus:

18. While preserving and perpetuating the semi-feudal set-up, the big comprador-bureaucrat bourgeoisie and big landlord ruling classes have become pawns in the hands of US imperialism and Soviet social-imperialism. 19. The phenomenal increase in the total quantum of foreign capital, the heavy remittances of profits abroad, thousands of collaborationist enterprises, total dependence on imperialist 'aid, grants and loans' for capital goods, technical knowhow, military supplies and armament industries for building military bases and even for markets, unequal trade and P.L. 480 agreements have made US imperialism and Soviet social-imperialism the overlords of our country. 20. US imperialism and Soviet social-imperialism have brought the vital sectors of the economy of our country under their control. US imperialism collaborates mainly with private capital and is now penetrating into the industries in the state sector, while Soviet social-imperialism has brought under its control mainly the industries in the state sector and is at the same time trying to enter into collaboration with private capital. 21. US imperialism and Soviet

social-imperialism do everything possible to foster the growth of comprador-bureaucrat capitalism for continuing their unbridled exploitation of the Indian people. 22. The much-trumpeted 'public sector' is being built up by many imperialist exploiters for employing their capital and for exploiting the cheap labor power and raw materials of our country. The public sector is nothing but a clever device to hoodwink the Indian people and continue their plunder. It is state monopoly capitalism i.e., bureaucrat capitalism. 23. With their octopus-like grip on India's economy, the US imperialists and the Soviet social-imperialists control the political, cultural and military spheres of the life of our country. (ibid.)

It also furnished a separate discussion of imperialism's penetration in India's foreign policy. It said:

24. At the dictates of US imperialism and Soviet social-imperialism, India's reactionary ruling classes pursue a foreign policy that serves the interests of imperialism, social-imperialism and reaction. It has been tailored to the needs of the global strategy of the US imperialists and Soviet social-imperialists to encircle Socialist China and suppress the national liberation struggle raging in various parts of Asia, Africa and Latin America, of which Vietnam has become the spearhead. India's aggression against Socialist China in 1962 and her continual provocation against China since then at the instance of US imperialism and Soviet social-imperialism, her support to the Soviet attack on China, her tacit approval of Soviet aggression against Czechoslovakia, her dirty role in supporting US imperialism against the Vietnamese people prove beyond a shadow of doubt that India's ruling classes are faithful stooges of US imperialism and Soviet social-imperialism. 25. These hard facts irrefutably prove the semi-colonial character of our society, besides its semifeudal character. 26. As the obsolete semifeudal society acts as the social base of US imperialism and Soviet social-imperialism and as it facilitates also the plunder of our people by comprador-bureaucrat capital, the problem of the peasantry becomes the basic problem of the Indian revolution. 27. Therefore, the basic task of the Indian revolution is to overthrow the rule of feudalism, comprador-bureaucrat capitalism, imperialism and social-imperialism. This determines the stage of our revolution. It is the stage of democratic revolution, the essence of which is agrarian revolution. (ibid.)

Among other things, the CPI-ML propagated the politics of attack against foreign capital and imperialism. Point 38 of the 40-point 'Programme' adopted by the CPI-ML Party Congress of May 1970 indicated that the People's

Democratic State in post-revolutionary India in future would carry out, inter alia, the following major tasks: (a) confiscation of all the banks and enterprises of foreign capital and liquidation of all imperialist debt; (b) confiscation of all enterprises of comprador-bureaucrat capital; (c) development of a new democratic culture in place of colonial and feudal culture.

Conclusion

In this essay, we have tried to show that although the Naxalite movement was basically a peasant movement against feudal oppression, its anti-imperialist orientation was also quite pronounced. After its rise in the 1960s and subsequent fall in the 1970s, the Naxalite movement had undergone a series of fragmentations. At present there is a resurgence of the 'Maoist' movement (as it is commonly called to distinguish it from the old Naxalite movement). There is a lot of controversy about the similarities and differences between the old Naxalite movement and the present Maoist movement, and also about whether the current Maoist movement is a continuation of the old Naxalite movement or not. However, the new Maoist movement is, like the old Naxalite movement, both anti-feudal and anti-imperialist. But that is a separate story.

Definition

A poetic, literary, political movement, Négritude remains one of the most emblematic discourses of African and Black Atlantic, anti-colonial, cultural politics.

Introduction

A poetic, literary, political movement, Négritude remains one of the most emblematic discourses of African and Black Atlantic, anti-colonial, cultural politics. Although formulated in the specific context of late French colonialism and its assimilationist politics, its singular aesthetics and the depth of critiques travelled far beyond Francophone countries. Born out of the intellectual revolt of three friends – the Guyanese Léon-Gontran Damas, the Senegalese Léopold Sédar Senghor, and the Martinican Aimé Césaire – the concept of Négritude emerged in the inter-war period from their search for poetics able to capture their specific experience as colonised black subjects. 'Négritude' comes from 'nègre', a derogatory term historically used to designate African slaves, generalised to black African people in the nineteenth century. By the beginning of the twentieth century, it was used both as a racial term and as a slur, situated in US English of the 1920s somewhere between 'nigger' and 'black' (Edwards 2003, pp. 34–35). Damas, Senghor and Césaire were not the first to subvert and appropriate 'nègre', a distinction claimed by anti-racist activists such as Lamine Senghor and Tiemoko Garan Kouyaté from the 1920s onwards (Edwards 2003; Miller 1998). Against the racial hierarchy prevailing in the French Empire, which distinguished Antillean 'évolués' (evolved), civilised mixed-race people and backward 'nègres', the latter came to be a symbol of the struggle and solidarity against colonial oppression. Négritude thinkers grounded their literary movement in this founding gesture, turning the vocable into an existential condition, an aesthetic style, and a pan-African form of identity. From an array of creative and political practices of the Paris-based black diaspora, 'négritude' only emerged as a self-conscious movement after the Second World War II, and continued to be reconfigured in light of the evolution of Third-World nationalisms, decolonisation, and the advent of post-colonial states. Thus, the challenge is to understand it in the complexity of its historical transformations as Négritude progressively incoporated new dimensions: from a literary movement emerging in student politics, through reformism, it was retrospectively reconfigured as a a precursor of radical anti-colonialism and Third-Worldism. In addition, some of its central theoretical concepts (race, culture, civilisation, racism) underwent dramatic changes in the same period.

Colonial Elites

[...]
Bleached
My hatred grows on the fringe
Of their wickedness
On the fringe
Of gun blows
On the fringe
Of wave blows
Of slave merchants
Of the foul freight of their cruel trade
Bleached
My hatred grows on the fringe
Of culture
On the fringe
Of theories
On the fringe of the chatters
That were deemed fit to be stuffed into me from
the crib
While everything in me only aspires to be nègre
Like my Africa that they plundered

(Damas 1972, p. 60)

Césaire and Senghor met in the lycée Louis-le-Grand, where they had both come to attend preparatory classes for the entrance at the Ecole Normale Supérieure, one of the most prestigious higher-education institutions in France. While the aim of colonial schools was to form native élites, intermediary between French administrative functions and local populations, the French meritocratic system also helped a few native students to partake in the entry competition for some of the most prestigious schools of the capital with bursaries. In command of flawless French language, these deserving students were held up as examples of 'assimilated' subjects, but these living exemplars of an impossible 'success' only revealed the contradictory nature of the French assimilation politics. As Damas would summarise: 'he who will be assimilated expects from assimilation the equal treatment that the metropole will never grant him, and on the other hand, they will ask him to pay a price that the other cannot pay: they both agree to try to whiten the nègre, but that cannot happen' (Wilder 2005, p. 223).

Senghor, born into a rich Serer family of the small town of Joal, had received his secondary education at a missionary boarding school, and after attending lycée in Dakar he obtained half a scholarship to study Letters in Paris (Vaillant

1990). Aimé Césaire, coming from a modest family in Basse-Pointe, Martinique, had moved to Fort-de-France at the age of 11 to study at the lycée Victor Schoelscher, where he met Léon-Gontran Damas. The latter, originally from French Guyana, had moved to France in 1928, and to Paris in 1930 where he had encountered Senghor through an acquaintance (Racine 1983, p. 27). Senghor, who immediately befriended Césaire, was the first African person Césaire had ever known. Together with Damas, they read the same books, shared poetry, and discussed Africa, the Antilleans and the US. All three had experienced forms of racism; they were concerned with defining who they were vis-à-vis French culture, and revolted against the exclusionary character of French society and its paternalistic discourse. Their 'lived experience' as black, as Fanon would later theorise in *Black Skin White Masks*, and their ungraspable feeling of uprooting, called for words they had to invent. With their modest bursaries, Césaire and Senghor were living in extremely poor conditions, often on the verge of depression. But Damas, unlike them, had no scholarship at all. He was studying Law, Languages and Ethnology, at the same time as working in various small jobs at Les Halles, Paris's main wholesale market, for survival. In these distressing and consuming life conditions, Damas, who was the most 'tormented soul' of the three, was also considered the most *engagé* (Racine 1983, p. 9), and in many ways their inspiration.

Négritude's Genesis: Black Internationalism and Translation in Inter-War Paris

Much of the ideas of the young Senghor, Damas, and Césaire was formed through their encounter with previous journals and other collectives created amongst the black communities of the French capital. These earlier organisations ranged from the Garveyist internationalist journal *les Continents* (1924) to the Republican-reformist journal *La Dépêche africaine* (1928–32), through the Marxist-anti-colonial *Comité de Défense de la*

N

Race Nègre (1926–27) as well as the short Marxist-Surrealist experience of *Légitime Défense* (1932), in which Damas got involved. After their arrival in Paris, these three students took part in what Gary Wilder proposed to call a 'black public sphere' composed of students, activists, and militants, Antillean, African, and African-American writers, artists and workers. Latin Quarter cafés, the Cabane Cubaine in Montmartre, apartments and student dormitories provided spaces for lively debates between pan-Africanists, anti-fascists, communists, artists, and writers (Wilder 2005). For Césaire, Senghor, and Damas, this cosmopolitan network of associations was epitomised by the intellectual milieu surrounding the Nardal sisters' salon, held every Sunday to discuss the 'Negro race' and its future, and to promote 'the solidarity between different Negro groups spread around the world' (171). In relation to these gatherings, a bilingual journal, *La Revue du Monde noir* (hereafter, '*La Revue*'), was launched in 1931 (and lasted about a year). It published articles and poems by Antillean writers such as Etienne Léro, René Maran, Gilbert Gratiant, and René Ménil (Vaillant 1990, p. 125), as well as ethnographic research by Delafosse and Frobenius. As Louis T. Achilles would later recall, this movement was 'no longer political like the Pan-Negro movements that preceded it, but cultural and sociological' (quoted in Wilder 2005, p. 174). Yet, colonial politics was at the centre of their preoccupations.

For Damas, Senghor, and Césaire *La Revue* not only connected them to 'wider sociocultural networks of the imperial metropolis' (173) and older generations of colonial migrants, it also made them discover a number of important writers. Claude McKay's *Banjo* (1928), Alan Locke's *New Negro* (1925) and Langston Hughes's poetry were crucial references, along with recent anthropological studies on Africa. Along with the Achilles and the Nardal sisters, the Guianese René Maran, internationally famous for winning the literary Goncourt prize, was, in Mercer Cook's words, a 'focal point for transatlantic contacts' (166) and had been the first to publish translations of Harlem poetry in *Les Continents*. In their flats, one could regularly meet writers and political figures such as Claude MacKay, Mercer Cook,

Carter G. Woodson, Alain Locke, Countee Cullen, and Hale Woodruff (Edwards 2003, p. 120). Césaire would later explain that the importance of the Harlem Renaissance was to 'encounter another modern black civilization, Blacks and their pride, their consciousness to belong to a culture' (Césaire 2005, pp. 25–26). Like the Harlemite writers, they were seeking to express, in Langston Hughes's formulation, their 'individual dark-skinned selves' (Wilder 2005, p. 176), but also to foster and herald the renaissance of African civilisation. As Brent Hayes Edwards (2003) has admirably shown, Négritude, like other cultures of black internationalism, arose from translation practices. An internationalist black consciousness could only emerge across, and from articulation of, linguistic and historical differences.

In 1935, Césaire, Senghor, and Damas, who were active in student politics, got involved in the writing of the newly renamed journal of the Association of Martinican students, *L'Etudiant noir*. The first and only issue that has survived contained articles by Paulette Nardal, Gilbert Gratient, Léonard Sainville, and Henri Eboué, and addressed similar themes as the *Revue du monde noir,* mostly focused on assimilation and black humanism. Damas, in his role of editorial secretary, described the journal's ambition as that of ending the Quartier Latin student 'tribalism', so that they 'cease being essentially Martinican, Guadeloupean, Guianese, African, and Malagasy students to become one single and same étudiant noir' (Wilder 2005, p. 187) Yet, as Senghor was one of their only non-Antillean contributors, this was more a wish than a fact. Far from being a Négritude manifesto the journal was principally a platform for Césaire and Senghor to begin writing publically in a non-academic context. By 1934, Damas had already published some poems in the famous personalist review Esprit. Damas, who 'hung out in the most diverse neighbourhoods and milieux' (Senghor quoted in Wilder: 206) was the first to step outside the purely academic system of recognition in which they were entangled. For Césaire, Damas was 'the first to liberate him-self', to become, in a truly bohemian spirit, a 'cursed poet' (*poète maudit*) (Césaire, quoted in Wilder: 280). In the poems of

his small, 1937, self-financed volume titled Pigments the questions of assimilation and the complicity of black élites with the French colonial system figure prominently. They are expressed in a vehement, sometimes threatening voice, as in 'Bleached' (quoted above). While they circulate through revolt, racial authenticity, and Afro-centric identifications, Damas's poetic forms are much indebted to the Harlem Renaissance, displaying a strong engagement with spirituals, blues, and jazz, through rhythm and anaphoric repetitions.

Notebook of a Return to the Native Land

The first occurrence of the word 'négritude' appeared in the middle of Césaire's long poem *Cahier d'un retour au pays natal* (Notebook of a return to the native land; 2000), which became a classic of French and Antillean literatures and overshadowed *Pigments* as the seminal text of the movement. Césaire started writing the poem during a stay in Croatia, where he had been invited by his friend, in 1936, and published it for the first time in 1937, at the age of 25. Against the élitist alexandrines of Martinican poets, the *Cahier* stages the epic journey of an experience of self-recovery in an insurrectional prose. By titling it as he did, Césaire announces a return to Martinique, and a return to his fundamental self. Framing this search in a 'notebook' locates it halfway between the schoolboy *cahier* and the personal diary, and evokes it as a learning process. The path of learning is that of Négritude, which constitutes the overcoming of racial and colonial normativity at the same time as being an affirmative endorsement of black people's historical condition. Négritude constantly circulates through historical subjects, realising itself through multiple voices: 'I have worn parrot feathers and / musk-car skins / I have worn down the patience of missionaries / I have insulted the benefactors of humanity' (Césaire 1969, p. 57). The nihilistic description of the filthy, poor, and motionless Basse-Pointe and the 'crumbled island' of Martinique, with which the poem begins, averts any exotic praise. Leaving for Europe does not mark a narrative progression but the discovery of the disguised racism of the metropole: that is, in the 'vogue

nègre', the belittling admiration for the 'good nègre' and the denigrating praise for the Lindy-hop dancer. A first escape would be to embrace these clichés and to cling to the meagre and disparaging recognition it discharges. 'As a result of an unforeseen happy conversion I now respect my repellent ugliness' (65). But this victory is a complacent lie. 'I refuse to pass my swellings off for authentic glories / And I laugh at my old childish imaginings' (66). The return begins with the end of these mystifications; by embracing the real and ghostly presence of (black) suffering. 'How much blood there is in my memory! In my memory are lagoons . . . . / My memory is surrounded by blood. My memory has its belt of corpses!' (63–64) Négritude's movement of reversal draws a trajectory from inertia to life, from shameful wounds to full acceptance. 'I accept . . . . I accept . . . completely, with no reservation . . . / . . . My race gnawed with blemishes' (80). Towards the end of the poem the poet's call for Négritude as a vital force, a virile and incarnated life against the machinistic Europe becomes the herald of hope. The prose becomes increasingly incantatory, inflated by future promises:

> In their spilt blood
>   the niggers smelling of fried onion
>   find the bitter taste of freedom
>   and they are on their feet the niggers
>   the sitting-down niggers
>   unexpectedly on their feet
>   on their feet in the hold
>   on their feet in the cabins
>   on their feet on deck
>   on their feet in the wind
>   on their feet beneath the sun
>   on their feet in blood
>   on their feet
>   and
>   free
>   on their feet and in no way distraught
>   free at sea and owning nothing
>   veering and utterly adrift
>   surprisingly
>   on their feet
>   on their feet in the rigging
>   on their feet at the helm
>   on their feet at the compass
>   on their feet before the map
>   on their feet beneath the stars
>   on their feet
>   and
>   free
>   (89)

N

From the comical 'nègrerie' of *l'Etudiant Noir*, through the derogatory 'négraille', 'Négritude' is not the only neologism created by Césaire with the prefix 'nègre', but it is the only one that could sustain the radical inversion they called forth, turning an epidermic slur into an existential condition. Although one easily recognises a progressive linearity in the poem, signalling the temporality of 'return', the text is a collage of leaps back and forward; its objects are plunged into a confounding night. Whilst consciously appealing to a certain 'cannibalistic violence' (Wilder 2005, p. 280) in order to explode formal references, it simultaneously draws on a dense network of historical and geographical references. The poem, which incarnates the pilgrimage of a (singular collective) self in relation to a specific historical context, is affirmative but has not much to do with the notion of *'cultural* affirmation', by which one often characterises Négritude.

Rather than ascribing *culture* to black people, as Senghor does, Césaire opposes Western civilisation for its intrinsic barbarism. Civilisation, with its 'machinistic' overtones, is the decaying antithesis of the self's vitalism, and its structural racism is the backdrop for revolt. The pitfalls of recognition are central to the poem; it is Nietzsche's influence that 'emboldened Césaire to rise above the need for confirmation, which can only imply conformation' (Jones 2010, p. 168). In Gary Wilder's analysis (2005, p. 278), the *Cahier* is to be considered as the 'crowning achievement of interwar Négritude, its summit and synthesis. But it must also be read as an autocritique of Négritude itself, a text in which the self reflexive doubt about cultural nationalism that momentarily surfaced in the work of Gratient, Sainville, Ousmane Socé Diop, Damas, and Senghor is pursued deeply and directly'.

Négritude as Ontology

In contrast to Césaire, Senghor's early concept of négritude was an attempt at revalorising African cultures in a positive way, as ontology and an ethical way of life. In the case of Césaire, Négritude's vitalism is expressed in a poetic idiom, staging the revolt against colonialism as an inward and organic violence. In Senghor's case, though, vitalism was a *theoretical* frame to think what négritude was. By 1939, Senghor had already reached a complex theory of African Art as philosophy, which, combined with that of civilisational *métissage* (hybridity) laid out the ground for his subsequent writings on Négritude:

> The service provided by the Nègre will have been to contribute along with other peoples to re-creating the unity of man and the World: to link flesh with spirit, man with his fellow men, a stone with God. In other words, the real with the spiritual surreal – through man, not as the center, but the hinge, the navel of the World. (Senghor, quoted in Wilder 2005, p. 249)

African art, for Senghor, was defined by this very connection with this sub-reality of vital forces (Bachir Diagne 2011) beneath the level of the visible. Influenced by the study of Guillaume and Thomas Munro on primitive negro sculpture, Senghor developed an understanding of African art form as a 'unity of rhythmic series' (81). Through this move to ontology, Senghor was able to transcend the available concepts of 'culture', trans-valuating the civilisational yardstick of development into the language of humanist *values.* As he would repeat throughout his life, 'Négritude is the set of values of the black world civilization, which is to say a certain active presence to the world: to the universe' (Senghor 1977, p. 69). Understanding these values as a 'presence' becomes meaningful once situated in Souleymane Bachir Diagne's proposition that Négritude is Senghor's way to think 'African art as philosophy'. Indeed, as Jones recently argued, 'there was nothing inherently reactionary about this part of their program insofar as it attempted to open up cognitive possibility rather than essentialize African perception as the simple other of a caricatured West' (Jones 2010, p. 144) But Senghor's Négritude was also closely connected to his conception of humanism. Drawing on Teilhard de Chardin, who professed a form of evolutionism of human consciousness at a global scale, Senghor called for an encounter and *métissage* between civilisations from above, a humanisation through the 'best' contributions of each. True humanism would be 'totally human

because formed of all contributions of all peoples of the earth' (Senghor 1977, p. 91). Grounded in a concept of 'culture' relying on a preconceived notion of alterity, his humanist vision of world civilisation could only restrict the disruptive potential of his 'Negro-African ontology'.

Césaire, for his part, remained faithful to the historical perspective of the *Cahier,* and continued to ground Négritude in past and present oppression and in the movement of historical remembrance. In a 1987 discourse on Négritude, he unmistakably asserted 'Négritude, in my eyes, is not a philosophy. Négritude is not a metaphysics. Négritude is not a pretentious concept of the universe. It is a way of living history within history ... ' (Bachir Diagne 2011, p. 34). To the analytic stylisation of black heritage through Western ontological concepts, Césaire opposes an incommensurable 'heritage' of suffering. As the friendship between the two men always prevailed over their theoretical and political disagreements, these two faces of Négritude's legacy remained, in a way, dialogically linked. Damas, their self-proclaimed 'holy spirit' (Racine 1983, p. 193), was less determined to theorise Négritude than to situate it in the historical movement of ideas. Faithful to their initial quest, he considered Négritude to be a search for identity through the rehabilitation of African culture (189).

Négritude and Politics

Proponents of civilisations' dialogue and of cultural *métissage,* Négritude's protagonists at no point advocated a total break between metropolitan and native cultures. Nor did they advocate an absolute political break. The politics of Négritude is riddled with problems of interpretation, as the violent anti-colonial stance against colonialism surfacing in their poetry does not find direct translation into their political discourse and decisions. While much of the early scholarship on Négritude was concerned with describing its clear identification with either radical anti-colonialism or cultural reformism (Wilder 2005, p. 202), Gary Wilder's important study has shown how Négritude responded to the specific conditions and

contradictions of the inter-war 'French imperial Nation-state', which was characterised by a greater level of integration between metropolitan and colonial societies, and by new methods of colonial administration. The post-war need to improve colonial productivity led to a form of government that was based on the simultaneous transformation and preservation of indigenous societies, at the same time rationalising national belonging and racialising citizenship, or ethnicising development (4–5). In this context Négritude can be read as a response to this contradictory situation, working within French Republican politics and against colonial racial hierarchy. It expresses itself in Négritude's simultaneous demand of citizenship and rejection of assimilation, a project that could 'accommodate both republican and Panafrican identifications' (256). Resituating Négritude in the context of Greater France helps one to understand why their critique did not lead to a project of complete separation, such as Fanon's call to 'leave Europe'. It explains why Négritude remained in the register of immanent critique, taking its clue from radical counterpoints to European modernity and rationality, such as philosophical vitalism, surrealist aesthetics, or ethnology (257).

Historical Watershed, 1945

The immediate aftermath of the Second World War constitutes a break within the history of the Négritude movement. Whilst Césaire moved back to Martinique with his wife Suzanne and created a literary review called *Tropiques,* Senghor and Damas were both mobilised in French army battalions. Senghor was held captive for 2 years in German labour camps and Damas worked for the Resistance. In the 1930s, Senghor, Césaire, and Damas were notorious among small communities of Antillean and African students in Paris; they elaborated their own discourse in the margins of mainstream politics. After 1945, however, all three took up political roles within the French Empire as deputies and sat at the National Assembly in Paris. Only then did Négritude become a self-conscious movement, signalled by the

N

creation of the journal *Présence Africaine*, by Alioune Diop, their friend and ally. The journal proposed to edit black writers and studies on Africa, with a particular emphasis on African literature. Moreover, the publications of two anthologies – *Poètes Noirs d'Expression française, 1900–1945* by Damas in 1947 and Senghor's *Anthologie de poésie nègre et malgache* in 1948 – were key in publicising Négritude on a wider scale. Jean-Paul Sartre's long preface to Senghor's anthology, 'Black Orpheus', became Négritude's political manifesto, propelling the movement onto the world stage of revolutionary politics. His intervention signals the entry of French anti-colonial thought into a new era, where readings of Sartre, Hegel, Kojève, phenomenology, and psychoanalysis prevail over those of Nietzsche, Bergson, and anthropology (Frobenius, Delafosse, Delavignette). In the course of the 1950s, reflections on life and civilisation were thus replaced by existential phenomenology, Marxism and development discourse.

Sartre's preface redefined Négritude in connection to post-war revolutionary politics, at the convergence of existentialism, Marxism, and his own theory of literature. For Sartre, Négritude designates the black man's *taking consciousness* of himself (Sartre 1972, p. 11) in the nexus of capitalist relations of forces. 'And since he is oppressed *in his race* and because of it, it is *first* of his race that it is necessary for him to take conscience' (15, emphasis added). The paradoxical framing gesture of Sartre was to celebrate Négritude poets as 'authentic revolutionaries' while negating the autonomy of their political demands, reducing it to the 'weak stage of a dialectical progression' (60). Since Négritude, through Césaire's voice, lays claim to the universal struggle against oppression, Sartre deduces that Négritude's voice is *ultimately* reducible to a main, overarching historical subject: the proletariat (59). Sartre's analysis, by prioritising a historical definition of Négritude over its anthropological or cultural facets, foreshadowed the subsequent problems and debates surrounding it, simultaneously ontological definition, cultural inventory, *and* emerging from struggle – positing race and undoing it.

Négritude: Between Culture and Politics

The heterogeneity of positions and political tensions surrounding Négritude was never so glaring as during the First Congress of Black Writers and Artists, organised by Présence Africaine in September 1956. Gathering over 60 'delegates', the aim of this three-day congress was to engage a 'dialogue' between black 'men of culture' from Africa, the Caribbean, and the US, re-enacting in an official way the trans-continental groups of interwar Paris. Senghor, Césaire, Achilles, Alexis, Fanon, Hampaté-Bâ, Cook, Wright, amongst others, gave papers and participated in heated debates. But behind its constant invocation, the polymorphous notion of 'culture' proved to be a very unsteady ground for the reunion. The Congress was structured around the idea of an authentic 'African heritage', which was to be unearthed, inventoried, and modernised. But by the time this 'dialogue of civilizations' could finally take place, several delegates and a large part of the public were expecting the speaker to endorse radical anti-colonial positions. The word 'nègre' and its correlate 'négritude' were hardly pronounced during the conference. Senghor, who at the time represented Négritude's canon, presented a paper titled 'The Laws of Negro-African Culture', in which he defined the negro-African civilisation by a set of integrated characters, insisting on its complementarity with European civilisation:

> The negro (nègre) reason does not exhaust things, it does not mould them in rigid schemes, eliminating the juices and the saps; it sticks itself within the arteries of things, it adheres to their rims to dive into the living heart of the real. The white reason is analytical by utilization, the negro reason, intuitive by participation. (Présence Africaine 1956, p. 52)

Several delegates criticised this idealised image of the African civilisation, entirely disconnected from the colonial problem. Césaire's important intervention, 'Culture and Colonisation', constituted a stark opposition to the latter, arguing that the question of black culture was completely unintelligible without reference to colonisation. For Césaire, the issue was not to address colonised people as an *audience* anymore, but as agents and creators. The time to 'illustrate

the presence of black men of culture', as *Présence Africaine* claimed to do, was over. More generally, these proceedings reveal the growing importance of psychology and existential phenomenology, in the mid-1950s, as ways of understanding racism and colonisation. Frantz Fanon's notorious speech – 'Racism and Culture' –contained an implicit critique of Négritude's lack of reflection on their psychological mechanisms as colonial élites. Recalling the themes of the *Cahier,* Fanon's 'Racism and Culture' referred to an *interior struggle* of the colonised with himself, evoking a bloody and painful 'corps-à-corps' between the colonised and his culture, a struggle at the level of his 'being'. In 1956, Fanon had abandoned the upbeat dynamic of 'cultural choices' and situated liberation in both psychic and physical violence, within the concrete experience of liberation struggles.

Négritude After Decolonisation

With Senghor's presidency in Senegal (1960–80), Négritude accessed the status of state discourse, and met its most virulent critiques from among the Antilleans and the newly independent African states. At the 1969 Pan-African Cultural Festival held in Algiers, the Dahomeyan (now Benin) Stanislas Adotévi asserted: 'Négritude is a vague and ineffective ideology. There is no place in Africa for a literature that lies outside of revolutionary combat. Négritude is dead' (Jules-Rosette 2007, p. 276). Similarly, the Haitian communist René Depestre characterised the movement as the 'epidermisation of his [the black's] miserable historical situation' (Depestre 1980, p. 50), and made the brutal claim: 'All these chatters around the concept of négritude are actually defining an inacceptable black Zionism, which means an ideology that, far from articulating itself to a desalinating and decolonization enterprise, is incapable of dissimulating that it is one of the columns supporting the tricks, the traps and the actions of neo-colonialism' (53).

A few years later, the Benin-based philosopher Paulin J. Hountondj developed a criticism of Négritude specifically targeted at its philosophical aspects, which he called 'ethnophilosopy'. To reclaim, he argued, an African way of life as philosophy can only be an external point of view, *about* them and not *by* them, which can only generate an alienated African philosophical literature. Négritude, he wrote, 'has lost its critical charge, its truth. Yesterday it was the language of the oppressed, today it is a discourse of power' (Hountondji 1983, p. 170).

In the wake of these polemics, Négritude scholarship has focused intently on the thorny questions of its lack of political radicalism and on its cultural 'essentialism', seemingly at odds with 1990s paradigms of identity (creolness, hybridity). More recently, the tendency has been to resituate these questions in their historically specific contexts, addressing Négritude's archive as a multidisciplinary resource of study. The crucial role of Jane and Paulette Nardal in launching and inspiring the movement through their use of transnational networks has represented an important step towards reconfiguring Négritude from the point of view of gender critique (Sharpley-Whiting 2002; Edwards 2003). But Négritude has also been increasingly analysed at the level of its philosophical discourse, emphasising its relation to the Western canon (Jones 2010; Bachir Diagne 2011). Emphasising Négritude's historical depth does not mean, however, that it only retains a documentary value. Today, Négritude's truth resides not only in the complex sum of its influences; it has also become, over the years, one of the main foundations of the black radical tradition.

Neoliberal Economics and Imperialist Ideology

Francesco Macheda
Department of Social Sciences and Law, Bifröst University, Borgarnes, Iceland

Synonyms

Critique of development economics; Neocolonialism and transnational corporations; Theories of economic development; Washington consensus

This entry explores the ways in which the apologists of imperialism seek to camouflage the true causes of the unequal position occupied by a vast number of developing countries within the system of international capitalist relations. It will be shown that this goal has been achieved through the adoption of a more veiled but equally reactionary theoretical platform that tries to shift the blame for the misfortunes of millions of people in backward countries onto these very same people. Methodologically speaking, the goal of exonerating imperialistic relationships from any responsibility for the backwardness of the former colonies is served by thrusting into the foreground the psychological propensities of people

in developing countries and the institutional failures allegedly arising from their incapacity to conform to market norms. However, the task of providing a "scientific" substantiation of the "irrationality" of people in backward countries and of their "inability" for managing and developing their economies is complemented by the absence of any systematic consideration of the structural processes that have produced the underdevelopment of such countries.

The Essence of Imperialist Ideology and its Reproduction in Mainstream Economics

Imperialist ideology refers to a set of ideas intentionally designed in order to justify, preserve, or strengthen the dominant position of the international monopolies based predominantly in Western Europe, North America, and Japan in many of the economically underdeveloped countries of Asia, Africa, and Latin America. In a bid to conceal that it is the very nature of the penetration of international capital into developing countries that produces new forms of dependency, the ideologues of imperialism exert a great deal of effort to persuade the public that the export of state and private capital, respectively, by imperialist states and their giant monopolies, operates as a type of integrating factor whose historical mission is to accelerate the transfer of equipment, technology, technological experience, and managerial skills. In the apologist narrative of imperialist ideology, this is presumed to narrow the technological and economic gap between advanced capitalist countries and developing ones and to lead to the elimination of the pronounced differences in the rate of economic development and welfare around the world.

The arsenal of modern imperialist ideology which encourages the South's opening up to foreign capital investments is loaded with the weapon of neoliberal economics (monetarist, supply-side, neoclassical policies, neo-institutional theories, etc.). In accordance with Adam Smith's concept of the invisible hand of the market, the advocates of economic neoliberalism believe that, under conditions of free competition, the private

enterprise system guided by the profit incentive automatically directs toward the maximization of the total product and the most effective use of society's productive resources. The absolutization of the potentialities of the free play of market forces for promoting development ultimately serves the goals of the international monopolies, which is that of moving their capital across the globe and placing it in countries with a more favorable business climate. Neoliberal economics is a tool to legitimize imperialist policies designed to intensify the integration of the former colonial periphery into the world capitalist economy with the aim of perpetuating developing countries as profitable spheres for investment. On the one hand, the purpose of neoliberal economists is to remove hesitation on the part of the ruling circles of backward countries who are concerned with the foreign monopolies' penetration into their economies, by fostering the illusion that an "open door" policy is the only means through which to achieve rapid economic growth and raise the living standard of their populations. On the other hand, the goal of the defenders of the imperialist system is to convince the local ruling circles to create a favorable sociopolitical and economical "climate" for large-scale private foreign investments by means of enforcing the polices which preserve the free market system in liberated and emerging countries. Overall, the promotion of the private sector is intended to encourage the creation of a wide network of participation in foreign activities by international monopolies. This entry is structured as follows. The next section of this paper retraces the key historical events that supported the global offensive of the neoliberal ideology which has been disseminated worldwide by US-backed imperialist institutions such as the IMF and the World Bank. By starting from the assumption that economic theories are the product of their social, political, and economic settings and the conflictual circumstances in which they are conceived, the section pinpoints the causal nexus between the numerous failure of government-led import substitution industrialization (ISI) growth programs based on Keynesian principles and the ascendency of conservative policy and ideology within leading imperialist countries (what came to

N

be known as the "Washington Consensus"), which became the hegemonic model of international development starting in the early 1980s. Neoliberal economics and the apologetic conception of free market presents illustrations of the way in which the theoretical core informing the so-called structural adjustment programs imposed on the former colonies and dependent countries of the Global South by leading international financing institutions since 1980 is derived from basic principles of neoliberal economics. The purpose here is to scrutinize the theoretical foundations underpinning the typical neoliberal arguments regarding the need for a strengthening of the role of the market mechanism at both the national and international levels. Development economics and the ideological defense of imperialism discusses the specific forms of colonization of development economics by neoliberal economic theory. In doing so, it will be argued that the adoption of neoliberal dogmas by development economists fulfils a certain ideological function: it reflects the search by imperialist ideologues for the most effective theories capable of throwing a smoke screen around the true nature of the impact of the privatization of national assets privatization and the extensive inflow of foreign capital into developing countries. The final section concludes with an attempt to pierce the veil of imperialist ideology backed by neoliberal economics.

The Crisis of US-Led Imperialism and the Restructuring of International Economic Relations

The evolution of the explanations provided by economists and the ideologies they are based upon are shaped by the emergence of new practical problems "that are thrown up from a particular social context" (Dobb 1973: 16). In view of this, one can interpret the substantial shifts in Western economic thought away from the orthodox Keynesian doctrine of government economic regulation and toward laissez-faire neoliberalism as a reflection of the aggravation of the crisis in US capitalism and the subsequent changes in international economic relations during the 1970s. The disintegration of the global institutional configuration under which the newly independent countries successfully resisted the diktats of US

imperialism throughout the 1960s until the late 1970s can be traced back to the serious crisis of confidence in the US dollar as the global reserve currency. Such crisis reflected the decline of US global hegemony mainly due to the following factors: the rise of international competitors such as Germany and Japan, the fall of profitability of US firms' investments, the growth of state debt, and the intensification of chronic inflation caused by the actions undertaken by the US government, which continued to print dollars to sustain growth internally and mainly to fund both the war in Vietnam during the late 1960s and the Cold War against the Soviet Union.

In the meanwhile, it became apparent that the practice of state regulation oriented toward the closed economy not only ceased to correspond to the practical task of strengthening the position of American monopolies on both domestic and foreign markets, but was even an obstacle to its execution. It was in this context that the US political and economic leadership under President Carter and the Federal Reserve Chairman Paul Volcker, respectively, in a desperate effort to reverse the slide in US power, decided to throw off the shackles of bankrupt Keynesian methods of government regulation in favor of previously discredited monetarist strategies proposed by neoliberal theorists. This process started at the end of the 1970s with a drastic contraction in the money supply and the sharp rise in interest rates, which reached 14–16% in the early 1980s. The monetarist shift in the Federal Reserve's economic policy to stabilize the dollar set up the conditions for an outbreak of the debt crisis in developing countries, to the extent that they found themselves unable to bear the burden of debt repayments, which were issued in US dollars (Brenner 2006: 187–236; Parboni 1981).

This fundamentally restructured the relationship of the United States to the global economy. On the one hand, in the 1980s, US financial institutions re-established their financial power over the world economy, as the "Third-World debt crisis" led to a reversal of private capital flows, which began flowing back to the United States once the IMF stepped in to resolve such crisis in favor of the US international banking monopolies. The lowering of the limit for gaining access to its

resources and the toughening of the terms of credit by the IMF led to a substantial inflow of funds into the US economy (Arrighi 2002: 20; Duménil and Lévy 2004: 90; Vasudevan 2009). The other side of the coin is that underdeveloped countries were left with extremely meager funds to promote their economic growth. By absorbing the developing countries' savings, the developed countries – first and foremost the United States – did not allow poor countries to amass sufficient resources to finance large-scale economic programs that would diversify their economies, thereby setting backward nations on an upward path, taking them from poverty to development. This problem was exacerbated by the fact that, as Western developed capitalist states started to adopt strong "deflationary" and protectionist measures, the demand for raw materials mainly exported by developing countries slowed down in the early 1980s. The response adopted by these countries was to expand their exports all at once, causing a further collapse in the price of their traditional primary materials. As a result, the less-developed countries found themselves in a disastrous situation, as the falling export earnings were eaten by interest payments and the redemption of credits. Many of the Asian, African, and Latin American developing nations could do nothing but contract more and more credits to pay the interest on their debt or repay the existing debt to the international bankers, which caught them in a debt trap that ended up in an inevitable spiral (Nakatani and Herrera 2007). The growing external indebtedness of these countries contributed to a shift in the global balance of power in favor of the United States, as it marked the failure of ISI-based developmental strategies in most backward countries – based on protection, regulation, and state subsidies. The outcome of this process was that "the entire program of action for a new world economic (NIEO) order came up against serious difficulties in the 1980s" (Buzuev 1990: 263).

Imperial Policies and the Rise of Neoliberal Ideology

It is in this context that the global offensive of neoliberalism in practice and of neoliberal ideology in economic theory must be understood. At the Cancun Summit on International Development in 1981, both Mrs. Thatcher and President Reagan "killed" the South-backed NIEO idea, calling for a greater reliance on the free market as the vehicle for promoting economic development and fighting poverty (Cypher 2014: 237). Afterward, the United States simply refused to engage in global negotiations, forcing the North-South dialogue to stall. Such actions were applauded by Margaret Thatcher, who suggested that one of the valuable outcomes of Cancun was that it "was the last of such gatherings" (Taylor 2003: 410). Henceforth, she noted, "the intractable problems of Third World poverty, hunger and debt would not be solved by misdirected international intervention, but rather by liberating enterprise, promoting trade – and defeating socialism in all its forms" (Thatcher 1993: 170).

This pro-market philosophy soon became commonly accepted in the influential circles of big Washington-based developmental agencies. According to the new development policy that became codified in what was called the Washington Consensus (Williamson 1993; Babb and Kentikelenis 2017), the reasons behind the developing nation's troubles and the resulting growth in global inequality relied neither on the questionable neoliberal policies of the United States and its allies nor on the prolonged colonial rule imposed by the developed capitalist powers. On the contrary, neoliberal economists and orthodox policy makers sought to shift any responsibility for the disastrous situation fully upon the developing countries themselves and the government-led ISI strategies which they had adopted during the 1970s. These strategies, it was argued, lay at the root of many of the problems of developing economies, including the rent-seeking character of government and government officials, pervasive inefficiencies, misallocation of resources, endemic inflation, decline of primary sector output and exports, high levels of unemployment and informality, unequal distribution of incomes, high poverty rates, and systemic corruption (Moreno Brid and Pérez Caldentey 2010: 404–405).

From this perspective, the solution to the most pressing social, economic, and political problems was to be found in the institutionalization of market relations and, conversely, on a significant cutback of the role of government. Rather than resources,

what developing nations really needed was better organization. The latter was something of a code word that meant, primarily, shifting resources away from the state sector into areas assumed to be of much higher value in the private sector. What poor nations essentially needed was not more capital or infrastructure. Developing nations were advised to not waste their time and resources on creating national, domestic technologies because they could easily obtain them from the West through international trade. Indeed, the "privatization agenda" was complemented by the promotion of "free trade" as the most effective vehicle for forcing Third-World countries to open their markets to foreign goods and foreign direct investment by US multinational corporations.

Under the banner of "free trade," poor countries were urged to dismantle protectionism, minimize domestic restrictions on foreign ownership, and liberalize domestic markets so that state-owned assets (such as mines, manufacturing, electricity generation plants, public transport, and most infrastructures) could be available to foreign capital. These measures would facilitate the attraction of foreign investments by transnational corporations. By providing for an "interdependent" market-economic linkage between developed and underdeveloped countries, foreign investments allegedly constituted the major factor in developing the world economy, insofar as they transfer the most advanced equipment and technology which can be easily assimilated by the local producers.

The standard package of supply-side macroeconomic policies to promote economic growth embodied in the Washington Consensus was actively supported by the internationally competitive economic powers through the two main multilateral agencies – the IMF and the World Bank. The former has for decades imposed neoliberal policies on the vast majority of less-developed economies in the form of so-called structural adjustment programs, consisting primarily of a series of conditions or actions to which the borrowing government must agree before receiving a loan. Such programs were nothing but a punctilious application of the Washington Consensus-type economic policies that were imposed upon 70 developing debtor countries after the change of

the global political climate in the early 1980s. Basically, these programs were the global disciplinarians that would ensure a long-term strategy for commercial banks getting their money back (Bracking 2009: 20), as the conditions attached to IMF loans are usually associated with the demand for developing countries to implement processes of market liberalization, which typically implies the retrenchment of public subsidies on essential needs such as food, water, and other staple products, education, transportation, healthcare, housing, and the like. As the establishment of market pricing usually led to increased prices for basic necessities, these were roundabout ways of taxing the working people of Asia, Africa, and Latin America to pay the powerful creditors in the West (Vasudevan 2009: 297; Hossein-Zadeh 2010).

The fund's rescue schemes imposed on dozens of poor Third-World nations also included the currency devaluation to generate trade export, the privatization of national industries, and the liberalization of external trade and capital movements. Overall, these measures had the effect of allowing greater access to domestic markets for the industrialized nations, their banks, and transnational corporations. In this way, productive and financial institutions of the leading countries could buy up the peripheral countries' domestic assets at a very low price. This form of acquisition, other than constituting a kind of repayment for the existing external debt obligations, represented a new way of gaining access to newly created markets in emergent countries while, at the same time, allowing leading international monopolies to maintain controlling positions in the production and exchange of commodities.

The World Bank occupied a hegemonic position in setting the developmental agenda throughout the 1980s and into the 1990s (Fine 2002: 2065). Indeed, the World Bank became the key "maintainer and projector of the neoliberal economic paradigm...and that centers on deregulation, privatization, and financial and trade liberalization" (Broad 2006: 388). With the advent of neoliberalism, the diversity of the World Bank's points of view on the role of the

state in economic development narrowed. Between the late 1970s and the 1980s, about 800 orthodox macroeconomists were hired to replace budding development economists hired during the 1960s and the 1970s. This is considered by one World Bank official to be a type of "economic genocide" for older economists who had been learning about development during the McNamara era (Goldman 2005: 92).

Having virtually silenced all dissent within its ranks, the World Bank cemented a core community of development economists ideologically committed to defending neoliberal orthodoxy. They argued that markets are uniquely suited to allocate resources efficiently and that the best way for individuals to allocate such resources is to expand the sphere of the market. In their view, markets are desirable because they are superior to other social forms of economic and social organization. As such, they made a serious effort to convince the public that there is no alternative to development other than to laissez-faire economic policies. As a consequence, any idea of development outside of the free market economy seems to be prohibited or marginalized at best (Angresano 2007: 41–42).

Neoliberal Economics and the Apologetic Conception of Free Markets

Since the early 1980s, the neoliberal revolution promoted by the global governance institutions in tandem with the governments in the United States and the United Kingdom has been inseparable from neoliberal domination in the field of economics. The neoliberal idea that free markets are the most efficient method of organizing a society is founded upon some theoretical and methodological premises, which can be identified along the following four dimensions of neoliberal economics.

First, the key point of entry of neoliberal economics is the decisions made by people in terms of the theory of *rational choice*, which assumes that everyone is equipped with an inborn and ahistorical rationality which helps him/her to maximize his/her own well-being. He/she is presumed to be a sort of rational computer which mechanically processes "the information

available to weigh the costs and benefits of every action and undertake those that are the most beneficial" (Chernomas and Hudson 2016: 6), irrespective of the socioeconomic organization of society in which he or she is embedded. It is worth noting that the homo economicus is a simple apologia of the capitalist system, as he/she reflects the subjective goals of a capitalist who interacts within a primordial system of pure markets insofar as his/her only goal is to extract the greatest amount of utility (profit) for himself/herself, without regard to the methods employed in the process.

Second, from the individual and his/her rational behavior, neoliberal economic theory defines the meaning of all the social and economic phenomena that it seeks to understand. Neoliberal economics moves from its basic unit of the atomistic, hyper-rational individual to draw inferences on society as a whole by assuming that the whole is the sum of the individual isolated parts. The essential proposition of the theory is that the isolated individual represents the whole of society (in the words of Margaret Thatcher, there is no such thing as society – just individuals). This typifies *methodological individualism*, according to which the explanatory movement is from individuals to society, taking the maximizing behavior of atomistic individuals as given. Accordingly, the behavior of all individuals does not depend on the context in which they operate.

Third, the mechanistic concept of the nature of human beings lies at the heart of the ideology of neoclassical economic theory: when all rational buyers and sellers in the marketplace exchange their resources with the aim of maximizing their individual self-interest, "competition will produce a unique set of prices and quantities that will create a perfect match between the supply and demand" (Herrera 2006). At this point, the economy reaches an inherently harmonious and stable *equilibrium*, which supposedly fully satisfy the needs of all members of society. It follows that deviations from market-based equilibrium are associated with disorder and irrationality (Carchedi 1995: 172; Perelman 2002: 22). Note that the stability of equilibrium crucially depends on the existence of a well-defined system of

property rights. These are mainly defined as the right to use, derive an income from, and sell a resource (an asset). These resources, in turn, are assumed to be scarce. Scarcity of all resources affects individuals' behavior, in the specific sense that it is because resources are scarce that individuals have the incentive to use them more efficiently. The implication is that open access to resources – or more precisely, the absence of markets where property rights are bought and sold – leads to inefficiency and waste of resources. A single-minded advocacy of eroding the system of public ownership and "protecting" the use of resources by means of their privatization is among recent policy reflections of this view. Actually, the assumption in neoliberal economics against state ownership of national assets is that public interference carries the danger of economic inefficiency and stagnation, since it frustrates the spontaneous tendency of the market to reach the equilibrium. As ultraliberal economist Harold Demsetz (1967) argued, the stronger the protection of private ownership, the higher the incentive for individuals to mobilize their resources efficiently to the extent that private property allows individuals to realize the rewards of their investments.

Finally, the concept of equilibrium involves a basic assumption: "all individuals express freely their preferences, without any form of coercion or *power* relation" (Palermo 2016: 83). By completely omitting from the analysis the asymmetrical distribution of property among various classes of society, the competitive market is regarded as an impersonal arena through which buyers and sellers are free to buy and sell whatever they like. As the prices emerge from the "free" interaction of demand and supply, the market price system is therefore elevated to the role of the most equitable allocation system possible, where all individuals can extract equal benefits from the system. It is important to note that the introduction of market imperfections by post-Walrasian economics does not fundamentally challenge the power-free nature of competitive capitalism argued by traditional neoliberal economic models. They all agree that within a perfectly competitive arena, there is no power

relation. In both benchmarks, thus, the true cause of power relations, coercion, non-clearing markets, and allocative inefficiencies is to be found in imperfections (asymmetric information, bounded rationality, uncertainty, historical time, etc.) in the decision-making context that make perfect competition impossible. "Eliminate them, these authors maintain – either implicitly or explicitly – and power relations disappear" (Palermo 2014: 132).

It goes without saying that this is perfectly suited to the neoliberal utopia of market freedom: "if we assume that production is conducted by atomistic agents maximizing their utilities in perfect competition, then market competition controls their behavior and the need for formal social control is minimized" (Dugger 1992: 88). This contributes to impose the view of unregulated capitalism as the only neutral way of regulating social relations on the whole society. Indeed, this core principle forms the basis of the mainstream, neoliberal economist's instinctive position that if a problem arises, then some "anti-market" and/or "monopolistic" forces, typically the trade unions or government, are to blame: the imposition of high corporate taxes kills the capitalist incentive to make new investments; the imposition of high tariffs, quotas, and other forms of barriers aimed at protecting indigenous industries against foreign competition creates costly distortions that end up penalizing exports and weakening the national economy; state support to employment, wages, and social needs creates a free-ride mentality that encourages workers to prefer voluntary unemployment and state assistance rather than to look for work. To put it bluntly, by shifting onto the regulatory activity of the state and other extra-market institutions all the responsibility for unemployment, inflation, and stagnant economic growth, neoliberal economists argue the necessity of dismantling the system of state regulation, curbing social spending, and opening up the economies to foreign investment. To the extent to which the state maintains an economic function, this is reduced to providing the most favorable environment for the functioning of the market system and to increasing the effectiveness of private capital investments.

Development Economics and the Ideological Defense of Imperialism

The previous section has provided a brief account of the core of neoliberal economics, which traditionally deals with an advanced capitalist world of power-free, voluntary, market transactions. This is because advanced countries are presumed to be populated by rational economic agents who exchange private property rights over their resources on the basis of purely individualistic, self-interested considerations and utility calculations. It will not come as a surprise that neoliberal economists have paid particular attention to advanced countries, which are allegedly characterized by automatic price adjustments "and equilibrium outcomes in all product and resource markets" (Todaro and Smith 2011: 7).

One of the most effective instruments in the hand of imperialist ideologues that help them propagate free-market principles and related policy prescriptions to underdeveloped countries is "development economics." Generally speaking, the task of development economics is to clarify:

(a) The reasons behind the lower incomes and living standards in developing countries
(b) The origin of and the machinery perpetuating the sharp economic inequality of different groups of nations in the world
(c) Ways and means of solving the problem of economic backwardness and, as a result, eradicating the economic inequality of states

Since the early 1980s, the analytical tools of neoliberal economic theory discussed above have been amply applied to the field of development, so much so that the theoretical core of neoliberal economics has come to define the core of mainstream development economics. As Todaro and Smith (2011: 25) candidly admit "Development economics is a distinct yet very important extension of...traditional economics," or, as Kanbur (2002: 477) put it, "mainstream development economics today is mainstream economics applied to poor countries." In what follows, it will be examined how the adoption of neoliberal economic tools by development economics has reshaped the way in which academics, policy makers, and leading development institutions understand problems related to development. Development economists take the core tenets of neoliberal economic theory and try to apply them in analyzing the economy of poor countries as well as in devising development and growth strategies.

Firstly, the focus will be on the first two assumptions which have been discussed in the previous section: methodological individualism and rational choice theory. To begin with, once it is recognized that the whole of society must be analyzed largely in terms of isolated individuals and their properties, it follows that the global dynamic of capitalist development is seen as merely the aggregation of national dynamics. The elevation of individualism to the level of the most important methodological principle imposes narrow limits on the subject matter of neoliberal development economics, which is essentially reduced to the identification of internal features of the economically backward countries supposedly underlying their backwardness and economic inequality in the world. For example, Ray (1998: 4) states in his widely adopted textbook, *Development Economics*: "I move away from a long-held view that the problems of all developing countries can be understood best with reference to the international environment of which they are a part." According to this view, "the problems of underdevelopment must first and foremost be seen in a global context. ...but I wish to emphasize equally fundamental issues that are internal to the structure of developing countries." Through this methodological lens, the persistent poverty of developing countries cannot be ascribed to the specific features of economically backward countries themselves, such as incompetent economic policy. This position, therefore, determines the normative function of mainstream development economics, namely, the design of appropriate domestic policies. As succinctly stated by Akbulut et al. (2015: 751), development economics within the contemporary mainstream is reduced to "a mere technical issue that can be resolved through the implementation of the right mechanism."

On the other hand, this individualistic approach, which automatically opens up the

N

possibility of resolving problems by purely administrative methods, sanitizes the question of development as this is discursively detached from the system of states in which the world market is embedded, the interdependent but often antagonistic international relations and reproducing mechanisms that shape, constrain, or condition agents' behavior. Poor countries remain poor not because others are rich, but because they have not "done as well." The overlooking of the dynamics of global exploitation, extraction, and dispossession and the relegation of the asymmetrical distribution of property (power) between developed and underdeveloped countries to the periphery of its analytical field is an ideological device used (consciously or not) by neoliberal development economics to propagate the belief that, overall, the capitalist system is an inherently harmonious and egalitarian system. In this framework, all underdeveloped countries need to do is choose the "right" path of capitalist development.

Secondly, the field of development economics has been dominated by the rational-actor model for the past quarter-century. "Despite the abandonment of some of the unrealistic assumptions of the standard neoclassical framework...mainstream development economics unmistakably retains the assumption of homo economicus" (Akbulut et al. 2015: 746). The micro-focus is reduced to the (ir)rational (opportunistic or rent-seeking) choices adopted by the representative individual or individual state, which, however, is also treated as an optimizing individual. Since the theories of development are based on the psychological propensities of individuals or groups of individuals, the engine economic growth and development for all nations must be powered by economically rational subjects. As an important corollary of this, one must note that underdevelopment is reducible to the consequences of the irrational (wrong) decisions undertaken by policy makers and individuals. The issue, in fact, is that "in comparison with the more developed countries, in most less-developed countries, prices often do not equate supply and demand" because at "the individual level, family, clan, religious or tribal considerations may take precedence over private, self-interested utility or profit-maximizing calculations" (Todaro and Smith 2011: 9).

The main argument in such assertion is that the main obstacle to economic development of some countries is the lack of economic rationality, which neoliberal development economics alleges to be innate in the common people of the economically backward countries. Since psychological barriers, conservative habits, religious prejudices, fear of change, and so forth prevent people from behaving in a hyper-rational manner, the spread of the market mechanism over economically backward nations, it is asserted, will overcome the ancient culture of these peoples and, together with this, will induce an entrepreneurial spirit and economic development. Such concerns were exported to adjacent fields such as poverty alleviation and human well-being literature epitomized by the work of Banerjee and Duflo (2005, 2007). The starting point of their analysis is that poor people are poor because they often make poor decisions with harmful consequences. The poor are poor, they say, because "they are reluctant to commit themselves psychologically to a project of making more money" (Banerjee and Duflo 2007: 165). With such theoretical view, Banerjee and Duflo deride poor people on the account that they supposedly undermine their own interests with very high discount rates, that is, the tendency for people to overweight present costs relative to future benefits. Since poor people cannot resist immediate temptation to squander their money on immediate gratification, making the decision to save is put off day after day, and so it is never done. This misbehavior discourages the accumulation of personal savings which, by decreasing the inducement to invest in subsequent periods, inevitably results in depression, unemployment, and poverty. In general, this speculation about poor people's tendency to deter sacrifices creates the impression that, left to their own devices, the poor are victims of their own irrationality, which makes them incapable of planning for the future.

The main conclusion of Banerjee and Duflo's work is that had they properly adopted a profit-maximizing behavior, poor people might have been able to undertake the most forward-looking investments, which could have allowed them to make some progress. As poor decisions make poor people, then neoliberal development

economists' recommendation on this issue boils down to changing people's behavior to bring it into line in every way a with profit-maximizing behavior through the implementation of market system of incentives. Within capitalism, such incentives are generally provided by the liberalization of the labor market and the reduction of unemployment benefits and financial and other forms of assistance from the state after retirement – these being indispensable conditions for motivating individuals to curtail their present consumption relative to planned future consumption.

The proposition that the existence of an explicit system of private property rights is a highly important factor in promoting growth represents the third instance of direct, and effective, invasion of neoliberal economics into the domain of development. Typically, mainstream development economists hold the view that underdevelopment is the inevitable result of the lack of a system of legal sanctions and/or the assurance of legality for the protection of private ownership. Due to the uncertainty in the area of property rights, "in most less developed countries, commodity and resource markets are typically highly imperfect, consumers and producers have limited information, and disequilibrium situations often prevail (prices do not equate supply and demand, emphasis added)" (Todaro and Smith 2011: 8). It is then argued that the state of persistent disequilibrium due to a lack of an explicitly defined system of private property rights makes it difficult for developing countries to make good (efficient) use of the existing scarce productive resources, which prevents their markets from freely spreading or working properly. Following this line of thought, orthodox development economists like Debraj Ray claim that "the irregular, uncertain, and unpredictable nature of land expropriation and transfers, together with the free-rider problems caused by the formation of cooperatives with ill-defined property rights, surely undermined the productivity of Mexican agriculture and caused it to stagnate over a very long period" (Ray 1998: 461).

A similar view is held by leading economists working in the new institutional economics tradition, namely, Acemoglu and Robinson (2010, 2012). In tackling the link between macro-level institutions and national income growth, they argue that poor economic performance throughout the developing world is primarily caused by too much government interference into the functioning of the market. This arbitrary concentration of power in the hands of the government, in turn, leads to the persistence of institutions that are unfit (defined as those that threaten private property), thereby undermining market exchange and posing serious impediments to long-term technological investment and economic growth. For instance, in their discussion concerning the roots of African poverty, Acemoglu and Robinson (2010: 22) point out that "property rights are insecure and very inefficiently organized, markets do not function well, states are weak and political systems do not provide public goods." Then, they go on to say that the greatest threat to property rights and markets is a predatory state in which the government levies high taxes or expropriates land and property. This uncertainty is viewed as one of the basic obstacles to investment and innovation and is the root cause of low productivity and growth.

To sum up, the main argument of neoliberal development economics is that poverty results from the failure to support the development of necessary "market prerequisites," namely, a strong system of property rights and legal regulations. This deprives firms of the opportunity to mobilize the necessary capital, which leads to the paralysis of investment activity and hence underdevelopment. The ultimate cause of such failure relies on oppressive, activist governments that reduce market efficiency and impede economic growth. This view is fully consistent with the neoliberal focus on privatization which originates from the idea that any regime based on strong intervention of the state in the economy is almost universally prone to failure due to its inherent wasteful, inefficient, and costly character (Stewart 2005).

The fourth essential feature of mainstream development economics is its reliance on the neoliberal belief that unfettered markets are necessarily power-free, that is, that there is no inherent asymmetry of power and authority between market agents – be they individuals, firms, or states.

N

This premise determines the interpretation given to development issues: economic development is being held back because of enduring power relations that arise from imperfections in the working of market competition. Such imperfections, which are always related to the subjective nature of individuals (their irrational economic behavior), are conducive to numerous market failures that hinder the full deployment of factors of production in developing countries. Since market transactions in underdeveloped countries are inefficient due to various types of failures and imperfections, development economics must therefore focus on the specific conditions which will re-establish market efficiency. As Ray (1998: 4) points out, "the point is to understand the conditions under which they (markets in developing countries, emphasis added) fail or function at an inefficient level and to determine if appropriate policies grounded in an understanding of these conditions can fix such inefficiencies...Few people would disagree that these considerations lie at the heart of many observed phenomena." In a similar vein, Todaro and Smith (2011: 8) suggest that development economics "must be concerned with the economic, cultural, and political requirements for effecting rapid structural and institutional transformations of entire societies in a manner that will most efficiently (that is, at the lowest cost and highest profit, emphasis added) bring the fruits of economic progress to the broadest segments of their populations." The passages quoted above are enough to show that the contemporary mainstream in development economics is about "getting policy right," that is, fixing market imperfections which, in turn, will speed the creation of those "market-friendly" institutional environments most favorable to capital accumulation. A concrete example of this approach can be found in orthodox development economists' treatments of "globalization," which is presented in the most favorable light with the intention to convince relatively underdeveloped countries that they should dismantle protectionist barriers to make foreign monopoly capital welcome in every possible way.

Within mainstream development economics itself, the idea of market inefficiency caused by various forms of market failures has recently been used to justify discretionary state intervention in the economy. In this framework, the state is conceptualized as one that intervenes, often extensively, to resolve problems that the spontaneous market itself endangers but is unable to resolve. It is worth noting that the reinvention of the nature of the state in efficiency terms and the search for the best ways to deal with market imperfections went hand in hand with the transition from the Washington to the post-Washington Consensus spearheaded by Joseph Stiglitz after his appointment as chief economist at the World Bank in the late 1990s. At least in principle, this is more state-friendly and less pro-market than the previous neoliberal Washington Consensus, "as it emphasizes the significance of market and institutional failings and their correction through state intervention as the key to developmental success" (Ashman et al. 2010: 28). Nevertheless, this definition of the problem provides a narrow perspective on the concept of the state. In fact, by using the Pareto efficiency principle as a driving factor in governance decisions, the state is reduced to an alternative, nonmarket institution that intervenes every time the market fails to allocate resources efficiently with the aim of improving economic efficiency by correcting such market failures.

This approach is a methodological device used by neoliberal development economists to launch their own version of state regulation of the development process. Here, the regulatory activity of the state is restricted to "intervention on behalf of capital" (Saad-Filho 2003: 9), for example, to the opening up of the national economy to international trade and foreign investment by international private corporations. Other forms of state intervention to stimulate private capital accumulation are the limitation of trade unions' rights, which gives private capital unlimited freedom of action in the labor market, and the assumption by the state of the burden of insuring international capital against the commercial and political risks connected with possible revolutionary perturbations and/or the upsurge of anti-imperialist movement in emerging countries. In brief, such an understanding of the economic role of the state provides an ideological cover for the promotion

and strengthening of capitalist relations within developing countries' borders. This ultimately reflects the interests of international capital, insofar as it improves the conditions for extracting the greatest possible profit for minimal initial investment by foreign corporations.

Critique and Conclusion

A major trait of neoliberal economics, especially that branch which studies the problem of the development of economically underdeveloped countries, concerns its attempt to arm the supporters of imperialism with new tools for applying various forms of pressure within developing countries. Under the flag of the "free market system," neoliberal economists have, in fact, launched an offensive on an unprecedented scale aimed at extending the freedom of entrepreneurial activity throughout the world and discrediting the idea of public ownership of the means of production (and/or central planning) as the basis of economic development. The typical neoliberal argument regarding the need for the dismantlement of the system of state regulation and the privatization of public assets is nothing more than an ideological cover for weakening the economic and political position of developing countries. This primarily serves the multinational corporations' aim of extending the ability to relocate investments at the level of the entire world capitalist economy. This point is attested to by the active use of free market policy principles addressed primarily to developing countries and designed to clear the way for the relaxation of trade and foreign direct investment restrictions and the opening of capital markets.

The approach taken by neoliberal development economists in analyzing factors determining economic development, and the laws and categories expressing these factors, is an extremely important criterion in penetrating the significant influence of imperialist ideology on backward economies. To a decisive extent, the adoption of abstract models claimed to be applicable both in developed and underdeveloped countries forms the principal characteristic of the methodology of neoliberal economic theories of the economic development of backward countries. The predominant use of an individualistic methodology must be seen as a form of ideological practice, whose precise function is to mask the economic essence of contemporary imperialism, namely, the maintenance of a dominant position by international private capital over all modern industrial sectors of developing countries, where conditions for extracting monopolistically high profits are favorable. In an attempt to hide the exploitative nature of imperialism, neoliberal development economists who dominate major academic institutions and intergovernmental organizations claim that underdevelopment is a result of a diversity of internal, accidental causes which supposedly could be eliminated by the expansion of the scope of the market and the simultaneous retrenchment of government intervention in economic matters.

The bankruptcy of neoliberal theories of economic development is confirmed by the historical experience of all countries where these have been applied. First, the neoliberal dogma that economic development can only be achieved on the basis of the private ownership of the means of production and market competition in the pursuit of individual profits is dangerously disconnected from reality. As a matter of fact, the historical paths of currently developed countries support the evidence that the governments of these nations played a major role in all aspects of their development – ranging from public health, education, and other social measures to the creation of the most important inventions (Chang 2002; Mazzucato 2013). This suggests that the very specifics of the problem of overcoming economic backwardness and of winning economic independence compel the governments of developing countries to invest large sums in those branches of the national economy in which the criterion of current profitability does not play a substantial role in guiding individual behavior: public health, universal education, housing, transport, working environment, social security, and so forth. The social results achieved on the basis of these "unproductive" investments create material conditions for securing the growth of people's

creative potential and physical powers which, in turn, "serve as the prerequisites for the acceleration of scientific-technical progress and the growth of productivity of social labor and national income" (Vainshtein 1974: 8).

Directly related to this point is the need to channel public funds to new branches of production which demand more sophisticated technology. As a matter of fact, government funding normally contributes to foster innovation due to the fact that private business is extremely reluctant to finance new investment projects because of the lack of a clearly defined relationship between these expenditures and companies' profitability. This implies the need to make large-scale state-led investment in R&D which encompasses massive outlays on powerful new equipment and costly structures such as laboratory buildings, experimental plants, testing grounds, and computational centers equipped with computers – along with public investment in new scientific institutions and in the formation and training of scientists and highly qualified specialists. As before, the scale of these expenditures requires a departure from the criterion of current profitability, insofar as "it can be determined only on the basis of a general consideration of prospects for the development of the national economy as a whole" (Kollontai 1970: 11). In other words, objective circumstances frequently demonstrate the inadequacy of market competition and profit-driven entrepreneurship as a method of stimulating innovation and development.

Second, the "theoretical" arguments advanced by neoliberal economics to present free trade as the most important vehicle for closing the gap in living standards between advanced economies and the rest of the world are neither supported by historical facts nor take into account the question of real economic power which is closely connected to the ownership problem. On the one hand, the widespread adoption of neoliberal economic programs during the 1980s and 1990s, which were meant to ensure the liberalization of trade and capital movement (along with fiscal austerity and privatization), to a large extent failed to support the convergence of the global income gap between developed and developing countries

(Chossudovsky 1997; Milanovic 2016). Since the start of the wave of market liberalization in the mid-1980s until 2005, the less-developed economies' share of total world income stagnated at 22% even as its share of world population has grown. As a consequence, the income per capita received by three-quarters of humanity fell over that period. In US dollars, while income per person in advanced countries rose from 18,088 to 26,201, in the rest of the world, it fell by around 30% – from its 1980 peak of 1690 to its 2000 trough of 1160 (Freeman 2004: 47), leaving a surplus of people living in extreme poverty.

On the other hand, the failure of neoliberal economics (and the free-trade policies promoted under this banner) to adequately address the fundamental question of development is not accidental but is the inevitable manifestation of its methodology, which ignores the asymmetrical distribution of power in society, which is determined by the asymmetrical distribution of the property of the means of scientific and technological production. Casting aside property relations, neoliberal economic science provides an apologetic treatment of the economic operations of transnational corporations, where their foreign investments are understood as a neutral channel that freely transfers technology from economically advanced to poor countries, thereby raising the technical level of their production and contributing to technological convergence.

This view entirely neglects or glosses over the fact that the dominant relations of ownership of the means of scientific production and abundant supply of skilled labor in imperialist countries give transnational corporations the opportunity to distort the mechanism of global competition to serve their own ends. Although the "the results of scientific labor (new technologies, emphasis added) are potentially accessible to all countries, individuals and groups of people [. . .], under capitalism, monopoly of scientific knowledge emerges" (Anchishkin 1987: 204). The massive availability of financial resources, in fact, allows transnational corporations to concentrate scientific and research work and centralize the most qualified labor power in their headquarters. The results of scientific work performed by such

skilled and technical personnel are manifested in the development and introduction of more sophisticated technology, which becomes the source of higher labor productivity. By lowering the unit production cost, labor productivity gains create mounting opportunities for increasing investment in new technology to be incorporated in new means of production, thereby further strengthening the monopoly power of transnational corporations vis-à-vis technological laggards.

Developing countries' position on the technological marketplace is far more complex. As a direct legacy of the recent colonial past, these countries are extremely limited not so much in the availability of material resources, as in the supply of creators of scientific ideas, engineering specialists with higher qualifications, and networks of scientific research institutions (Skorov 1970; Wood 1995; Lall 2001; Gürak 2015). The acute shortage of educated and skilled human resources armed with modern scientific knowledge, experience, and professional skills makes developing countries even more dependent from an economic point of view. In fact, the formation of numerous science and technology gaps implies the uneven use of the economic effect of science, meaning that not only science-intensive products and scientific up-to-date equipment but also scientific and technological patents, technical know-how, and so on have to be imported on an ever-large scale by less-developed countries. This allows industrially developed countries to remain the main source of obtaining technology to such an extent that they have the power of making more rigid the condition of technology acquisition by developing countries.

Besides selling technology to the developing countries selectively (e.g., blocking access to latest technology) and with many restrictions, this also offers international monopolies the opportunity to make local producers frequently pay for the technology in excess of its actual cost. This has varying effect. On the one side, this technological rent is used by giant monopolies in imperialist countries to buttress their position. The other side of the coin is that the payment of new technology imported on unfavorable terms means a colossal squandering of developing countries'

financial resources that could instead be used to support a country-wide scientific and technological policy for the sake of national interests. In any event, it must be noted that, even if the dissemination of scientific information through a complete liberalization of intellectual property rights was possible, there is another and perhaps more crucial factor that constrains the free flow of technology and knowledge. This is represented by the relative territorial stability of the labor force and/or the imposition of restrictions over people's ability to move across borders. The relative immobility of labor (often enforced through various forms of political coercion) "leads to stable differences in the scientific and technical levels of individual branches of production, regions and entire countries" (Anchishkin 1987: 35). In a nutshell, the ability to compete of technologically latecomers in the developing world is structurally constrained by the asymmetric distribution of material resources, differences in the availability of skilled labor within the international capitalist system, and restrictions over the form of the its mobility.

International monopolies take maximum advantage of their monopoly power over the most advanced technology to penetrate new markets and sectors and participate in the capital of developing countries' private firms to acquire control over them. Due to their financial and technological inferiority, domestic firms are confined to low value-added activities which are typically of a dependent nature such as export-oriented subsidiaries. These supply-oriented enterprises, which widely employ low-paid female labor as well as the labor of teenagers and children, are chiefly engaged in the production of component parts for Western and Japanese multinational corporations that are not able to yield a maximum rate of return on domestic investments. That is to say that, given the dominant capitalist relationships and the asymmetrical levels of technological development in the world today, the imposition of economic policies based upon the principles of laissez-faire provides international monopolies hidden opportunities for preventing the most up-to-date branches of their economies from emerging and effectively competing on both the internal and world market (Chufrin 1982).

To conclude, the transfer of technology is more than merely a material process influencing production. It is a process that also influences the development of social relations, to the extent that foreign monopolies, which have control over global scientific and technical potential and financial flows, stimulate the local development of dependent forms of capitalism by adapting the industrialization of newly free nations to their own interests. The current practice of imperialist relations impedes the worldwide spread of scientific and technological progress, which in turn inhibits the full development of emergent states' productive forces. It is precisely this form of dependence in science and technology (and the unequal international division of labor that follows) which prevents emergent states from building truly independent national economies and liberating themselves from the financial bondage of imperialism.

Introduction

In the last decade of the twentieth century, many authors commented on the new economic, cultural, and political system being implemented worldwide, which emerged after the crises and fall of socialism: that is to say, neoliberalism. According to Connell (2013, p. 100), this system has an economic and social agenda to be implemented in every society, to be achieved under the auspices of a free market. This agenda turns neoliberalism into not merely a simple set of economic policies; rather, as Miraftab (2009, p. 34) notes, it should be understood as a *network of policies, ideologies, values and rationalities*, and certainly some of these are disarticulated and contradictory – however, it aims to encompass all peoples, institutions, and culture itself. This means that educational policies are an important part of this system, and it is one of the areas that policy-makers are keen to implement changes (McLaren and Farahmandpur 2001). In this light, we understand that this question must be answered: *What is the impact of changes in education being implemented by neoliberal policies in the Global South?*

The Rise of Neoliberalism as a New Form of Imperialism

Characterized by cutting taxes, curbing public budgets, privatization of the public assets, commodification of relationships, banking system deregulation, and flexibilization of labor laws, neoliberal policies started to be implemented with vigor in the 1980s by Margareth Thatcher in the United Kingdom and Ronald Reagan in the United States. However, some authors maintain that the very first experience with this kind of social-political-economic model was implemented in Chile under General Augusto Pinochet, who through a coup d'état, took power by force, murdering President Salvador Allende on the 11th of September 1973 (Stiglitz 2006; Klein 2007; Carvajal Diaz 2017; Vásquez and Olavarría 2014). During Pinochet's government, some Chilean economists who had studied at the University of Chicago started to define economic policies for the country. These economists were known as the "Chicago Boys" and were responsible for that which Milton Friedman called "The miracle of Chile" (Friedman 1994).

Milton Friedman and Friedman Friedrich Von Hayek are the two most important thinkers of neoliberal ideology, and their works during the 1980s–1990s became a showcase to the New World Order. It could be said that this was an orchestrated reaction from the right, against the continuous failures of left-wing governments in managing the economy successfully and which ultimately led to a backlash against workers', women's, children's, and minority groups' entitlements and rights. For instance, in the 1960s and 1970s, the United Kingdom was often called the "sick man of Europe" due to its poor economic performance when compared to its peers (e.g., in 1967, the pound was devalued; 1973/1974, the period of the Three-Day Week; 1976, the IMF has to bail out the country; and 1978/1979, the Winter of Discontent). So the failures of the left provided fertile ground for the right to implement its new agenda.

It is arguable that the great beneficiaries of these changes are business owners that take advantage and profit from the situation because governments, worldwide, refrain from stablishing more rules, constraints, and overview procedures, on the production, distribution, access, and consumption of goods and services (McLaren and Farahmandpur 2001, p. 273) – and we would add that some governments have in fact done

away with these. Under the discourse of "less government," private capital takes over services that before were considered functions and part and parcel of the state, such as electricity, communication, transportation, healthcare, and education. Thus, while in classical liberalism it is understood that the state must stay out of market relationships, but ensuring security and the basis for free enterprise, in neoliberalism the state becomes a servant of the private sector. This is so because under neoliberalism, the state must open all sectors to the free market, should deregulate through legislation the use of natural resources, must flexibilize labor laws, and needs to build infrastructure, or be open for companies to do it, so to support private enterprise (McMurtry 1999, p. 58; p. 6). On the servitude of the state to the market, Olssen and Peters (2005, p. 314) affirm that this relationship is, from the dominant part's point of view, *a positive conception of state's role in creating the appropriate market by providing the conditions, laws and institutions necessary for its operation*. And McLaren and Farahmandpur (2001, p. 285) corroborate this thesis, maintaining *that whereas state power can be used in the interests of the large multinational corporations, it cannot be employed in the interest of the working-class*. Accordingly, those who defend neoliberalism become willing servants of the market, understanding that the state should be free of ideologies and that this will make the nation more democratic.

Henceforth, within the neoliberal system, some forms of citizen's participation are stimulated, while others are criminalized. The World Bank's document *Social Capital: The Missing Link?*, published on April 1998, endorsed actions that help the poor to live with inequalities, but the same publication manifested its disagreement with any kind of movements that fights against these inequalities (World Bank 1998). By taking this position, this institution, one of the most influential in the organization and definition of public policies worldwide, empties the political and democratic dimension of social relationships under the discourse of free enterprise, personal merit, and naturalization of inequalities. According to Miraftab (2009, p. 39), the neoliberal system accepts some types of public action

and citizen's participation, but just those that do not challenge the system; he says: "They celebrate grassroots and their collective actions selectively, applauding those that help the poor cope with inequality, while criminalizing the others. Planning practices that celebrate inclusive planning through citizens' participation yet remain uncritical of the complexities of inclusion and resistance in the contemporary neoliberal era are complicit in the binary misconception of civil society and public action." Thus, questioning the neoliberal system, its understanding of human freedom and of democracy, becomes difficult (McLaren and Farahmandpur 2001, p. 273), especially for those from disadvantaged backgrounds who are prevented from conceiving of a life beyond the limits set by the "free market."

However, it is important to note that these policies are implemented differently in parts of the world. As Connell (2013, p. 101) notes, in the Global North, neoliberalism dismantled the welfare state, the system based on a state-regulated capitalism, and basic services that were stablished after World War II, and in the Global South, neoliberalism *dismantled the strategy of autonomous economic development, and broke up the social alliances around it*. It puts pressure on developing economies through multinational companies, financial help, trade agreements, and so forth, stablishing an international relationship based in dichotomy between the center (i.e., developed countries) and its periphery (i.e., developing countries).

Neoliberalism, thus, is a new manifestation of imperialism (Kaščák and Pupala 2011, p. 148) that amplifies the concentration of wealth among people and countries. It is a form of imperialism because it seeks to affirm its own truth as the unique truth, not only in the economic sphere but also in all spheres of life, individual, and social. According to Grenier and Orléan (2007), in 1979, Foucault affirmed that this new kind of liberalism, which was beginning at the time, was not just economic and political choice but was also a way of being and thinking. Indeed, it is possible to find in Foucault's writings the following sentence on (neo)liberalism: "It is also a method of thought... It is up to us to create liberal utopias, to think in a liberal mode... Liberalism

must be a general style of thought, analysis, and imagination" (Foucault 2008, pp. 218–219). In this way, neoliberalism is a new kind of meta-narrative (i.e., it creates all the dispositive for the narrative to be realized, fulfilled), and it is perhaps one of the most influential we have seen in our time. The success of neoliberalism as a dominant approach in almost all areas, trade, finance, work, and culture is because, on the one hand, the twentieth century experienced a number of ideological crises that compromised some utopic understandings of reality and their metanarratives and, on the other hand, because neoliberalism does not portray itself as a utopia to be realized in the future but as the truth. As such, it depoliticizes relationships, between individuals and countries, portraying them as mere market relationships, in which everything is exchanged as a commodity. Kaščák and Pupala (2011, pp.149–150) comment:

> The neoliberal metanarrative thus represents a totality of a variety of discursive and non-discursive practices, which often operate disparately, subliminally and diversely. It is not a homogenous ideology, but rather a number of heterogeneous discourses and measures, which ultimately converge and strengthen one another.

It is for this reason that neoliberalism is today that which Foucault called "episteme," a way of thought that shapes the foundations of social reality. This "new episteme" seeks to convince individuals in all possible ways that any opposition to it is a waste of time, a feeble and irrelevant attempt in the face of the social-political and economic processes.

This can be clearly seen in the neoliberal takeover of international financial institutions, such as International Monetary Fund and the World Bank, in the 1980s, when developing countries in need of aid were put under the Structural Adjustment Programs that aimed to stablish deregulated markets, guaranteeing advantages to companies (e.g., low-wage regimes, loose environmental legislation, consumer market, and so forth). However, it is also undeniable that neoliberal policies have had an impact in developed countries too, generating not merely new forms of dynamics within the metropole but "in the relation between metropole and periphery" (Connell 2013, p. 100), between Global North and Global South.

According to McLaren and Farahmandpur (2001, p. 281), the process leading to the disappearance of the working class in developed countries needs to be understood alongside the reappearance of assembly lines in China, Brazil, Indonesia, India, and elsewhere, where there are fewer restrictions to profit-making. In addition, under the discourse of "minimum state," which gained further support after financial and budget crisis, countries have been forced to implement austerity policies, opening more space to private enterprise. It is arguable that the result of these austerity policies in the Global South was the collapse of economic security and public services, currently experienced by Argentina and Turkey but also to a lesser extent by Brazil and South Africa – in the Global North this was perhaps less acute. These policies are always implemented through a discourse advocating the good use of public money. Further, it is possible to add that, by and large, devalued jobs in developed countries are currently being done by immigrants and are not desired by unemployed citizens born in these countries – in turn, this seems to have led to an increase of xenophobia and the rise of the far-right. Thus, the outcome of Structural Adjustment Programs, imposed by the financial institutions such as IMF and World Bank on developing countries seeking aid, as well as the self-imposed restrictions implemented by other emerging economies, has caused the public sector to shrink, wages to be frozen in the public sector, deregulation of economic and work relationships, cutting taxes or taxes breaks, and dependence on international capital linked to a requirement of strict inflation controls and national debt servicing as the top priority (Connell 2013, p. 101). Yet according to Connell (2013, p. 101):

> The commodification of services and the privatization of public sector agencies demands institutional and cultural change. The profit-seeking corporation is promoted as the admired model for the public sector, and for much of civil society too. Schemes of organization and control are imported from business to public institutions. In an 'audit society', public institutions have to make themselves auditable, on a model imported from business accountancy.

As a way of thought, neoliberalism needs to control the educational discourse to inculcate its

values in children and young people, particularly with regard to individual success (self-determination) and freedom of choice in the marketed relations between the individual and others. Pongratz (2006, p. 474) corroborates this when stating that *schooling and further education, educational institutions and social work are gathered together in a strategic complex which aims to recode relations of power on the basis of a new neo-liberal topography of the social*. Within this thinking, failure and poverty are blamed on the individuals because "they are too lazy, ignorant, unskilled" (McLaren and Farahmandpur 2001, p. 276). It is a perfect strategy because the system has conveniently taken no responsibility toward an individual's living conditions while advocating that it is possible to overcome hard conditions, and this is only achieved by those that are obedient to the market and are enterprising. As neoliberalism seeks to stablish itself as the truth, the educational field becomes one of the most important ones within this project: it is necessary to prepare people to conform to a New World Order, an order under the government of free market.

The Neoliberal Concept of Education

As is the case in the economic and social fields, neoliberal actions in the educational field can be rather fluid. Generally speaking, in the economic and social spheres, it is possible to affirm that the fragmentary characteristic of neoliberal policies is a very convenient strategy that allows the system to adapt itself in the face of resistance and crisis. According to Pongratz (2006, p. 475), with a fragmentary discourse and partial reforms, neoliberalism managed, step by step, to stablish a centralized control of education, a new metanarrative that is a new way of governance of the school sector. Pongratz (2006, p. 477) refers to Foucault and affirms that the strategy of "soft power" by competition, rankings, and disputes for status stablishes a form of control based on self-control that is allied to the idea of personal responsibility for success or failure. This is connected to the discourse of democratization and improvement of academic standards, as well as an attempt to disguise non-egalitarian relationships between

those within educational processes. The ideal citizen in the neoliberal era is the one who accepts the system and internalizes the self-responsibility and self-control ideals.

With a veneer of freedom and democracy, the kind of education supported by neoliberalism is a deeper manifestation of normalizing education. Gur-Ze'ev (2001, p. 332) commented on this and stated that "normalizing education is founded on such an unchallenged consensus and is committed to security its self-evidence." Normalizing education does not just introduce a set of values, but it also establishes and naturalizes what it considers to be relevant and valid and, consequently, what is irrelevant and non-valid; that is, those concepts that reinforce the normalizing ideology are considered as being true, and those concepts that question the normalizing ideology are considered as untrue (Gur-Ze'ev 2007, p. 164). Through a series of standardized tests and rankings, among which the most important for basic education is the Programme for International Student Assessment (PISA), normalizing education, as set by the neoliberal project, establishes what should be taught in schools and communicates the results of evaluation processes so to praise or shame schools and educational systems. In this way, it pressures schools and educational systems to organize the curriculum, practices, teacher education, and so forth, in accordance with its own initiatives, such as PISA, heralded by the Organisation for Economic Co-operation Development (OECD) for its member countries or for any other country that wishes to join the organization. According to Pongratz (2006, p. 472), the OECD included PISA in their framework for global politics and economic agenda since 2000; and in general terms, PISA's aims for education are very neoliberal in nature, since they aim at the "implementation of private sector management principles in the public sector, restructuring of education and research institutions according to business principles, introduction of market and management elements to all process levels" (Pongratz 2006, p. 472).

Thus, in education, the normalizing characteristics of neoliberal policies mean that we must direct efforts toward human capital development.

In order to achieve this, it is common to use the values and practices of humanist traditions and, even, from critical pedagogy but certainly without an effective critical perspective and disregarding its transformative social drive; that is, these are emptied of their original meanings. Further, active learning and collaborative environment – something borrowed from constructivist psychology – are some of the most cherished concepts used by the neoliberal pedagogical perspective to attenuate the emphasis on competition and individual success (Carter and Dediwalage 2010). According to Kaščák and Pupala (2011, p. 150), neoliberalism is very ingenious in trying to connect various strands, which normally is to be seen as being at odds with it, which are used for human capital development and the normalization of individuals. Pongratz (2006, p. 473) corroborates this:

> Seen in this way, PISA can be seen as a nodal point in a disciplinary network, using an extensive arsenal of partly familiar, partly innovative modes of intervention. This apparatus extends from new modes of administration through budgeting, sponsoring and privatisation to certification, centralised performance control, creditpoint systems, Total Quality Management, and not least, PISA. In a certain sense it remains irrelevant whether one supports the new reforms (more selection, more encouragement of elites, more performance, more competition, more control) or their philanthropic opponents (more self-organisation, more individual profiles, more (school) autonomy, more (self) responsibility, more democratic participation). In each case one can see a disciplinary strategy at work in the wake of the current educational reforms.

This means that the individual is, at the same time, a victim and an enthusiastic supporter of this kind of education because, in principle, anyone can be successful and anyone can become rich, and this only depends on the individual's performance and efforts; that is to say, it is the individual's responsibility. As Connell (2013, p. 109) points out, the internal base of values and technical knowledge promotes a sense of satisfaction that hampers any criticism of the system. There is a complex combination between external- and self-subjection and external- and self-control characterizing the neoliberal restructuring of educational systems (cf. Pongratz 2006, p. 479). As Olssen and Peters (2005, p. 314) affirm, while in the classical

liberalism the individual is characterized as practicing freedom, in neoliberalism, as a faithful and obedient servant of the system, the individual seeks to create a competitive entrepreneur. Thus, the individual's interests in a world of a free market, of free enterprise, and of competition are understood as the only possible option. In this context, the instrumentalization of knowledge is favored, and, very often, some disciplines such as philosophy, sociology, and art are understood to be irrelevant, being gradually withdrawn from the curriculum because they are conceived as being of no importance in a competitive world. According to Peters (2001, p. 66), "The curriculum must also be redesigned to reflect the new realities and the need for the highly skilled flexible worker who possesses requisite skills in management, information handling, communication, problem solving, and decision making. As the metanarrative has grown it has also been transformed to encompass a new emphasis on regional educational standards." Similarly, as Connell (2013, p. 109) says, "Corporate interests globally have mounted a fierce and well-funded attack on science when scientific findings challenge profit-making."

Without opposition, educational institutions tend to become themselves a market-orientated service (Pongratz 2006, p. 479), and with all concerns directed at it, education becomes, in theory and practice, a product, a good, or, better, a commodity. Connell (2013, p. 109) notes that this leads to the development of a "corporate identity," a "corporate behavior," and a "corporate design" within a "permanent quality tribunal" that stablishes and intensifies competition among teachers, students, schools, and universities. The university is no more an institution for producing and sharing knowledge but instead becomes an institution for profit-making. As a commodity, the neoliberal conception supports a ranking system between schools so to establish a criterion for parents to choose which schools their children should attend. This system shows parents the right place for their children (Campbell and Sherington 2006). In perfect accordance with the market perspective, within this discourse the school becomes a service provider and parents become costumers. In some countries, it also favors private schools

within this "educational market" through a voucher system; that is, the government pays for places in private schools and universities instead of investing in improving and expanding the public sector. This means that families from disadvantaged backgrounds, largely unable to compete for places in elite schools, must place their children in public schools, which normally direct their curriculum toward technical training aimed at occupying less prestigious posts in the labor market. The exception to this are some of the more prestigious public schools that establish a rigorous selection system that in fact hinders the enrolment of students from a disadvantaged background, who do not achieve good results in the selective processes (Connell 2013, p. 103). Thus, education becomes a privilege.

The Imperialist Neoliberal Reforms in the Global South's Education

The term Global South refers to those countries primarily located in subtropical or tropical ecosystems (Karlsson 2002, p. 54) and that were, in the past, colonized by European countries or indirectly by the United States. This might be an oversimplification, as there is great diversity among these countries and in the kind and level of neoliberal policies implemented by them. However, it can be clearly perceived that, in general terms, under a discourse of modernization, in the Global South, "an entitlement to political and social rights does not necessarily guarantee substantive rights to livelihood" (Miraftab 2009, p. 40). Miraftab (2009, pp. 40–41) comments:

> that in this neoliberal moment the hypocrisy of modern citizenship can be most clearly observed in the global South. In the liberal democracies of the global North, citizens experience the pretence of neoliberal capitalism through the shrinking of the public sphere and some infringement on civil liberties. In the global South, however, for example in Brazil and South Africa, new found universal citizenship rights are starkly contradicted by the material inroads on citizens' lives made by neoliberal capitalism. Their political citizenship and abstract formal rights have expanded, yet simultaneously their economic exploitation and the abdication of public responsibility for basic services continue, and their livelihood erodes. In societies that have emerged from a colonized legacy, 'citizens have gained rights they cannot eat!'. (Mifaftab 2009, pp. 40–41)

In the light of our argument thus far, let us look at some concrete examples in the Global South: Chile, Brazil, and South Africa. As already mentioned, Chile was the first country to experience "neoliberal reforms," which happened in the 1970s. Other developing countries in the Global South followed suit and liberalized their trading and external capital regime under guidelines, or determinations, of IMF and World Bank, especially during the 1990s. Even countries governed by left-wing parties implemented a reduction of taxes and conducted the privatization of public companies, which is something in accordance with the Washington Consensus (McLaren and Farahmandpur 2001, p. 280) and the logic of the market (Connell 2013, p. 102). (The Washington Consensus is a term coined in 1989 by John Williamson, a British economist working at the Institute for International Economics, a think tank based in Washington, D.C., and it is a set of ten points that should be implemented by countries facing economic and financial crises (cf. Williamson 1989). Thus, Chile served as an "experiment" and a "showcase" for other countries in the Global South.

In 1973, after a coup d'état, Augusto Pinochet established a right-wring dictatorship in Chile and under the guidance of the Chicago Boys opened the country to the world market, privatized public assets, and implemented changes in the educational system as public universities started charging tuition fees (González and Espinoza 2011, p. 95). According to Assaél Budnik et al. (2011, p. 306), Esquivel Larrondo (2007, p. 42), and Redondo (2005, p. 103), it is very common to refer to this educational reform in Chile as "the educative market experiment" because it was done during the dictatorship period, without dialogue and without any empirical evidence; it was based on the dictums of Friedman's and Hayek's theories.

In this connection, it is important to note that until the beginning of the 1980s, there was a public educational system which served about 90% of enrolments in basic education (Assaél Budnik et al. 2011, p. 307); however, around this time, Pinochet started an educational reform based on four pillars: (1) a new regulation system

N

for education, (2) the creation of a management model for formal education that introduced new agents as stakeholders, (3) a new way for school funding through vouchers or portable subsidies to students, and (4) the restructuring and privatization of higher education. These pillars are still in place, even after almost 40 years (Assaél Budnik et al. 2011, pp. 307–308; Falabella 2015, p. 703; Inzunza et al. 2011).

Further, under the discourse of the failure of the state as an education provider, Chile adopted the discourse that education is the responsibility of the family, and as a consequence of this, education stopped being understood as a social right (Ruiz 2010; Falabella 2015, p. 704). Primary and secondary educations are still mandatory and funded through a system of vouchers that covers about 92% of students, who attend public schools. According to González and Espinoza (2011, p. 96), the cost of private education is very high, approximately 5000 dollars per year, and because of this, only 8% of young people are able to attend private institutions. The national curriculum was revised, and as Falabella (2015, p. 705) affirms, there was an alliance between neoliberals and conservatives; that is, between a Christian view of the world and the market logic, which established a "minimum curriculum," with a "humanistic and Christian" character, to form, as the dictator Pinochet wrote, "good works, good citizens and good patriots" (*our translation*; cited in Falabella 2015, p. 705) Thirty years have passed since the end of the dictatorship period, and no changes to these structural pillars have been made by democratic governments (Assaél Budnik et al. 2011, p. 308; Falabella 2015, p. 707; Carrasco et al. 2013; Garcia Huidobro et al. 2014; Herrera et al. 2015).

The government is responsible for the assessment and publication of rankings so that families are able to choose schools for their children. This assessment is done by standardized tests, such as PISA, which is done under the National System for the Measurement of the Quality of Education. This system seeks to introduce competition between schools, because the best ranking schools become the most sought after by parents, and, therefore, they are those who receive most money, either from the families themselves or

from the state through the voucher system (Assaél Budnik et al. 2011, p. 310). According to Garcia Huidobro et al. (2014) and Herrera et al. (2015), underlying the discourse of educational reform is the implementation of traditional pedagogical practices seeking to improve human capital, capable of working in an open and competitive economy. In this context, the state is very important, not as a provider but as a supporter and a regulator which rewards the best and encourages those who are not doing so well to improve their competitiveness – the state becomes a servant to market interests. The Ministry of Education of Chile (MINEDUC 2014) acknowledges that there is a great issue in this system that must be resolved: the subsidized private sector gets advantages over the public sector because there is no regulation for the criteria of selection and expulsion of students, and thus, the private school can choose the least expensive and best students, who usually come from middle or upper classes. In 2006, the Preferential School Grant Law was implemented trying to resolve this problem, but this was to no avail because of the complexities involved according to Assaél Budnik et al. (2011, pp. 312–313).

Despite all these issues, Chile has managed to improve its results in standardized international tests. Budnick et al. (2011, p. 316) affirm that this has occurred not in general and widespread terms; rather, students that come from the most favorable classes have improved their performance, while those that come from the less favored classes continue to score low in tests. This is used as evidence for the argument that public schools do not function properly and that the private schools are a better alternative – this discourse is normally done without any consideration of important differences in living conditions. With the aim of improving positions in the rankings, the standardized test becomes the motor for changes in education, from management solutions to school results (Assaél Budnik et al. 2011, p. 316; Falabella 2015, p. 713). All this means that the effects of the 1980s neoliberal educational reform gave rise in Chile to an educational apartheid, where students only study with people from their own social class and who share the same values.

Let us look at the case of Brazil. In Brazil, neoliberal ideas started to be implemented with the National Plan for Privatization under Fernando Collor de Mello's government (1990–1992), but it was under Fernando Henrique Cardoso's government (1995–2002) that an effective set of neoliberal reforms was developed in the country. According to Frigotto and Ciavatta (2003, p. 95), during the 1990s, by and large, public policies were based around concepts such as globalization, minimum state, productive restructuring, information society, total quality, employability, and so forth (cf. Leher 2001, p. 162). Reforms were in three areas: deregulation, decentralization, and privatization. Deregulation meant revoking old laws or passing new ones that favored the laws of the market. Decentralization meant the transfer of the operations and management of public services to states and municipalities, with less interference from the federal government. Privatization meant allowing private companies to profitably exploit the provision of public services and offer complementary or parallel services.

Thus, under the three pillars (deregulation, decentralization, and autonomy-privatization), Cardoso's government implemented the Law of Guidelines and Bases of National Education (LDB) (Saviani 1997, p. 200; Dourado 2002, p. 241; Frigotto and Ciavatta 2003, p. 110) which is still in force, and consequently neoliberal elements entered all subsequent National Plans of Education and its derivative laws. In addition to this, the adequate level of investment was never reached by the state, which means that the system is not functioning properly, and the middle and upper classes have either migrated to or kept their children in private education. Recently, further changes have been implemented. Under the discourse of modernizing secondary education, one of the first decisions of Michel Temer's government (2016–2018) was to reform the system, reducing the timetable for history, geography, biology, physics, and chemistry and prioritizing maths and Portuguese language; further, this reform extinguished philosophy, sociology, art, and physical education as compulsory subjects. The focus on maths and Portuguese language is largely regarded as a demand from the labor market while the exclusion of disciplines such as philosophy and sociology as an attempt to hinder critical thinking. With regard to these reforms, Lima and Maciel (2018, p. 21) write that "[t]he adaptability of the curriculum results in the erosion of the right to basic and professional education, whose root lies in meeting the demands of the capitalist crisis, which, by choosing to stifle the State's social 'expenditure', intends to appropriate the public fund in order to serve the interests of the rentier capital, represented by neoliberal and neoconservative sectors in Brazilian politics."

Changes in the higher education system were also implemented, which at the same time affirm the autonomy, decentralization, and flexibility to institutions, but also implement controls through a standardized process of assessment. According to Dourado (2002, p. 242), key points of this policy were to provide incentives for the creation of for-profit institutions in the educational sector, to expand educational credit finance through state and private resources, and to encourage distance learning and the creation of a system of measurement in favor of teaching activities rather than research activities (cf. also Dias Sobrinho 2002). Through the standardized evaluation process, the federal government can provoke changes in management processes and on the institutional culture of higher education institutions, especially universities, which are now ranked by the National Examination of Courses and the General Index of Courses (Dourado 2002, p. 244).

Interestingly, and to attend to the demands of students from less wealthy backgrounds, in 1999, the federal government created the Student Financing Fund for Higher Education (FIES), and in 2005, it created another financing device called University for All Program (ProUni), which provides full or partial grants to students from less wealthy backgrounds to study at private institutions – in practice, these are voucher systems, by which the state pays for places at private universities. Thus, it is possible to affirm here that if there is still a great presence of the state in the provision of basic education – although the curriculum is being influenced by market interests – it is possible also to affirm that higher education,

N

especially at undergraduate level, is highly dominated by market forces and players. According to Sguissardi (2015, p. 869), there is a certain neoliberal control of higher education in Brazil, dividing the system in two: (i) higher education institutions providing high-quality education and research focused, encompassing public and some private universities, and (ii) higher education for-profit institutions providing mass education and of low quality. In the last 20 years, access to higher education has been treated as a commodity, which has led to a large expansion of the sector, but with a considerable impact on the quality of provision. The last significant event occurred in 2017 when a law was passed by the federal government prohibiting the expansion of public investments above inflation and the growth of gross domestic product in several sectors, including education and health, for the next 20 years, and this leaves it open for a considerable expansion of for-profit companies and organizations (Amaral 2017).

The last case we wish to look at is South Africa. The regime of apartheid was officially institutionalized in 1948 and only ended in 1994. During this period, the movement against apartheid in South Africa had as one of its most important demands equality in the field of education, rejecting the Bantu Education Act of 1953, which enforced segregation in educational institutions (Christie 2016, p. 435). It is often claimed that this policy aimed at directing black and nonwhite youth to blue-collar and unskilled jobs; however, Kiyaam Govind, Minister of the Native Affairs at the time, denied this claim and affirmed that the policy aimed at solving South Africa's ethnic problems by creating a system for each ethnic group (cf, Byrnes 1996). After the end of the apartheid regime, the aspiration of "Education of equal quality for all" encountered problems in the government's national unity formation and was laid aside in part because new challenges emerged. In 1996, the South African Schools Act restructured school governance, introducing a system of parental fees to school and a system (i.e., equitable share formula) that distributed part of the educational budget differently among schools classified by a poverty scale (Christie 2016, p. 439). This represented a great opportunity for neoliberals to occupy the educational field, through the creation of "affordable private schools" which targets students from a disadvantaged background (Tooley and Dixon 2005). According to Languille (2016, p. 1), the supporters of low-fee private schools affirmed that this would aid the state to offer access to education with good quality and conditions. More than 20 years since the end of apartheid regime, educational access has improved, but the performance is still poor, with great differences between schools attended by a majority of white children and those attended by black youth (Languille 2016, p. 1; cf. also Motala and Dieltiens 2008; Nordstrum 2012; Motshekga 2015; Phadi and Ceruti 2011)). This is so because "access to quality education is unequally distributed, along social class, racial, and spatial lines" (Chisholm 2005). According to Christie (2016, p. 435), in the "Rainbow Nation":

> Despite some shifts in apartheid's race/class configuration, the burden of poverty and poor education are still shouldered disproportionately by black people. The imaginary of liberation has scarcely been touched – let alone achieved – despite the formalities of a modern state being put in place. The practices of everyday life (including education) follow the rhythms of a fundamentality unequal neoliberal political economy.

The case of "affordable private schools" is significant, because according to Mcloughlin (2013, p. 15) and Languille (2016, p. 2), these schools do not cater for individuals from disadvantaged backgrounds; rather, it caters for the emerging, predominantly black, middle classes seeking to use education as a way to further improve their lives. These developments in South Africa are similar to a neoliberal trend experienced worldwide. During the transition period, the democratic government discarded the option of free compulsory basic education (so even public schools are allowed to charge tuition fees) while, at the same time, established education as a right. This seems to be a paradoxical situation.

After the end of the apartheid system, the majority of South African universities subscribed to international metrics of success, joined cross-country rankings, and adopted systems of management, very similar to for-profit companies (Muller 2017, p. 58). If in the beginning it was

possible to affirm that these changes were directed at overcoming isolation and to improve quality, nowadays it is the reason for a series of problems. Muller (2017, p. 63) notes that the majority of South African universities are public institutions and that, even if this is the case, they must engage in a competitive system for funding. The author affirms that there are three popular and influential themes in the current higher education system's thinking in the country: (i) an emphasis on "indigenous knowledge," that is, aims to develop local know-how; (ii) the importance of "internationalization," that is, to gain a certain status among institutions abroad; and (iii) a focus on the university's role in the "knowledge economy," that is, to add value and potential for raising funds for academic research and production. The author continues:

> The most notable problem with the system is that it encourages publication in lower quality (local or international) accredited journals. This is simply because the reward for publication is the same across all accredited publications, but the preparation, submission and revision costs – in terms of actual time and ability required – are lower and the probability of acceptance is higher for lower quality journals. In some instances these incentives may even induce individual academics, or academic institutions, to engage in fraudulent – or ethically questionable – publication practices. (Muller 2017, p. 63)

Shrivastava and Shrivastava (2014, p. 7) remind us that in 1996, the higher education reform in South Africa was implemented under the framework of "Growth, Equity and Redistribution"; however, this was adopted only in discourse because in practice a very competitive system was implemented. In addition, public resources for higher education fell since from 4% in 1999 to 2.5% in 2007 of the national budget. This forced universities to raise tuition fees sharply, and, "as a consequence, as student numbers grew steadily due to urbanization and increasing population density, faculty numbers at universities remained static, further contributing to the disturbing 45% dropout rate among higher education students in South Africa" (Shrivastava and Shrivastava 2014, p. 7).As a way of trying to solve this situation without state support, most universities formed increasingly larger classes, some of them

with more than 200 students, and started to use ICTs, distance learning, and MOOCs (Massive Open Online Courses) to support their students (Shrivastava and Shrivastava 2014, p. 9).

Conclusion

It can be argued here that under neoliberal ideology schools and universities are in danger of not encouraging true education but instead promote normalizing education. For this ideology, the role of these institutions is to prepare individuals through competitive training to compete for privileges (Connell 2013, p. 110). However, this does not occur without opposition. Since the beginning of the twenty-first century in Chile, Brazil, and South Africa, student protests have questioned and opposed the system – such as in 2006, 2011, and 2012 in Chile, in 2016 in Brazil, and in 2015 in South Africa. While these movements must be understood in their own complexities and historical contexts (Miraftab 2009, p. 43), it is possible to affirm their claim that education is a human right not a commodity and true education should not normalize people. Thus, the following question posed by McLaren and Farahmandpur (2001, p. 279) is still very significant: "Why try to help young people adapt to a system that is designed to exclude them?". This question does not exclude the importance of posing questions about education, but it refuses to accept the neoliberal normalizing education as the essence of schools and universities.

If, according to Foucault (2008, pp. 218–219), there is a utopic dimension to neoliberalism insofar as it tries to establish a "general style of thought, analysis and imagination," then education, not normalizing education, must become a form of resistance against this utopia that seeks to turn people into uncritical defenders of the system. As Biesta (2018, p. 26) affirms:

> This does not mean, of course, that the economy does not matter, but the challenge is to 'do' economy differently, in ways that are more sustainable, more caring and more democratic. It also suggests that we should question the focus on competition – which is fine as long as one is part of the winning 'team,' but becomes nastier when the table turns – and ask how co-operation and collaboration can

become more central in how we conduct our lives together. And it means – and this is perhaps the most important issue in face of the half-truths that seem to govern global education – that we need to make a shift away from sheer survival towards an orientation on life. After all, survival entails an orientation on the question how we can adapt and adjust to ever changing circumstances, whereas the question of life asks us that we first explore whether the circumstances we find ourselves in are worth adapting to, or whether the first task is actually to try to create better circumstances.

Certainly, there is no guarantee that true education will succeed. However, in the neoliberal era, true education must resist social imaginary and market logic and affirm that education is the opportunity to try and create possibilities for life and to face risks (Biesta 2018, p. 28). To create possibilities for life and to face risks means having the opportunity to conceive an anti-imperialist view of the world. According to Miraftab (2009, p. 45) and Biesta (2018, p. 28), to resist neoliberal thought implies resisting half-truths and openly facing the complexities of reality, in which the other exists, rejoices, and suffers, and acknowledging that the market-stimulated competition can greatly amplify this suffering.

Synonyms

Democracy; Democracy assistance; Democratization; Europe; External governance; Neoliberal Hegemony; Neoliberalization; Political transformation

Definition/Description

This entry probes whether neoliberalism is hegemonic in European democracy promotion. It analyzes the models of democracy and strategies of democratization of two democracy promoters in Europe, the European Union and the USA, both of whom are key to understanding the relationship between neoliberalism and democracy promotion. This entry sheds light on the way in which democracy promotion and democratization processes can be a component of the extension of neoliberalism in Europe. Second, it aims at a better understanding of the conceptual and practical implications of neoliberal thinking for democracy. Carving out neoliberalism's influence on democracy helps to grasp better why there is often a gap between the democratic rhetoric of and its implementation by democracy promoters. It is argued that neoliberalism is in fact hegemonic in European democracy promotion. The USA and the EU, both in their own way, pushed for neoliberal

economic transformations and advanced neoliberal principles in democracy promotion. Nevertheless, democracy promotion policies neither consistently nor exclusively advocate neoliberalism. Rather, the policies draw from a variety of political traditions. Liberal and social democratic elements are promoted alongside neoliberal principles, which often result in inconsistencies and competing priorities.

Introduction

Neoliberalism and neoliberal globalization processes have become buzzwords for scholars and commentators today. Whereas the proponents of neoliberalism – often without referring to the term itself – hold that unhindered market transactions will maximize the social good, its critics argue that neoliberalism has resulted in economic destitution in many countries in the Global South as well as many industrial regions of the Global North, environmental destruction on an unprecedented scale, and the hollowing out of national representative democracies.

The theoretical basis of neoliberalism dates back to the 1920s, but its large-scale implementation in economics and politics proliferated about 50 years later in the 1970s (Harvey 2005). Spearheaded by Thatcher in the UK and the Reagan administration in the USA, neoliberalism advanced from a niche economic theory to the elite's preferred development model in the world. Despite a complex and uneven diffusion as well as conceptual shifts, neoliberalism has become hegemonic today to a degree that globalization is often used as a synonym for neoliberalization. The aim of this article is to discuss whether neoliberalism has become dominant in European democracy promotion as well.

I use the term European democracy promotion not as a rigid research category but as a regional and thematic focus to narrow the scope of this article. The analysis centers on the policies of democracy promoters since the 1990s that are directed at Central and Eastern Europe (CEE), the Caucasus, and the Middle Eastern and North African region (MENA), which I include here due

to its proximity to Europe. These regions were subject to varied democracy promotion efforts and underwent regime changes in the past (the "velvet revolutions" in CEE, the "colored revolutions" in Eastern Europe and the Caucasus, and the "Arab Spring" in the MENA region).

This article does not seek to identify the variables of successful democratization. Furthermore, no contribution to the debate about the relationship between external and internal dimensions of democratization is intended. Instead, it sheds light on the democracy promoters. It analyzes their models of democracy and strategies of democratization. The view is restricted to two democracy promoters – the USA and the European Union (EU) – both of whom are key to understanding the relationship between neoliberalism and democracy promotion.

This article addresses two research gaps. International political economists, whose work draws on Marxian or neo-Gramscian perspectives, tend to focus on the spread of neoliberalism as a dominant development paradigm through the work of governments' national policies and the way national governments have supported international organizations such as the World Bank and the International Monetary Fund (IMF) that have enforced international trade rules that benefit multinational corporations and global creditors. One of the findings of international political economists is that the globalization of capital results in a hollowing out of representative democracy (e.g., Hirsch 1997). Democracy's scope and the people's political efficacy need to be restricted for neoliberalism to thrive. Democracy and neoliberalism almost appear antithetical in the literature on neoliberalism (e.g., Bonefeld 2017; Bruff 2014). While this research is no doubt important, it overlooks the way in which democracy promotion and democratization can be a building block in the spread of neoliberalism.

Second, as International Relations scholars and political scientists, mostly from a rational institutionalist, intergovernmentalist, or neo-functionalist perspective, seek to understand the political and economic variables that determine the success of democratization, they assess the coherence of democracy promoters' agenda, etc. Often, studies point out a gap between the rhetoric and practice in democracy promotion. Research suggests that in many cases, economic and security interests override the ambition to democratization. A reference to neoliberalism (or "free market" paradigm) is sometimes made. However, it seems that in many cases the very concept of democracy is presented as remaining untainted by neoliberalism. What is needed is a better understanding of the conceptual and practical implications of neoliberal thinking for democracy (promotion) (see Kurki 2013). Eventually, this can yield a better understanding of the gaps between rhetoric and practice of democracy promoters.

These two research gaps can be bridged by addressing whether or not neoliberalism is the dominant paradigm in US and EU democracy promotion. In addition, this chapter sheds light on the following questions: Is democracy promotion a building block for extending the reach of neoliberalism and securing its hegemony in the world? Is democracy promotion part of a neoliberal form of imperialism? What are the effects of neoliberal hegemony and strategies of democratization by the actors that are promoting democracy? Are there contradictions and tensions between neoliberal ideas about democracy and other political traditions (classical liberal, social, or participatory democratic ones) in the policy documents?

I will argue that neoliberalism is indeed hegemonic in European democracy promotion. However, that does not mean that it is dominant in every case. Neoliberalism can be both hegemonic and flexible. It is adaptable to different political and historical conditions. That way we cannot expect to find a 'one size fits all model' of neoliberalism in democracy promotion or in the democracy aid-recipient countries. Furthermore, security and geopolitical interests can override economic and political reform ambitions. Finally, neoliberalism cannot always be easily identified as the hegemonic concept in policies because democracy promoters draw from a variety of political traditions.

I will use the term democracy promotion throughout this text as an umbrella term despite the fact that researchers and policy makers use

N

partly different wordings with different connotations. A short clarification on terms and wordings will follow. Schmitter and Brouwer (1999, p. 14) have defined democracy promotion in the following way:

> Democracy *Promotion* consists of all overt and voluntary activities adopted, supported, and (directly or indirectly) implemented by (public or private) foreign actors explicitly designed to contribute to the political liberalization of autocratic regimes and the subsequent democratization of autocratic regimes in specific recipient countries.

Toppling an autocratic regime by the use of military force is one possible way of political liberalization. Today, the term democracy promotion is widely associated with the US-led interventions in Afghanistan and Iraq. Many democracy promoters refrain from military actions to pursue their goals. The bulk of the activity of democracy promoters is better labeled as democracy *assistance*, which is limited to measures that serve the consolidation of democratization processes in newly established democracies or semi-democratic countries (Bicchi 2009; Huber 2008). In order to set their work apart from US democracy *promotion*, EU officials turned to the wording democracy *support*. Another term that is sometimes used is democracy *aid*, which signifies that democracy promotion is often a subsection of development aid. In order to avoid terminological confusion, I will use the term democracy promotion consistently in the text and as an umbrella term that comprises all measures to promote, assist, stabilize, and support democracy.

In the next section, I will introduce into some key conceptual foundations of neoliberalism. I will outline the role of the political system (the state and democratic institutions) in neoliberalism and how neoliberal theory conceptualizes the state-citizen relationship. This section will provide the basis for assessing the neoliberal character of the particular democracy promotion agendas.

In the section "The USA: Disparities in Discourse and Practice," I provide an overview on the shifts in US democracy promotion and the US engagement in Europe. The USA used the political transformation processes in Europe as an opportunity to promote the American model of democracy and the free market doctrine. But US democracy promotion is not ideologically confined to neoliberalism and draws from a range of liberal ideas.

The section "The European Union: Coupling Neoliberalization and Democratization" focuses on EU democracy promotion. It analyzes the enlargement process from the 1990s to the early 2000s and the European Neighbourhood Policy. I will argue that neoliberalism is hegemonic in EU democracy promotion, first, as the EU itself can be said to be neoliberal, and, second, as neoliberal principles or neoliberal conforming practices are promoted in the subtleties of funding regulations and program priorities, as well as in the European Commission's mode of cooperation in its external relations.

Neoliberalism and Democracy

Neoliberalism was put forward – most prominently by the economists Friedrich von Hayek and Milton Friedman – as a counter-hegemonic proposal directed against state planning and the regulation of capital, which its proponents perceived as becoming hegemonic in their times. The spread of communism in the early twentieth century and onward, government spending and state-directed modernization projects in many liberal democracies, as well as the class compromise that was established in many countries after World War II were perceived by neoliberalists as a hegemonic configuration that threatened entrepreneurial freedom. As Harvey (2005) describes in his critical history of neoliberalism, in a several decade long process, neoliberalism has become hegemonic in economics, politics, and lifestyle in many countries as well as in international financial institutions and other international organizations.

The history of neoliberalism is characterized by an uneven development, tensions, conceptual and practical contradictions, and recurrent economic crises that resulted from the neoliberalization of economies. A broad consensus among scholars about the conceptual foundations (the paradigm of entrepreneurial freedom and

individualism), its historical trajectory (the Reagan and Thatcher administrations as key promoters), and the economic consequences (increasing inequality in the world but also an alleviation of poverty to some extent) seems to exist. However, given the recurring economic crises such as the Asian crisis of 1997–1998 or the global financial meltdown in 2008, scholars debate how neoliberalism maintains and reproduces its hegemony (see, e.g., Konings 2017; Rodrigues 2018). Furthermore, the uneven development of neoliberal hegemony resulted in regionally and locally specific variations of neoliberalism. In this section, some of neoliberalism's key conceptual foundations and its relationship to democracy will be discussed. The aim is not only to introduce into neoliberal thinking but also to provide some theoretical linkages between democracy promotion and neoliberal hegemony.

In his critique of neoliberalism, David Harvey (2005, p. 2) defines it as "a theory of political economic practices that proposes that human well-being can best be advanced by liberating individual entrepreneurial freedoms and skills within an institutional framework characterized by strong private property rights, free markets, and free trade." According to neoliberal theory, the role of the state is to "favour strong individual private property rights, the rule of law, and the institutions of freely functioning markets and free trade" (ibid., p. 64). The deregulation of industries and privatization of social and other state-provided services should be the prime tasks of neoliberal governments. Against the standpoint of an active intervention by the state into the market, a legal framework that secures free and fair competition is all that is deemed necessary to further the public good.

However, the implementation of neoliberalism itself is exempt from the noninterventionist standpoint. The state can and should take an active role in producing and reproducing the conditions and institutional framework for neoliberalism. Despite the public rhetoric of many neoliberalists, neoliberal theory does not consider the free market as a natural order. The neoliberal market is contingent on a framework that it cannot (re)produce itself. Neoliberalism's proneness to crises exemplifies

this. The global financial crisis of 2008, for example, posed a threat to the free market principle and the ongoing process of financialization. For neoliberalism to maintain its hegemony, it required a "mob-up after strategy" or "failure containment" of an active state that managed the economic and social consequences of crises and adjusted the conditions for the neoliberal economy (see Konings 2017, p. 66; Panitch and Gindin 2013, p. 266).

The neoliberal state promotes actively neoliberal principles in its activities and through its structures (see Harvey 2005, Chapter 3). From this perspective, state capacity building in development aid programs can be compatible with the neoliberal paradigms of a minimalist and noninterventionist state. The state has to have the capacity to provide a favorable environment for business activities to thrive. Furthermore, the state has to be equipped with the capacity to handle economic crises and global economic transformations, for example, by removing economic decision-making capacities from democratic control to independent central banks or by creating the institutional framework for the flexibilization of a country's workforce by eliminating labor laws and curtailing unions.

The promotion of a neoliberal state can be seen as part of a greater effort to embed neoliberalism, which is defined as "the realities of an elite-driven intellectual and political constructivist effort to strengthen market forces and corporate power" (Rodrigues 2018, p. 129). Embedding neoliberalism is as much as about controlling and reconfiguring the state as it is about "cultivating the appropriate moral climate among the populace so that commodification is deliberately pushed forward and accepted" (ibid.). This includes activities to educate citizens to be good market actors and to foster a neoliberal subjectivity.

In the neoliberal framework of thinking, each individual is considered responsible for his or her well-being. Hence, welfare, education, health care, and other social services are individual responsibilities and should be acquired on the market. The privatization of social services opens up opportunities for financialization and "accumulation by dispossession" (see Harvey

2003, Chapter 4). However, privatization is not only a means to open up new markets and to increase profit margins. It is also a way to replace solidarity among citizens with a consumerist attitude, the value of individual entrepreneurship, and competitive behavior. Citizens should, first and foremost, think of themselves as consumers and entrepreneurs and not as members of a community. Neoliberal citizens (and state officials with a professional attitude of being service providers to these citizens) are a necessary component to secure neoliberalism's hegemony.

The concept of the neoliberal citizen is relevant for the topic of this article because democracy promotion programs may help fostering a neoliberal subjectivity in recipient countries. Democracy promotion is often not restricted to core democratic institutions (e.g., the electoral process, parliamentary reforms, accountable governments). Many activities target the relationship between the citizen and the state more generally. For example, a rights-based approach in citizen training may result in an increase of people voicing their complaints against the government on the basis of human, i.e., mainly individual and Western-coined, rights instead of locally specific customs. As part of so-called Twinning projects, local government officials are trained in or become accustomed with "modern" administration processes. These projects can have multiple effects: they may increase democratic accountability, may support the transition toward a neoliberal management approach in the bureaucracy, and may help local officials to adopt business-friendly behavioral attitudes (cf. İşleyen 2015). Some research – mostly from a Foucauldian perspective – exists, but comparatively little is known yet about the promotion and the effects of neoliberal governmentality in aid-recipient countries (see, e.g., İşleyen 2015; Kurki 2011; Muehlenhoff 2018; Tagma et al. 2013).

This aspect of neoliberalization and democracy promotion should not be taken as a simple form of social engineering. Instead, it should be analyzed in the context of quite complex social processes and addressing why neoliberalism is appealing to the population in target countries. A society may be receptive to a neoliberal lifestyle because of a desire for autonomy from disciplinary forces of the state or the intrusion of the state in private and public life. Mitchell Dean's (2018) discussion of Foucault's ambivalent stance on neoliberalism is exemplary to understand processes of superficial or actual alignment with neoliberal ideas such as greater autonomy from the state and self-management.

Given neoliberal theory's skepticism against collectivisms, one might suspect a hostility against civil society organizations (CSOs). But this is not necessarily the case: To ease the transition to privatization and a competitive consumer society, and to stifle social upheaval, voluntary associations can step in to provide basic social services to those who cannot afford them. This is a market conform solution since it is based on a market regulated philanthropy dominated by successful entrepreneurs and competitive charity organizations.

From this perspective, the growth of CSO activity in the second half of the twentieth century is not a contradictory trend to the rise of neoliberalism. Some analysts even see CSOs complicit in advancing neoliberalization. Wallace (2004) asks whether NGOs (or CSOs, in my terminology) are Trojan horses of neoliberalism because they provide services that were formerly responsibilities of the state. By providing social services, CSOs may contribute to more privatization and may encourage the state to retreat even further. Petras (1999), who perceives CSOs as part of an imperialist strategy of economic and cultural colonization, argues similarly: CSOs in the development sector are complicit with a neoliberal agenda because they stand for a privatization "from below" and their activities may lead to a demobilization of social movements. Although this standpoint cannot be generalized and applied to all CSOs in democracy promotion, CSOs may indeed foster neoliberalization and a neoliberal conforming democracy due to their working style and function in society or by implementing their donor's neoliberal principles.

In sum, neoliberal theory privileges the individual over the community and subordinates all activities of social and political life to the market principle. Even the political and civic engagement of citizens is subject to market rationalities.

Harvey (2005, p. 66) offers a view on how democracy figures in neoliberal theory: "Democracy is viewed as a luxury, only possible under conditions of relative affluence coupled with a strong middle-class presence to guarantee political stability. Neoliberals therefore favour governance by experts and elites. A strong preference exists for government by executive order and by judicial decision rather than democratic and parliamentary decision-making." Neoliberals see majority rule – one of the core principles of representative democracy – as a potential threat to individual rights and constitutional liberties.

Neoliberal theory is not necessarily anti-democratic in principle, but it favors a minimalist conception which is best described with Schumpeter's pluralist-elitist model of democracy. Schumpeter (1994) applied a market model to democracy in which citizens are perceived as consumers of political goods that are offered by competing political parties. Citizens play a rather passive and restricted role in politics: They vote for a candidate or political platform in general elections, which they are supposed to choose according to their individual interests. But citizens are not meant to engage in the process of political will formation, which is reserved for the political elites. Likewise, the formation of (political) collectives such as trade unions or political parties is seen with skepticism. Strong collective institutions may force the state to intervene in markets and, hence, may result in an infringement of property rights and entrepreneurial freedom.

As a potent check against the democratic threat of the majority rule, neoliberals favor constitutionalism and the rule of law with a twofold purpose. First, neoliberals seek to locking in neoliberal principles in constitutions because they are hard to change democratically. The failed constitutional process of the EU is a case in point. European social movements were opposing the EU constitutional treaty exactly because it would have constitutionalized the principle of market competition for the future development of the EU (see della Porta and Giugni 2009, pp. 90–91). This would have minimized the national governments' leverage to divert from a neoliberal course. In the cases where liberal values such as entrepreneurial and individual freedoms are already constitutionally codified, judges, who interpret these values in a neoliberal way, can act as key promoters of neoliberalism. In such cases, democratically passed laws that are backed by a majority in the population but that run counter to neoliberalism can be challenged and defeated in the courts. In a neoliberal system, constitutionalism and the rule of law trump democracy.

International treaties and the integration of nation states in a global (neoliberal) community are another way to embedding neoliberalism. Neoliberalism is "institutionalized at the macro-level of power in the quasi-legal structuring of state and international political forms," which Gill (2008, p. 139) has coined the "new constitutionalism." The policies of the International Monetary Fund and the World Bank, the content of free trade agreements, and the EU's legal framework have, among others, redefined the public sphere in a more privatized and commodified way (ibid.). International treaties are usually drafted by experts and negotiated in backroom talks removed from public access. Global governance is practically void of democratic accountability and stands for the possibility of implementing neoliberalism without popular consent.

The second reason why neoliberal theory privileges the rule of law is its proponents' suspicion against collective bargaining and collective interest representation. In parliamentary democracy, for example, the parliament is the principle institution of conflict resolution and mediation. The parliament is the place, in which different parties seek to push through the interests of their constituencies or seek a compromise or consensus with other parties for the public good. The basic working principles are the representation of aggregated interests and collectivized bargaining. In neoliberal theory, on the contrary, the court is the principle institution of conflict resolution and mediation. The court resolves conflicts on the basis of individual rights and mediates between – mostly – singular parties (businesses and citizens).

To sum up, neoliberal thinking privileges a minimal form of the state with a strong judicial regime that protects individual rights and entrepreneurial freedoms. The neoliberal citizen does

N

not seek to receive services from the state but acquires them on the market. Conflicts are resolved individually in courts instead of collectively through political association. Democracy is kept to a minimum and in the hands of political elites.

Such an ideal-type (but, nevertheless, incomplete) characterization of neoliberalism is seldom found in reality. Different forms of neoliberalism with different degrees of realization exist around the world. Furthermore, analysts have pointed out contradictions in neoliberal theory that result in a contingent implementation (see, e.g., Harvey 2005, pp. 67–81). In addition, neoliberalism is fused with other political traditions, for example, neoconservatism (e.g., Harvey 2005, p. 81) or European-specific types of social democracy and neo-mercantilism (van Apeldoorn et al. 2009). The following sections on democracy promotion account for excellent examples of neoliberalism's fuzziness.

The USA: Disparities in Discourse and Practice

Introduction

The United States (USA) are the most active and versatile democracy promoter in the twentieth century and today. Likewise, it is known to be the most vigorous advocate over the last 40 years of a free market doctrine and the primacy of individual liberties. An assessment of neoliberalism and European democracy promotion can hardly ignore the US agenda and its consequences in Europe and beyond. In numerous cases, the USA have influenced democratization processes by open assistance or in covert operations. Depending on their security and economic interests, the USA have supported pro-democracy movements, but they have also destabilized elected governments and stabilized authoritarian regimes.

The history of democratization and regime change in Latin America accounts for the most prominent example of how democratization is inconsistently promoted over time. Building on Robinson's (1996) classical study, Burron (2012) has shown from a neo-Gramscian International

Political Economy perspective how democracy promotion is put to use for the promotion of the neoliberal state. He (2012, p. 143) concludes that "[w]hile the institutionalization of a liberal-democratic order in the hemisphere [the Americas, MF] is not to be dismissed, democracy promotion itself has often served as a hegemonic practice reducing the scope of democracy to the requirements of neoliberal accumulation."

The US-led military interventions in Afghanistan and Iraq are further cases in point to characterize US democracy promotion. Both interventions were at least partly justified with bringing freedom and democracy to the Afghan and Iraqi populations – despite the blatant dominance of security and economic interests. The transition period in Iraq, for example, has been used to lock in a neoliberal framework for the future development of the country. As Harvey (2005, p. 6) notes, before handing over power to the Iraqi interim government, Paul Bremer, head of the Coalition Provisional Authority, ordered the full privatization of public enterprises, the elimination of almost all trade barriers, and other neoliberal policy directives. Harvey (ibid., p. 7) concludes that the "US evidently sought to impose by main force on Iraq [. . .] a state apparatus whose fundamental mission was to facilitate conditions for profitable capital accumulation on the part of both domestic and foreign capital."

In Europe, US democracy promotion started with the success story of the democratization of West Germany after World War II. The USA can refer to the stable German democracy and thriving market economy that external democracy promotion and the transition to a free market economy work even in a society that had been deeply indoctrinated by fascist ideology and whose economy became extremely centralized during the war. However, the German case is less interesting here because the USA did not promote a neoliberal model of democracy. In the opposite, "[d]emocratic liberalism was balanced by concern with economic equality, stability and well-being and hence democratic regulation of the economy of the state" (Bridoux and Kurki 2013, p. 123). In short, the postwar era was not a time of neoliberal hegemony.

Neoliberalization Through Shock Therapy

By the time of the collapse of the Eastern Bloc in 1989–1991, the Reagan administration had started implementing neoliberal ideas in its policies at home. It had also developed a Hayekian-inspired democracy promotion agenda with individual liberty, economic freedom, and anti-communitarianism at its core and procedural democratization as a target activity (ibid., p. 124). However, Bridoux and Kurki (ibid., pp. 124–125) point out that despite Reagan's discursive turn to neoliberalism in the 1980s, the actual practice of democracy promotion that followed in the 1990s was rather a mix of neoliberal and classical liberal approaches.

More important for advancing neoliberalism in Central and Eastern Europe than any democracy promotion program of the USA was the West's insistence on a particular strategy of economic liberalization. Western diplomats, international financial institutions, and Western economists (most prominently Jeffrey Sachs (1990)) pressured the post-socialist governments to adopt a development model that came to known as the Shock Therapy. It was geared toward a rapid transition to market economies, the opening for foreign direct investment, and the integration into the Western market (Gowan 1995). Even though some governments in the post-socialist countries resisted the Western development model to some extent, Drahokoupil (2008, p. 1) shows for the countries of the Czech Republic, Slovakia, Hungary, and Poland that at the turn of the new millennium "[t]he dominant state strategies aim to promote competitiveness by attracting foreign direct investment. The states are thus increasingly internationalized, forging economic globalization by facilitating capital accumulation for transnational investors." A decade after socialism, Central and Eastern Europe adopted a diverse but by and large neoliberal economic agenda.

In Gowan's reading of Sachs' economic transition theory, democracy and freedom are the primary discursive goals of the Shock Therapy (Gowan 1995, p. 47). However, in order to realize it and, subsequently, the desired forms of democracy and freedom, it seemed necessary "to subordinate the will of the electorates and parliaments to the overriding priority of rapid systemic transformation to capitalism, downgrading constitutional development, social and political consensus-building, and respect for minimal economic and social solidarity" (ibid., p. 48). Gowan (ibid., pp. 50–53) proves this point with the West's support of Yeltsin's unconstitutional and non-democratic implementation of Shock Therapy in Russia. The argument that neoliberalism prefers elite rule and rule by experts over democratic accountability finds some empirical grounds in the transformation of Central and Eastern Europe in the 1990s (see section "The European Union: Coupling Neoliberalization and Democratization"). Furthermore, the external influence on the transformation process shows neoliberals' strategy to take advantage of political and economic crises for advancing their agenda.

The US strategy of economic liberalization in Europe, which is mostly implemented via international financial institutions such as the IMF and World Bank, is neoliberal and seems to be antithetical to popular democratic participation. However, the US democracy promotion programs do in fact provide support for free and fair elections, democratic state-building, and distribute funds to civil society. Furthermore, as indicated above, US democracy promotion is not unequivocally neoliberal. The analysis so far has not shown whether US democracy promotion is part of or at least compatible with a neoliberal agenda or whether it contradicts the economic dimension of US foreign policy. Hence, it is worth pointing out some strategy changes in the discourse and practice to acquire a better understanding to which extent neoliberalism is hegemonic in US democracy promotion.

Strategy Change 1: Neoliberal Discourse but Classical Liberal Democracy

According to Bridoux and Kurki (2013), recurring disparities between rhetoric and practice can be observed: A neoliberal rhetoric entered the discourse in the 1980s with the Reagan administration. However, the US democracy promotion institutions did not implement the policy shift immediately but predominantly promoted a classical liberal model of democracy (ibid., pp. 124–125). The authors

(ibid., p. 124) argue that the actual implementers of Reagan's agenda conceived a classical liberal model "more palatable to many recipients of democracy aid." During the 1990s the "[c]lassical and neoliberal agendas in a sense merged." This approach continued throughout the presidencies of George H.W. Bush, Bill Clinton, and George W. Bush. In its response to 9/11, the latter's administration "made strong rhetorical commitments to democracy promotion" (ibid., pp. 125–126). The authors argue that this did not account for a paradigmatic shift "but a more intense continuation of Reagan's and Clinton's commitments to promote a combination of classical liberal and neoliberal ideals of democracy globally" (ibid.).

Hassan's work on the MENA region provides some further insights. He argues that George W. Bush turned to the one size fits all approach of the Washington Consensus after initially pursuing a more conservative approach, which allowed the elites of authoritarian states to safeguard their socioeconomic privileges and power. "Promotion of democracy came to mean pushing for elections, opening markets following the prescription of neoliberal economics [. . .] in the hope of generating gradual and stable transformation into so-called 'market democracies'" (Hassan 2012, p. 131). However, the pressure to hold democratic elections was lowered after electoral victories and gains of anti-American and Islamic groups in the region. Watering down democratization efforts in the hope for regime stability, political liberalization did not necessarily become to mean a greater degree of political participation by the population but any reform that enhanced individual freedom (ibid., p. 133). In sum, Bush's agenda was characterized by "an incoherent set of policies held together by a neoliberal core; economic reform was the order of the day, not necessitating serious political reform from partners and the allies in the region" (ibid., p. 132).

The situation in Europe during Bush junior's presidency was not less complicated. The so-called "colored revolutions" brought pro-Western governments in Georgia (2003) and Ukraine (2004) into power. However, the diplomatic support for the opposition in the run-up of the regime changes or for the newly elected leaders varied, and there is

controversy about whether the USA had a significant influence on the events (Mitchell 2012). Beyond dispute is that US agencies deployed millions of aid to CSOs, which increased mainly opposition groups' capacity of campaigning and electoral observation. US democracy promotion also facilitated the unification of opposition groups, which made electoral success of pro-Western candidates more likely (MacKinnon 2008).

Neoliberal Democracy?

Unfortunately, we do not learn much about neoliberalism in the debates about the "colored revolutions." Analysts do not pose the question in how far neoliberal ideas were promoted in the democracy promotion programs. Although economic interests such as pipeline projects in Ukraine and Georgia are common references and the new leaders were known to be pro-American, more research is necessary if one wants to make the case that the democracy promotion efforts bore a neoliberal mark. It remains largely unstudied in how far US-funded projects in Eastern Europe and the Caucasus promoted neoliberal characteristics of the state, democracy, and state-citizen relationship as outlined in the section "Neoliberalism and Democracy."

Sussman provides some hints and starting points in this respect. He argues that former socialist states have to comply with neoliberal regulations if they seek to receive democracy assistance. Referring to a USAID website, the expectations include the "'dismantlement of all wage and price controls,' supply-side tax policies, [. . .] a functioning investment system of stocks, bonds, and other financial instruments" (Sussman 2010, p. 54). Pointing out the training of lawyers and judges in the American jurisprudence "with regard to constitutional law, business law, and 'election reform'" (ibid., p. 58), he provides another possible object of inquiry. This training can be seen as a rather technical aid to countries in transition. However, a specific type of rule of law which focuses on individual liberties and conflict resolution in the courts is conducive for implementing neoliberalism. Skills transfer accounts for one strategy to foster the adoption

of American-type institutions and may have helped to introduce neoliberalism in the region.

Based on the existing research, one can conclude that the US efforts in promoting democracy in Eastern Europe and the Caucasus are part of the USA's sustained effort to bring the regions closer to the West. One can hypothesize that a neoliberal economic agenda is pursued and that democracy promotion programs carry neoliberal contents to some extent. Some support for this hypothesis can be garnered by proceeding with the paradigm shifts in the US administration on democracy assistance.

Strategy Change 2: Neoliberal Practice Despite Discursive Changes

A partial shift in discourse has been undertaken by the Obama administration (Bridoux and Kurki 2013, pp. 127–130; Hassan 2012, p. 134). In the light of Bush's military interventions, which delegitimized democracy promotion in many eyes, it seemed that the Obama administration neglected democracy promotion. In addition, the Obama administration had to cope with the consequences of the global financial crisis, which threatened the hegemony of the neoliberal model to some extent. In domestic politics, Obama undertook a discursive shift toward questioning the "assumptions that the market will naturally regulate the economy and that more deregulation and less taxes are synonymous with economic growth" (Bridoux and Kurki 2013, p. 128).

Obama's global development policy continues to prioritize economic growth. Democratic governance holds a supportive role in consolidating economic development. However, "Obama argues that the values of liberty, equality, and social justice are intrinsic to democracy and should be present when democracy and human rights are promoted abroad" (ibid., p. 130). Bridoux and Kurki (ibid.) see in Obama's "simultaneous concern for social and economic equality through greater state interventionism in economic affairs and political democratisation" an incipient shift away from the classical and neoliberal models of democracy in US democracy promotion.

Hassan (2012, pp. 133–134) too observes Obama's distancing from his predecessor's policies. However, he argues that after 2011 Obama's approach moved closer to Bush's agenda by stressing financial stability, promoting reform, and integrating competitive markets in the global economy as the backbone of American democracy promotion in the transition process of the MENA region (ibid., p. 135). Instead of supporting the protesters call for social justice and human rights, the Obama administration used the aftermath of the Arab Spring to support free trade and free markets. As Hassan's assessment shows, Obama's recipe for stabilization and economic transformation very much resembles the US approach in postsocialist Europe.

This does not necessarily contradict Bridoux and Kurki's argument of discursive shifts: despite the discursive shift in the Obama administration, the latter see little concrete transitions in the discourses of the US State Department, who did not call for a greater regulation of economic forces, and the funding practice of USAID (Bridoux and Kurki 2013, p. 131). In particular the funding priorities and regulations, which cannot be presented here in its entire complexity, are a way to understand in how far a neoliberal state and neoliberal conform democracy is promoted by the USA.

Bridoux and Kurki identify two important shifts in the USAID programming. The regulations of 1998 carried a classical and neoliberal view of democracy with the respect for the rule of law and a well-developed justice system, which are seen key not only for democracy but also for a modern economy (ibid., p. 132). Neoliberal aspects such as private property ownership and minimum state intervention are promoted with classical liberal elements such as the call for free and fair elections, multiparty systems, minority rights, and free association of citizens. Even a vital labor sector is seen as important for the political and economic liberalization of a country (ibid., p. 133). The guidelines in 1998 "laud the classical liberal political system together with a free-market economy, deregulation and minimum state intervention as organising principles of the economy in developing countries" (ibid.).

N

In 2010, the regulations read differently. The "free market economy is conspicuously absent as a definitional component of democracy" and "broad-based, equitable economic growth" becomes an aim of development aid (ibid.). This shift seems to be in alignment with Obama's call for a greater regulation of the economy. However, Bridoux and Kurki (ibid.) doubt that this counts for an actual shift because the new priorities contribute "to social stability and effective functioning of open-market societal institutions. They can be compatible with (neo)liberal policies, and be reflective of a more 'embedded' stability-oriented neoliberal model."

To sum up, this section has discussed neoliberalism in US democracy promotion. Security and geopolitical interests were largely left aside to retain the focus on the question whether neoliberal ideas are hegemonic in US democracy promotion. Transition processes such as the transformation of post-socialist countries provided the USA with the opportunity to promote both an American model of democracy and a free market doctrine. Most of the pressure on economic liberalization was exerted through conditional loans of international financial institutions. The democracy promotion programs were implemented by a range of development aid agencies and backed with diplomatic efforts.

To which extent these programs can be called neoliberal and whether they contributed to a neoliberalization of the target countries is only partly answered in the literature on democracy promotion. The support of pro-Western forces seemed to be the priority in Europe. For that purpose, democracy promoters drew from a range of liberal ideas about democratization and were not ideologically confined to neoliberalism. The regulations and funding guidelines in the democracy promotion bureaucracy shifted toward a neoliberal content though. Bridoux and Kurki (2013, p. 145) conclude that despite the variety in the discourse about liberal democracy and state-economy relations in US politics, "these developments are contradicted by continued, and often 'technically' or 'implicitly'-justified, promotion of classical and neoliberal ideas" by the implementers of democracy promotion.

The European Union: Coupling Neoliberalization and Democratization

Introduction

Whereas some EU member states have a long-standing history in democracy promotion, the EU itself is a latecomer in the field. During the Cold War, action in this field was either unrealistic as in the case of Central and Eastern Europe or – with some exceptions – it was seen as "too intrusive" in regard to developing countries (Smith 2014, p. 126). Furthermore, the member states only reluctantly transferred foreign policy competences to the community level because they are seen as one of the core elements of national sovereignty. International trade is an exception to this rule: The European Commission has the authority to negotiate trading partnerships with non-EU countries. In these negotiations, the European Commission is known to push for neoliberal principles such as free markets, free flow of capital, and privatization of social services. Since the 1990s, the EU has acquired some substantial competences in managing the external affairs of its member states in general and in democracy promotion in particular (see Smith 2014). Does this mean that neoliberalism, which coins the EU's trading policy, is hegemonic in EU democracy promotion as well?

Important to note is that throughout the 1990s and 2000s, EU policies lacked a particular label for or a rigid definition of democracy. In a strategy paper from 2006, the EU recognized that "democracy is a multi-faceted and contested idea" (Kurki 2013, p. 153). A catalog of basic democratic rights and the idea of popular sovereignty served as guidelines for democratic reforms, which very much resembles the existing liberal democracies in the EU member states (Fiedlschuster 2018, p. 81). In 2011, however, the revision of the ENP included a definition and label of democracy (deep and sustainable democracy (European Commission 2011)), which very much resembles liberal representative democracy. The introduction of a specific definition was controversial because, as an EU official put it, democracy would be a fuzzy thing and that promoting a specific label of democracy has no advantage for

the implementation of democracy assistance (Fiedlschuster 2018, pp. 84–85).

Recent research has shown that EU democracy promotion is characterized by a plurality of political traditions (e.g., political liberalism and social democracy) (see Fiedlschuster 2018; Kurki 2013). However, as indicated above, a Western liberal representative type of democracy can be identified as the basis of the plurality (see Fiedlschuster 2018, pp. 81–82, 103). Free and fair elections, a representative parliamentary system, the rule of law, and the respect for fundamental freedom of rights are the basic ingredients of this type of democracy. But the content of EU democracy promotion also includes (neoliberally coined) good governance principles, social democratic ideas, and even a particular kind of participatory democracy. Furthermore, neoliberal characteristics can be identified in the funding regulations and the conceptualizations of the role of civil society organizations and local authorities in democratization and development.

I will show that, to some extent, the neoliberal characteristics outlined in the section "Neoliberalism and Democracy" are embedded in the policies and practices of EU democracy promotion. I will argue that neoliberalism is hegemonic in EU democracy promotion, first, as the EU itself can be said to be neoliberal, and, second, as neoliberal principles or neoliberal conforming practices are promoted in the subtleties of funding regulations and program priorities, as well as in the European Commission's mode of cooperation in its external relations.

I will support my argument, first, by analyzing the EU enlargement process. The latter is an example of a form of democratization and neoliberalization accomplished by including new members, who have to accept the existing EU regulations. Second, I will discuss the European Neighbourhood Policy (ENP), which provides incentives for the governments of the EU's neighborhood regions to conform with EU standards and to democratize their countries. Both cases, the enlargement and the ENP, subject the countries in question to a considerable extent to the monitoring of the European Commission.

Democratization and Neoliberalization Through Enlargement: EU-Europeanization of Membership Candidates

The enlargement process is arguably the most effective way of the EU to extend its values and norms to other regions. The accession countries need to conform with the established political and economic standards in the EU. More precisely, they are required to accept and implement the EU *acquis* before they join the union. The EU's *acquis* is the body of common rights and obligations that are binding on all EU Members. Only in exceptional circumstances are derogations from the EU *acquis* allowed. This requirement is part of the Copenhagen criteria for accession candidates, which were formulated in 1993 and applied to all candidates after Sweden, Finland, and Austria joined the EU in 1995. Further requirements are "stable institutions guaranteeing democracy, the rule of law, human rights and respect for and protection of minorities; a functioning market economy and the capacity to cope with competition and market forces in the EU; the ability to take on and implement effectively the obligations of membership, including adherence to the aims of political, economic and monetary union" (European Commission 2016). This quote exemplifies that the conditionality of democracy goes hand in hand with the requirements of a market economy and international competition, which often fostered a neoliberal restructuring of accession countries.

Subject to the accession criteria were mostly young democracies of the former socialist countries: the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Slovakia, Slovenia, Malta, and Cyprus, who joined in 2004; Bulgaria and Romania (2007); and Croatia (2013). Most of these countries were also subject to the economic Shock Therapy in the 1990s (see the previous section). Processes of democratization and neoliberalization were – in varying degrees – already underway in these countries, but the prospect of EU membership was an important incentive for democratic and economic reforms. On the side of the EU, the enlargement was a deliberative step to stabilize the new states, to support the transition to market economies, as well as to bind the countries

N

politically and economically closer to the EU. As I will show below, it also served the consolidation and expansion of a European neoliberal project.

The legal framework of the accession process gave the EU the leverage to demand political and economic reforms. As Sedelmeier (2011, pp. 5–6) puts it, the EU "became engaged to an unprecedented extent in a regular monitoring and assessment of the adjustment efforts of the candidate countries. Moreover, the EU used its attractiveness for the candidates to pursue "a broad range of political and economic criteria, covering many rules for which EU institutions have no legal competences vis-à-vis full member states (such as democracy and minority rights)" (ibid.).

Böröcz and Sarkar (2005, pp. 158–159) have criticized the EU's competences from a post-colonial perspective: "Such structural conditions of dependence on a foreign authority for laws and regulations make the situation of East European applicant states somewhat similar to that of 'dependencies', 'protectorates' and a form of externally supervised government reminiscent of the history of colonial empires' 'indirect rule.'" Also Sedelmeier (2011, p. 6), representing a more mainstream International Relations perspective, concedes that "as non-member states, the candidates had no voice in the making of the rules that they must adopt, and the power asymmetry vis-à-vis the incumbents has led to a top-down process of rule transfer, with no scope for 'uploading' their own preferences to the EU level." This sheds a negative light on the enlargement process because the populations – and even the political elites – had little democratic leverage in the process.

Without doubt the EU enlargement process has changed the accession countries considerably in many respects (cf. Böröcz and Kovács 2001; Zielonka 2007; see also Sedelmeier 2011). However, there are also studies pointing out the EU's limited influence on the patterns of democratization and the role of domestic factors that affected the efficacy of EU-Europeanization (see Sedelmeier 2011, p. 18).

Despite the EU's competences to interfere in the accession candidates, Sedelmeier argues that its impact on the polities has been low compared to its policy impact (ibid., p. 17). Either the EU did

not need to make substantial use of democratic conditionality because liberal democratic governments were already in place or its influence proved to be insignificant in the cases of nationalist or illiberal governments because they saw no benefits in democratization on the terms of the EU. The EU's influence on political change was rather indirect. It supported liberal reformers "by informing electorates about the implication of their choices for the country's accession prospects and facilitating cooperation and moderation of opposition forces" (ibid., p.18). The EU had perhaps greater influence on the pro-EU political elites that came into power and were willing to EU-Europeanize their countries (see Vachudová 2005).

Apart from the domestic factors, the limited influence of the EU on the design of democratic institutions can be explained with the lack of a clear definition of democracy and the European Council's viewpoint that there are many variations of democracy (see above). Furthermore, the European Commission was in charge of the enlargement process. As Pridham (2006, p. 381) points out, "its approach to democratic conditionality was bureaucratic rather than straightforwardly political." It focused on state capacity building with operative principles such as transparency, effectiveness, and accountability (ibid., p. 382). As I will show in more detail below, such a managerial and technocratic approach has ambivalent or negative effects on democracy.

The EU enlargement process contributes to the neoliberal restructuring of Europe by binding these countries to the neoliberal trajectory of the EU. Therefore, it is worth summarizing the neoliberal character of the EU. Neo-Gramscian international political economists have characterized EU integration as a threefold project (see, e.g., van Apeldoorn 2009). As Bieler (2006, p. 80) summarizes this perspective, there is, first, a neoliberal attempt of integration favored by mainly globally operating transnational corporations that emphasized a "market-led, negative integration and close connection with globalization through the opening of the EU to the global economy. It was argued that the loss of competitiveness of European production was due to expansive welfare

systems and labour market rigidity. [. . .] Secondly, there was a neo-mercantilist project supported mainly by transnational European firms, which predominantly produced for the European market, but were still not fully global players. [T]hese companies regarded the fragmentation of the European market as the main cause of their lack of competitiveness [vis-a-vis the US and Japanese companies, MF]. Finally, there was a social democratic project, especially supported by Jacques Delors, social democrats and a whole range of trade unions. For social democrats, the European level offered the possibility of re-regulation of the market at a higher level and thus the opportunity to regain some control over capital lost at the national level." Bieler argues that the neoliberal project came to dominate the integration process (ibid., pp. 82–83). Van Apeldoorn (2009) labeled the result "embedded neoliberalism," which is "predominantly neo-liberal in content, but also includes some mercantilist and social policy side aspects to widen the social basis of support" (Bieler 2006, p. 83).

Analyzing the EU enlargement, Bieler points out the context of domestic factors in the new member countries. Starting with Sweden and Austria (accession in 1995), Bieler (ibid., p. 85) asks why these more social democratic-oriented countries sought to become members of a predominantly neoliberal EU. "Partly due to structural pressure, especially exemplified in Sweden through the relocation of production units and investment by Swedish TNCs to locations in the EU, and partly due to a change in hegemonic ideas away from a Keynesian towards a neo-liberal understanding of the economy, the neo-liberal drive underlying the revival of European integration became suddenly an attractive option in times of severe domestic economic recession in the late 1980s, early 1990s" (ibid.).

In regard to Central and Eastern Europe (CEE), Bieler (ibid., pp. 85–86) argues that "[s]tructural change was not driven by domestic coalitions of social forces, but through the incorporation of international ideas and foreign production methods in tandem with an internalization of transnational social forces in the national CEE forms of states." He adds that transnationalization,

nevertheless, was not enforced from outside but took place through the state elites cooperation in the transnationalization of production structures via foreign direct investment (ibid., p.86).

Holman (2001, p.178) shows that the Copenhagen criteria pushed the accession candidates to adopt the neoliberal model of the EU. He concludes that "the Commission's pre-accession strategy is basically about disciplining the candidate members in terms of free market integration" (ibid., pp. 180–181). Bohle (2006, p. 78) claims that the EU "has exported a more market-radical variant of neoliberalism to its new member states." She claims that only the EU's deregulatory program and not the redistributive acquis was exported. Furthermore, Bohle (2006, p. 77) observes that the labor movement "weakened tremendously during the 1990s. Unionisation levels have fallen dramatically, and the mobilisation capacities both at the national and the workplace level have been seriously undermined." In addition, labor mobility from the old to the new member states had been considerably blocked for several years.

As Bieler (2006, p. 88) sums up, "EU enlargement with the social purpose of securing and intensifying neo-liberal restructuring in CEE fulfiled the objectives of both CEE state elites, who want to secure restructuring externally, and of the EU and European transnational capital, who want to expand capitalist accumulation to CEE." Van Apeldoorn's concept of embedded neoliberalism and Bieler's application of the concept to the enlargement process are crucial for understanding the neoliberal character of the EU and the expansion of the neoliberal project in Europe. However, we do not learn much from these political economists about the effects on democracy. I will provide two examples that exemplify the ambivalent effects of the enlargement process for democracy.

First, although the EU is said to have had no major transforming effect on the polity of the accession countries, the enlargement process affected the efficacy of parliamentary democracy. The governments had to integrate about 80,000 pages of EU *acquis* into national law. The EU *acquis* "had to be implemented under great pressure with insufficient time or effort to consult

where necessary. Accession certainly favoured the executive institutions over the parliamentary ones; while administrative values were sometimes given a priority over democratic (i.e., participatory) values" (Pridham 2006, p. 396). Sadurski (cited in Sedelmeier 2011, p. 21) confirms this point: "Enactment of EU-related laws was often fast-tracked, with little or no serious parliamentary discussions, and with the executive controlling the process throughout. [. . .] [I]t strengthened the executive bodies over their parliamentary equivalents, a secretive procedure over fully transparent ones, and the quick-fix pace of decision-making over comprehensive deliberation. [The goal of accession] gave the executive more power to by-pass parliament and to justify the centralisation of decision-making by the emergency-like circumstances." Furthermore, governments often prioritized the demands of the European Commission, which is in charge of managing and monitoring the enlargement process, over the parliament.

Even though the hollowing out of parliamentary democracy may not be an intentional effect of EU enlargement and Pridham or Sadurski does not frame it that way, the bypassing of parliaments conforms with neoliberalism's preferences for governance by experts and elites. For many newly established democracies, the decision to join the EU meant that their democratic decision-making capacity became limited and that governments exhibited a neoliberal or neoliberal conforming attitude.

Second, the European Commission fostered the establishment or the strengthening of democratically elected regional governments. Through decentralization, the EU aimed at stabilizing the new democracies, increasing cohesion in the EU, and securing the effective management of EU structural funds (Sadurski 2004, p. 395). For the latter, an appropriate administrative capacity at the regional and local level was needed. As Sadurski (ibid.) notes, "[t]he Commission's Regular Reports made remarks on the extent of administrative reforms in the relevant states, though there is a very clear emphasis on the administrative capacity for the management of structural and cohesion funds, and on effective monitoring, financial management, and control

at regional level rather than on democratic self-government and autonomy." This is an example of the often-stated gap between the rhetoric of democracy in the policy documents and the actual priorities of the European Commission, which tends to pursue a technocratic and managerial approach. Although the European Commission's activity might not have been intentionally anti-democratic, its emphasis on efficiency and effectiveness has had de-democratizing effects to the extent that it has fostered the rule by experts and restricted democratic deliberation.

The prospect of EU membership and economic prosperity through the integration in a (neoliberal) European economy highly motivated (the pro-European) political elites in CEE to accept a substantial outside interference by the European Commission and the – not formally but factual – restriction of their newly established democratic institutions. Although the EU imposed democratic conditionality, it did not seem to be an effective or ambitious democratizer. In contrast, the European Commission's managerial and technocratic approach and its emphasis on effective and efficient administration of EU funds can be said to have had de-democratizing effects and fostered a neoliberal conforming style of politics in the accession countries.

In addition, the accession process made a substantial contribution to extending neoliberal hegemony to the CEE countries. Most of the accession countries adopted a neoliberal economic model. The reforms toward a market economy and the restructuring of the economy to increase regional and international competitiveness resulted in privatization, deregulation, and the decline of labor rights. The new membership countries had to open their economy for EU investment. However, the EU set restrictions on the access to labor markets of the old member states. As Böröcz and Sarkar (2005, p. 158) point out, the enlargement process asymmetrically benefited the EU in economic and geopolitical terms.

Democracy and Neoliberalization in the European Neighbourhood Policy

The ENP offers those 16 countries in the Eastern and Southern neighborhood who have no membership perspective a closer cooperation with the

EU: Algeria, Armenia, Azerbaijan, Belarus, Egypt, Georgia, Israel, Jordan, Lebanon, Libya, Moldova, Morocco, Palestine, Syria, Tunisia, and Ukraine. The policy was launched in 2003 after a speech of Romano Prodi (2002, p. 5) set out the goal "to extend to this neighbouring region a set of principles, values and standards which define the very essence of the European Union." The policy was revised in 2011 in light of the Arab Spring and reluctant reformers in Eastern Europe (European Commission 2011). The ENP is connected to further EU cooperation instruments, programs, and policies such as the Eastern Partnership, the Union for the Mediterranean, the Neighbourhood Civil Society Facility, and the program Civil Society Organisations and Local Authorities, which I will only mention in the passing. The ENP is a means to increase the EU's influence in its neighborhood regions by binding them economically and politically closer to the EU. The regions offer export markets, investment opportunities, a cheap labor force, etc. Also, cooperation is crucial for the EU in terms of political stabilization and conflict resolution (e.g., in Caucasia, North Africa, or the Middle East). The non-EU partner countries seek financial assistance, access to the EU's internal market, and, last but not least, visa liberalization. The EU casts the ENP as mutually benefiting all partners and acknowledges that the level of cooperation will differ. Unlike the enlargement process, the ENP is chiefly a bilateral policy between the EU and each partner country.

The original policy document was imprecise about democracy. The revision in 2011 included a definition of "deep democracy," which is "the kind that lasts because the right to vote is accompanied by rights to exercise free speech, form competing political parties, receive impartial justice from independent judges, security from accountable police and army forces, access to a competent and non-corrupt civil service" (European Commission 2011, p. 2). This definition strongly resembles a liberal idea of democracy, and the EU is positive that "[r]eform based on these elements [of deep democracy, MF] will not only strengthen democracy but help to create the conditions for sustainable and inclusive economic growth, stimulating trade and investment" (ibid., p. 4). A certain indeterminacy about the content of

democracy remains because the policy affirms that "[t]here is no set model or a ready-made recipe for political reform" (ibid., p. 3). Furthermore, the EU shies away from imposing sanctions on partner countries that do not sufficiently democratize; this questions the EU's claims as a democracy promoter.

Democracy promotion is only one component of the ENP. The cooperation is often driven by security interests and migration control. These interests take precedence over the EU's normative value of democracy, which shows a gap between democratic rhetoric and political practice (see, e. g., Jünemann and Maggi 2010, pp. 119–120; Lavenex and Schimmelfennig 2011, p. 899). Moreover, the EU's mode of cooperation with authoritarian regimes had some stabilizing effects on the latter and might prevent substantial democratization (see Van Hüllen 2015). The slow progress in democratization in some countries and the conflicting goals of pursuing political change while favoring stability renders the ENP in many eyes an ineffective instrument for democracy promotion (cf. Börzel and van Hüllen 2014).

Another important component of the ENP is the regulation of the economic integration into the EU internal market. Here we would expect that the policy's neoliberal character is exposed. The document promotes free trade negotiations, which are tailored to the EU's needs and requires a WTO membership. The free trade agreements gradually remove trade barriers and "aim for regulatory convergence in areas that have an impact on trade [. . .]. They [regulations, MF] are designed to be dynamic in order to keep pace with regulatory developments in the EU's Internal Market" (European Commission 2011, p. 8). In the end, this means that the partner countries have to continuously adopt EU regulations without enjoying EU membership rights.

The provisions on the support for sustainable economic and social development focus on fostering "stronger and more inclusive growth," which "includes support for efforts to improve the business environment such as simplifying procedures and catering to small and medium-sized businesses and to promote employability" (ibid., p. 7). Strengthening the rule of law and the fight against corruption are said to increase foreign

N

direct investment. Another aspect of the policy is "macro-economic governance and budgetary sustainability" (ibid., p. 8). Due to the labor shortage in some areas of the EU economy, the regulation of labor mobility is promoted as well.

Whether budgetary sustainability translates in practice into austerity measures and employability will result in a flexibilization of the workforce – both characteristics of neoliberalism – cannot be judged analyzing the policy document alone. The policy, furthermore, uses vocabulary that resonates with liberal and social democratic ideas: inclusive growth, job creation, improving social protection, as well as strong administrative and democratic institutions. Also the characterization of CSOs seems to bear a progressive meaning: CSOs help to ensure that economic growth becomes more inclusive and they can contribute to greater social justice (ibid., p. 5). In sum, the ENP reflects the ambiguity in EU democracy promotion, which is simultaneously influenced by liberal, neoliberal, and social democratic traditions.

While the ENP has certain progressive elements that support democratization, its implementation exposes a clear neoliberal agenda. Kurki (2013, p. 164) has shown on the basis of the first ENP policy document that reform priorities in the cooperation with Ukraine were neoliberal in nature. İşleyen (2015, p. 679) argues that projects about vocational training and employability in Tunisia and Egypt "are indicative of neoliberal governmentality as they focus on the optimisation of capacities and individual connections for the benefit of market processes." Furthermore, Kurki holds that the EU's recent increased focus on socioeconomic issues in democracy promotion is not a turn toward the promotion of social democracy, but it addresses the socioeconomic effects of the global economic crisis of 2008: "[T]he EU seeks to make democracy promotion more attuned to challenges which economic inequalities can raise to achievement of liberties in communities" (Kurki 2013, p. 154). Her view finds some support in the 2011 version of the ENP, which sees the need for economic and social reforms partly because "[m]ost partner countries have weak and poorly diversified economies that remain vulnerable to external economic shocks" (European Commission 2011, p. 7).

What are the possible consequences of the neoliberal aspects of the ENP for democracy and democratization in the partner countries? In which way can one claim that neoliberalism is hegemonic in this case? First of all, the partner countries "commit themselves to approximate their domestic policies and legislation to the EU *acquis*" (Lavenex and Schimmelfennig 2011, p. 896). Democratization is promoted through the adoption of principles of democratic governance (accountability, transparency, and participation) that are the underpinnings of EU policies. Furthermore, the export of EU policies, which were originally designed for liberal democracies, may foster reforms of the political system in the partner country (ibid.). However, the scope and character of democratization are restricted at the same time because the partner countries are assumed to converge with the EU *acquis*. This EU-type Europeanization and the EU's neoliberal characteristics as outlined in the previous section set limits for any genuine "home-grown" or "bottom-up" process of democratization.

Second, neoliberal practices can be transferred to partner countries through the EU's Twinning instrument, which is part of the ENP framework and has been launched in 1998 in the context of the enlargement process. İşleyen (2015, p. 673) characterizes Twinning "as a tool for project-based institution-building cooperation between relevant public bodies of EU member states and their counterparts in Egypt and Tunisia [İşleyen's empirical focus, MF] so that the latter foster their technical, administrative and judicial capacities to implement European Neighbourhood Policy objectives." She contends that "Twinning practices are illustrative of a neoliberal governmentality agenda with which the EU aspires to circulate market principles and logics into the minds, choices, habits and actions of individuals and public institutions across a broad array of issues" (ibid.). Twinning contributes to depoliticizing the citizen as a subject entitled to rights and social welfare and "promotes neoliberal subjects defined by the idea of competition and enterprise- and risk-oriented action" (ibid., p. 684). Twinning can be seen as fostering the moral climate that is necessary to embed neoliberalism (see Rodrigues 2018, p. 129).

Arguably, Twinning may have democratizing effects to the extent that it is meant to increase the accountability of authoritarian, nonresponsive authorities. In the long run, however, it might be an obstacle toward substantive democratization because it remains unclear if there is room for substantive democratic participation of ordinary citizens.

Third, Tagma and his colleagues see the EU's support for CSOs as another form of promoting neoliberal subjects through democracy promotion. They argue that the EU's view on civil society is "a neoliberal one that is characterized by the economic rationalities of competitiveness and entrepreneurship" (2013, p. 382). They claim that "democracy promotion is limited to 'institutional-technical' areas and leaves very little room for substantive democratic debate. Instead, one could well be left with a political sphere that is monitored by entrepreneurial and effective civil society actors that report to the EU vis-a-vis democratic deliverables with neo-liberal benchmarks" (ibid., p. 387). The concern here is that the EU funding regulations and rules of cooperation have a neoliberal effect on civil society because CSOs have to conform to EU expectations in order to receive resources.

Kurki's analysis of the European Instrument for Democracy and Human Rights (EIDHR), which is the EU's main tool to support civil society-driven democratization, is a case in point. Although the EIDHR promotes a pluralistic view on democracy, it collaborates with CSOs in a neoliberal managerial way (Kurki 2011, 2013, pp. 159–162). She argues that "actors in civil society are expected to adopt for themselves a liberal democratic and liberal market attitude" (Kurki 2013, p. 161). CSOs are conceived as "the defenders of individual rights against the state" and as "self-standing, autonomous, but at the same time entrepreneurial actors in defence of a limited individual-protecting state" (ibid., p. 160). Left-leaning organizations certainly can apply, but they have to adjust their applications to the rhetoric of the EIDHR. Furthermore, the EIDHR's calls-for-proposal system "enforces competitive applications from civil society actors" (ibid., 159), which is "far from creating civil society solidarity (one of the key constituents

of social democratic and participatory understandings of democracy)" (ibid., p. 161).

It can be added here that the ENP outlines that CSOs should apply good governance principles within their own organizational structure (European Commission 2011, p. 6). Lacking the means to enforces it, the EU requests CSOs to voluntarily neoliberalize their working style.

It is important to explain that the EU's position toward CSOs has become multifaceted in recent years. Civil society obtained a central role in bringing forward reforms: "Civil society plays a pivotal role in advancing women's rights, greater social justice and respect for minorities [. . .]. The EU will support this greater political role for non-state actors through a partnership with societies, helping CSOs to develop their advocacy capacity, their ability to monitor reform and their role in implementing and evaluating EU programmes" (European Commission 2011, p. 4).

Another document even goes further by stipulating that CSOs are an important feature of democracy: "An empowered civil society is a crucial component of any democratic system" (European Commission 2012, p. 3). In the document, CSOs contribute to participatory democracy and inclusive and effective policies; they articulate citizens' concerns, stand for a demand for transparent and accountable governance, and bear further democratic features. In comparison to past EU documents, this is a relatively progressive view on CSOs because it acknowledges that CSOs can be political actors (see Fiedlschuster 2018, pp. 80–81). The document demonstrates the influence of manifold European political traditions in EU democracy promotion.

Nonetheless, the cited documents exhibit neoliberal characteristics. A reference to CSO's contribution to inclusive and effective policies as well as CSOs' role in implementing and evaluating EU programs mixes a participatory ideal with the idea of good governance, in which CSOs provide expertise in a policy-making process dominated by state actors (Fiedlschuster 2018, pp. 90–94; see also 2016). The political role of CSOs is often limited in practice.

The political character of CSOs is limited in another way: The EU conceptualizes democratization predominantly as a collaborative venture of

N

governments and CSOs (see ibid., p. 99). This clouds the often adversarial relationship between civil society actors and the state. Although the EU has increased its means to support oppositional CSOs by establishing the European Endowment for Democracy, social change is predominantly conceptualized in a reformist and consensual way. Democratization takes the form of a technical problem and not a political process in which adversaries struggle over the trajectory of their country. From this perspective, CSOs are not contenders of power but contributors to effective problem-solving (ibid., p. 100).

To sum up, EU democracy promotion ambivalently conceptualizes CSOs. Liberal ideas about civil society and neoliberal characteristics of good governance are fused with a progressive stance about the role of CSOs in democracy. In practice, this can have the effect that CSOs, who cooperate with the EU, may become Trojan horses that embed neoliberalism through their activity and self-understanding.

Fourth, a final dimension of interest is the ENP's empowerment of the local level. Although the EU still focuses in democratization on state capacity building and the political elites at the national level, greater weight is given to local authorities (and, as outlined above, to CSOs) in social, economic, and political development. In the previous section, I have outlined the EU's interest in decentralization in the enlargement process. The European Commission approached decentralization in a way that is problematic in democratic terms because it privileged the rule by experts. The ENP and related documents will serve as another example to characterize the ambivalent neoliberal character of EU democracy promotion.

Local authorities and local CSOs, which in the EU's view include business associations, are seen as key implementers of policies, and they are considered important sources of input for policies that meet peoples' needs. This position is underlined with the program "CSOs and Local Authorities" (see Fiedlschuster 2018, pp. 67–68). The European Commission (2014, p. 3) has stated that local authorities and CSOs are "essential in building the foundations for broad-based

democratic ownership of development policies." The EC has recognized the "CSOs 'right of initiative' to identify and respond to emerging needs, to put forward visions and ideas; to initiate and propose initiatives and new approaches" (ibid., 11). Such a description could be taken as a progressive approach that puts citizens first.

However, a greater focus on civil society and the local level is not necessarily a step toward substantive democracy; in fact, such a focus can actually signify a neoliberal position which emphasizes a lean state and a management approach to politics (Mohan and Stokke 2008, p. 552). Seen from the perspective of neoliberalism, local authorities and CSOs form a counterweight to the centralized nation state, which is a bureaucratically overburdened and inefficient service provider (ibid., 550).

Mohan and Stokke (ibid., 546) argue that the Western development agencies "construct 'the local' in ways that create certain opportunities for local participation but also render development as a technocratic and depoliticized process." In a similar way, this seems to be true for EU democracy promotion as well. The EU deploys a democratic rhetoric about broad-based democratic ownership of policies, which may indeed create opportunities for citizens; but, and perhaps more importantly, it brings together this democratic rhetoric with a neoliberal view on politics, which in turn restricts the scope of citizen participation. This contradictory tendency is significant because it is key to understand the connection between EU democracy promotion and neoliberalism.

Conclusion

The aim of this article was to discuss whether neoliberalism has become hegemonic in European democracy promotion. Using the US and EU democracy promotion as case studies, I analyzed models of democracy and strategies of democratization. Drawing on the research of international political economists, who analyze the spread of neoliberalism, on the one hand, and on the research on democracy promotion conducted by (mainly) International Relations scholars on

the other, I sought to, first, shed light on the way in which democracy promotion and democratization processes can be a component of the extension of neoliberalism in Europe. Second, I aimed at developing a better understanding of the conceptual and practical implications of neoliberal thinking for democracy. Carving out neoliberalism's influence on democracy helps to better grasp why there is often a gap between the democratic rhetoric of and its implementation by democracy promoters.

I argued that neoliberalism is in fact dominant in European democracy promotion. The USA and the EU, both in their own way, have pushed for neoliberal economic transformations and promoted political principles that are, at least, not detrimental to the spread of neoliberalism. Nevertheless, democracy promotion policies neither consistently nor exclusively advocate neoliberalism. The policies draw from a variety of political traditions. Liberal and social democratic elements are promoted alongside neoliberal principles, which often results in inconsistencies and competing priorities.

One of the central findings on US democracy promotion is that there has been a disparity between high-level political rhetoric and the implementation on the administrative level. In the 1980s, where we would have expected a strong neoliberal stance, researchers observed a classical liberal position in US democracy promotion. In comparison, President Obama's change toward a (partly) anti-neoliberal rhetoric after 2008 did not seem to translate into a different practice of democracy-promoting agencies. Furthermore, there are different and changing priorities in the actual cases of democratization. This means that researchers should take at least three aspects into account: the changes in political discourse, the degree of implementation in the bureaucracy and the agencies distributing aid, and the actual priorities and effects in the recipient countries.

In conclusion, it can be said that the USA took the political transformation processes in Europe as an opportunity to advance the free market doctrine and the American model of democracy. Although neoliberalism is currently hegemonic in US democracy promotion, the latter is not ideologically confined to it and draws from a range of liberal ideas.

A research gap seems to exist in how far the US engagement in Europe actually promoted neoliberal characteristics of the state, democracy, and the state-citizenship relationship as outlined in the section "Neoliberalism and Democracy." A more comprehensive view on this matter is needed to understand, for example, in which way the training of state officials like judges fostered the adoption of American-type institutions, which in turn may have helped to spread neoliberalism to the region.

One of the findings on the EU is that the EU's efforts to promote liberal representative democracy, democratic elections, and a parliamentary system are quite diverse and not dominated by neoliberalism (see Kurki 2013, pp. 156–159). However, the incorporation of countries in the EU's neoliberal framework through the EU enlargement or by the European Neighbourhood Policy extends the hegemony of neoliberalism in Europe – with a varying degree due to the individual trajectories of each country. Neoliberalism is hegemonic in another sense: the European Commission tends to apply a managerial and technocratic mode of cooperation, which fosters a neoliberal conforming conduct of aid-recipient governments and the governance by experts and elites. This often has negative effects on the efficacy of democratic institutions such as parliaments.

Another finding concerning EU democracy promotion is that an increased focus on CSOs and local authorities is in fact ambiguous because it can be seen as a way to foster both the democratization of a country from the "bottom-up" and a neoliberal entrepreneurial culture among citizens and authorities. A turn toward civil society in democracy promotion does not primarily signify a shift toward progressive concepts of democracy (such as participatory democracy) but fosters a neoliberally coined state-citizen relationship. Furthermore, it is a way to sidestep national governments, which are not always willing to reform their countries toward EU-type democracies.

Many more democracy promoters than the USA and the EU could have been included in

N

the analysis. For example, some of the newly established democracies – in particular Poland and the Czech Republic – have developed a distinct democracy promotion agenda based on their own history of democratization. As Petrova (2014) shows, these actors played a significant role in the Balkans and Georgia (see also Mitchell 2012 on the linkages of the "colored revolutions"). Arguably, they have become proxy democracy promoters by other European states and the USA with a distinct twist. Research could analyze whether or not they promote neoliberalism as well.

International organizations such as the Council of Europe (CoE) and the Organization for Security and Co-operation in Europe (OSCE), who refer to democratic principles in their statutes, could be included in the analysis as well (see, e.g., Gawrich 2017). They were not central for my argument because both organizations are less rigorous democracy promoters: the CoE's approach is based "on post-membership socialization into western democratic practices," and the OSCE focuses on monitoring (Dimitrova and Pridham 2004, p. 99). Nonetheless, it would be interesting to know whether these long-established organizations remained untainted with neoliberal thinking.

Neoliberalism targets a transformation of all spheres of social and political life. Therefore, the work of the international court system to which individuals can appeal about human rights violations, lobby organizations that seek a stable and profitable investment environment, biographies of charismatic political leaders and their entanglement with Western think tanks and business organizations, profiles of educational institutions, and media campaigns account for further potential objects of analysis to prove in how far neoliberalism is hegemonic in politics, economics, and society.

Democracy promotion is a complex (research) field, which cannot be treated exhaustively in one article. Democratization is in most cases a collaborative project of many internal and external actors (with the common aim to democratize a country and the minimal consensus on fostering democracy and human rights) but also a competitive field in which everyone pursues their particular economic or political interests and pushes for different social policies. Hence, plenty opportunities for future research from multiple and interdisciplinary perspectives are abound.

Neo-liberalism and Financialization

John Michael Roberts
Brunel University, London, UK

Synonyms

Capitalism; Finance; Financialisation; Free trade; Neoliberalism

Definition

This essay examines neoliberalism as a theoretical, economic, and political project. In particular, it describes how neoliberalism promotes the deregulation of domestic and international trade and capital movement, and how this relates to the phenomenon of financialisation of the global economy.

Neo-liberalism

According to David Harvey (2005, p. 2) neoliberalism 'proposes that human well-being can best be advanced by liberating individual entrepreneurial freedoms and skills within an institutional framework characterized by strong private property rights, free markets and free trade'. Neo-liberals therefore believe that free markets need to be unshackled from the demand management of the economy and society so that individuals can then follow their self-interests.

It was after the Second World War that demand management of national economies took centre stage when many governments sought to impose Keynesian policies, such as national bargaining with trade unions over wage levels in order to forecast wage costs and consumer demands. Neo-liberals, however, jumped on the inflationary tendencies of Keynesianism in order to push forward their own agendas. For example, during the 1970s higher wage demands from organised labour in the US and Western Europe led to

increased prices, which were then tackled by cuts in public expenditure. But this ran into other problems, not least the spectre of industrial action by trade unions to maintain living standards (Crouch 2011, p. 14). To counter these inflationary tendencies neo-liberals broadly argued, and indeed still argue, that individuals should be encouraged to interact with one another through their ego and self-interest in free markets rather than rely on a state to make economic calculations for them. Spontaneous order throughout society will as a consequence emerge (Birch and Mykhnenko 2010, p. 3). Social policy cannot, then, be used to ameliorate social inequalities thrown up by free-market economic processes and practices. Instead, neo-liberals take it for granted that 'the economic game, along with the unequal effects it entails, is a kind of general regulator of society that clearly everyone has to accept and abide by' (Foucault 2008, p. 143).

None of this implies that neo-liberals are entirely anti-state as such. Indeed, Harvey's definition also usefully draws attention to the fact that for neo-liberals free markets require an 'institutional framework' if free markets are to prosper. This is an extremely important point if for no other reason than the fact that neo-liberalism is often thought to only promote free markets in society. But this is not true. While supporting free markets neo-liberals have also been keen supporters of the need to ensure that a strong interventionist state is evident in society in certain areas. Early neo-liberal ideas say as much. Emerging in Germany during the late 1920s, and comprising thinkers such as Walter Eucken, Franz Böhm, Alexander Rüstow, Wilhelm Röpke, and Alfred Müller-Armack, the Freiburg School explicitly thought that 'entrepreneurship is not something that is "naturally given", akin to [Adam] Smith's idea of the natural human propensity to truck and barter. Instead it has to be fought for and actively constructed' (Bonefeld 2012, p. 636). These 'ordoliberals' held strongly on to the belief that the pursuit of private property, selfinterests, entrepreneurial determination, and so on also had to be socially ordered through the state. After 1945 this brand of new liberal thinking was complemented by other luminaries in the

economic world. Most notable of these economists was Milton Friedman, whose work at the University of Chicago with liked-minded colleagues criticised Keynesian demand management of the economy in favour of deregulation and monetarism. Unlike ordoliberalism, the neo-liberalism of Friedman et al. was more anti-state and advocated a larger degree of pro-market strategies in policy-making (Peck 2010).

Even so, those following Friedman's brand of free-market ideology were also adept at using state power for their own ends. For instance, one of the first experiments in implementing neo-liberal policies in fact arrived in an authoritarian state system in Chile when in 1973 Augusto Pinochet staged a *coup d'état* against the democratically elected government of Salvador Allende. As well as rounding up, imprisoning, and killing many in the opposition, Pinochet also called on the help of neo-liberal economists to apply their brand of free-market economics (Crouch 2011, p. 15). The next notable large-scale neoliberal offensive came in 1979 with the election of Margaret Thatcher's Conservative Government in the UK. Privatising nationalised industries and passing legislation to strengthen the forces of law and order were just two broad policies that demonstrated Thatcher's commitment to a free economy and strong state (Gamble 1988). Antiinflationary policies were also pursued to avoid wage-price instabilities and overloaded governments, while rising levels of unemployment and poverty were deemed acceptable because they helped to loosen labour markets (Cerny 2008, pp. 18–20; O'Connor 2010, p. 698). Under the presidency of Ronald Reagan the US pursued similar policies, while neo-liberal ideology more generally spread throughout the global world during the 1980s.

Despite these real effects of neo-liberal policies some critics nevertheless argue that many theories of neo-liberalism establish ideal-typical models which fail to take account of the complexities of societies. Wacquant (2012) in particular finds fault with what he considers to be one-sided views of neo-liberalism. Marxists for example regard neo-liberalism as a strictly economic macro project best encapsulated through the

N

beliefs that neo-classical economics, privatisation, and 'small states' work best to safeguard capitalist interests and power. Foucauldians on the other hand regard neo-liberalism as a more concrete and contingent social project comprising a 'conglomeration of calculative notions, strategies and technologies aimed at fashioning populations and people' (Wacquant 2012, p. 69; see also Barnett et al. 2008). In contrast to these two approaches, Wacquant prefers to analyse neo-liberalism as neither a strictly economic project nor a series of concrete governing techniques. For Wacquant neo-liberalism is therefore best viewed as a state project that includes fiscal constraints over welfare policy alongside an increase in penal policies aiming to curb disorders generated by welfare reform.

Jessop (2013), however, also reminds us that neo-liberalism has assumed different guises during specific periods in time and in specific countries. In other words, neoliberalism has not remained an unchanging and static phenomenon as is perhaps suggested by Wacquant's definition. In the United Kingdom alone neo-liberalism has altered its form under successive Conservative and Labour governments from the 1980s through to the 2000s (Kiely 2005, pp. 32–33). Moreover, neo-liberal policies have been adapted to suit different contexts, from the neo-liberal shock therapy in Russia during the collapse of the Soviet Union to Atlantic neo-liberalism in the United Kingdom and US, to neo-liberalism in developing countries, and finally to Nordic neo-liberalism (Jessop 2010, pp. 172–174). It is for this reason, as Peck (2010, p. 20) recognises, that neo-liberalism does not have fixed coordinates of explanation as such, but rather represents a 'problem space' that resides within and at the boundaries of the state but also seeks to socialise institutions residing in civil society to take on a free-market ethos. Neo-liberals have therefore recognised the need to develop their ideas in order to suit the times they find themselves in and to convince sections of the public and policy-makers that the future resides in perpetuating the neo-liberalisation of society.

Neo-liberalism also shares a relationship with what has become known as financialisation. In actual fact, the two often work off from one another. Neo-liberal projects across the world have for example privatised the public sector, thus preparing the way for private investors to take over the running of particular social services and repackage them for financial markets and investors. Neo-liberalism promotes deregulation throughout society, including the financial sphere. For example, it 'imposed strong macro stability, and the opening of trade and capital frontiers' for finance (Duménil and Lévy 2011, p. 18). But what exactly is financialisation? It is to this question that we now turn.

Financialisation

In one sense financialisation simply points towards 'the increasing role of financial motives, financial markets, financial actors and financial institutions in the operation of the domestic and international economies' (Epstein 2005, p. 3). However, different approaches to financialisation can be identified. One influential approach in the social sciences and humanities highlights how financial networks are created through financial categories and financial models themselves, which not only 'describe economies . . . but are intrinsic to the constitution of that which they purport to describe' (Langley 2008, p. 25). In this respect finance can be analysed as being 'performative' insofar as financial models and other financial devices and objects create a certain calculative logic among agents and objects and this in turn helps to shape the economy. In this definition, then, performativity designates the point at which an object is brought into being at the moment it is performed in concrete events.

One illustration of this type of performativity would be a financial model for prices which brings into being a set of prices, and thus changes actual existing prices, the moment it is performed in certain economic markets. For instance, options are a type of financial derivative based on the idea that one trader has the right to either buy an option at a stated time for a fixed price, for example to give $5 to another trader for the option to buy crude oil at $75 in 6 months, or sell an option at

a point in time for a fixed price (Scott 2013, p. 68). One problem with options, though, has been how to decide when it is indeed the best time to buy them in the first place. This problem was 'solved' in 1973 by the Black–Scholes model in which stipulated that 'it was possible to construct a portfolio of an option and a continuously adjusted position in the underlying asset and lending/borrowing of cash that was riskless' (MacKenzie 2007, p. 58). According to MacKenzie, the influence of the Black–Scholes model went beyond simply presenting a 'correct' solution to a particular economic conundrum. Instead it started to change the behaviour of option traders. After all, the model was soon highly regarded in academic circles, it was simplistic enough for traders to understand its basic principles, and it was publicly available through newly established personal computers. It is in this sense that the model helped to socially construct, or 'perform', economic reality in accordance with its own principles and thereby opened up a space for derivative traders to make seemingly 'rational' calculations about the buying and selling of options (compare Callon 2007).

For Arvidsson and Colleoni, such illustrations imply that financial markets are directed by 'calculative frames' of 'convention' that enable a 'rational analysis' of financial markets to come into being among financial actors. These calculations and social conventions in turn guide interpretations of financial data and lead to financial evaluations of companies and goods among different financial communities. Knowledge about the reputation of a company, say, Facebook, thereby circulates through these communities and can help encourage investments in the company in question (Arvidsson and Colleoni 2012, p. 142). Financial models and modes of calculation are also attached to other means of communication. One obvious illustration in this respect is the huge growth of information about finance in popular media (see also Thrift 2005).

However, if one argues that capitalism works within 'rational' calculative frames of convention then, as Engelen et al. (2012, p. 367) observe, this further implies that financial practices are to some degree predictable because certain rules of 'convention' are followed by financial actors. Engelen et al. suggest this gives a misleading picture of global finance, primarily because far from being predictable, global finance in fact operates in highly unpredictable circumstances. Financial strategies do not follow a set pattern or logic but more often evolve from a set of volatile circumstances which prove impossible to foresee. And such unpredictability is deeply embedded in the global financial architecture (Engelen et al. 2012, p. 367).

This is an important point because it suggests that the manner in which capitalism operates is not only found at a concrete level of calculations and conventions, but also operates at a deeper structural level where contradictions and dilemmas are evident. Starting from the standpoint of critical political economy, this alternative viewpoint attempts to understand how financialisation has become entrenched in the daily economic decision-making of major actors and corporations in the global capitalist economy. While not denying the importance of cultural conventions, critical political economy also explores how finance has become a growing source of profits throughout the global economy (Krippner 2011, p. 27).

To give just one illustration of what this mean in real terms, major corporations are today able to fund many of their investments without the help of banks. They draw revenues instead by going to open financial markets, where they trade in bonds and equities (Lapavitsas 2013, p. 38). Again, many of these developments are related to the rise of neo-liberalism pursued by dominant states. As McNally (2006, p. 40) observes, those politicians who championed a move away from 'closed' national economies in the late 1970s to a competitive global economy actually advocated not the freeing up of trade as such but the liberalisation of capital. This then helped to pave the way for various forms of financialisation to take on highly complex appearances like derivatives and hedge funds (for a good discussion of these financial devices see Blackburn 2006).

At the same time, there has been a rise in the number of 'financial intermediaries' (corporate lawyers, hedge fund managers, stock market analysts, pension fund advisors, financial traders, and

N

so on) willing to articulate financial imperatives to society. Banks are a case in point in that they too now gain profits by operating in financial markets to gain commissions and fees (Lapavitsas 2013, p. 38). With other financial organisations, banks also encourage individual households to increasingly take on financial burdens. So, for instance, during the 1990s financial intermediaries in the United Kingdom, with the help of government, made it easier for households to divert their savings into financial mechanisms like securities which then ended up in secondary financial markets. The coupons created by these markets could subsequently 'be held directly by households or indirectly by pension funds and insurance companies pooling household savings' (Froud et al. 2002, p. 127). Profits were thereby generated in part through these emerging markets. Financialisation has therefore penetrated everyday life, placing a pressure on ordinary working people to pursue financial avenues and knowledge in their day-to-day activities and lives, with private pension schemes being an obvious illustration (Martin 2002, p. 78).

Among radical political economists, however, there is some disagreement about the form, function, and consequences of financialisation on the global economy. Post-Keynesians follow Keynes's belief that a financial rentier class grows in maturity when capital is depressed. The rentier class is therefore like a parasite, feeding off the 'real' productive sections of the economy through forms like interest on loans (Lapavitsas 2013, p. 30). For this reason the rentier class is a 'functionless investor' who gains profits from financial market activity through their ownership of financial firms and financial assets (Epstein and Jayadev 2005, pp. 48–49). According to post-Keynesians, then, financialisation is closely tied to an increase in the increased action and influence of the rentier class. Epstein and Jayadev (2005, p. 50), for example, estimate that the income share of the rentier class in the United Kingdom went up from 11.48% to 24.5% between the 1970s and 1990s.

An alternative perspective of financialisation to post-Keynesians is that of Marxism. Without doubt, both Marxists and Keynesians share some

similar assumptions such as their critical remarks on the rentier class. Yet Marxists argue that financialisation is the result of deeply rooted contradictions within the heart of capitalist production which can never be eradicated, while post-Keynesians see the problems of financialisation as being based on poor decisions by politicians and policy-makers that can in principle be rectified by better management. However, there are different Marxist perspectives on the rise of financialisation. One school of thought sees finacialisation as the outcome of stagnation. By the 1970s, according to Foster and McChesney (2012), capitalism was dominated by large monopolies that had generated large surpluses but could not invest these in normal productive spheres such as infrastructure projects (railways, roads, and so on) for the government. Most infrastructure projects had already been exploited by previous capitalists. Therefore the financial sphere was seen as a way to avoid stagnation. Investments in speculative and debt-driven finance thus became attractive because of the huge profits that could potentially be made. Speculative finance soon took on a life of its own, which is especially noticeable in relation to the use of debt to bankroll speculation. In the 1970s total outstanding debt in the US was around one and half times gross domestic product (GDP). By 2005 it had shot up to three and half times GDP (Foster and McChesney 2012, p. 60; see also Magdoff and Sweezy 1987).

A different Marxist perspective draws on Marx's argument that capitalism exhibits a propensity for the general rate of profit to fall over time. One of the most well-known proponents in this respect is that associated with Robert Brenner. He argues that capitalists have failed to invest in new productive capital. Specifically, Brenner (2002, p. 18) claims that intensified intra-capitalist competition from the 1960s onwards has led to 'manufacturing over-capacity and over-production in forcing down profit rates, both in the US and in leading capitalist economies more generally'. To compensate for a declining profit rate capitalists can temporarily seek out other ways to make money. During the 1990s, for example, Brenner (2002, p. 224) notes that venture capital and financial speculation hyped up an

emerging belief that a new economy was coming into being based in part on high-tech industries, jobs, and services. But he argues that the new economy owes much of its existence to the predatory and speculative nature of the (over-) accumulation of capital in its financial form. Many investments in the high-tech sector were and are based on financial speculation rather than the production of goods with a foreseeable real profit gain (Brenner 2002, p. 229; for a similar Marxist perspective see Callinicos 2010).

Other Marxists dispute this and claim instead that financialisation represents the power of US economic global hegemony. Dominant capitalist nations have been willing to engage in financial investment in the US economy on the assumption that they will benefit in some way from the US's continual economic dominance in the world (Panitch and Gindin 2005). Panitch and Gindin (2012, p. 135) therefore argue that the American state has been enormously influential in maintaining the hegemony of the US dollar. Indeed, the Federal Reserve has managed to push liquidity into the economic system when required to try to off-set and manage economic crises. For Panitch and Gindin, then, the liberalisation of capital during the 1970s and greater global competition was underpinned by the determination of the US Treasury to maintain a common purpose among the core advanced capitalist nations and global institutions, which meant spreading financialisation across the world. The result was to bring new advantages to American industry. As Panitch and Gindin go on to note (2005, p. 114), from 1984 to 2004 the US economy (GDP) grew by 3.4%, greater increase than those of other Group of 7 (G7) countries during this period, while its volume of exports averaged 6.8% between 1987 and 2004 compared with an average of 4.5–5.8% for the other G7 countries.

One useful conclusion that one can draw from Marxism is the idea that neo-liberalism and financialisation do not represent relatively stable socio-economic projects. Despite their differences, Marxists all agree that it is truer to say that both exhibit highly contradictory tendencies. The 2008 global economic crash is testimony to the deep-seated irrational nature of the

relationship between the two, but evidence also suggests that more a country goes down the path of neo-liberalism and excessive financialisation, the more social inequalities it will generate and the less income and wealth will flow to its population (Lansley 2012). Moreover, neo-liberalism has made meagre gains for many in the developing world in terms of economic growth, notwithstanding the claims of the World Bank and other apologists to the contrary (see Hart-Landsberg 2013, pp. 80–82). More positively, the contradictory nature of neo-liberalism and financialisation creates cracks, fissures, and gaps in its own structures that then open up opportunities for those with progressive agendas to put forward alternative social and political programmes to those who celebrate free markets.

Definition

This essay explores the continuities and ruptures between older forms of colonialism and contemporary forms of imperialism centred on neoliberalism as ideology and as economic program. Specifically neoliberal imperialism has led to unprecedented levels of inequality, fed by finance, media control, and corruption. It has also irreversibly damaged the environment. While neoliberalism has not yet been defeated, it has faced stiff resistance, not only in Latin America but also in numerous regions of the world, in the form of workers' movements, women's movements, and movements to protect the environment.

Introduction

Let us start with some rough definitions and distinctions. First, we are concerned with modern imperialism and neo-liberalism, which are intimately

connected with capitalism. A developed capitalist economy is one in which capitalists or the bourgeoisie own the means of production and the rest of the people, designated as workers or proletarians, own only their labour power (Dobb 1946: 7; Marx and Engels 1969 [1848]). But the proletarians are free in a legal sense: no private person (including corporations) can compel them to do anything legally without paying them a wage. No country has fully fitted this model of the capitalist mode of production.

There is a second aspect associated with capitalism. Capitalists not only make their profit by utilising the labour power of their workers, they have also to compete with one another by using whatever means they have at their disposal, for fear that if they cannot win they will lose all their capital, or their businesses will be taken over by other capitalists. One of the first things they have to do is to save as much of their profit as possible and invest it in such a way as to increase their profits further. As Marx (1957 [1867]: 595) wrote: 'Accumulate, accumulate! That is Moses and the prophets!' As investment grows in size, various kinds of manufacturing production display economies of scale. Long before William Petty in the late seventeenth century, and Adam Smith in the second half of the eighteenth century, an Italian monk called Antonio Serra (2011 [1613]; Bagchi 2014a) had theorised that manufacturing displays economies of scale. This contrasts with agriculture, where the output is limited by the size and fertility of the land and increasing applications of inputs yield, after a time, diminishing amounts of output. Hence, he concluded, promotion of manufacture was the means of increasing the prosperity of a kingdom or region.

There is a third basic aspect of capitalism which is often overlooked. Workers have to compete with one another in order to survive. As Marx and Engels (1976 [1845–46]: 83) wrote:

> Competition separates the individuals from one another, not only the bourgeois but still more the workers, in spite of the fact that it brings them together. Hence it is a long time before these individuals can unite . . .

Capitalism can develop only in societies in which the kind of non-market power exercised by feudal lords has been abolished or greatly moderated, and in which the capitalists or landlords turned

capitalists control state power. This happened in several communes of northern Italy and in Flanders by the 11th–13th centuries (Abulafia 1977; Braudel 1984). These capitalists often make their first piles of wealth in foreign trade: 'Intercourse with foreign nations was the historical premise for the first flourishing of manufactures, in Italy and later in Flanders' (Marx and Engels 1976 [1845–46]: 76).

Referring back to the second characteristic of capitalism, we can again use a citation from Marx and Engels (77):

> With the advent of manufacture the various nations entered into competitive relations, a competitive struggle, which was fought out in wars, protective duties and prohibitions, whereas earlier the nations, insofar as they were connected at all, had carried out an inoffensive exchange with one another.

Most of the historical evidence supports both parts of the above citation. The flows of trade within Asia were far more extensive than within Europe and between Europe and Asia before the rise of European powers, and by and large these trades were conducted peacefully (Abu-Lughod 1989). China and India, the two most populous countries of the world, had extensive internal and external trade, and big merchants conducting such trades from centuries BCE. However, these merchants acted under the regulations of states over which they had no control, and could not dispose of their property as they pleased, nor did they dare to engage in war to increase their profits (Bagchi 2005: Chaps. 9–10).

Between the 10th and 12th centuries, communes of Italy emerged as capitalist states, Communes were regions ruled by the citizenry of a town. Many of them remained subject to the authority of the Holy Roman Emperor or a prince or the Pope. But communes in Central Italy (Lombardy), organising themselves in the Lombard League, threw off the suzerainty of the Holy Roman Emperor by the twelfth century. Merchants of some of the Italian towns, many of which were ports connected by trade with the Byzantine Empire, Egypt and the Levant, grew wealthy and powerful through trade and then subjugated the countryside and compelled the surviving feudal lords to give up their privileges and

N

submit to the rule of the magistracy of the town council. For the history of the emergence and consolidation of the Communes, see Procacci (1973): Chaps 1 and 2 and Epstein 1999. They developed or revived the Roman laws relating to private property (Marx and Engels 1976 [1845–46]: 99–100). One of the earliest such examples was Amalfi in southern Italy (ibid; Braudel 1984: 106–108). 'Amalfi was penetrated by a monetary economy: notarial documents show that her merchants were using gold coin to buy land as early as the ninth century. Between the eleventh and the thirteenth century, the landscape of the *valle* of Amalfi was thereby transformed: chestnut trees, vines, olive-groves, citrus fruits and mills appeared everywhere. The Amalfi Tables (*Tavole Amalfitane*) became one of the great maritime codes of Christian shipping in the Mediterranean' (1984: 107). Then two things happened to the city: in 1100, it was conquered by the Normans who proceeded to establish a feudal order on the whole of southern Italy and the island of Sicily. And in 1135 and 1137, Amalfi was sacked by the city-state of Pisa, its rival in trade. Those events sealed the fate of Amalfi as a city-state and trading power.

But the aggression against Amalfi by the city-state of Pisa is only one in an almost unending series of wars by Italian city-states against each another, against the North African Arab sultanates or viceroyalties of the Ottoman Empire, and the rapidly declining Byzantine Empire. I shall cite only a few examples of such continuous competition for profit and power using violent and diplomatic means. In 1284, at the Battle of Melora in the Ligurian Sea, the Genoese defeated and destroyed the entire shipping of Pisa, and the latter then paled into insignificance as a maritime power (Caferro 2003). Ironically enough, exactly 400 years later, a French fleet of 160 ships bombarded the city of Genoa for three days and destroyed its shipping. Genoa had already declined to a tiny power, and its decline was hastened further by this. The French bombarded Genoa in order to eliminate it as a competitor in the salt trade and because it had refused to join the war against Spain with which the city had close commercial and financial relations (Reinert 2009:

260). Such events became a regular feature in wars between rival capitalist powers. For example, in 1801, a British fleet commanded by Horatio Nelson, the most famous British naval commander of all time, bombarded Copenhagen because Denmark-Norway had joined an Alliance of Armed Neutrality, and as a neutral power, would not cease trading with France (Fremont-Barnes 2012: 84; Pocock 1987: 229). This feat was repeated in September 1807 by another British naval commander, and much of Copenhagen was burnt to cinders. So the infamous Japanese attack, against the US-occupied Pearl Harbor in December 1941, had many precedents in intra-European rivalries.

The destruction of Amalfi as a city-state and the establishment of a feudal order had an effect on the economic and social structure of southern Italy that lasted for the next seven centuries, if not longer. Until the eleventh century or so, northern Italian city-states had to pay for the goods imported from Naples and Sicily with bullion, gold, or silver. Increasingly, however, the northern Italian merchants brought cloth and other manufactures to the region and used these in part to pay for the primary products they took from it. They found it increasingly in their interest to deepen the dependence of southern Italy on northern cloth (Abulafia 1977: 284). So the problem of dependency which has plagued the non-European colonies conquered by the European powers and the USA could occur even before centre–periphery division had emerged in the *global economy.*

Imperialism Straddles the World

Among the Italian city-states, Venice had emerged as a great power by defeating its arch rival Genoa. It fought four wars with Genoa between the thirteenth and fourteenth centuries and emerged triumphant in the fourth war fought between 1378 and 1381 (Lane 1973: Chaps 13–14; McNeill 1974: Chaps 1–2). Even before that victory, Venice had been acting as a great power in the eastern Mediterranean, siding with one power or another as suited its interests. It continued in that role until it was thoroughly trounced in a series of

engagements with the Ottoman Empire, which had captured Constantinople, the seat of the Byzantine Empire, in 1453. However, Venice consolidated its position on the mainland of Italy, extending its territorial possessions on terra firma. This situation ended when Francis VII of France invaded Italy and the rivalry between European states was fought out among the much bigger states of Spain, France, and England, and with the newly independent Republic of Netherlands, erstwhile part of the Spanish Netherlands, as a player (ibid: 123).

From the sixteenth century, several European powers – including England, the Netherlands, France, Spain, Sweden and Prussia – strove for dominance in global trade and territorial power (Bagchi 2005: Chap. 4). Eventually, between the 1690s and the final defeat of Napoleon in the Anglo-French wars (1815), freshly sparked by the French Revolution and its successful defence by the nationalist army put together by the revolutionaries (Fremont Barnes 2012), France and Britain became the two major European powers vying for global dominance. The consolidation of British hegemony over the global economy and trade lasted till the creation of the nation state of Italy in 1861, and the German Reich after the defeat of Napoleon III by Prussia in the Battle of Sedan in 1871 (Hobsbawm 1987: Chap. 6). With the Ottoman Empire visibly declining after its defeat in the Russo-Turkish war of 1877–78, a Congress of the European Great Powers, including Ottoman Turkey, was convened in Berlin, with Bismarck the reich chancellor playing host. Under the Treaty of Berlin, Romania, Montenegro, and Serbia were created as independent principalities by detaching them from the Ottoman Empire, and the process was started of creating a new nation state of Bulgaria, taking it out of the Ottoman Empire (Motta 2013: Sect. I, Chap. 1). This arrangement settled little of which power was to get what share of the global resources, markets, and fields of investment. Most of Asia – including India and China – had already been subjugated, the coastal areas of West, South and East Africa were already in the possession of one European power or another, and they were now competing for the acquisition of all the interior of Africa. One

of the claimants of the huge territory of the Congo was King Leopold II of Belgium, who used Henry Morton Stanley to explore and stake out a claim for him. In 1884, at the Berlin conference of the major European powers, again hosted by Bismarck, Leopold's claim was recognised and the whole of Africa was divided into spheres of control among the European powers. Leopold had already managed, through his agents, to secure US recognition of his claim (Hochschild 1999: Chaps 3–5). 'The scramble for Africa' received its official sanction.

Imperialism and Theories

Eric Hobsbawm (1987) called the period from 1875 to 1914 'the age of empire'. This designation is justified only to the extent that this was the period during which all the major capitalist powers were trying to grab whatever colonies were still left un-usurped by the others, and began also planning to take away other powers' colonies wherever they could. The developments that took place during this period gave rise to the Hobson-Lenin theory of imperialism (Hobson 1902; Lenin 1957 [1916]), and also to parallel studies by liberals such as H.N. Brailsford and Marxists such as Rudolf Hilferding (1981 [1910]), Rosa Luxemburg (1951 [1913]), and Nikolai Bukharin (1972 [1915]). Of these theories, the Hobson-Lenin theory has proved most influential. The subtitle of Lenin's pamphlet has led to a deluge of unnecessary controversy. Hobsbawm (1987: 11–12) has pointed out that Lenin never claimed that imperialism was 'the highest stage of capitalism'. He had called it the 'latest' stage of capitalism, and the subtitle was changed after his death.

Among these theorists, Rosa Luxemburg used colonial conquests as the centrepiece of her analysis. She argued that since capitalists are always taking away a large share of the surplus value created by labour, the latter would not have enough purchasing power to buy the consumer goods produced by them. Therefore, the capitalists needed to break down what she (and many other Marxist authors) called the 'natural

N

economy' of non-capitalist countries and convert the erstwhile producers of those economies into buyers of the commodities to be sold by the capitalists. It was also necessary to dispossess the producers in order to increase the supply of labour to an ever expanding capitalist system (Luxemburg 1951 [1913]: especially Sect. 3, 'The historical conditions of accumulation').

From Bukharin (1972 [1915]) to Kalecki (1971 [1967]), many Marxists and others have criticised Luxemburg for her theoretical mistake about the solution of what the Marxists called the realisation problem and is now known as the problem of effective demand (after Keynes). Theoretically, it is possible, as was argued by Tugan-Baranovski, that capitalists can invest greater and greater amounts as their total profits and even their share of profits go up. But as the capitalists invest larger and larger amounts, in the general case, their profits will fall. They will then retrench their investment and the realisation crisis will affect the economy. One solution to the problem is competition among capitalists: in order to survive and preserve themselves from being taken over by another firm, they have to invest even when the profitability of their operations is declining. But there is again a limit to the decline in profitability and they have to retrench their expenditure, and the realisation crisis is triggered once more. Thus, Luxemburg's problem cannot be wished away just by showing the incompleteness of her theoretical model.

In the last chapter of her book ('Militarism as a province of accumulation'), Luxemburg pointed to another factor that has become increasingly important in the current neo-liberal phase of imperialism, both as an instrument of domination and control, and as a means of generating higher effective demand and profits, without empowering the working class through an improvement in its real earnings or working conditions. Military expenditures, arms sales, and military bases of Western powers, especially the US, have played a major role in enforcing the global imperial order (Grimmett and Kerr 2012; Shah 2013). While the US, in spite of the recession, continues to be by far the biggest military spender in the world, and also remains the biggest seller of arms (with

Russia ranking second), it is ironic that, developing nations (especially client states of the Western bloc) are the biggest buyers of arms.

Hilferding's theory of finance capital (1981 [1910]) was a generalisation based mainly on the Continental European countries (including Tsarist Russia) trying to catch up with Britain. Banks had played a critical role in many of those countries by giving cheap credit to the industrial firms. Hilferding saw this as an amalgam of finance and industrial capital. The role of finance in the contemporary imperial order is very different (Patnaik 2011). Finance has emerged as a separate power on its own. It directs the global, interstate financial organisations such as the World Bank, the IMF, the Asian Development Bank, the European Central Bank, and so on to act according to the interests of the biggest hedge funds, private equity funds, and other private financial giants. It also buys up politicians and political parties by giving them campaign funds in all kinds of ways, and holding them hostage, as the careers of US presidents from Reagan to Obama and the rise to power in India of the Bharatiya Janata Party and Narendra Modi in 2014 vividly illustrate. Modi's campaign for the post of prime minister cost, at a conservative estimate, INR50 billion or about US$850 million (Ghosh 2014). In actual fact, it cost several times more, because much of the expenditure by the local campaign agents was made without any receipt, in order to avoid restrictions on expenditure made by the Indian Election Commission, a statutory body.

The aggrandisement of the finance companies has proceeded apace even after the financial and economic crisis officially signalled by the collapse of Lehman Brothers in 2008. This has been helped by the bail-outs of banks by all concerned governments. No CEOs of finance houses have been prosecuted, even when they had resorted to fraudulent behaviour (Rakoff 2014). The weaker economies of the Eurozone – generally with a history of belonging to the periphery of the zone, such as Portugal, Ireland, Italy, Greece, and Spain (PIIGS) – have been the worst sufferers of the financial crisis starting in 2007–08, and some of them have been led up the garden path for

slaughter by the big finance companies (Dunbar and Martinuzzi 2012). But those companies have great influence with the governments of the US, UK, Germany, and France. So ordinary people in the PIIGS are made to suffer under a draconian austerity policy (Blyth 2013).

Side by side with these developments, millions of poor citizens – including small businessmen – in advanced capitalist as well as developing economies have been excluded from formal credit networks. They have to pay usurious interest rates to local moneylenders or intermediaries of big finance houses and often lose their land or other means of livelihood when they default on their loans. Hundreds and thousands of them, such as farmers in India and Mali, have committed suicide as a result (Bagchi and Dymski 2007).

Some resistance to the dominance of the IMF and the US-EU finance companies is being built up through the agreement signed in September 2009 by the leaders of Venezuela, Brazil, Argentina, Ecuador, Uruguay, Paraguay, and Bolivia to establish the Bank of the South with a capital of $20 billion (MercoPress 2009), and by the May 2014 agreement to establish the BRICS (Brazil, Russia, India, China, South Africa) development bank, along with a currency reserve pool. But whether they can rival the IMF or World Bank depends on how much capital they can mobilise. In 2013–14 the World Bank and China Development Bank each lent around $32 billion to developing countries (Williams 2014). On the other hand, while the late Hugo Chávez was president of Venezuela, his country lent, or granted, a larger amount to the peoples of America than the US administration. In 2007, for example, Venezuela spent more than $8.8 billion in grants, loans, and energy aid as against $3 billion spent by the Bush Administration (Lamrani 2013).

Free Trade Imperialism and Neo-liberalism

Although Adam Smith and David Hume preached free trade, their homeland did not adopt it during their lifetime. Britain adopted free trade for its own external commerce only in the 1840s when the Corn Laws protecting British agriculture were abolished. It should be emphasised that free trade and laissez faire are not synonymous. Britain adopted free trade policies but from 1833 began adopting laws restricting child labour, women's labour, and hours of work in mines and factories. Britain could do all this because by then it had become the leading industrial and economic power in the world. In the eighteenth century, Josiah Tucker had laid the foundation of the theory of free trade imperialism (Bagchi 2014a; Semmel 1970). His analytical model used what would later be known as the theory of cumulative causation. Both Adam Smith and Tucker were opposed to colonies established by monopoly companies that had been established by means of charters granted by their governments. They were also opposed to the special privileges granted to producers in the home governments that impaired the economic development of colonies. They opposed the British government's attempt to quell the revolt of the 13 American colonies. But Smith had little to say about the general attempt of the Europeans to conquer non-European peoples.

Tucker's opposition to colonialism was in some ways more fundamental, based as it was on what could be called the Hume-Tucker theory of economic development (Bagchi 1996).

According to Tucker, writes Bagchi (2014a: 552):

> Hume's essays on money and the balance of trade . . . were being read as implying that a rich country, through free trade, would necessarily be brought down to the same level of income as a poor country. This reading suggested that when a rich country trades with a poorer country, it will gain gold or silver (virtually the only international currencies of the time) for the goods it sells to the poorer. The access to that bullion, coined or uncoined, would raise prices all round in the richer country and eventually make its exports uncompetitive, so that bullion will flow out of the richer country until the prices and, by implication, incomes were equalised in the two countries.

> Tucker countered this view by working out the rationale of cumulative causation keeping the richer country ahead . . . According to him, the richer country would be able to stay ahead of the poorer because: (a) the richer country, with better implements, infrastructure, a more extended trading

N

network and more productive agriculture, would be more productive overall; (b) it would be able to spend more on further improvements; and (c) the larger markets of the richer country would provide scope for greater division of labour and greater variety of products. Tucker also pointed to the advantages a richer country would enjoy in terms of human resources and the generation of knowledge: (a) it would attract the abler and more knowledgeable people because of higher incomes and opportunities; (b) it would be better endowed with information and capacity for producing new knowledge; and (c) a greater degree of competitiveness gained through higher endowments of capital, knowledge, ability to acquire more knowledge and capital and the energy of people with more capital and ability to generate more capital and knowledge in the richer country would make products cheaper. Finally, the larger capital resources of the richer country would lower interest rates and render investable funds cheaper.

Gallagher and Robinson (1953) coined the phrase, 'imperialism of free trade', and argued that in the nineteenth century Britain primarily concentrated on the policy of forcing colonies – formal and informal – and defeated powers to abolish restrictions on foreign trade, rather than always wanting to acquire new territories as colonies. Thus, for example, when Spanish and Portuguese America threw off the rule of Spain and Portugal, the UK recognised their independence on condition that they allowed the free import of British manufactures. This policy more or less ensured that few large-scale industries grew up in Latin America in the nineteenth century. Of course, the 'imperialism of free trade' required to be backed up by military action from time to time (Semmel 1970). The two wars the UK fought in the interest of forcing China to allow the free import of opium – a drug which was produced by Indian peasants but from which the British Indian government derived a large revenue – are perhaps the most notorious examples of this policy.

But British liberalism did not mutate into neoliberalism during the heyday of the British Empire. While one principal feature of liberalism was the centralisation of decision making into a few hands (Wallerstein 2011), its market-friendly policies, and the freedom of contract it wanted to universalise, were constrained by the workers' struggles in the core countries and the need of the factory-owners to have a healthier workforce and the rulers to have more fighting-fit armed

force (Atiyah 1979; Bagchi 2005: Chap. 7; Clark 1995). The largest formal colonial empire ruled by Britain and the mass migration of the poorer sections of the population to the US, Canada, and other lands taken over by Europeans also obviated the need for the creation of a neoliberal global order.

It was after the end of the so-called Golden Age of Capitalism (Marglin and Schor 1990) – from say 1945 to 1970 – that we witness the full unfolding of neo-liberalism. Neo-liberalism is a symptom of capitalism in extremis, of the involution of the system, when it regurgitates resources it has already captured to try and draw nourishment from them. In practice, neo-liberalism is a virus that penetrates every pore of the social body and every atom of the surrounding earth and its stratosphere. It attacks the family and seeks to reduce it to a relationship among self-centred individuals; it commercialises love and makes potential lovers into consumers through the celebration of St Valentine's Day; it commercialises and corrupts sport, reducing it to a consumer item and a means of advertising the prowess of the country or the city. In nature, it spoils the soil, pollutes and makes scarce clean drinking water, clean air, and sanitary living quarters. It attacks the innards of the earth's surface under land, rivers, along coastlines, and under the deep ocean floor. It has evolved the ideology of austerity for defrauding the poor of whatever control they may have over their lives (Blyth 2013). In the following, the many facets and effects of neo-liberalism will be analysed, with illustrations from all regions of the world (for brief accounts of the rise of neo-liberalism, see Bagchi 2005: Chaps 22–25; Harvey 2007).

Independent countries following Britain rejected both the practice of freedom of external commerce, and from the late nineteenth century, laissez faire doctrines as well. Alexander Hamilton in his *Report on Manufactures* (1791) argued that the new republic of the United States of America should impose duties and other restrictions on imports of British manufactures in order to safeguard and promote domestic industrial production. In 1841, Friedrich List argued that the British had become industrially the most advanced country in the world by adopting

policies of import restriction and state patronage for domestic production and shipping during the preceding centuries (List 1909 [1841]). Countries wanting to prosper industrially and economically should study British practice and ignore the British propaganda in favour of free trade. Neoliberalism can be seen as the adoption of both free trade imperialism abroad and laissez faire for the domestic polity by the principal capitalist powers, and enforcement of such policies in all countries that are subjugated by them.

Neo-liberalism, Media, and Corporate Power

Ruling classes rule by using coercion, encoded in law, and by persuading the ruled to believe in the right to rule of the former. This ideological hegemony is exercised through educational systems, through nurturing in the family, and through propaganda. This propaganda can often take the form of feeding false information to the public and suppressing the correct information. The propaganda war by the US-led coalition of Western powers reached new heights from the Thatcher-Reagan era of neo-liberalism onwards (Herman and Chomsky 2002).

The basic characteristics of their 'propaganda model' as set out by Herman and Chomsky (2002: 2), in which the inequality of wealth and power plays the crucial part, can be understood by combining three of the basic ideas adumbrated by Marx, and the Marxists and other radical writers (including, of course, Chomsky and Herman in their other writings). The first idea is that under capitalism two laws operate, unless they are countered by resistance of the workers or liberal defenders of free competition as against oligopolies. These two laws are those of concentration and centralisation of economic power. In most areas of commodity production, economies of scale in production, finance, marketing, and advertising will enable a large firm to cut the cost of production, raise finance on more favourable terms and reach the buyers on a wider front than a small firm. Economies of scale in production are best exemplified by the three-fifths law in process (ore refining and

chemical industries); namely, that as the volume of a vessel doubles the surface area increases only by approximately three-fifths, thus conferring a cost advantage to the owner of the larger container. This plus the advantage in raising finance that a larger firm generally enjoys will allow it to take over smaller firms and thus economic power will be centralised in fewer hands. The process of centralisation was accelerated as a market for firms developed in the 1960s (Manne 1965; Shleifer 2000). The second proposition is that the dominating ideas in a society are the ideas of the ruling class. The third strand of the argument is that despite advances made by some ex-colonial countries in economic and human development, the world is dominated by the imperial countries led by the US. The fourth, relatively recent strand of the argument is that the ideas of neo-liberal liberalisation have gripped the ruling classes of the subordinate countries and the latter have done their best to inculcate them among the labouring population. Herman and Chomsky applied their propaganda model to the US ruling class, but it can be applied to the relation between media, corporate power, and the state in every market economy. Moreover, the suppression or exclusion of relevant information, the deliberate channelling of disinformation, and the concentration of media and corporate power have been taken much further in the twenty-first century.

There is a reciprocal relationship between the media and the government. In Britain, successive prime ministers from Tony Blair to David Cameron, and leaders of the Opposition (would-be prime ministers) have taken care to cultivate Rupert Murdoch, chairman of News Corporation and arguably the most powerful media magnate in the world (Allen 2012). The kind of deception and false propaganda on the basis of which Ronald Reagan and George H.W. Bush had conducted wars in Nicaragua, a proxy war in Iran, and the first war against Iraq reached their apogee in the Second Gulf War against Iraq in 2003. As Bagchi (2005: 334) writes:

> ... neoliberalism has increasingly resorted to divesting the state of functions that Adam Smith thought could never be in the private domain. These include military and security operations both at home and abroad. Prison services are privatized and private firms profit from them. Military

N

functions are contracted out to private firms, and in the name of security and war against terrorism, the executive branch of the government removes their own accountability and the accountability of the firms to the legislature or the electorate (Johnson 2004; Pieterse 2004). The deception and the disinformation about the weapons of mass destruction in the possession of Saddam Hussein (Economist 2003a, b) are all of a piece with this attempt on the part of White House and Whitehall to put themselves above not only international law but the laws of their own nations.

After the 9/11 events of 2001, the US Surveillance Court allowed the official spy agencies to breach all earlier standards of protection of privacy through accessing trillions and trillions of personal information of its citizens and non-citizens all across the world (Savage and Poitras 2014). As the scale of surveillance increased, courageous whistleblowers such as Daniel Ellsberg (who leaked the lies spread by the Pentagon during the US–Vietnam War), Julian Assange, Edward Snowden, and their associates such as Laura Poitras revealed the escalation of the reach of surveillance and its iniquity. Secrets were sold to dictators, people were killed, arrested, and kept in secret prisons without the benefit of any legal defence (Big News Network 2013; Campbell 2014; WikiLeaks 2014). The spy agencies of the USA and some European countries spied on friendly governments as well as on governments of what they considered to be hostile countries, and on businesses of other countries whose secrets the US corporate houses wanted to know.

In the meantime, Israel, the longestoffending rogue state since 1948, continued with impunity its murderous campaign of ethnic cleansing directed at the Palestinians, that land's original inhabitants; not content with driving out the Arabs from the legal territory of Israel, it has continued to try and destroy Palestinian homes and villages. (Rachel Corrie, a 23-year-old US student was killed by an Israeli bulldozer razing a Palestinian home in 2003.) Courageous Israeli citizens such as Ilan Pappé (2007, 2014) and Mordechai Vanunu who disclosed Israel's nuclear programme remain in exile (Pappé) or a prisoner of conscience (Vanunu). Vanunu's case illustrates the length to which a neo-liberal, racist regime can

go to punish a protester: 'in 1986, Vanunu went to Britain to tell the *Sunday Times* the story of the then secret nuclear weapons facility at Dimona in Israel. He was lured by a woman from Mossad [the Israeli spy agency] to Italy. There, he was kidnapped, drugged and smuggled out of the country to Israel, where he was convicted of espionage' (Campbell 2014). Since then, he has been kept many years in solitary confinement, his passport has been taken away, and when out of prison, he is not allowed to make any public statement; and he was not allowed out of the country even though a group of 54 British MPs had invited him.

The strongest supporters of Israel are the hardcore European and US Zionists and the neoconservatives such as Richard Perle and Paul Wolfowitz. In fact, neo-conservatives have been accused of putting the interest of Zionists in Israel even above those of the US (Heilbrunn 2004; Lieven 2004a, 2004b). But in fact, Israel serves a vital role by terrorising the Arab countries with its military might, continually replenished with US help (Chomsky 2012). It is now a moot issue as to how useful Israel will remain as an ally, when fundamentalist Islam and desperate resistance have spread all over West Asia and North America, often unwittingly helped by the US intelligence agencies. But Israel's determination to take away the lands of the Palestinians by killing or driving them off remains unabated, with scant regard for world opinion as its genocidal assault against the Gaza Strip in July 2014 demonstrated.

In India, all the neo-liberal regimes have used media to sustain their power. They also evolved the phenomenon of 'paid news'; that is, advertisements for particular politicians and parties which appeared as news, without the newspaper signalling them as such. The Press Council of India, supposedly the watchdog for media, condemned the practice (Guha Thakurta 2011; Press Council of India 2010), but it continues in some form or another. In any case, with corporate control of the media, only news that can benefit the corporates commercially or politically finds a place in big newspapers or major TV channels, although smaller papers and electronic media try to keep up a tradition of investigative journalism (Sainath 2011).

Neo-liberalism, Creative Adaptation and Resistance

Several countries or regions of East Asia (including Singapore in South-East Asia) have creatively adapted to neo-liberalism and boosted their economic growth and human development, although virtually all of them have paid a price in increased inequality and constraints on human freedom. They include Taiwan, South Korea (Republic of Korea, ROK for short), Singapore, People's Republic of China (PRC, or China), and more recently Vietnam. On the other side of the world, major Latin American countries such as Venezuela, Brazil, Argentina, Bolivia, Uruguay, and Ecuador have resisted the worst aspects of neo-liberalism and US domination from the late 1990s or the first decade of the twenty-first century. But the history of such resistance goes back to that of Guatemala's President Juan José Arévalo, under whose leadership the dictator Ubico was overthrown in 1944, and his successor Jacopo Arbenz. Because of the pro-worker and pro-peasant policies of the two democratically elected presidents, which hurt the interests of the United Fruit Company, at that time the US-based biggest producer and seller of bananas in the world, the CIA organised a coup against Arbenz and overthrew him (Cullather 1999). Guatemala, along with most of the Central American republics, moved into a long night of rule by mass-murdering dictators, helped by the US. Resistance against US-backed dictators erupted in Cuba, where, from 1953 to 58, rebel forces led by Fidel Castro fought against and eventually overthrew the dictator Fulgencio Batista and established a socialist regime from 1959 (Wright 2001). That regime has served as a beacon of the left in Latin America and the Caribbean (and for other socialist activists across the world); and it has naturally attracted the concentrated enmity of the US ruling classes and their collaborators throughout the region. In 1973, on 11 September 1973 (the 9/11 of Latin America), Salvador Allende, the democratically elected socialist president of Chile, was overthrown and killed by the armed forces of the country, aided and abetted by the US government, and the vicious dictatorship of Augusto Pinochet was installed. During the 1980s, the US conducted a wholly illegal and vicious war through its surrogate collaborators in Nicaragua against socialist Sandinista National Liberation Front (Frente Sandinista de Liberación Nacional, FSLN), which was fighting to liberate the country from the grip of the dictator Anastasio Somoza.

Despite the continuous opposition and machinations of the US, by 2009, battered by US-inspired neo-liberal policies, 13 countries of Latin America had elected leftist presidents, including Daniel Ortega in Nicaragua, who had been the leader of the Sandinista revolution in Nicaragua (Lupu 2009). Apart from Fidel Castro, another charismatic leader, Hugo Chávez emerged in Latin America to challenge the neo-liberal and US dominance in the region. After being democratically elected in 1998, Chávez survived a coup organised by the elite of Venezuela, and – despite continuous disinformation spread by the Venezuelan elite and mainstream US media – won every election till his death in 2013. He left a legacy of land reforms, public education, health care for the poor, and a high degree of participation by the ordinary people in decisions of the state (Harnecker 2013). There have been some setbacks, and some regimes have been seduced by promises of US or World Bank aid, but on the whole the left turn continues in the region. The latest victories have been those of Michelle Bachelet of the Socialist Party in Chile in March 2014 and of the ex-guerrilla leader Salvador Sanchez Ceren as the president of El Salvador in the same month (Wilkinson 2014).

Virtually the only developing countries or regions that have been able to industrialise in a proper sense – that is, where both employment and income generated by industry contribute a much larger fraction to the national or regional employment and income – are Taiwan, South Korea, Singapore, and Hong Kong. Of these regions, Taiwan and South Korea had been colonies of Japan. For various historical reasons, both South Korea and Taiwan underwent thoroughgoing pro-peasant land reforms in the 1950s. In Singapore, the government owned 70% of the land, and used that as a lever for both raising

N

revenues from the government-owned housing board and for relocating industries when structural change so demanded. In Hong Kong, all the land is now owned by the PRC. Before 1997 as well, most of the land was owned by the government. In the PRC and Vietnam, the communist regimes had got rid of landlords. The abolition of landlordism had thus created the basic condition for the development of capitalism in the private enterprise economies of Taiwan, South Korea, Singapore, and pre-1997 Hong Kong, and a base for building basic forms of socialism in PRC and Vietnam such as publicly funded education and health care and a guarantee of a minimum standard of nutrition.

However, the private enterprise economies of Taiwan and ROK learned from Japan, the pioneer of East Asian industrialisation. (For a brief history of the Japanese experience of competing with Western capitalist countries and moving towards industrialisation, see Bagchi 2005: Chap. 12.) First, while these economies obtained loans and aid from the Western countries trying to build a bulwark of resistance against communism, they tried to become free of dependence on those loans as soon as possible. Otherwise they might have become dependent perennially on Western countries. Second, even when they had been receiving Western loans and aid and had privileged access to Western markets, they did not allow any foreign enterprise to acquire a foothold in any important sector of the economy. Until 1993, ROK – and until very recently, Taiwan – strictly controlled foreign direct and portfolio investment. Third, they all adopted policies that induced or compelled their firms to absorb any foreign technology they bought or borrowed and upgrade it to suit their own requirements as quickly as possible.

Until 1978, China operated a command economy. When it wanted to bring in reforms, it did so under its own compulsion, not under the pressure of the IMF, World Bank or USAID. Before the start of reforms, China had already built up a network of roads and other infrastructural facilities by utilising its enormous manpower resources. It also constructed a large industrial sector, although often only with 1950s Soviet-era technology. It was still a very poor country. It suffered a food crisis in the early 1980s and had to

avail itself of UN food aid. Bu the reforms it had introduced in agriculture, in industry and decision-making processes began yielding results soon. PRC had nationalised all land, and, until 1978, the land was cultivated collectively by the village or cluster of villages and towns under the commune system. Land is still state-owned in China, but the local or provincial government can lease it out to users for specific purposes. In agriculture, PRC introduced the Household Responsibility System under which a household was given a plot of land to cultivate under its own responsibility, with specific payments to be made to the state (such as, for example, an amount of grain delivered, later generally changed to cash payments). The prices of agricultural products were raised in order to increase the incomes of the peasants. Other steps taken by the government included: (a) decentralisation of powers of raising revenues and spending them (with the central government making transfer payments to correct imbalances between surplus and deficit provinces); (b) greater autonomy of state enterprises to retain profits and invest them; and (c) introducing a credit system to finance investments and monitor them (ESCAP 2014: Chap. 7). The state continued to change the reform measures as conditions changed. It took quick measures to control balance-of-payments deficits, so as to avoid dependence on foreign loans. It also continually changed policies with regard to state enterprises and research institutions, sometimes merging them, sometimes directing a research institution to float commercial firms, and so on (Gu 1999; Oi and Walder 1999). When it began foreign direct investment, it offered many concessions to the investors, first creating special economic zones for them and then allowing them also to operate in other regions, especially in the economically backward western provinces of the country. These concessions often resulted in an extreme degree of exploitation of labour. But on the other hand, the conditions imposed on foreign investment generally led to a surplus of foreign exchange inflows over outflows. PRC also never allowed free flow of portfolio investment into its stock markets by the residents. Similar restrictions were also operative in Taiwan. This is one of the

reasons why neither of the two economies were affected by the Asian financial crisis of 1997–98. China has now emerged as the second largest economy in the world, with a still relatively low per capita income but reasonably high levels of human development, and an enormous increase in inequality.

Vietnam was utterly devastated by the 30-year war with Western powers: France to start with and the US after the French defeat at the Battle of Dien Bien Phu. In 1979, almost simultaneously with the Chinese reforms, the government of Vietnam began dismantling the 'bureaucratic centralism and subsidy system' because of the urgent need to improve the living standards of the peasants and equip them with the resources and incentives for improving productivity. An American trade (and investment) embargo on Vietnam was lifted in 1994. In 1995 Vietnam joined ASEAN, the Association of South East Asian Nations.

Vietnam's advance was built on some earlier foundations. It had a long record of investment in human capital, both in education and in health provision. In 1990, the adult literacy rate for men here was already 94%, and 87% for women. Beyond this, Vietnam had invested substantially in higher education, and there was a cohort of officials well trained, for example, in agricultural techniques and engineering, generating a receptivity to technical change (Beresford 1993).

The core of Vietnam's economic strategy since the early 1990s has been a rapid integration into the world economy: the development of a diversified portfolio of oil, manufactured and agricultural exports, and the attraction of direct foreign investment. This has been combined with successful domestic agricultural growth and a continued role for state-owned enterprises (SOEs) while encouraging growth of the private sector. Gross capital formation, largely from domestic sources – despite substantial inflows of foreign direct investment (FDI) – rose from just over a quarter of GDP in the mid-1990s to over a third of GDP in the early 2000s.

Unlike Indonesia, Thailand, and Malaysia, Vietnam remained unaffected by the Asian financial crisis of 1997–98, and it emerged as the fastest growing economy of South-East Asia.

Like China, it retained autonomy of economic and social policy and depended – despite the large inflows of FDI – mainly on domestic sources of growth in demand (ESCAP 2014: Chap. 6). But as in China, this achievement was bought at the cost of increases in inequality between town and country and among persons.

Neo-liberalism and Corruption

Corruption, in the sense of people making money by using political connections, has been endemic to capitalism and especially to capitalist colonialism. Businessmen from metropolitan countries enjoyed enormous patronage from the colonial authorities in the allocation of land and construction of plantations, railways, ports, and purchase of commodities by the government. With the rise and growth of the stock exchange, the corruption reached new heights, for example, in eighteenth–century Britain (Dirks 2006) and France under Louis Napoleon (aka Napoleon III) (Plessis 1987). Since the late nineteenth century, there has been no period in which 'crony capitalism' – that is, the enrichment of the capitalists in association with politicians and bureaucrats – has ceased to operate. This has been especially true of the arms industry, including the making of ships of naval forces, and increasingly of aircraft, both civilian and military. The US administration has, for example, lobbied repeatedly for the purchase of Boeing or Douglas McDonnell aeroplanes as against the products of the European company Airbus SAS (formerly Airbus Industrie).

But the advent of neo-liberalism worldwide since the 1970s has escalated both the scale and spread of corruption. In the US, much of the corruption has been legalised by allowing many industries such as gun making, finance and health care to have recognised lobbyists who try and influence Congressmen. The latter two have been particularly active in the 1990s and in the twenty-first century. Moreover, politicians raise campaign funds by various means. Recently, the US Supreme Court has legalised donations by corporations to politicians and parties (Liptak 2014).

Beyond the borders of the state, the US state permits any illegality committed by its corporations and citizens, so long as it does not infringe any sacred tenet of US foreign policy, such as the real or imagined security of Israel. Another sacred tenet was earlier not to allow anybody to give any assistance to communist countries through trade, aid, or sensitive technology. That prohibition still continues in the case of Cuba, on which the USA tries to enforce its completely illegal embargo of trade. But the focus has shifted to the so-called war on terror (of a specifically Islamic variety), started by the Republican Administration of President Bush and continued diligently by the Democratic one of President Obama. Behind such wars there also are many links to crony capitalism, such as Dick Cheney and Halliburton Corporation profiting from the Iraq War, or the family of George Bush continuing to benefit from its cosy relationship with the Saudi monarchy, a throwback to the most benighted realms of the past (Bronson 2006; Unger 2007; Woodward 2004).

Corruption was rife in the dictatorships in the Third World either promoted directly or supported by the US and its allies. Indonesia under the control of Suharto's military regime was one of the stellar examples of such corruption. According to an investigation by *Time* magazine, after his fall from power in 1998, Suharto was busy protecting his family's wealth: '$9 billion of Suharto money was transferred from Switzerland to a nominee bank account in Austria. Not bad for a man whose presidential salary was $1,764 a month when he left office' (Colmey and Liebhold 1999). Altogether, 'Suharto and his six children still have a conservatively estimated $15 billion in cash, shares, corporate assets, real estate, jewelry and fine art – including works by Indonesian masters' (1999). Suharto's regime left a legacy of corruption which affects the lives of millions of Indonesians and damages the environment very seriously. For example, in East Indonesia, when construction contractors were asked to give competitive bids, it was found that several of them had done so in identical writing and some did not bother to go through the actual bidding process (Tidey 2012). This kind of collusive behaviour is almost routine in many

developing countries, including India. Under the Suharto regime, the major source of revenues had been exploitation of natural resources, including oil and other minerals and the forests of other islands. These resources were generally extracted by big foreign companies, often in association with the Suharto family or military top brass. They had often simply burned the forests as a cheap way of clearing them for creating plantations or extracting minerals. This practice continued after the change to a formally democratic regime. In 2006, Indonesian forest fires created a haze that covered neighbouring states including Malaysia, Singapore, Thailand, and the Philippines (Ghosh 2006).

The only two indexes of success recognised by the World Bank are the rate of economic growth, as conventionally measured, and the extent of poverty reduction, as measured by the crudest and minimalist criteria, such as the percentage of people falling below an income of US$1 ($1.25) or $2 per day. (For a critique of the conventional poverty measures, see UNDESA 2009: Chap. 2.) Indonesia under Suharto is supposed to have done well by these criteria, although the reduction of poverty was exaggerated, and the labour department and the statistics departments contradicted each other (Bagchi 1998). (Under the military regime, many data were unavailable to outsiders.) Among the major Asian countries, Indonesia suffered the most in the Asian financial crisis of 1997–98. The officially measured proportion of people under the poverty line jumped from 18 to 24% between 1997 and 1228, but there was a huge clustering of people above the poverty line, so that a small change in cost of living or earnings can push large numbers of people below that measure. Moreover, there were huge differences in the incidence of poverty between outer regions and Java, and even within Java, between villages and cities (Breman 2001; UNDP 2001: 7–9).

The globalisation of corruption under neoliberalism produced startling and costly results for the Indian public with the entry of Enron into the electricity generation sector in India. When Kenneth Lay took over as the CEO of Enron in 1979, the company specialised in the production and transmission of natural gas and pipelines and

in production of plastics. It soon expanded its business to the generation and sale of electricity. It built political links with the Bush family and the Republicans:

> Since 1993, Lay and top Enron executives donated nearly $2 million to Bush. Lay also personally donated $326,000 in soft money to the Republican Party in the three years prior to Bush's presidential bid, and he was one of the Republican 'pioneers' who raised $100,000 in smaller contributions for Bush. Lay's wife donated $100,000 for inauguration festivities. (Scheer 2001)

Attracted by the enormous amounts of income that the Enron executives –including the CEO Lay – could earn from trading in derivatives and stock options and bonuses from rising values of shares in the stock market, Enron resorted to creating derivatives in energy supplies, offshore entities to hide the liabilities it assumed, and creative accounting in collusion with Arthur Andersen, the world's biggest accounting firm, before its dissolution. When ultimately, Enron could no longer deceive its creditors, it filed for protection under US bankruptcy law in December 2001. It is interesting that it enjoyed a high credit rating from the global credit agencies even up to the middle of 2001. The complex web of deception Enron built can be gauged from the fact that after it filed for bankruptcy it was found that it had created 2800 offshore units and that 54 pages were required to list people and companies owed money by it (Cornford 2006: 20). On the way to bankruptcy, it had totally pauperised its workers by locking all their pensions into the stocks of the firm. The value of those shares fell to nothing after Enron crashed. Enron also defrauded the US and Canadian publics in other ways. After deregulation of electricity supplies in the US and to a smaller extent in Canada, Enron had got into the business of supplying electricity to the US state of California and to Canada. The result was the following development:

> In the midst of the California energy troubles in early 2001, when power plants were under a federal order to deliver a full output of electricity, the Enron Corporation arranged to take a plant off-line on the same day that California was hit by rolling blackouts, according to audiotapes of company traders released here on Thursday . . . . Enron, as early as 1998, was creating artificial energy shortages and running up prices in Canada in advance of California's larger experiment with deregulation . . . . [T]he California energy crisis . . . produced blackouts and billions of dollars of surcharges to homes and businesses on the West Coast in 2000 and 2001. (Egan 2005)

Enron got into India soon after the Indian central government introduced neo-liberal reforms in 1991. On the assumption that India needed enormous amounts of private foreign funds in order to create large capacities for electricity generation, in 1992 the government amended the 1948 Electricity Act that reserved electricity generation and strictly regulated the pricing of electricity. The amendment allowed the entry of private companies into the business of generation and transmission of electricity, and, what is more, guaranteed a return of 16% on the capital invested to foreign investors (Victor and Heller 2007: chapter on "India" by Rahul Tangia). It may be mentioned that even the colonial British Indian government had only guaranteed a return of 5% to British companies constructing railroads in India. Indian officials visited the US scouting for investors, and Enron seized the opportunity. In 1992, it signed a Memorandum of Understanding with the government of India for building a series of gas-based power plants with a generating capacity of 2000 MW.

A confidential World Bank report of 1993 argued that the project was economically unviable and therefore it did not receive the bank's funding. Nonetheless, in the same year, the electricity board of the state of Maharshtra, in which the plant would be located, concluded a 20-year agreement for building the plant at Dabhol. But when the opposition party, the Hindu-chauvinist Shiv Sena, came to power here in 1995, it filed a law-suit to cancel the agreement. But after a meeting between an Enron executive Rebecca Mark and Bal Thackeray, the unelected and non-accountable supremo of Shiv Sena, the Mahrashtra government agreed to renegotiate the agreement. (Enron later showed an expenditure of $20 million for 'educating' the public in India.) After a review by the neo-liberal energy, Kirit Parikh, the government went ahead with the project on the basis of slightly altered terms. Dabhol's

first phase, begun in 1999, proved to be too expensive and too burdensome because the Maharashtra State Electricity Board had to pay for the cost of utilising the plant's full capacity, even if it could use only a fraction of that capacity. The Maharashtra government then set up an inquiry committee under the chairmanship of Madhav Godobole, a senior and widely respected bureaucrat, and the report condemned the whole project in no uncertain terms. The already built Dabhol plant was shut down. Meanwhile, Enron filed for bankruptcy. Most experts (Godbole and Sarma 2006; Prayas Energy Group 2001, 2005) were against trying to restart the plant because there were legal complications arising from the Enron crash and, technologically, the plant had become obsolete owing to the shutdown. However, Parikh argued for restarting the plant, and the views of the neoliberal experts prevailed. The state-owned National Thermal Power Corporation and Gas Authority of India Limited were persuaded to float a joint venture and take over the plant in 2005, and, after technical glitches suffered by equipment supplied by General Electric had been overcome, the plant started operating in 2010.

The Indian Enron story shows that while the neo-liberal policy of generating private profit at public cost was being pursued, there was stiff opposition against it, from conscientious bureaucrats to scientists (e.g. the Delhi Science Forum and Prayas Energy Group) and the general public. The victory of the neoliberals in their programmes was made possible because they ran a democracy that money could buy. It is necessary to pay some attention to the theory and practice of democracies that benefit plutocrats all over the world.

Neo-liberalism and Democracy

Under capitalism, formal democracy has always been weighted in favour of the propertied classes. But for a brief period, first in the major Scandinavian countries such as Sweden, Norway, and Denmark, and in most West European countries between around 1945 and 1970, working classes found a voice and a welfare or social democratic state operated. One principal contribution of neoliberalism has been to destroy the workers' resistance in those countries and install democracies that money can buy. In India, the most populous formal democracy in the world, the same tendency prevailed under neo-liberalism – in the central government and in most of the constituent states. The climax was reached in the parliamentary elections of 2014, when the Hindu nationalist BJP, led by Narendra Modi, obtained an absolute majority in the Lok Sabha (the lower house of the central legislature) by mounting a lavishly funded campaign. Because of the majority rule of representation in every constituency, the BJP obtained that legislative majority with only 31% of the votes polled. In the US, lobbying for particular interests and corporations has been legal for a long time. Between 1998 and 2013, lobbyists contributed a total of $60.38 billion to the two major parties, the Republicans and the Democrats. Among the top-contributing sectors were finance (insurance, banking, hedge funds), private health care, and defence suppliers. Among corporations, top contributors included Boeing, General Electric (GE), Google, by now the biggest internet company in the world, and Pfizer, the biggest drugs and pharmaceuticals company globally, which conspired to create the entity called the World Trade Organisation (WTO) (Center for Responsive Politics 2014a, 2014b). Besides contributions by lobbyists, individual politicians also receive campaign funding from corporations. For his 2008 campaign, for example, the presidential candidate Barack Obama received funds from Goldman Sachs, JP Morgan Chase, Microsoft and Google, among others. Altogether he was able to raise $417.5 million in direct campaign funding (Center for Responsive Politics 2004b, 2014a). It is not surprising then that Obama would pursue policies that would benefit these corporations or that he should appoint as treasury secretary Tim Geithner, who has had a close relationship with both the foreign policy establishment and Wall Street all his life. Nor is it surprising that the policies Obama followed during both his terms should be those of George Bush and Bill Clinton. The US Supreme Court has now lifted all limits on

campaign funding, so big corporations can simply buy the legislators who will back them (Liptak 2014).

In India, corporations used to finance both the Congress Party, which has been the longest-ruling centre party and the BJP, which had ruled in several major constituent states since 1990 and been at the centre in the early twenty-first century. Between 2004 and 2012, corporate houses made 87% of the total contributions to political parties, most of them to the aforementioned parties (Association for Democratic Reforms 2014). Of the total amount of INR3,789 million, the BJP received INR1,925 million and the Congress received INR1,723 million. These are only legally disclosed amounts.

Imperialism, Neo-liberalism, Inequality, and Resistance

As should be clear from the earlier analysis, imperialism has led to unprecedented levels of inequality, fed by finance, media control, and corruption. It has also irreversibly damaged the environment. While neo-liberalism has not yet been defeated, it has faced stiff resistance, not only in Latin America but also in numerous regions of the world, in the form of workers' movements, women's movements, and movements to protect the environment.

> The beginning of the twenty-first century has witnessed a collapse of the growth of employment worldwide, except in most countries of East Asia, and not only in the formal sectors but even in low-paid informal sectors (ILO 2003, 2004). This is especially true of the youth (that is, persons between the ages of 15 and 24 according to the UN definition) who constitute 25 per cent of the working age population but account for 47 per cent of the unemployed. Worldwide, there were 88 million unemployed youth in 2003 (ILO 2004). Moreover, women have been the first victims of spreading unemployment in many countries. In particular, in some Asian countries which had specialized in using female labour for export production, there has taken place a 'de-feminization of labour' as machines operated by men have displaced women . . . Rates of unemployment have soared perhaps to levels as high as 36 per cent in the Caribbean and Middle East and North Africa among young people between the ages of 15 and 25 years' (Bagchi 2005: 328–329).

Such trends are likely to continue in most countries, especially since many developing ones, including India, have concluded what are called WTO-plus free trade agreements, under which the highly subsidised agriculture of the US and EU is competing with very poor farmers of the Third World. Such struggles for existence of already impoverished farmers and women in subsistence agriculture will also cause more environmental damage through over-grazing, deforestation and failure to put back organic soil nutrients (Singh and Sengupta 2009).

During the last few decades, there has been a steep increase in the shares of the top 1–5% of income earners in many advanced capitalist countries, and especially the US and the UK (Atkinson et al. 2011). Piketty (2014: parts 1, 3) has demonstrated that over the last three decades 60% of the increase in US national income went to just the top 1% of earners; the incomes of the top 0.01% and the top.001% increased even more steeply. Enormous increases in salaries and other incomes of the top layer of executives even during the period of global recession, and capital gains accruing from operations of deregulated stock markets, have contributed greatly to this historic increase in inequality in these countries.

Global income inequality has also increased over this period (Milanovic 2011). One reason for this global inequality is that in most of the developing economies, except for the East Asian industrialised or industrialising ones, landlordism still prevails. As in earlier centuries, imperialism has utilised the use of non-market power for its own ends. However, we have already noted how in Latin America many leftist regimes are challenging the imperialist world order. They are also, as in Bolivia and Ecuador, empowering the majority Amerindian communities and throwing out the criollo elite that is complicit with imperialism.

All over the world, including the US, Mexico, and other countries, workers organised in formal trade unions and unorganised workers – many of them immigrants – are fighting for their rights (Bagchi 2014b; Lynd and Gross 2007; Weinberg 2007). In Porto Allegre in Brazil and Oaxaca province in Mexico, such groups were able to take control of municipalities and implement a

variety of participatory democracy. One problem with workers' international solidarity is that colonialism created an enormous gap between the wages of workers in imperial centres and those in the colonial lands. Under the neoliberal dispensation, capital is fully mobile across international borders but workers' mobility across those borders has been kept very restricted. One consequence is that the aforementioned wage gap that continues in spite of the slow rise or stagnation of wages for the majority of workers in the US and EU (Bagchi 2014b; Cope 2012).

Even under those constraints, successful experiments in participatory democracy have occurred; for example, in the state of Kerala in India, in the city of Porto Alegre in Brazil, and in Venezuela under Chavez (Thomas Isaac and Franke 2000; Harnecker 2013; Kingsley 2012;). That kind of democracy necessarily challenges the basic tenets of neo-liberalism.

All over the world, women have been actively defending their rights and the democratic principles under which they can defend them (see e.g. El Saadawi 2012; Patel 2010). They are fighting for universal literacy, universal health care, an end to human trafficking (of which women are the most numerous victims), equal pay for equal work, and a decent livelihood for the nurturing care which they bestow on their children and other members of their communities. This is also a fight against neo-liberalism, because under that extremely inegalitarian order, both the demand for food grains – of which the poor are the main consumers – and investment in agriculture (which has again been of a labour-displacing nature) have suffered badly, and led to the displacement of several hundred million women from agricultural work, forcing them into very-low-wage work in cities where they live under subhuman conditions.

Finally, scientists have long campaigned for human beings to respect Nature's boundaries. Apart from the International Panel on Climate Change, which has documented the irreversible nature of climate change and has been campaigning for limiting the emission of greenhouse gases by using more renewable sources of energy, a group of 18 scientists has identified what they call planetary boundaries which human

beings cross at their peril and at the peril of life on earth (Rockström et al. 2009). These boundaries are determined by the following factors, and some of them have already been crossed: climate change, ocean acidification, stratospheric depletion, interference with the global phosphorus and nitrogen cycle (through intensive use of artificial fertilisers), an alarming rate of biodiversity loss, interfering with natural ecological balance, excessive use of freshwater globally, drastic change in land use patterns, and excessive loading of aerosols such as particulate matters through a tremendous rise in the production and use of internal combustion engines in automobiles of all kinds, and finally chemical pollution of water and food.

A system that is driven by competition for profit and power, which is the fundamental prime mover of the neo-liberal imperial order, cannot respect the planetary boundaries as the repeated failures of the Copenhagen intergovernmental conferences on climate change have demonstrated.

In spite of the spread of resistance against neoliberalism and imperialism in the form of jihadist movements in the Islamic world and peasant wars in Latin America,, rejection of the Washington consensus (namely, that you should leave all economic activities up to the market and the private sector) in most countries of Latin America, and the rise of China as the world's second largest economy, imperialism and neo-liberalism with corporates as the core commanders continue to rule most of the world, and military expenditures remain massive. 'World military expenditure in 2012 is estimated to have reached $1.756 trillion. This corresponds to 2.5 per cent of world gross domestic product (GDP), or approximately $249 for each person in the world' (Shah 2013). That per capita expenditure is higher than the income of the working poor in the poorer nations of the world. However, while the US remains the dominant military power accounting for 39% of the global military expenditure and with hundreds of military bases across the globe, it is being challenged by Russia in Syria, Ukraine, and even in Latin America. The Russian president Vladimir Putin met Fidel Castro in Cuba, and offered help for offshore exploration of oil (Anishchuk and

Trotta 2014). On the other side of the Caribbean, the government of Nicaragua has signed an agreement with a Hong Kong Chinese company for construction of a canal that will link the Caribbean (and the Atlantic) with the Pacific Ocean, and thus provide an alternative to the Panama Canal (Westcott 2014). Thus, the US and its allies are being challenged internationally by two powerful nations and by a host of countries revolting against neo-liberalism or military domination by the US. But humankind is still waiting for a world of knowledge economies, where the search for new ways of using nature without causing irreversible damage and improving health, education, and creativity will be the driving force rather than the exploitation of wo(man) by wo(man) and profit-motivated extraction of non-renewable natural resources.

Nepal, Imperialism and Anti-imperialism

Feyzi Ismail
SOAS, University of London, London, UK

Synonyms

Anti-imperialism; Imperialism; Inter-imperialist rivalry; Maoism; Monarchy; Nepal; People's War

Definition

Resting on a fault line between the two emerging global powers of China and India, Nepal aspires to geopolitical neutrality. In reality it is subject to imperialist interests. This essay shows that although modern Nepal was never officially colonised, its economic and political dependence on imperial powers reveals a history that has been shaped by imperialism. The caste, ethnic, and regional discrimination that exists in Nepal today is a legacy of Gorkhali imperialism, which was accompanied by a unification process based on classifying social and cultural diversity along lines of caste hierarchy under the rule of the Shah monarchs. Challenges to this discrimination were revitalised as a result of the Maoists' People's War initiated in 1996, and were brought to the forefront of national politics following the 2006 revolution, the end of the 240-year-old Shah dynasty in 2008, and subsequent constitutional debates. But internal domination by an upper-caste hill elite has not been overcome and, at the same time, Nepal continues to endure external interference in its political and economic affairs by the great imperialist powers. India remains the most interventionist power in the region and has a particularly charged relationship with Nepal, facilitated by the open border. Thus, the balance of forces between imperialism and anti-imperialism in Nepal must inevitably encompass India's role, its security and economic interests – and resistance to these interests – but also the complex interplay of imperial forces including

the US, Britain, and China in maintaining and profiting from the status quo in Nepal.

Resting on a fault line between the two emerging global powers of China and India, Nepal aspires to geopolitical neutrality. In reality it is subject to imperial interests. Modern Nepal was never officially colonised, but its economic and political dependence on imperial powers reveals a history that has been shaped by imperialism. The caste, ethnic, and regional discrimination that exists in Nepal today is a legacy of Gorkhali imperialism, which was accompanied by a unification process based on classifying social and cultural diversity along lines of caste hierarchy under the rule of the Shah monarchs. Challenges to this discrimination were revitalised as a result of the Maoists' People's War initiated in 1996, and were brought to the forefront of national politics following the 2006 revolution, the end of the 240-year-old Shah dynasty in 2008, and subsequent constitutional debates. But internal domination by an upper-caste hill elite has not been overcome and, at the same time, Nepal continues to endure external interference in political and economic affairs by the great imperialist powers. India remains the most interventionist power in the region and has a particularly charged relationship with Nepal, facilitated by the open border. Thus, the balance of forces between imperialism and anti-imperialism in Nepal must inevitably encompass India's role, its security and economic interests – and resistance to these interests – but also the complex interplay of imperial forces including the US, Britain, and China in maintaining and profiting from the status quo in Nepal.

The history of the Nepali nation state is itself one of imperial conquest. Prior to the unification of Nepal by Prithvi Narayan Shah, who ruled the small kingdom of Gorkha in what is now central Nepal, and who eventually became Nepal's first king, the region was dominated by an assortment of petty kingdoms. Following the capture of Nuwakot, a strategic town lying between Gorkha and the Kathmandu Valley, Prithvi Narayan's army was able to assert control over the profitable trade route between Tibet and Kathmandu and other strategic points in the area, before declaring

N

Kathmandu the capital of Nepal in 1768. Gorkhali expansion included the annexation of the Terai (the southern plains bordering India), which was one of 'the most valuable among the territorial acquisitions of the Gorkhali government' (Regmi 1999: 15) in the early 1770s. Prithvi Narayan continued to expand the Gorkhali Empire as far as Sikkim in the east and Himachal Pradesh in the west, until his death in 1775. The Gorkhalis had also challenged Chinese suzerainty in Tibet between 1788 and 1792, without success (Joshi and Rose 2004/1966: 3), before engaging in a border war with Britain's East India Company from 1814.

British Imperialism in Nepal

The growing power of the East India Company was the harbinger of deepening British control of South Asia, shaping Nepal's fortunes until Indian independence. The British never occupied Nepal, but it was vital to their imperial calculations. Bhimsen Thapa, who had seized power in Nepal in 1806, the son of a loyal soldier of Prithvi Narayan, had provoked the war with the British. While the Gorkhalis had 'better knowledge of the ground and inflicted several reverses on the East India Company's forces' (Whelpton 2005: 42), and the British found it difficult to break them despite the Gorkhalis' inferior weaponry, the Gorkhalis eventually capitulated, negotiating an end to the war in 1816 with the signing of the Sugauli Treaty. Viewing the Gorkhalis as encroaching on British territory by continually shifting the frontier line, at the end of the war the East India Company demanded that the border dividing Nepal and British India be carefully demarcated by stone pillars (Burghart 1984: 114), which remain in place today. The signing of the treaty had several advantages for the British: territory along the western, southern and eastern borders of Nepal was annexed, preventing direct contact with the princely states of Lahore and Sikkim, which Nepal had ambitions to conquer; raw materials such as iron, copper, and lead mines, forests and hemp; and a trade route through to Tibet (Sever 1996: 87). These gains reinforced Britain's imperial role in the region.

The Anglo-Nepalese War resulted in the loss of one-third of Nepal's territory (Mojumdar 1973: 5), and although the British later returned part of the Terai, the current boundaries of Nepal are more restricted 'than at the apex of Gorkha imperial expansion' (Joshi and Rose 2004/1966: 3). The British returned territory that was deemed 'unimportant' (Mojumdar 1973: 83) after the Indian Mutiny in 1857, out of gratitude for the offer of military assistance, despite initial reluctance to accept it. The Sugauli Treaty not only put an end to Nepali territorial expansion but also to the economic development of the Terai, on which the future of Nepal's economic development depended (Stiller 1976: 50). The aim of the British was not to absorb Nepal but to make it smaller and weaker (Brown 1996: 3), providing a reasonable buffer with China. Moreover, as long as Britain's influence over Nepal was 'sufficient to exclude that of rival powers, a boundary on the plains was satisfactory; approaches to India could be guarded by obedient feudatories as securely as by British power itself, and far more cheaply' (Maxwell 1972/1970: 24). The terms of the Sugauli Treaty, including the presence of a permanent British resident, helped strengthen British hegemony in the country. The British resident 'was dreaded as an instrument of British imperialism and as a sinister agent of intrigue' (Mojumdar 1973: 6), intent on compromising Nepal's integrity. Following the war, the British began recruiting Gorkha soldiers into the British Indian Army (the word 'Gurkha' came to be accepted in English, but is a corruption of Gorkha). The Gurkhas helped crush the Indian Mutiny (78), fought in the two world wars, and continue to serve in the British and Indian armies today. Nepal had lost the war of 1814–16 and, while it retained formal independence, its economic and political dependence intensified in the following decades.

Rivalry between various powerful families culminated in a palace massacre in 1846, known as the Kot Massacre, which displaced the Shah monarchs and brought to power the Ranas, whose rule was to last for over a century. There are few legacies the Ranas are remembered for other than inflicting misery on the vast majority of the population. But the internal stability of the

Rana regime also depended on managing political and military relations with British India. The British needed Nepal to serve as a frontier to counter Chinese influence and subversion in the region, but it also needed the Gurkhas' military skill and influence in dealing with seditious forces in India, for example, during the Indian Mutiny. The mutiny was perhaps the greatest crisis the British faced in India. That Jang Bahadur Rana, one of the founders and first ruler of the Rana dynasty, refrained from exploiting the opportunity to challenge the British, is testament to the 'effective alliance of interests between the ruling class of Nepal and British imperialism in India' (Blaikie et al. 2001/1980: 38). Nepal, on the other hand, needed British recognition of its independence to keep Indian and Chinese intervention at bay, and to quell any internal challenges to the Rana regime. These mutual interests were recognised in the Treaty of Friendship, which Nepal and Britain signed in 1923, and which explicitly declared Nepal's independence. Ultimately, however, relations were not on equal terms: 'Nepal was, in fact, an Indian political and military outpost, serving the purpose of an outer strategical frontier; Nepal's internal autonomy was guaranteed by the British, but her external relations were subordinated to the considerations of British interests' (Mojumdar 1973: 12).

The treaty also discouraged the establishment of new industries because it allowed almost unrestricted imports of British goods into Nepal (Lohani 1973: 205), facilitating the growth of the British economy at the expense of Nepal's (Tamang 2012: 271).

Several factors account for the fall of the Ranas in the 1950–51 revolution: divisions within the regime itself; the role of the king in emboldening the political parties exiled in India; the insurrectionary activities of the Nepali Congress; mass demonstrations in the capital; and the British withdrawal from India in 1947. But two further factors stand out, both of which stoked anti-imperialist sentiments towards the British. First, over 100,000 Nepalis fought in the First World War for the British, with at least 10,000 killed and another 14,000 wounded or missing (Whelpton 2005: 64). Hundreds of thousands also fought in

the Second World War in Africa and Europe, again for the British (Joshi and Rose 2004/1966: 57). This exposed them to new ideas, and a small but significant number of Gurkhas became fiercely anti-Rana. Attempting to prevent veterans from spreading these ideas in the villages, the Ranas requested the British not to promote Gurkha recruits beyond the rank of sergeant, and enforced caste purification rituals on the Gurkhas when they returned from fighting (52). Many Gurkhas refused to be repatriated to Nepal, preferring instead to settle in India. A number of them joined the movement against both British imperialism and Rana rule.

Second, the Quit India Movement initiated in 1942 had a powerful impact on Nepali activists and intellectuals. The participation of Nepalis in the Indian movement created an anti-Rana movement within Nepal, however limited, that could not be ignored by the Ranas. The survival of the Ranas 'had depended on the submission of the subjects to medieval methods of oppression. But once the idea of defiance entered the public mind, the Rana system collapsed like a house of cards' (Gupta 1964: 49). Exposure to the Indian nationalist movement led many Nepalis to believe that the fall of the Rana regime could only be accomplished with the elimination of British rule in India, since the British had become a bulwark for Rana power (Joshi and Rose 2004/1966: 50). Nepalis began to participate in the *satyagraha* movements of the 1920s and 1930s in India, and to train in the methods of mass movements (ibid.). The eventual success of the civil disobedience movement in India instilled fear in the Ranas, and it was becoming increasingly clear that the strength of political opposition to imperialism in India was intimately bound up with the prospects for a resistance movement in Nepal.

The Ranas were surrounded: the post-1947 government in India – the powerful Indian National Congress – detested the Ranas because they had supported British imperialism; the Nepali monarchy, which had been deposed by the Ranas, also wanted the dissolution of the regime; the international community was becoming impatient with Nepal's trade barriers and concerned about potential communist influence

N

from China; and various Nepali political parties, with a growing base of support, were being founded calling for democratic reforms. The Ranas finally conceded when sections of the army surrendered to the Nepali Congress's liberation army, the Mukti Sena, and when India, Britain, and the US refused to recognise four-year-old Gyanendra, one of King Tribhuvan's grandsons, as the new monarch; the Ranas had crowned Gyanendra in the absence of King Tribhuvan, who had fled to India for safety in the midst of the crisis.

India's Sub-imperialism

Nepal's relationship with India has been more complicated and challenging for the Nepali ruling class than it was with the British (Rose and Dial 1969: 91). India's overwhelming security, economic and political interests, as well as its cultural and religious affinities with Nepal, have constantly raised the spectre of Nepal's potential absorption within it. When India gained independence, it continued with imperial pretensions in Nepal, inheriting Britain's strategic and political dominance in the region. In 1950, eager for continued recognition of Rana rule, Mohan Shamsher Rana signed the India-Nepal Treaty, a bilateral agreement formally known as the Treaty of Peace and Friendship, replacing the 1923 Treaty of Friendship. The India-Nepal Treaty sanctions the free movement of people and goods over the border and outlines strategic questions of defence and foreign affairs, restricting the development of a diversified economy and an independent polity. The treaty remains in effect and while it officially acknowledges the sovereignty, territorial integrity, and independence of each nation, it is widely perceived to favour Indian interests, particularly as Nepal continues to be aligned to India in foreign affairs (92).

But following independence India could no longer support Rana rule; popular disaffection with the Ranas was growing, and India did not want to encourage the potential for revolution. The government in India thus favoured Shah rule, believing it to be more stable, and believing

also that there was a role for the Nepali Congress in providing the regime with democratic credentials. What became known as the Delhi Compromise involved an agreement between the Indian government, the Ranas, and King Tribhuvan. It was aimed at a smooth transfer of power from the Ranas back to the monarchy. A power-sharing government was formed in 1951 between the Ranas and the Nepali Congress, until the Congress decided to force the Ranas out of the cabinet (Joshi and Rose 2004/1966: 89), prompting King Tribhuvan to invite the Congress to form the government. The Ranas had to accept the compromise, partly to protect extensive investments in India (Rose 1971: 285), and partly to avoid total humiliation. The situation suited the Indians because it meant the king was indebted to India for having restored the monarchy. India could also extend support to the Mukti Sena in order to put pressure on the regime when Indian interests were threatened. India cultivated this relationship with the monarchy over the following decades, and in the post-1990 context the constitutional monarchy formed one pillar of India's 'twin-pillar' policy towards Nepal, together with multiparty democracy.

After his death in 1955, King Tribhuvan was succeeded by his eldest son, Mahendra. In 1960 King Mahendra used his emergency powers to dissolve parliament, suspend the constitution, and ban the political parties, ushering in the panchayat system. The royal coup marked the restoration of direct rule by the king (Rose 1963: 16), more akin to the Rana autocracy that was overthrown in 1951 than the constitutional monarchy of the preceding decade. Initial misgivings on the part of India following the imprisonment of Nepali Congress prime minister B.P. Koirala, ending a decade of democracy and the 18-month stint of the country's first popularly elected government in 1959, were displaced by greater security concerns over China. India continued to provide economic assistance to Nepal to boost closer communication and transport links across the border in order to restrict Chinese influence there, revealing India's privileging of national security interests over questions of democracy. In any case, the 1962 Sino-Indian War necessitated a rethinking of

relations with Nepal, particularly when Nepal was making overtures to China (Tamang 2012: 277) and Chinese authority in the region was reinforced by its victory in the war.

The panchayat government of the post-Rana era ostensibly viewed economic development as one of its top priorities. Nepal requested aid from India, which responded with technical and economic assistance in 1952, building roads, airfields, and communications networks (Khadka 1997: 1047). India became Nepal's largest donor from the mid-1960s until the 1970s, when Japan assumed the role (1048). Meanwhile, China offered aid to Nepal in the wake of King Mahendra's coup in order to reduce Nepal's economic dependence on India; in general during the 1960s and 1970s, when Indian aid increased, aid from China and the Soviet Union also increased (1053). This economic integration and associated dependence continues. Landlocked and without easy access to ports, accessing the markets of the rest of the world other than through India is time-consuming and expensive for Nepal (Karmacharya 2001: 89). Sole reliance on India for trade and transit has inhibited Nepal's ability to develop commercial relations with other countries. While the long open border with India has enabled Nepalis to work in India, it has also created problems; India's superior infrastructure, technology, and skills, the unofficial and unrecorded movement of goods across the border (ibid.), and the economies of scale provided by its large domestic market have acted as disincentives to the development of industry in Nepal. Following the liberalisation of trade, imports from India have rapidly increased, creating a trade deficit for Nepal.

Nepal's integration into the global economy has been largely dictated by its dependence and integration into the Indian economy (Blaikie et al. 2001/1980: 49; Tamang 2012: 271). The importance of foreign intervention in the development of Nepali capitalism, which has 'taken the form of assertion of monopoly control by ruling families in alliance with transnational interests – a position analogous to that of the Birlas, Tatas, and other large houses of post-independence India' (Mikesell 1999: 186), cannot be overstated. This

integration has reduced Nepal to a virtual colony of India, but with none of the benefits of infrastructural development that some other colonies experienced, and all the disadvantages of being subject to the demands of a sub-imperial power. The resulting diversion of labour across the 1580 km long open border between Nepal and India continues. The poorest Nepalis travel to India to work in the informal economy, primarily as security guards, porters, miners, and domestic workers, not having been able to afford to travel to the Gulf countries or Malaysia (Sharma and Thapa 2013: 10). Estimates range from a few hundred thousand to a few million, though millions of Nepalis are now also migrating elsewhere. While seasonal migration is necessary for many agricultural labourers in order to survive, it has at times weakened the economy of Nepal by reinforcing economic ties to India. Indian aid and investment, particularly early road projects, were geared towards expanding India's business interests and fortifying its strategic defence capabilities. India has long been the primary supplier of military aid and training to the Nepal Army (Adams 2005: 129). The supply continued throughout the Maoists' People's War and although it was suspended following King Gyanendra's takeover of absolute power in February 2005, it has now resumed (see http://goo.gl/riN5Rh – last accessed on 29 January 2015). Notably, the India-Nepal Treaty also specifies Indian control of Nepali arms acquisition, serving as 'a definite mark of New Delhi's strategy of seeking a preeminent position in Nepal' (Dabhade and Pant 2004: 163). When King Birendra negotiated a special arms deal with China in 1988, India imposed the now infamous trade embargo in 1989, preventing fuel and kerosene from entering Nepal (Mishra 2004: 633), damaging the Nepali economy and setting off the 1990 revolution. India argued that under the India-Nepal Treaty, Nepal must consult India before purchasing arms; Nepal argued that this provision was not applicable if the arms were not transiting through India (ibid.). India was not convinced. Post-9/11, India has supported an increased role for the US in providing arms and economic aid to Nepal, ostensibly 'to counter the

menace of terrorism' (Dabhade and Pant 2004: 165) and curb Chinese influence. All of these factors have consolidated Nepal's dependence on India. While Indian aid has at times converged with the interests of the Nepali elite, it has not been provided on the basis of the interests of Nepal's population; rather it has served to strengthen India's hand in the Nepali economy.

Chinese Interests in Nepal

Nepal has always attempted to pursue a balanced foreign policy between China and India. While this policy of neutrality has been encouraged by China, and Nepal has often needed to use China to manage relations with India, India has unremittingly sought to reinforce its authority in Nepal, including countering Chinese influence. Thus, in practice, a balanced policy between China and India is impossible given the economic, cultural, and religious ties between Nepal and India and the geographical barrier with China created by the Himalayas. Since China's invasion and occupation of Tibet in 1950–51, Chinese interests in Nepal have been fixated on repressing the organisation of anti-China activities from Nepal; indeed Nepali soil had been used to launch the Tibetan uprising in 1959. Regardless of the government in power, China's top priority has been to stifle protests challenging Chinese authority in Tibet, particularly since Nepal hosts a growing presence of Tibetan refugees. China has also been involved in aid politics in Nepal since the 1950s, building large infrastructural and road projects. These have been used to leverage security and foreign-policy interests, including countering US influence, and reducing economic dependence on India (Khadka 1997: 1047–1048). These goals have remained unchanged in recent years, and since the Maoists' entry into mainstream politics in 2006, China has stepped up aid and offered military training. In 2009, for example, China provided Nepal with US$3 million in military aid, including training for the Nepal Army (see http://goo.gl/27yusT – last accessed on 2 February 2015). In 2014 China announced that it was increasing its overall aid budget by five times,

and while its ambitions in Nepal are limited, it seeks to exert its interests in increasingly strident ways (see http://goo.gl/e5OQhb – last accessed on 29 January 2015). Apart from security concerns surrounding Tibet, China has also become preoccupied with expanding business and commercial interests in Nepal, seeking markets for manufactured goods and using investment to leverage influence. In this respect, China has now become a major player in Nepali political affairs.

US Foreign Aid and Imperialism

US interests in Nepal have been driven largely by geopolitical concerns. The overthrow of the Rana regime in 1950–51 combined with the perceived threat of communism following the Chinese Revolution led the US to establish a presence in Nepal, even before Russia, India, or China. Using its aid programme in a systematic and strategic way in order to achieve its foreign-policy objectives, the US was Nepal's first bilateral donor (Skerry et al. 1992: 1). Until 1965 it was also Nepal's largest donor (Khadka 2000: 83). US aid started to decline as Nepal's relations with China began to normalise in the 1960s and the US became preoccupied with Vietnam; the relative decline of aid from the Soviet Union and the involvement of Western European donors, in addition to the Bretton Woods institutions, which could help counter any communist uprising, were also factors in the decline of US aid (84). There were two primary reasons for the US initiating its aid programme: the growing popularity of communist parties in South Asia in general and Nepal in particular, and the grinding poverty found across Nepal (77). But the question of poverty, arguably stemming from a century of neglect by the Rana dictatorship and weak governance following the rise to power of the nascent political parties, was also linked to the US's overall anti-communist offensive. Creating the economic conditions that could prevent the spread of communism, particularly the 'vulnerability of the peasantry' (Mihaly 2002/1965: 31) to communism was a major pillar of the US's aid

programme. US officials were aware of the increased political consciousness of Nepalis, who appeared to be turning to communism and were becoming increasingly anti-Indian (Tewari 2001: 104). They reasoned that if aid could help Nepal achieve rapid economic growth, it would be able to repel any communist influence from either China or the various communist groups in India, and even the Soviet Union (Khadka 2000: 77). On a diplomatic level, having an aid programme that allowed US officials to travel throughout Nepal and assess socio-economic conditions first-hand was an important source of information for analysing the threat of external aggression and the level of ideological penetration by communist China or Russia. During the Maoists' People's War, the presence of numerous US-funded NGOs, including international and national NGOs working on development, human rights, democracy, and peace, often took on this role in an effort to mitigate the impact of the Maoists' ideas on wider Nepali society.

Driven by Cold War priorities, the US thus supported King Mahendra's coup in 1960, believing the monarchy to be a more stable force than the political parties, just as India did. King Mahendra's pragmatic foreign policy (i.e. professed neutrality between the regional powers) also coincided with US interests. But it is arguable that the US failed in its stated objective of fostering democracy. This is because while it had always emphasised 'democracy, human rights and freedom whenever aid was questioned' (91), it lent indirect support to the absolute rule of the monarchy by financing its plans and maintaining close contacts with palace officials. During the panchayat era, the US position was that the regime was a form of democracy, 'a stepping stone to full democracy for which the Nepali people were said to be not quite ready' (ibid.). In 1990, the US supported the people's movement, but advised the Nepali Congress to co-operate with the monarchy in order to counter the expansion of communism (ibid.). During the People's War it took strong measures to communicate its displeasure about the political situation, including putting the Maoists on the second tier of the US terrorist list in 2003, despite ongoing negotiations between the government and the Maoists and a ceasefire in place. The Maoists had always opposed the terrorist label, arguing that they were a serious political force, not a terrorist group (see http://goo.gl/I492Bs – last accessed on 25 January 2015). The US also pursued a strategy that aimed to give the Maoists a 'bloody nose' by ensuring a steady flow of weaponry to the army; this would force the Maoists to negotiate from a position of weakness. Later, as it was becoming clear that neither side was making decisive military gains, the US's strategy changed. Although on one level it continued to maintain a hard line towards the Maoists, in 2005 when King Gyanendra staged his coup, taking power as dramatically as his father had done in 1960, the US began working with India to bring the Maoists into the mainstream. Between 2001 and 2005 the US also donated US$29 million in military aid (Adams 2005: 130), and it continues to conduct training for the Nepal Army. The policy of containment remains the core of US interests in Nepal.

The Growth of Anti-imperialism in Nepal

The two most significant political events that influenced the development of the communist movement in Nepal, including the spread of anti-imperialist ideas, were the independence movement in India and the Chinese revolution of 1949 (Rawal 2007: 30; Tewari 2001: 48). While the revolutionary upheaval in China was relatively far-removed from the communists in Nepal, the Indian experience had a more direct impact. With the growth of educational institutions in northern India in the early twentieth century, many young Nepali students began to study in India, particularly from the 1930s onwards. They quickly became influenced by the ideas of the Indian communists, who were operating in a relatively open political environment compared to Nepal. Based in Calcutta, Darjeeling, Varanasi, and elsewhere, they began to participate in various groups and study circles that explicitly professed socialist and anti-imperialist ideas. Following the participation of Man Mohan Adhikari, Pushpa Lal Shrestha, and others in the Biratnagar Jute Mill

strike in 1947, they returned to Nepal as young leaders looking for an opportunity to form an organisation that could provide the basis for launching a struggle against the Rana regime (Upreti 2009: 15). The Biratnagar Jute Mill strike was a momentous event in Nepali history because it brought both Congress and communist activists together in joint struggle. But it was also the beginning of wider resistance to Rana rule. The strike began as 'an economic struggle of the working class projected from India' (Tewari 2001: 70), since the Indian left had helped to initiate it and most employees at the mill were Indian; when the Ranas repressed the strike with police violence and mass arrests, it had repercussions across Nepal (Chatterji 1967: 39). The strike moved beyond the confines of trade unionism and joined the mainstream of the democratic struggle. The leaders associated with the strike and others decided that a party separate from the Nepali Congress should be formed. The CPN was established in September 1949 in Calcutta with the advice and financial support of the Communist Party of India (CPI). The main objective of the party was to participate in the popular movement against the Rana dictatorship, together with the Nepali Congress.

The CPN was active in the movement against the Rana regime since its formation. Following the tactical line of the CPI, the CPN had recognised that the national leadership in India had a 'collaborationist character' (Gupta 1964: 200) that was susceptible to being influenced by imperialist forces and, as such, could not be trusted; it began to organise amongst peasants and workers, and held that peace in Nepal would require more than the overthrow of the Ranas (ibid.). The CPN was also conscious of the fact that the Delhi Compromise had been engineered to diffuse the anti-Rana movement and prevent the growth of the communist movement in Nepal (Rawal 2007: 39). It publicly criticised the pact and declared that the Nepali Congress had betrayed the revolution. One of the main policy aims of the CPN was to minimise Indian influence and strengthen relations with China (Khadka 1995: 57); to that end it called for the defeat of national feudal lords, Indian capitalists, and

imperialist forces (Gupta 1964: 63). But the CPN also suffered from a lack of ideological clarity. Following a revolt in 1952 in which parliament was stormed in order to secure the release of K.I. Singh, one of the leaders of the Mukti Sena who had been arrested for being involved in disturbances in eastern Nepal, King Tribhuvan called a state of emergency and banned the CPN for its involvement. The CPN was forced to organise underground, where it continued its activities by infiltrating other organisations and intensifying its work among agricultural labourers (202). The ban was only lifted in 1956 by the Nepali Congress government headed by prime minister Tanka Prasad Acharya on the condition that the communists accept the principle of constitutional monarchy.

The Maoists and Anti-imperialism

The 1990 revolution that brought about multiparty democracy in Nepal was a turning point in Nepali political history. If the 1950–51 revolution marked the end of a dictatorship, ushering in not an entirely new order, but a 40-year transition that steadily weakened the old structures of power, then the 1990 revolution, in contrast, set Nepal on a trajectory where everything could be challenged: the monarchy, upper-caste rule, ethnic disparities and the stark class divisions that had characterised Nepali society for centuries. It was the beginning of a new kind of revolutionary process – the birth of Nepal's democratic revolution. The Maoists were crucial agents in this process because they pursued and advanced it from 1990 until the abolition of the monarchy in 2008, but then held it back and ultimately contained it. It was the Maoists, however, more than any other political force, who had recognised the objective possibility of fundamental social change in Nepal following the 1990 revolution. With the movement having forced the king to make major political concessions, the Maoists sensed there was an urgency (amongst women, ethnic minorities, and the poor in the countryside) to take the movement further; for this they saw no other alternative to armed struggle (Mikesell 2001: 17). Whether this

would democratise the economic sphere, in addition to the political one, was another question, but the rationale included an anti-imperialist element from the start.

Several days prior to launching the People's War in 1996, the Maoists had issued a 40-point demand containing a number of radical proposals under the labels nationalism, democracy, and livelihood. These included: the abrogation of the 1950 India-Nepal Treaty; the cessation of the work of NGOs and INGOs as agents of imperialism; the closure of Gurkha recruitment centres; an end to all racial and regional discrimination; and secularism (Thapa 2003: 189–94). In the letter accompanying the 40-point demand, the Maoists criticised the parliamentary parties for blindly adopting policies of privatisation and liberalisation, serving the interests of imperialism over the interests of Nepal. In developing the theoretical premises for the People's War, the Maoists concluded that challenging state power by uniting the antiimperialist masses (i.e. workers and poor peasants) under the leadership of the Maoists was the principal goal (UCPN 2004: 25).

They also argued that Nepal essentially suffers from two forms of oppression. The first is its semi-colonial domination by India, manifested in unequal treaties such as the 1950 India-Nepal Treaty; Indian interference in Nepal's political affairs; Indian control of the vast majority of trade and industry in Nepal, including the exploitation of its water and other resources; and the promotion of Hindu nationalism in Nepal (Yami 2006/1996: 132–133). Other imperialist powers such as Britain (through the recruitment of Gurkhas) and the US (through its domination of the World Bank and IMF) exert 'neo-colonial' domination over Nepal. The second form of oppression was the subjection of weaker nationalities by the dominant nationality within Nepal, whose language, dress, and religion enjoys state patronage. These inequalities were systematised under the Ranas with the promulgation of the legal code of 1854, the Muluki Ain. The Maoists' defence of ethnic interests in particular, along with questions of class, were recognised as 'inevitable components of the democratic revolution' (128). Questions of strategy were crucial to responding to both widespread poverty and inequality.

By the end of the war in 2006, not only had the Maoists achieved the military stalemate they wanted, but they had also succeeded in shifting the majority of public opinion in favour of a Constituent Assembly (CA) and a federal republic. If the Maoists did not lead a direct confrontation with the capitalist system as such, the People's War was effective in undermining the legal and ideological framework that was holding it together in Nepal. During the 2006 revolution, which emerged in response to the royal coup the previous year, the Maoists enjoyed mass support, the monarchy lacked authority, and the army ultimately refused to fight. The military stalemate forced the establishment to calculate that a political solution was unavoidable. But without a strategy for taking the revolutionary process beyond the parliamentary road, the Maoists' alliance with the mainstream parties became a way for the ruling elite to demobilise the movement. The consolidation of the alliance took the form of the Comprehensive Peace Accord (CPA), signed in November 2006 between the Maoists and a grouping of political parties, prepared in Delhi and facilitated by the Indian government. Although it spelled the end of the monarchy, it also marked the official end of the People's War. The Maoists agreed to dismantle their parallel infrastructure outside Kathmandu, including people's courts and people's governments, return property confiscated from landlords, and confine Maoist fighters to cantonments under UN supervision. Since the CPA and their triumph in the CA elections in 2008, in which they emerged as the largest party, the Maoists' trajectory has been one of accommodation.

Whereas once the Maoists' agenda was pulling mainstream politics to the left, and divisions in society cut along class lines, following the end of the war the central divisions cut along ethnic lines. The mass protests in the Terai organised by Madhesi parties in early 2007, although they quickly turned violent and raised tensions between Madhesis and hill migrants, were successful in pushing for guarantees for federalism. The raised level of ethnic consciousness in Nepal is irrefutably progressive to the extent that it destabilises imperialist influence. In recent years,

N

however, the imperial powers have sought to use questions of nationality and ethnicity to support fragmentation along ethnic lines and divert energy away from challenging imperialism. Whether the Maoists facilitated a shift from class struggle to identity politics can only be judged by assessing their political trajectory in practice: they suspended the People's War through a negotiated settlement facilitated by India, and were at the helm of a coalition government with mainstream parties, which have a considerable record of neglecting the aspirations of the majority. After signing the CPA, the Maoists became central to rehabilitating capitalism, and national debates became focused on the nature of identity-based federalism as the starting point for restructuring the state. The ethnic movement, predominantly aided by NGOs and donors, now has a political course that is largely independent, and perhaps even contrary to, class struggle. In an international context where indigenous rights have been incentivised by the neo-liberal state, the anti-imperialist potential of these rights-based movements remains limited.

Although the Maoists managed to reorient the country towards a radical departure from the status quo (a secular, federal republic that replaced a conservative Hindu monarchy) and for a time gain immense popularity as communists, they were predisposed towards a peace process that would leave much of the Nepali elite in place because of their conviction that a new, more equitable society was impossible at the present stage of historical development. Participation in the peace process has had profound consequences: the Maoists have accepted the main tenets of capitalist development, entrenched themselves into the mainstream of politics in Nepal, and distanced themselves from strategies involving popular struggle. These consequences have been eloquently elaborated elsewhere (see http://goo.gl/34gLqt – last accessed on 2 February 2015). Moreover, the adoption of a parliamentary perspective alone has meant the abandonment of the struggle to transform wider structures in Nepali society and, with it, the acceptance of a framework of consensual, neo-liberal policies. In the process, it has meant accepting (and even embracing) the involvement of imperialist forces in Nepal's internal political affairs.

Imperialist Powers' Response to the Maoists

Imperialist powers have responded to the Maoist challenge with both military force and a soft-power approach. While the purpose of early police operations was to crush the movement by sheer physical force, predictably, this had the effect of strengthening the Maoists' cause as family members and others sought revenge against the brutality of the police. The project of containing the Maoists needed to be extended to countering the Maoists' ideology. For much of the international community, particularly the US and Britain, this has taken the form of strengthening the role of NGOs and 'civil society' in development and conflict resolution, and in implementing the terms of the CPA. Alongside NGOs, military force was crucial in neutralising the Maoists. India, China, Britain, and the US, as well as Belgium and others, have all supported the Nepal Army with arms and other military equipment and have tolerated widespread human rights abuses committed by the army throughout the People's War. Only towards the end of the war, after King Gyanendra's seizure of power and when the army was losing popular legitimacy, was there a focus on human rights, which was made a condition for further military aid. This was a step forward for human rights defenders. One drawback of this focus by the US, British, and Indian armies, however, was that it suggested an equivalence between the Maoists and the Nepal Army and, moreover, has been used to argue for more monitoring and training by foreign militaries in general. Yet there is no evidence that engagement with foreign militaries improves human rights records (Adams 2005: 134). Military aid, particularly by India and China, has escalated in recent years. On a political level, India attempted to prevent the ascendance of the Nepali Maoists because this lent legitimacy to the Indian Maoists. Failing to prevent the Maoists' influence, they chose to pacify them, and succeeded in facilitating

their entry into the mainstream. This has had two major benefits for India: the Nepali Maoists have served as an example to the Indian Maoists and extremist groups the world over; and, secondly, India has been able to increase business investment in Nepal, further reinforcing Nepal's economic dependence.

Dependence on foreign aid has also unquestionably made Nepal more vulnerable to coercion by the imperialist powers. Donors have been able to impose conditions, 'some of which could be interpreted as direct interference in recipients' internal affairs' (Khadka 1997: 1058). These include pressures to liberalise the economy, accept trade and transit restrictions, obtain arms and military training, and calibrate foreign-policy objectives according to imperialist interests. The neo-liberal reforms that Nepal has pursued since the mid-1980s, as a condition for loans from the World Bank and IMF, have created political and social costs (1057). From the late 1980s Nepal became even more reliant on external loans, leading to greater debt, which ultimately led to 'more stringent aid conditions to correct structural imbalances caused by the debt itself' (1056). Privatisation of state-owned enterprises and deregulation have been particularly severe, resulting in cuts in subsidies and social expenditure and an increase in the price of public services. In recent years Nepal was deemed the most unequal country in South Asia (Wagle 2010: 577), where reforms have created an 'overall policy environment providing a powerful impetus to create and sustain inequality' (573). Furthermore, increasing inequality coincided with the liberalisation policies of the 1990s, 'further intensifying integration of the national economy into the regional and global markets' (574). While foreign aid contributed significantly to a number of advances in development indicators over several decades, the experience of development in Nepal remains uneven and incomplete. One of the sources of stagnation can be directly attributed to the deepening of neo-liberal reforms, inextricably linked with the ability of imperialist powers to exert their interests in Nepal.

The response to the devastating earthquake that struck Nepal in 2015, in which thousands were killed and hundreds of thousands displaced, mainly consisted of an outpouring of funds for reconstruction and rehabilitation from donors, NGOs, and members of the public all around the world. The extent of the damage caused by the earthquake, however, must be traced back to the history of underdevelopment in Nepal by both national elites and international donors (see https://goo.gl/7x0ixt – last accessed on 5 June 2015). For the imperialist powers in particular, development has always been secondary; since the 1950s efforts primarily went into preventing the spread and influence of communism and promoting free-market ideas. Much of the infrastructure, which is particularly badly built in the rural areas that were hardest hit, was unable to withstand the force of the 7.8 magnitude earthquake and aftershocks, even though it had been anticipated for decades. While hundreds of thousands of people were still waiting for food, shelter, and medicines months after the tragedy, there were reports of massive corruption of funds and supplies, and distribution favoured certain groups over others. The progress made in distributing relief was largely done by Nepalis themselves. At the national level, the government ceded control of immediate relief efforts to the army and, again, while progress was made in pulling out survivors and concentrating relief near the epicentre, concerns were raised over the lack of civilian oversight of the army, and whether the army should be commanding the long-term reconstruction process. The earthquake did seem to create the conditions for limited agreement amongst the political parties over the constitution and restructuring the state, which had been postponed for over five years. But without ensuring that reconstruction favours those who are most vulnerable, poverty and inequality in Nepal will be compounded. There is also the risk that the disaster will be used to impose a regressive constitution and shock therapy economics, and it remains to be seen to what extent anti-imperialist and other progressive forces can resist the reinforcement of imperialist powers in the country.

The Maoists, unable to mobilise, remained relatively silent following the earthquake, making it clear that a new anti-imperialist alliance has yet to

emerge. That the various anti-Maoist forces did reassert themselves in Nepal through the peace process, managing to violently (and non-violently) counter the Maoists' own use of violence during the People's War, does not negate the Maoists' case. Anti-imperialist struggle in Nepal has reached an impasse for the time being, but having overthrown two regimes and built an anti-imperialist tradition in the country, Nepal's experience remains a beacon for anti-imperialist struggles in the region and beyond.

Newton, Huey P. (1942–1989)

Anthony Mustacich
Department of Political Science,
University of Washington, Seattle, WA, USA

Definition

Huey P. Newton was the co-founder of the Black Panther Party ('Party'), and its leader, chief theoretician, and ideologue.

Huey P. Newton was the co-founder of the Black Panther Party ('Party'), and its leader, chief theoretician, and ideologue. When the Party was founded by Huey and Bobby Seale in 1966, Huey was 24 years old.

Born on 17 February 1942, in Monroe, Louisiana, Huey was the seventh and last child of Walter and Armelia Newton. In 1945, the family migrated to Oakland, California.

With some difficulty, primarily in reading and on account of conflicts with teachers, Huey finished high school, and, in 1959, enrolled in Oakland City College, a community college. There, he joined the Afro-American Association, and immersed himself in its agenda to read and study books by and about black people. He and other Association members would then take their newly found knowledge out onto the streets of Oakland and nearby Berkeley to proselytise people about the wrongs of racism in America. Ultimately deeming the Association too 'bourgeois', as unwilling to take action against the racism they denounced, he soon left it.

Disillusioned with the religious tenets embraced by his family and with the actions of the emerging black movements, Huey became reclusive, studying the works of great thinkers and philosophers, and supporting himself by street

N

hustling. Swayed by the ideas of Kierkegaard, Huey considered himself an existentialist. Later, after attending meetings of the Progressive Labor Party, he began to transform himself into a socialist, determining that the problem of racism in the US was the problem of capitalism. He became further influenced by the positions set forth by Malcolm X in his many speeches, one of which Huey heard in person at McClymonds High School in West Oakland. All of this led to his interaction with what became the West Coast branch of the Revolutionary Action Movement (RAM). He joined RAM's student affiliate, the Soul Students Advisory Council. Deemed by some to be the paramilitary wing of Malcolm X's Organization of Afro-American Unity (formed in 1964 after Malcolm's expulsion from the Nation of Islam), RAM articulated a revolutionary programme for blacks that fused Black Nationalism with Marxism-Leninism.

During this time, Huey enrolled in criminal law classes at Merritt College, primarily, as he stated in his autobiography *Revolutionary Suicide*, to 'become a better burglar'. Though the money he gained on the streets allowed him a lot of time to read and study and contemplate the social and philosophical questions that beleaguered him, this activity resulted in numerous brushes with the law. He was never convicted of any of these crimes. In 1964, however, he was charged and found guilty of assault, for stabbing a man in a knife fight. For this felony, he was sentenced to prison.

While in prison, in 1964, he endured living in an extreme isolation cell, where he felt he developed a clearer consciousness about the social construct of the US. Once released from incarceration, in 1965, he reconnected with his college comrade Bobby Seale. Huey describes their relationship before this as one in which they were not always on the same side politically. He cites the time when, during the 1962 Cuban Missile Crisis, Bobby aligned himself with the position of the NAACP to support President John F. Kennedy and the US government, which Huey denounced, arguing in favour of Cuban prime minister Fidel Castro. Both had actively tried to change the status quo in America,

however, and they joined forces in exploring the burgeoning movements and organisations forming to address black rights and black liberation. They returned to the Soul Students Advisory Committee, by then embroiled in a struggle to create an Afro-American history class at Oakland City College. Huey urged that, to be effective, students should carry guns at their proposed rally to demand institution of this class. As this idea was totally rejected, Huey and Bobby began to consider the need for a new organisation, one that involved working blacks and unemployed blacks surviving on the streets by any means necessary.

Formation of the Black Panther Party

Huey began studying the works of Frantz Fanon, who promoted engaging the lumpenproletariat of the oppressed class in the revolutionary struggle as a critical element to success, which was antithetical to traditional Marxism that defined the lumpenproletariat, the non-working class, as scum that had no place in the workers' struggle to overcome capitalism. While adhering to the fundamental tenets of Marxism-Leninism, Huey favoured the ideas of Mao Zedong, particularly relating to the necessity of armed struggle as the resolution to the contradictions that existed between the oppressed and oppressor, summarised in Mao's statement that would become a Party motto: 'political power grows out of the barrel of a gun'. Finally, Huey focused on the Leninist concept that a necessary step in preparing the oppressed people for revolution was the creation of a vanguard party. As importantly, Huey idealised and would come to embody Ernesto Che Guevara's concept that the revolutionary guerrilla was at once military commander and political theoretician.

Armed with these ideals, Huey and Bobby launched the Black Panther Party for Self-Defense, and wrote out its 10-Point *Platform and Program,* articulating the basic social and economic contradictions that had to be resolved for blacks to be free in the US. The first point stated: 'We want freedom'. Huey became the minister of defense, the highest rank in the Party,

which came to be organised around a paramilitary structure. Early on, Huey commanded that the Party was a vanguard party for black liberation, that it was guided by the ideology of Marxism-Leninism and the philosophy of dialectical materialism, that the black lumpenproletariat were the guiding force of the vanguard party, and the goal of the Party was to create the conditions for revolution by instigating war against the 'two evils' of capitalism and racism toward the liberation of black people in the US.

Focusing first on the *Platform and Program's* seventh point, calling for an 'immediate end to police brutality and murder of Black people', and for blacks to be 'armed for self-defense', Huey began to organise the members recruited into the Party in the early days to carry arms and patrol the streets of Oakland, Richmond, and other nearby cities in Northern California to educate the people in these ghetto communities as well as the police that the people had a right to defend themselves against the rampant brutalities regularly carried out by the police against blacks. Over that first year, more and more young blacks became attracted by this stance and joined the Party.

In October of 1967, Huey became involved in a direct confrontation with the Oakland police. During this clash, Huey was shot and severely wounded, one of the policemen was shot and wounded, and one was shot and killed. Huey was arrested for murder and related charges, which arrest spawned the 'Free Huey Movement', in turn triggering the explosion of the Party over the next year from a small, Oakland-based group into a nationwide organisation with chapters in 48 states. The rallying cry 'Free Huey' became a clarion call that galvanised blacks around the country into a single voice that shouted 'The revolution has come. It's time to pick up the gun'.

Even though he was incarcerated, awaiting trial, Huey began to shape the theories and practice of this growing organisation. From jail, in 1967, he issued 'Executive Mandate No. 1', calling for 'Black people to arm themselves', arguing that, 'As the aggression of the racist American Government escalates in Vietnam, the police agencies of America escalate the repression of Black people throughout the ghettos of America'.

In 1968, he issued 'Executive Mandate No. 3', commanding that 'all members of the Black Panther Party for Self-Defense … acquire the technical equipment to defend their homes and their dependents and shall do so. Any member … who fails to defend his threshold shall be expelled from the Party for Life'.

Liberation Struggles

Newton led the Party to form coalitions, and he encouraged the formation of various revolutionary organisations that represented the interests of other oppressed groups inside the United States, including: the American Indian Movement (AIM); the Brown Berets, a Chicano organisation; the Young Lords, a Puerto Rican organisation; the Young Patriots, an organisation of poor whites; the Red Guard, Chinese. All of these organisations recognised the Party as 'the vanguard party', and used it as the model for their agendas and ideology. At the same time, in 1970, just after being released from 3 years in prison on account of the success of a new-trial motion following conviction on lesser charges in connection with the killing of the Oakland policeman, Huey issued a statement that the Party not only called for an end to the then raging Vietnam War but also that: 'In the spirit of international revolutionary solidarity, the Black Panther Party hereby offers to the National Liberation Front and Provisional Revolutionary Government of South Vietnam an undetermined number of troops to assist you in your fight against American imperialism'. This position was in line with the Party's agenda to develop coalitions with socialist organisations around the world.

Pronouncing that the liberation struggle of black people in the US was tied to the struggle of others around the world fighting for freedom against the US and its allies, Huey outlined the Party's position on developing international coalitions in his letter of 29 August 1970 to the National Liberation Front of South Vietnam (as referenced above): 'There is not one fascist or reactionary government in the world today that could stand without the support of United States

N

imperialism. Therefore, our problem is international, and [we recognise] the necessity for international alliances to deal with this problem'. Soon, the Party had developed alliances not only with the Democratic Republic of Vietnam ('North' Vietnam) and the Provisional Revolutionary Government of the Republic of South Vietnam but also, among others, with: the Democratic People's Republic of Korea; the Zimbabwe African National Union (ZANU); the Mozambique Liberation Front (FRELIMO); the Pan Africanist Congress of Azania (PAC); the Irish Republican Army (IRA) and Sinn Féin; the Tupamaros of Uruguay; the PAIGC (African Party for the Independence of Guinea and Cape Verde); the Popular Front for the Liberation of Palestine and the Palestine Liberation Organisation. In addition, the Party developed close ties with the Republic of Cuba and the People's Republic of China, to which it sent several official delegations over the next years, one of which was led by Huey himself (1971).

By this time, Huey had been identified by the US government, particularly the Federal Bureau of Investigation (FBI), as an enemy of the state, and the Party had been deemed by FBI Director J. Edgar Hoover as 'the greatest threat to the internal security of the United States'. Under its COINTELPRO (Counterintelligence Program) operations, the FBI orchestrated assaults on Party offices and murders of Party members, and used other tactics to 'discredit, disrupt or destroy' the Party, on account of which Huey entitled his second book *To Die for the People.*

In furtherance of the necessity to build revolutionary coalitions, Huey led the Party to form partnerships with other marginalised groups seeking liberation within the US, launched by his seminal statement in 1970 articulating the Party's position on Women's Liberation and Gay Liberation: '[T]he women's liberation front and gay liberation front are our friends . . . We should try to form a working coalition with the gay liberation and women's liberation groups'. No other black or progressive or radical organisation of the time had taken this revolutionary position. As a result, the Party engaged in joint activities not only with radical women's groups and gay

organisations but also developed coalitions with labour unions, particularly the United Farm Workers; with older people struggling for human rights, launching the Gray Panthers; with the disabled independence movement, coalescing with the Center for Independent Living; and with environmental activists, creating a programme of developing 'gardens in the ghetto' with the Trust for Public Land.

Survival Programmes

At the same time, Huey promoted strengthening of what he named the Party's Survival Programs, stating:

> We recognized that in order to bring the people to the level of consciousness where they would seize the time, it would be necessary to serve their interests in survival by developing programs which would help them to meet their daily needs
>
> . . . All these programs satisfy the deep needs of the community but they are not solutions to our problems. That is why we call them survival programs, meaning survival pending revolution. (Newton 2002: 229–230)

Starting with the Free Breakfast for Children Program, the Party established a number of Survival Programs throughout the US, including: Free Clinics and Ambulance Programs; Free Food and Grocery Programs; Free Clothing and Shoe Programs; Free Legal Aid and Bussing to Prison Programs; Free Plumbing and Maintenance Programs; and Free Pest Control Programs. In this vein, the Party also launched the Oakland Community School in East Oakland and, in 1973, the People's Cooperative Housing Program. The latter was organised through the Oakland Community Housing non-profit corporation, which developed a $12 million co-operative housing complex of 300 affordable homes in West Oakland, with rents not exceeding 25% of monthly income.

In 1972, Huey reorganised the entire Party, closing down all chapters and ordering all members to move to Oakland, the base of the Party and what he deemed could become the base of revolution in the US. With all forces consolidated, Huey ordered Bobby Seale and Elaine Brown to

run for public office, launching the Party's electoral campaigns.

All theories and activities of the Party were published in its newspaper, instituted by Huey in the early days. Ultimately entitled *The Black Panther Intercommunal News Service*, the newspaper was published by the Party and distributed around the world for 13 years.

Conclusion

Huey Newton was not only the leader of the Black Panther Party for all the years of its existence, from 1966 to 1981, but he was the Party's chief theoretician. In that capacity, he set forth his theory of Intercommunalism, fully articulated in a speech republished in *To Die for the People*. Huey postulated that, as industrialisation had heightened the contradictions of capitalism around which Marx and Lenin et al. had advanced the ideal of socialist revolution, technological advances had so shifted the construct of the world's societies that the nation state had disappeared and the question of socialist revolution had been rendered irrelevant.

Technology, Huey argued, had allowed US capitalists to consolidate their interests around the world, which had so transformed the planet by the end of the twentieth century that the US had been able to reduce the rest of the world to a collection of communities over which it had economic, social, and political dominion. He pointed out, however, that with the success of global capitalism, as Lenin had predicted, conditions were ripe for a global revolution. Technological production and 'outsourcing' of labour by US capitalists had rendered or would soon render the majority of US workers as unemployables replaced by workers of the world. This Huey identified as a state of Reactionary Intercommunalism, whereby local and national economies had disappeared in a world where, for example, Coca-Cola was the largest private employer on the continent of Africa; a world in which European countries had to surrender their national identities, as reflected in the merging of Franc, Deutsche Mark and other currencies into the Euro in order to stay afloat in a global economy defined by the US dollar; a world in which only the US and its designated satellites (e.g., Israel) held nuclear weapons.

With the disappearance of national sovereignty and independent economies came the prospect of the unity of the world's communities under the banner of Revolutionary Intercommunalism, whereby the people of the former nation states, which had withered away, could, without going through the Marxist stage of socialism, organise global revolution, overthrow the US empire and create the communist world ideal.

In August 1989, Huey was murdered in Oakland, California. He was survived by his siblings and second wife, Fredrika Slaughter Newton. He had no children. More than 10,000 people attended his funeral.

As founder and leader of the Party and author of numerous treatises and articles, poems (published in *Insights and Poems* with Ericka Huggins), and several books (including those noted above as well as In *Search of Common Ground* with Erik Erikson), and his PhD dissertation 'War Against the Panthers, A Study of Repression in America', Huey P. Newton stands in the pantheon of revolutionary leaders and thinkers.

Nicaragua and Contemporary American Imperialism

Definition

Nicaragua is perhaps among the clearest cases of rampant US imperialism producing sustained anti-imperialist movements, in a pattern that has repeated itself since the US mercenary William Walker invaded that country and declared himself president in 1856. The United States' financial and industrial interests, backed by US military forces, have sought to maintain control over key Nicaraguan resources, infrastructure, and a potential interoceanic canal route. US corporations and the US government maintained an aggressive posture toward Nicaragua throughout the twentieth century and have continued to utilize diverse imperialist strategies to coerce Nicaragua in the first two decades of the twenty-first century.

Introduction

Beginning with the Spanish-American War of 1898, the United States increasingly asserted itself as the sole imperial power over the Caribbean Basin, claiming Puerto Rico as war bounty and exerting economic dominance over Cuba, Hispaniola, and all of Central America – going so far as to create the nation of Panama in order to build an interoceanic canal (Bermann 1986). Nicaragua was highly important in this neocolonial endeavor, due to its arable land, fresh water, and mining resources, but above all, its geography as a likely canal route.

Methods used by the imperialist system in Nicaragua have included direct counterinsurgent war (1927–1933), support for despotic pro-US regimes (1934–1979), proxy mercenary warfare (1980–1988), financing of opposition groups (1909, 1980–1990, and 2007–present), the use of the Organization of American States to pressure Nicaragua (1980–1989 and 2016–present), military bases and exercises with the Honduran government near the Nicaraguan border (2010–present), declarations of Nicaragua as an extraordinary threat to US national security (1985 and 2018), financing of opposition media (2007–present), training of "civic groups" in cyber-politics (2013–present), planning and execution of a "color revolution" or "soft coup" attempt (2018), sanctions to prevent Nicaragua's access to credit (2018), personal economic sanctions against Nicaraguan officials (2018), and the use of US rating corporations to downgrade perceptions of Nicaraguan financial stability (2018).

This continuous trajectory of intervention shows a transition from more overt, military, or "push" forms of politics to more subtle tactics involving media-based "pull" politics premised on capitalizing on the rules of globalized economies, liberal democracies, and political legitimacy to discredit and disarm anti-imperialist forces in Nicaragua, in order to restore a docile neoliberal regime. Throughout this history, US imperialism has found strange bedfellows. Historian Michel Gobat has argued that William Walker's support came not only from the Southern US slaveholding interests that donated to his campaigns to build

slave states in Central America but also from more liberal, Northern US industrial and military figures, and, indeed, from the liberal party of Nicaragua. Likewise, during the two decades of US military occupation of Nicaragua in the early twentieth century, most of the Nicaraguan elite and its press maintained a reverential glow in editorials and reports about US forces. This was true of both the opposing Liberal and Conservative parties, although US policy after ousting Liberal president Zelaya in 1909 maintained a strong pro-Conservative focus until 1928. Only when a patriot general, Augusto César Sandino, refused to recognize US legitimacy of any kind in Nicaragua did there begin to emerge a consistently anti-imperialist political tendency. However, there has always been a sizable part of the Nicaraguan political class that favors and appreciates US intervention, reflecting a sense that the legitimacy of the State in Nicaragua begins with US approval.

In 2018, US President Donald Trump declared Nicaragua to be an "extraordinary threat" to national security, and US National Security Advisor John Bolton described Nicaragua, Cuba, and Venezuela as a "Troika of Tyranny" that would soon fall with support from the Trump administration, and at the same time he has lauded the election of "likeminded leaders" Jair Bolsonaro in Brazil and Ivan Duque in Colombia. The Nicaragua Investment Conditionality Act (NICA Act), the brain-child of Cuban-American Republican Congresswoman Ileana Ros-Lehtinen, which prevents the Nicaraguan government from accessing international loans, limiting its capacity to develop its healthcare, education, transport, and commerce capabilities, was passed by Congress in November 2018.

Historical Background

A century-long feud between the Liberal and Conservative parties marked Nicaraguan history even before US imperialism became a factor in national politics. The traditional landed oligarchy and the Catholic Church imposed their will through the Conservative party, which was based in Granada.

The Liberal party, based in Leon, was made up of an urban merchant and professional class, with important spaces of participation by workers and peasants. However, the Liberal party was thoroughly discredited through its shameful participation in the United States' first regime change operation in Nicaragua, carried out through filibuster William Walker in 1856–1857. As a result, the Conservatives controlled the Nicaraguan government for three and a half decades, until 1893, when Liberal strongman José Santos Zelaya assumed the presidency after the "July Revolution." The US government, led at the time by Theodore Roosevelt, was embarking on its "big stick" policy, which would soon be complemented by what he coined "dollar diplomacy," through which US banks would purchase the sovereign debts of Caribbean and Central American countries, exercising full control over formerly national banks, railroads, and shipping channels and forcing Caribbean and Central American countries to take on debts (Munro 1964).

Zelaya and the Regime Change Operation

The Zelaya government created a new constitution that replaced Nicaragua's electoral congress with obligatory and direct voting and a secret ballot, as well as separating the Church from the State (Esgueva Gomez 2005). Public education and transportation infrastructure increased, as shipping routes and railroads were built, largely with US capital. However, labor exploitation and labor strife increased during Zelaya's presidency, as he focused on modernization, particularly with regard to commerce and agrobusiness development, leading to countless land grabs and the widespread displacement of indigenous peoples from what would become coffee plantations and shipping routes. Initially enthusiastic with the expansion of commodity flows, US support for Zelaya waned after he appeared to take Nicaraguan sovereignty too seriously. US policy consistently demanded that Central American constitutions prohibit re-elections, yet Zelaya was re-elected twice, in 1902 and 1906.

After Zelaya intervened in Honduras and El Salvador in 1907, with interest in creating a Liberal-dominated federation of Central American states, the Taft administration assumed the US presidency in 1909, and the United States changed positions dramatically on Zelaya, now considering him a danger to US interests and "regional stability." Perhaps most significantly, Zelaya was reported to be initiating negotiations with the German and Japanese governments to build an interoceanic canal, challenging the monopoly of the US-controlled Panama Canal, under construction at the time (Gobat 2005).

Given the geographic importance of Nicaragua, US imperialism made a priority of Conservative restoration and the return to a subservient national government. After receiving covert support from the United States, politician Juan José Estrada proclaimed himself interim president of Nicaragua on October 10, 1909. Estrada represented one of several factions of Liberals unhappy with Zelaya, yet he was nonetheless utilized by the United States as a means by which to maneuver the unpopular Conservative party back into power. Within months, Estrada's military force on the ground was made up of Conservative generals, such as Emiliano Chamorro, using hired troops and weapons supplied by US companies through intermediaries such as Adolfo Díaz. When a counteroffensive by Zelaya led to the arrest and execution of two US nationals, soldiers of fortune hired by the Estrada insurgency, the US Secretary of State, Philander Knox, wrote the notorious "Knox Note" to the Nicaraguan Chargé d'Affaires in Washington on December 1, 1909, cutting off diplomatic relations with the Nicaraguan government. In late December, Zelaya resigned and left for Mexico via ship from the northwestern port of Corinto, surrounded by US warships (Kerevel 2006).

The Conservative Restoration

During his 10 months in office, Zelaya's successor, Liberal José Madriz Rodríguez, worked tirelessly to negotiate peace with the Estrada rebellion and to restore relations with the United States, but Knox refused to accept Madriz's government. US marines were deployed in Bluefields in order to prevent the final defeat of the failing rebellion, and a United Fruit Company subsidiary loaned Estrada money for arms and soldiers. Eventually, the US navy provided Conservative general Emiliano Chamorro with a large shipment of weapons to support the rebellion, at the same time as it blocked the arrival of arms purchased by the Madriz government (Kerevel 2006). Despite anti-imperialist protests across Nicaragua and in San Salvador, capital of El Salvador, the US presence gradually changed the balance of forces, and the Madriz government fell on August 19, 1910. One week later, Juan José Estrada assumed the presidency.

In the chaotic aftermath of war, as pro-Madriz, anti-imperialist armed groups still roamed the streets of Managua, the United States lost no time in restructuring the Nicaraguan economy, forcing Nicaragua in the "Dawson Agreements" to take out a $20 million US loan, to be paid for by Nicaraguan custom receipts. Liberals were rounded up, and the Conservation restoration was consolidated, as even the leader of the rebellion, Juan José Estrada, was ousted by the Conservative-dominated Constitutional Assembly in 1911 in favor of Adolfo Díaz.

In 1912, Conservative president Adolfo Diaz, formally a mining executive for a US company, transferred control over the Nicaraguan National Bank to the US Brown Brothers Commercial Bank. In response, the National Assembly, with Luis Mena Vado's leadership as Minister of War, passed a resolution censoring Díaz, who promptly fired General Mena and called on the United States for support. Mena and Liberal General Benjamín Zeledón rebelled against Díaz, who in turn appealed to the United States to intervene. Mena's forces, headquartered in Granada, succumbed under the combined thrust of US marines and recruits of the Conservative government. Taken alive, Mena was exiled. Zeledón, based in Masaya, stood up to US marines and was killed in battle. Zeledón's heroic statements and death in battle are considered one of the first major explicitly anti-imperialist endeavors in

Nicaragua. In response to Colonel Joseph Pendleton's letter asking him to surrender, Zeledón wrote, in part:

> I confess to you that I have read your note that I allude to and I have resisted believing that it could be signed by an educated soldier [...] and serving under the banner of the great (North) American Nation that prides itself on being the teacher of the Democratic Republics of the American Continent; and my sense of disbelief grows sharply when I consider that it is impossible for the Government of the United States of America and, above all, the Senate of the homeland of Washington and Lincoln, to have authorized their servants to come and intervene with armed force in the internal affairs that we Nicaraguans discuss in this land that is ours, and which was bequeathed to us freely, sovereignly and independently by our parents.
>
> [...] I do not even remotely see the reason you or your superiors could have for demanding the surrender of my positions or the disarmament of my army; consequently, I dare to think that you will withdraw his threats in view of the justice that accompanies me. But if, unfortunately for the honor of the United States of America, you and your bosses disregard the well-founded reasons that I invoke and carry out your pretensions of attack [...] I will do with mine the resistance that the case demands and that the dignity of Nicaragua demands, which we represent, and then, let it fall upon you, your bosses and the very strong Nation to which you belong, the tremendous responsibilities that History will attribute to you, and the eternal burden of having used your weapons against the weak who have been struggling to conquer the sacred rights of the Homeland. (in Selser 1984)

With the defeat of the nationalist rebellion, the Conservative government signed the onerous Bryan-Chamorro Treaty in Washington, DC, in 1914. The treaty, named for William Jennings Bryan, US Secretary of State and Nicaraguan General Emiliano Chamorro, gave the United States exclusive rights to build any canal in Nicaragua in perpetuity, as well as a renewable 99-year option to create a naval base in the Gulf of Fonseca and a renewable 99-year lease on the Big and Little Corn Islands in the Caribbean, in exchange for $3 million used by Nicaragua to pay debts to US creditors. US President Woodrow Wilson insisted on a clause that gave the United States a priori rights to military intervention, but the US Senate balked and the clause was removed before the treaty was ratified.

Sandino's Anti-imperialism

During the US military occupation of Nicaragua from 1912 to 1926, nonmilitary elements of imperialism developed. For example, the Rockefeller Center, funded through the Standard Oil monopoly, began sanitation drives that accompanied US military activities with rural census taking, hiring of local volunteers, and public meetings on hookworm control and prevention (Peña Torres and Palmer 2008). This is one of the first examples of a nongovernmental organization riding on the coattails of the US military. Meanwhile, the United Fruit Company (UFC) was the largest landowner between Colombia and Mexico.

In the countries that United Fruit dominated – referred to as "banana republics" – it controlled the ports, ran the postal service, and even created the first network of radio stations across Central America, effectively developing the first mass media (and media monopoly) that reached millions of people. The company vigorously resisted all worker efforts to organize unions, going as far as tearing down all houses and schools as it abandoned whole areas where union organizing was taking place. Although it paid no taxes, United Fruit gave governments money and weapons to repress the many rebellions taking place among the hundreds of thousands of highly exploited banana workers in the region, leading, for example, to the Banana Massacre of several hundred striking workers in Colombia. Politicians needed support from UFC's radio network, and so were scared of creating any tension with the conglomerate.

The geopolitical hegemony of the United Fruit Company was reinforced by the US Marines, which were deployed in Central America and the Caribbean to defend the interests of the corporation dozens of times between 1901 and 1934. The "Banana Wars", as these were called, produced such a trove of experiences in capitalist combat against impoverished rebels that the Marines systematized their learning in the *Small Wars Manual*, published in 1940.

In Nicaragua, banana interests were slowed by the need for a railroad system (Schoonover and Langley 1995). The US commercial bank Brown

Brothers financed the railway system and came to control the Nicaraguan National Bank. Bundy Cole, a manager of one of Brown Brother's subsidiaries in Nicaragua, famously said in the 1920s, "I do not think any Indian or any negro is capable of self-government." After a Liberal uprising against a US-supported Conservative government led to civil war in 1926, the United States intervened to prevent a Liberal victory, forcing all parties to agree to a power-sharing government that would preserve US interests.

Liberal general Augusto César Sandino refused the terms of the US plan and with 29 men embarked on a guerilla war against the US occupation of Nicaragua. Sandino's first armed action was the occupation of the San Andrés Mine in Nueva Segovia, where he drove off the US managers and turned over the mine to the workers to run collectively. Sandino was declared an outlaw, and US marines were sent to Ocotal to initiate a counterinsurgency campaign. Internationally, Sandino became a symbol of resistance to the US empire, and grassroots anti-imperialist leagues and Communist parties across the Americas debated whether his guerrilla tactics were acceptable or represented a threat to the dominant parliamentary political methods promoted internationally by the Soviet Union.

The first use of airplanes to support US ground troops occurred in Nicaragua, as US Marines leveled the countryside and forcibly displaced peasants from small towns of the Segovia region in repeated attempts to eliminate Sandino's forces (Macaulay 1985). The use of mercenary troops to hunt Sandino eventually became a concerted US effort to build a National Guard in Nicaragua, which US planners assumed would strengthen democratic institutions. Meanwhile, Sandino's writings took on class dimensions, as he insisted that the difficulty of prolonged anti-imperialist struggle would necessitate the unique qualities of workers and peasants.

By 1933, the US government withdrew troops from Nicaragua and announced the Good Neighbor policy toward Latin America. Sandino signed peace agreements with Nicaragua's new Liberal president, Juan Baustista Sacasa, and created an agricultural cooperative with his troops in Wiwilí. However, in 1934, as Sandino and his father left a dinner party with President Sacasa, the leader of Nicaragua's recently formed National Guard, Anastasio Somoza Garcia, ordered Sandino's detention and assasination, and disappeared his body. The following day, the National Guard carried out a massacre of Sandino's disarmed troops at the Wiwilí cooperative. Within 2 years, Somoza Garcia had staged a coup d'etat and installed himself as Nicaragua's strongman, with US support. Franklin Delano Roosevelt famously referred to Somoza by saying "he's a son of a bitch, but he's our son of a bitch" (Black 1988). The Somoza family ruled as a US-supported dictatorship from 1934 to 1979.

The Sandinista Popular Revolution and the Contra War

During the early 1960s, inspired by the success of the Cuban Revolution, radical Nicaraguans led by student activist Carlos Fonseca created the Sandinista National Liberation Front. Known as FSLN for its Spanish initials, this Sandinista Front created an "historic" program to break free from US tutelage and the agro-export model. After nearly 20 years of sustained clandestine activities, the FSLN managed to lead a massive people's insurrection that ousted Anastasio Somoza Debayle, the first Somoza's son, in 1979, after his regime inflicted tens of thousands of casualties on the civilian population in a US-supported counter insurgency.

The Sandinista revolutionary movement scored a surprise victory as a generalized disgust with the Somoza dictatorship transformed into an insurrection in 1978 and 1979, and Somoza met the growing uprising with air bombings of poor neighborhoods of Managua, Estelí, and León. When the dictator left Nicaragua on a flight to Miami, he took along with him the cremated remains of his father and brother. The new governing junta, which seized power in 1979, immediately began to enact social change through initiatives such as Fernando Cardenal's world-renowned literacy crusade, which reduced illiteracy over 40% to 8%. The agrarian reform process

eventually reached three million hectares of the country's five million hectares of farmland (Núñez-Soto 2015). Additionally, Nicaragua's contemporary healthcare infrastructure, including the system of public hospitals and clinics, essentially dates back to the revolutionary period of the 1980s. The Sandinista Revolution (1979–1990) was a period of profound social transformation in Nicaragua, including agrarian reform, literacy and cultural campaigns, nationalizations of key industries, and community development and health programs.

Many of the acheivements of the Revolution, however, were eclipsed by the scale and horrors of the war that began in 1980. The counterrevolutionaries, or Contras, were armies recruited, trained, armed, and financed by US intelligence, along with involvement by the governments of Argentina and Israel. US President Ronald Reagan (1980–1988) was the major backer of the Contras, whom he referred to as "freedom fighters" struggling against the "Communist beachhead in Central America."

As Brian Willson (2019) documented:

> In March 1981, during President Ronald Reagan's second month in office, he issued a Presidential Finding authorizing the CIA to undertake covert activities directed against Nicaragua and its new Sandinista revolutionary government, the Frente Sandinista Liberacion Nacional (FSLN). An initial $19 million was allocated for the purpose of destroying the Sandinistas, beginning with a 500-man "action team" to engage in paramilitary and political operations. By summer 1981, Reagan's State Department aide Robert McFarland prepared a report, "Taking the War to Nicaragua"2, and by December 1981, Nicaraguan exile groups, or Contras, began combat training at a site west of Miami, and subsequently at training camps in California, New Jersey, and in Florida's Panhandle. Also in December 1981, the Red Christmas CIA Operation occurred in Miskito territory in Northeastern Nicaragua along the Honduran border where Indigenous communities were forcefully relocated to create a beachhead inside Nicaraguan territory before the Sandinista government forces could establish control of the area. The hope was to create a breakaway state that could ask for US military support. In January 1982, Reagan requested and received, $5.1 million in US Agency for International Development (AID) funds to provoke dissent among Somocistas, and among Catholic Church hierarchy, against the new Nicaraguan government.

These armies' purpose was to reverse the triumph of the Sandinista Revolution, and their strategy was to terrorize the civilian population of Nicaragua. Over 10,000 separate acts of terrorism were committed by the Contras during the 10 years of war that coincided with the Sandinista Revolution, often coinciding with the practices recommended in the CIA-produced 1983 "murder manual" for Contras, *Psychological Operations in Guerrilla Warfare*. During the Reagan administration, the US Government illegally sold weapons to Iran and smuggled cocaine into the United States, fueling the crack epidemic in African-American communities, in order to finance the Contras (Webb 1998). The International Court of Justice found that the United States had violated international law by creating the Contra war against Nicaragua. In November 1983, the US Congress created the "National Endowment for Democracy" (NED), to openly perform some of the tasks that the CIA had secretly been carrying out for decades. NED immediately began funding printing supplies and salaries for the right-wing Chamorro-owned daily newspaper *La Prensa* to promote the cause and image of the Contras as pro-democracy forces. After the Nicaraguan government forced *La Prensa* to close for 1 year due to its connection with the armed Contra armies, the newspaper reinitiated with 250,000 of NED funds. The scale of the Contra operation was staggering, even by US standards. In March 1983, the CIA established a 50 million intelligence network in Central America, under the direction of figures such as Elliot Abrams and John Negroponte. Actions included infiltrating agents into Nicaragua and carrying out missions with low-altitude spy planes. Between 1983 and 1984, Contra armies sabotaged Nicaragua's airport in Managua, the Corinto port facilities, and an oil pipeline in the western coastal town of Puerto Sandino, and CIA assets mined Nicaragua's harbors. NED and CIA funds went into the manipulation of public opinion, as fotogenic events were staged in order to create false news stories and narratives that could erode public support for the Sandinista Revolution. The CIA created clandestine radio stations in Honduras, Costa Rica and on the Caribbean Coast of Nicaragua. A 16-page

N

comic book written by the CIA, *Freedom Fighter's Manual*, was air-dropped across northern Nicaragua. The manual called for physically breaking windows and light bulbs, spreading rumors, making false reports of crimes and fires, stopping up toilets, putting dirt in gas tanks, and firebombing police stations, among other tactics. In 1985, Col. Oliver North of the US National Security Council released the "US Political/Military Strategy for Nicaragua," which directed the Contras to repeatedly "disrupt the economic infrastructure of Nicaragua with priority given to the electrical grid, water, transportation and communication systems," as a "show of force action with maximum psychological benefit."

The Neoliberal Period

In the context of end of the Cold War, the Nicaraguan government agreed in negotiations with the United States to hold early elections in 1990. In an election in which the United States spent more per Nicaraguan voter than Bush and Dukakis had spent combined 2 years earlier, the US-backed Unidad Nacional Opositora (National Unity Opposition – UNO) presidential candidate, Violeta Chamorro, won the election handily against the FSLN's candidate, Daniel Ortega. Noam Chomsky commented that the Nicaraguan people were voting "with a gun to their heads," as the UNO promised an end to the war if it won the elections. The 1990 turnover of power from the FSLN to the UNO is the only known case in the world of a government that took power through armed struggle peacefully turning over that power through electoral means. After the electoral defeat of the Sandinistas in 1990, former landowners returned to Nicaragua from the United States. They began to take back their former estates through legal and less than legal maneuvering, driving many rural people off the land they had been cultivating. This "agrarian counter-reform," as it became known, left many hundreds of people landless in its wake during the 1990s and early 2000s.

During the three presidential periods from 1990 to 2006, the Nicaraguan government privatized healthcare and introduced educational "autonomy," which made each public school responsible for paying teachers' and administrators' salaries, essentially passing the cost of education to parents. By 1996, 34% of the population was considered illiterate, while half a million children and teenagers were outside of the school system, in a country with a total population of 6 million people (Hanemann 2006; UNDP 1998). Nicaragua became the second poorest country of the western hemisphere, after Haiti, as international aid and remittances from Nicaraguan citizens living abroad became the pillars of the economy (Bonino 2016).

The 2006 Central American Free Trade Agreement, signed by Central American countries as well as the United States, opened the door to "free trade zones" or enclaves for foreign-owned textile factories to take advantage of Nicaragua's cheap labor while avoiding paying taxes. However, the "lost decade" of the 1990s and early 2000s was not simply an uncontested, top-down process; on the contrary, student movements shut down Managua for several months protesting against budget cuts, and rural workers virtually occupied state farms on the cusp of being privatized, creating cooperatives and a bottom-up process of land reform (Wilson 2013).

The Second Phase of the Sandinista Revolution

After coming in second in three consecutive presidential elections, Daniel Ortega beat all other candidates with 38 percent of the vote in 2006 and returned to the presidency in 2007 after 17 years. The incoming Sandinista-led coalition created a National Unity and Reconciliation (NUR) government, with slogans such as "Christian values, socialist ethics, and actions of solidarity." Within its development plans, the "recuperation of rights" plays a major role, guiding diverse policies, including the renewed literacy campaigns and the reconstruction of public education and public healthcare, among other key areas (PNDH 2012).

Social infrastructure, including roads, parks, farmers' markets, child care centers, and

maternity homes in each municipality of the country, has been the hallmark of the NUR government. One of the first laws related to the food sector to be enacted by the returning Sandinista government was Law 693, the law of Food and Nutritional Sovereignty and Security of 2009. This law, the goal of several years of social movement articulation and lobbying, declared food sovereignty and security to be the responsibility of the State, to be carried out in collaboration with territorial and social actors (Araujo and Godek 2014).

Aside from Law 693, there are several recent laws that contribute to the argument that food sovereignty is a legitimate analytical lens for understanding Nicaraguan food and agricultural social processes. Law 717 mandates the creation of a fund for purchasing land for distribution to women peasants. Law 765, the Law to Foment Agroecological and Organic Production, establishes norms for agroecological production and the capacity for municipalities to create local ordinances to foment agroecology. New state entities, such as the Ministry of the Family, Community, Cooperative, and Associative Economy, have become spaces for promoting small-scale farmers and food producers through fairs, farmers' markets, micro-loans, and training (Núñez Soto 2015).

These policies have contributed to Nicaragua having among the highest rates of economic growth in Latin America between 2007 and 2018. By 2018, Nicaragua was food self-sufficient in beans, corn, eggs, milk, fruits, onions, peppers, tomatoes, and beef. Nicaragua has the highest human development index score in Latin America and has been considered the country with the greatest level of gender equality in the region. In 2007, Nicaragua became part of the Bolivarian Alliance for the Peoples of Our America (ALBA), a group of nations seeking a regional integration based on principles of complementarity and respect for socioeconomic models that seek alternatives to capitalist development. For nearly a decade, Venezuela contributed petroleum and loans to Nicaragua, providing a crucial initial investment for the economy of small-scale producers, while Cuban doctors provided diverse health services.

There is no doubt that the US Government has long been hostile to the ALBA alliance, with particularly violent postures toward Cuba and Venezuela. Until 2016, the official US stance on Nicaragua was not as aggressive, and the Nicaraguan government avoided the kinds of public clashes with US imperialism that Venezuela's Hugo Chávez, Ecuador's Rafael Correa, and Bolivia's Evo Morales took on as part of their political strategy. On the part of the Nicaraguan Sandinista government, it is clear that avoiding conflict with the United States is a basic need for governing the country, as evidenced by nearly 200 years of history. Additionally, the unhealed wounds of the Contra war require a permanent emphasis on peace and reconciliation on its part, which would be incompatible with heightened anti-US discourse. Wikileaks documents reveal the hostility of the US State Department's stance on the Nicaraguan government, and cables name goals including "the acheivement in the immediate future of a government akin to the interest of the US government," to "alienate the ALBA movement from Nicaragua," and the "creation of conditions for regime change." A 2013 memorandum of the National Democratic Institute, one of the four core entities of the NED, identified four elements of a destabilization strategy: (1) training young political leaders; (2) a media offensive; (3) the unification of the opposition; and (4) the strengthening of civil society organizations. However, it is not immediately clear why the United States did not act more decisively against the FSLN government until 2018, although it is likely that the continental geopolitical situation had deteriorated for leftist governments since the 2013 death of Hugo Chávez and, with that decline, the opportunity finally opened up for US imperialism.

The 2018 Coup Attempt Against Nicaragua

The Sandinista-led coalition government won elections by increasing margins in 2009, 2011, 2012, 2016, and 2017. Despite polling at around 80% approval, Daniel Ortega had his share of enemies. The fiercest of all of these were the

former Sandinistas, who after leaving the party, had shifted to the political right. Indeed, the president of the Movement for the Renovation of Sandinismo (MRS) in 2017 went so far as to meet with far-right Cuban-American Congresswoman Ileana Ros-Lehtinen and join her call for US sanctions against Nicaragua. In Miami and Washington, the Nicaragua Investment Conditionality Act (NICA Act) was written, which forces Washington to veto all international loans to Nicaragua until the United States approves of Nicaraguan election procedures.

Since the return of Daniel Ortega to the presidency in 2007, the NED has funded opposition nongovernmental organizations. Through the International Republican Institute, International Democratic Institute, and other US organizations, NED funded the training of over 2000 young people in social media skills for "democracy promotion" in the years leading up to 2018. Most of these trainings were carried out through MRS-affiliated nongovernmental organizations. As a NED-funded publication, Global Americans (2018) boasts on its website:

> In 2017, for example, the NED provided an anonymous organization with $86,000 to foster "a new generation of democratic youth leaders." According to the project description, the funds were intended,
>
> "To promote democratic values and participation among youth in Nicaragua. Forums in schools and universities will educate students about democratic values and human rights. A network of youth leaders will foster a more active role of youth in defending democracy. Additionally, a magazine and social media will facilitate discussion on youth issues and democratic activism."
>
> In the same year, the NED funded a project titled, "Strengthening the Strategic Capacity of Civil Society to Defend Democracy." Again, the NED's website does not report the name of the organization that received the grant. However, per the project description, the funds were used to,
>
> "To strengthen the capacity of Nicaraguan pro-democracy activists to forge a common civil society strategy to defend democracy. Periodic publications will cover the state of democracy and the situation of human rights in Nicaragua. A group of civil society organizations and social movements will convene a series of forums to discuss their content and identify advocacy opportunities."

NED has placed particular emphasis on funding fiercely anti-government media, human rights,

youth, environmental, and feminist organizations associated with the MRS political party. Among the main recipients of NED funds is the Institute for Economic and Public Policy Research, whose director, Felix Maradiaga, has been groomed and maintained by fellowships and grants from the US foreign policy establishment for over a decade. Another major recipient is Hagamos Democracy, which in turn funds other anti-Sandinista organizations. These organizations have been seen as largely ineffective in transforming their funding into any sort of broad-based opposition to the Sandinista government, until April 2018.

As Tom Ricker (2018) reported early in the crisis that in Nicaragua, rather than fund discredited political parties, the US government was more interested in creating a network of NGOs, particularly those that work with media, with the capacity to repeat each other loud enough and often enough to create an alternative version of events in social media:

> The problem with the words "developing a joint civil society strategy," and similar formulations of this idea, is what they obscure, which is the control of media representation through a well-coordinated strategy that excludes facts that might disrupt the story of a corrupt dictatorship with no popular support. The result of this consistent building and funding of opposition resources has been to create an echo chamber that is amplified by commentators in the international media – most of whom have no presence in Nicaragua and rely on these secondary sources. During and immediately after the INSS protests, the NED-funded opposition lost no time in using overblown rhetoric to frame a complex situation in simplistic terms, focusing solely on government misdeeds.

Carlos Fernando Chamorro, former editor of the 1980s era Sandinista newspaper and son of neo-liberal president Violeta Chamorro, created a media organization that served as the conduit for the National Endowment for Democracy to fund several anti-Sandinista media outlets in Nicaragua. He also runs one of them, called *Confidencial*, and has a television program. His cousin, Joaquin Cuadra Chamorro, is a publisher of *La Prensa*, a fiercely anti-Sandinista daily, and the same family controls *El Nuevo Diario*, the only other major daily newspaper in Nicaragua. These news outlets had regularly accused Daniel

Ortega of being an "unconstitutional president," a "dictator," and a "murderer" for nearly a decade.

The broader context for the soft coup attempt in Nicaragua was the deteriorating economic situation in Venezuela and the reemergence of a strong far-right political force in Latin America, particularly involving Colombia, Honduras, Argentina, and Brazil. In March 2018, Venezuela stopped purchasing Nicaraguan beef and cattle exports, negatively affecting the landholding oligarchy of Nicaragua (Suárez 2018).

The more specific context was a fiscal crisis in the social security system. In April, talks broke down between the business sector, labor unions, and the government over a new law to reform the social security system, or INSS. The number of insured people had mushroomed over the last decade, as the government encouraged individuals working in free-trade zones and informal popular markets to sign up for pension and healthcare. The government was running an $80 million annual loss between contributions and services delivered to the population. In 2017, the International Monetary Fund (IMF) had published recommendations that Nicaragua overhaul its social security system. The IMF proposal was to raise the retirement age and nearly triple the number of weeks, or paychecks, required for people to qualify for pension benefits. The business lobby, known as the Superior Council of Private Companies or COSEP, aggressively stuck by the IMF proposal, while labor unions demanded that the reform target businesses more than workers. When COSEP walked away from negotiations in April, the government quickly made an agreement with labor unions and published the reform law in the official Gaceta in April 17.

The business lobby called for protests the same day, and the two major newspapers dedicated front-page stories to the "antibusiness" social security reform. More importantly in the Nicaraguan context, virtually all Facebook accounts in the country were drowned in paid advertisements calling on people to protest against unjust reforms that would hurt elders. A dramatic image of crying older women reached nearly all Nicaraguans with a smartphone, along with a caption saying, "The war took my son. All I have to live on in is my pension. Now they are leaving me destitute!" The #SOSINSS hashtag was created on Facebook and Twitter. Although only about 5% of Nicaraguans have the Internet at home, the parks in nearly every neighborhood have free Wi-Fi, so the messaging was extremely successful in generating the perception that the INSS reform was regressive, particularly among young people.

The following day, April 18, in response to the COSEP call for protests, the Sandinista Front called for marches in favor of the INSS reforms across the country. In the largest anti-reform protest in the country, a group of about 200 young people, mostly students of the Jesuit-run, private Central American University (UCA), protested at a point along the highway in one of the wealthier parts of Managua. An equally large group of pro-government counter-protesters from a nearby working-class neighborhood confronted the students, and national camera crews were on the scene as scuffles broke out between young people of distinct class origins. One reporter had his camera stolen by a young man wearing a Sandinista T-shirt. Before the afternoon was finished, former presidents, beauty queens, and the US Ambassador had all made statements blaming the government for repressing protests. Indeed, Piero Coen, the richest man in Nicaragua and owner of national Western Union operations, personally visited the student protesters, who had regrouped at the gates of the UCA, to encourage them and declare his support for their cause. During the evening of April 18, there was a false report of a student protester killed by police that "went viral" in social media, and images of an older woman with a beaten face also reached virtually all Facebook users in Nicaragua (Moderate Rebels 2018). In April 19, large-scale mobilizations in favor and against the INSS reforms took place across the country. Four Nicaraguan human rights organizations, also funded by NED, mobilized protests for freedom of expression.

In several cities, opposing demonstrations came into close contact with one another, as the police attempted to separate them. During the evening of April 19, there were three fatal shootings related to the INSS protests: a worker not involved in the protests and a police officer were

killed near the campus of another Nicaraguan university, UPOLI, and a teenager in Tipitapa was shot that night. The case of the Tipitapa teen is somewhat explanatory of the vague circumstances of the early fatalities. A 16-year-old son of "historic combatants" and members of the Sandinista Front was a member of the Sandinista youth and played in a neighborhood marching band. However, on April 19, he was also one of a group of teens who were hired to attack the INSS building in Tipitapa and given makeshift firearms by a local Liberal party politician. After INSS workers and local police officers fended off the attack on the INSS building, the group of armed teens walked several blocks toward the municipal government buildings. Along the way, the teen misfired a weapon and shot himself, according to witnesses in his group. During his wake, the neighborhood band director, who had been fired from a job in a public high school, placed a Nicaraguan flag upon the coffin and brought bandmates in to videotape themselves promising to avenge his death – videos that reached hundreds of thousands of Nicaraguans.

Although none of the three deaths of April 19 were attributable to police overresponse, the media narrative was unequivocal in denouncing "repression." Facebook was overtaken by well-designed images and slogans calling for armed resistance against the "dictatorship." Videos of police beating people surfaced online, although many were later exposed as being from neighboring Honduras, where the police uniform is similar. Newspapers and television channels cited one another in reporting widespread government repression.

On April 20, 21, and 22, large-scale riots took over most cities of Nicaragua. In general, the confrontations were between pro- and anti-government civilians who threw rocks at each other and sometimes fought with sticks, although homemade mortar launchers began to appear as well. In Leon, anti-government rioters burned down the historic building of the Nicaraguan student movement, and a student was burned to death inside – the first death of a university student in the context of the protests. In Bluefields, the news reporter for pubically owned Channel 6, Angel Guhona, was broadcasting live on Facebook Lite

about the damage rioters had done to public infrastructure when he was suddenly shot in the head by a madeshift shotgun. For months, Nicaraguan and international media asserted that Guhona had been killed by the police, although a police officer had been wounded by the same shotgun explosion. In Esteli, two young protesters were shot, one at short range as riots came close to burning down the town hall, and the other as he crossed the town plaza next to the Cathedral. In Managua, riot police responded with tear gas and rubber bullets; in at least two cases, rubber bullet wounds resulted in a loss of an eye. In Masaya, a young man was killed as he defended a supermarket from rioters who had been "spontanously" convoked via anonymous WhatsApp messages. The number of victims became an issue of contention, as the US-funded human rights organizations claimed over 30 deaths and the government reported 10. Over the next week, the number of deaths reported by human rights organizations as occurring from April 19 to 22 mushroomed to 43, then to 65, and then to 84. On Facebook, posts referred to a "genocide." The same week, the "Anonymous" group carried out a massive hack of Nicaraguan government websites and public employees' email accounts.

In Saturday, April 21, President Daniel Ortega called for peace and dialogue. The next day, he rescinded the social security reform, in order to "create a better environment for dialogue." However, the opposition initially rejected dialogue and demanded a new government. As US Vice President Mike Pence called for Ortega to resign, the Twitter and Facebook hashtag became #SOSNicaragua. The FSLN government asked the Catholic Church to mediate the dialogue, and the opposition accepted on the condition that the National Dialogue be televised. During the dialogue, the opposition's newly created "Civic Alliance for Democracy and Justice" presented its proposal: the President, Vice-President, and members of the Supreme Electoral Court should resign, the powers of the National Assembly should be suspended, and an interim governing junta of "upstanding citizens" should take power. The members of the Church hierarchy mediating the dialogue began to bring their congregations to opposition rallies and use church infrastructure

(vehicles, physical installations) to support the opposition road blocks that were set up across the country as the government complied with an agreement to keep the National Police in barracks. The opposition road blocks eventually became the main element of the coup attempt, and for over 2 months Nicaraguans could not travel between cities due to the road blocks operated by masked men armed with pistols and automatic rifles. With police and emergency vehicles unable to respond, countless arsons and kidnappings targeted Sandinista supporters, particularly the well-known "historic" families of participants in Sandinista struggle since the 1970s. The June 16 assassination and public burning of Francisco Aráuz Pineda, son of Amada Pineda, one of the "Women of Cuá" who had been gang-raped by Somoza's National Guard troops, is an example of the symbolism used by the Nicaraguan right-wing during the 3-month-long coup attempt.

The regime change operation in Nicaragua made use of two kinds of internal opposition to the government. One face of the opposition was a well-groomed coalition made up of NGOs that ostensibly represented many sectors of the Nicaraguan society: university students, private commercial interests, agribusiness, peasants, and feminists. This group, known as the Civic Alliance, was coordinated with the Nicaraguan oligarchy, politically led by the Chamorro family, as well as other illustrious clans such as the Montealegre, Belli, and Baltodano families. Included in this opposition were the high-profile students being flown by Freedom House to meetings with rightwing Cuban-American politicians Marco Rubio, Ted Cruz, and Ileana Ros-Lehtinen (Blumenthal 2018). The other face of the opposition was made up of extremely violent street groups that carried out terrorist attacks on public infrastructure and Sandinista supporters. This violence followed the script of the "guarimba" protests in Venezuela during 2014 and 2017, including the widespread use of kidnapping, torture, murder, and public humiliation of Sandinista party members, the destruction and desecration of historical sites associated with the revolutionary struggle, as well as the use of road blocks and no-go zones from where opposition forces could broadcast a narrative to national and international media (Zeese and McCune 2018). In 2019, board members of the Nicaraguan Association for Human Rights accused Executive Director Álvaro Leiva of inflating the death toll from protests as well as stealing nearly half a million dollars in funding provided by the US government's National Endowment for Democracy (McCurdy 2019).

Nigeria: Modern Economic Imperialism (c. 1980 to Present)

Ayokunle Olumuyiwa Omobowale
Department of Sociology, University of Ibadan, Ibadan, Nigeria

Introduction

The roots of the modern system of economic imperialism in Nigeria can be traced back to the advent of European merchants along the coastal areas of West Africa as from the seventeenth century (Stone 1988). This early-stage mercantilism signalled the consequent proclamation of the Colony and Protectorate of Nigeria by the end of the nineteenth century and subsequent integration of the new colonial territory into the world capitalist system (Smith 1979). Colonialism ensured the total peripheral subjugation of geographical territory of Nigeria along with its markets and products (largely raw materials) to the dictates and vagaries of the markets in the metropolis (Lange et al. 2006). In particular, trade and profit making were the ultimate attention of metropolitan markets and local lumpenbourgeoisie at the expense of the pauperized producers in the colony. Forming the early set of the indigenous elite class, the local merchants and middlemen (lumpenbourgeoisie) merged with the educated elite to form the new ruling class at independence in 1960.

The economic policy in the immediate post-colonial period, from 1960 to 1966, was largely modelled after the economic foundation bequeathed by the former colonial masters. Primary emphasis was on the export of agricultural products and other raw materials to international markets, while multinational corporations dominated the nation's economy (Udofia 1984; Turner

1976). The consequent civil war of 1967 to 1970 ensured a war economy, which, of course, favored multinational arm suppliers along with middlemen in the military, political, and economic circles, while the country groaned at the massive loss of human lives and material capital (Nafziger 1972). The postwar attempt of General Gowon's government at participation of Nigerians in the mainstream of economic management through the promulgation of the indigenization decree in 1971 achieved little result (Ogbuagu 1983). The indigenization process was riddled with mistrust. While the Igbo ethnic group which had suffered great loss and economic deprivation due to the Civil War accused the Hausa-Fulani and Yoruba dominated Federal Government of deliberate economic annihilation and sideling, many of the indigenized companies were bought over by ill-experienced government contractors and retired powerful and high-ranking public officers (Iwuagwu 2009; Akinsanya 1994; Nwoke 1986). Many of the companies, of course, subsequently collapsed. The failure of the indigenized companies coupled with oil glut and economic depression of the late 1970s made the World Bank and International Monetary Fund's (IMF's) proposal for economic liberalism a rational option with dire economic and political consequences for the nation. The next section discusses austerity measures and structural adjustment, the third section presents post-1996 new economic order, the fourth section examines economic deprivation and militancy, and the last section concludes the chapter.

Austerity Measures and Structural Adjustment, 1980–1996

After a gruesome civil war and 13 long years under military rule, Nigeria was democratized again in October 1979. The civilian regime of Alhaji Shehu Shagari had a depressed economy and a huge debt burden. International financial experts, creditors, and Bretton Woods organizations attributed Nigeria's deplorable economic state to institutional corruption and waste, which could only be addressed through austerity measures (Bienen and Gersovitz 1985). At this stage,

austerity measures largely entailed the removal of subsidies. Shehu Shagari could achieve but a little with his reforms until he was toppled in a military coup in 31 December 1983. The new military regime headed by General Buhari was skeptical about the economic impact of the reforms on Nigeria. It rather sought to reform through a program it termed "War Against Indiscipline" (Stock 1988). For the Buhari regime, indiscipline was the problem with Nigeria. If tackled, Nigeria could improve its socioeconomic indices. Buhari remained in power only until August 1985 when he was toppled in a military coup led by his army chief, General Badamasi Babangida.

An intelligent military officer, Machiavellian, and very deceptive with his transition to civil rule program, euphemistically called the "Maradonna" and "evil genius" because of his dexterity at deft, and yet manipulative political maneuvers, Babangida, who ruled Nigeria for 8 years, introduced an encompassing Structural Adjustment Programme (SAP) in 1986, which has somewhat defined Nigeria's economic policy till date. The SAP entailed the withdrawal of government from the provision of social support, especially in education and health; downsizing of the civil service; devaluation of the nation's currency, the naira; commercialization and privatization of government enterprises; embargo on employment and salary increases; the adoption of liberal trade policies; and prioritization of debt servicing (Geo-JaJa and Magnum 2001; Roy 1993). The SAP resulted in massive inflation (which increased from 5.4% in 1986 to 40% by 1989) and mass pauperization with about 70% of Nigerians living below the poverty line by the year 2000, up from the pre-SAP figure of about 27% in 1980 (Ogwumike 2002; Anyanwu 1992). Student enrolment and hospital attendance drastically declined with some communities recording up to 50% increase in maternal mortality (Lingam 2006) and national child mortality of 191 per 100,000 live births (National Bureau of Statistics 2005). Likewise, there was massive retrenchment of workers in both the public and private sectors even as many industries also collapsed (Okafor 2007; Gbosi 1993).

Notwithstanding the socioeconomic woes of the mass, SAP through the embedded policies of

privatization and trade liberalization benefited a class of lumpenbourgeoisie and international capitalists who took advantage of the new fiscal environment. Here, a clear imperialistic manifestation of international capital alongside its local counterparts could be seen. General Babangida's government promulgated the Privatization and Commercialization Decree of 1988 and instituted the Technical Committee on Privatization and Commercialization (TCPC), which was saddled with the responsibility of privatizing 111 public enterprises. By the time the TCPC rounded up its activities in 1993, it had privatized up to 88 public companies (Igbuzor 2003). Whereas, while the Nigerian Telecommunications PLC (NITEL) and National Electric Power Authority (NEPA) were commercialized and retained under government control, the more profiting public enterprises in the banking, insurance, and oil sectors (including oil blocs) were sold and/or leased to government cronies among the economic elites (Olutayo and Omobowale 2011; Ugorji 1995; Lewis 1994). Thus, there emerged new super-rich capitalists, many of whom hitherto had no capitalist and productive pedigree in the Nigerian productive and business sectors. Buyers of the profitable public enterprises are often accused of being agents of the top military officers who may be the "real" owners of the companies.

The SAP's trade liberalization policy emphasizes international trade and open borders as against local production and protection of the local producers. Hence, while numerous local companies collapsed, the service and exploration industries in the financial and petroleum sectors, whose transactions are somewhat connected with multinational corporations abroad, thrived. Nigeria became a dumping ground for goods which had productive expertise in Nigeria. Facing difficulties to survive in the new "competitive" environment that favored foreign companies, local companies collapsed (Iwuagwu 2009; Noorbakhsh and Paloni 1999; Rogers and Til 1997).

It is also important to note that the economic de-empowerment of Nigerians also provided a thriving market for the importation of substandard goods from Asia (popularly called *Chinco*) and secondhand goods from the developed world

(Pang 2008; Omobowale 2012, 2013a). This was (and still is) a sort of "primitive" economic imperialism of Nigeria by Asian countries (particularly China) as well as developed countries who extract surplus capital flight from Nigeria by dumping poor quality goods and used goods, of course, with the connivance of Nigerian officials and businessmen (Omobowale 2013b).

Capital flight is a major consequence of economic imperialism. Jimoh (1991) estimates that aside from money lost to under-invoicing and "fake trading," capital flight from Nigeria between 1960 and 1988 is US$53.8 billion representing an average of US$1.9 billion yearly. Likewise Lawanson (2007) reports that annual average capital flight from Nigeria was US$4.3 billion in the 1980s, reaching a peak of US$10.1 billion in the 1990s, after which it declined US$1.4 billion in 1995 (see also Olugbenga and Alamu 2013; Akinlo 2011; Ngwainmbi 2005). The SAP was officially discontinued in 1996. It has been largely described as a monumental failure with most of the blame attributed to corruption and half-hearted implementation (Iwuagwu 2009; Rogers and Til 1997). It should be noted that the huge amount that Nigeria lost to capital flight during this period due to trade liberalization could have been used for local development. While the majority of Nigerians were pauperized, the country statistically experienced some economic growth that largely benefited the local capitalists and multinational corporations.

Post-1996 New Economic Order in Nigeria

The immediate post-1996 period marked some major milestones in Nigeria. General Abacha who had seized power in a military coup in 1993 was preparing to transform into a civilian president through a fraudulent transition program (Ehwarieme 2011). Abacha, was a military ruler that was very critical of the Western world and he, fraternized with China and North Korea. He was very much unloved both at home and abroad and often described as a pariah. He had constituted a team of political and military cohorts to advance

his plan for civilian presidency (Omobowale and Olutayo 2007). Abacha's sudden death in June 1998 somewhat changed the political and economic landscape of Nigeria, with the new regime of General Abubakar opting for a speedy transition to civil rule program. Thus Nigeria adopted liberal democracy with the assumption of Chief Olusegun Obasanjo as civilian president on 29 May 1999.

The new liberal democratic dispensation of President Obasanjo favored liberal policies that had supposedly been dispensed with the discontinuation of SAP earlier in 1996. Olusegun Obasanjo's economic policy did not really differ from what obtained during the SAP years. There was strong emphasis on privatization and liberalism. Obasanjo's government keyed into the Washington Consensus by designing the National Economic Empowerment Development Strategy (NEEDS) policy for Nigeria and influencing the African Union to adopt the New Partnership for Africa's Development (NEPAD) initiative as African homegrown initiative for economic development (National Planning Commission 2004; Chabal 2002). A close scrutiny of both NEEDS and NEPAD shows they are very connected with neoliberal recommendations of the Breton Woods organizations, which had earlier been implemental through SAP (Olutayo and Omobowale 2005). Simply put, NEEDS and NEPAD were new nomenclature for SAP in the era of liberal democracy. Hence, NEEDS and NEPAD were domestic policies for the continuation of economic imperialism through liberalization and privatization in the post-military era. Nigeria no longer lays emphasis on NEEDS and NEPAD nomenclature following the end of Obasanjo's regime in 2007; nonetheless, government economic policy remains market oriented.

The first major wave of liberalization and privatization under the Obasanjo regime was in the telecommunications sector. The government of Olusegun Obasanjo licensed two multinational GSM companies, MTN and ECONET (an indigenous company, GLOBACOM, was licensed much later), to invest in Nigeria's moribund telecommunications sector. For many Nigerians, this was a welcome development because the Nigerian Telecommunications PLC

(NITEL) had failed to provide nationwide quality service. Even though NITEL had advanced telecommunications equipment, some of which MTN and ECONET had to rely on in the first few years of their operations; NITEL could not compete with these new GSM companies. Subsequent attempts at privatizing NITEL have failed. NITEL's multimillion dollar investments remain abandoned; its staff has been disengaged, while the company remains comatose (Olutayo and Omobowale 2011). A report credited to the Association of Telecoms Companies of Nigeria (ATCON) states that the telecommunications sector is the largest-growing sector in Nigeria, but Nigeria lost 80% of the US$18 billion profit generated between 2001 and 2010 to capital flight (Okonji 2012). The steel and power sectors that are very critical to industrial development have also remained moribund. Attempts at revitalizing the steel sector by selling majority stakes to international companies have failed. In fact the Nigerian government accused a major investor in Nigeria's steel company at Ajaokuta of pilfering critical machinery and equipment while it invested nothing at reviving the company (Jumbo 2011). Also the power sector has virtually failed. Sarcastically described as *Never Expect Power Always* (Olukoju 2004), the power sector has remained inefficient in spite of privatization and huge bills that are charged by the new multinational owners of power transmission companies in Nigeria.

Finally, Nigeria's oil sector remains the most subject to international economic imperialism. The oil sector is the mainstay of Nigeria's economy. It is dominated by multinational oil companies that control exploration and pays royalty to the Federal Government. About 90% of the crude oil produced is exported. Unfortunately, Nigeria's refineries are largely nonfunctional. And so, Nigeria imports about 80% of its local consumption of oil products. Between March 2010 and January 2011, Nigeria spent over $7.6 billion to import about 8.1 million metric tons of petroleum products (Nwachukwu 2011). Still, Nigeria's local content policy is grossly disregarded in the petroleum industry. The industry relies principally on international technical and professional

N

manpower while the technology is largely imported. This, of course, translates to huge capital loss for Nigeria.

Again, Nigeria is experiencing a new wave of economic imperialism in the tertiary education sector. Nigeria's universities (which counted as some of the best around the world in the 1960s and up to when SAP was implemented in the early 1980s) are at present lowly ranked globally. According to the Times Higher Education (2019), only the University of Ibadan (public) and Covenant University (private) ranked among the best 601–800 universities globally (out of the over 160 universities in Nigeria, aside from polytechnics, monotechnics, and colleges of education – all considered as tertiary institutions in Nigeria). Faced with continual brain drain, poor infrastructures and equipment, limited student slots, unmotivated faculty, and incessant strike actions, due to SAP-induced strains, Nigerian universities are unable to compete with universities in the Global North. Hence, foreign universities (both in the Global North and Global South) attract candidates from Nigeria in groves. A report credited to Committee of Vice Chancellors (CVC) of Nigeria's Universities claims that Nigerians commit about US$500 million to tertiary education in universities in Europe and North America (The Sun 2012).

Only a few examples from critical sectors of the Nigerian economy have been discussed above. It is important to note that the imperialistic tentacle of the industrialized nations, international financial organizations, and multinational corporations cover every sector of Nigeria's economy. Nigeria's economy remains subservient to the dictates of the imperialist powers that are able to guide the direction of the nation's economic policy and system through the agency of neoliberalism at the pain of international sanctions.

Economic Deprivation and Militancy: Self-Determination Groups, the Niger Delta, and Boko Haram

Since the mid and late 1990s, vicious economic deprivation has contributed to the emergence and expansion of self-determination, militancy, and insurgency in Nigeria. Notable separationist, militancy, and insurgency activities in Nigeria, especially since the current democratization process commenced in 1999, include those of self-determination groups, particularly Oodua People's Congress (OPC), the Movement for the Emancipation of the Niger Delta (MEND) (and other Niger Delta splinter groups such as the Niger Delta People's Volunteer Force (NDPVF) and the Niger Delta Vigilante Force (NDVF)), the Movement for the Actualization of the Sovereign State of Biafra (MASSOB), and the Indigenous People of Biafra (IPOB) among others, while Boko Haram insurgents have repeatedly orchestrated devastating attacks in Nigeria's northeastern geopolitical zone since 2010.

The OPC emerged in the mid-1990s following General Babangida's cancellation of the 1993 presidential election which a Yoruba multimillionaire and politician Bashorun Moshood Kashimawo Abiola was posed to win. The Yoruba largely sentimentally described the cancellation of the election as a deliberate attempt by the Hausa-Fulani-dominated military and political leadership to deny the Yoruba the possibility of ascending the nation's presidency. The OPC was one of the numerous pro-democracy groups that emerged following the cancellation of the presidential election; however, the OPC pronounced a particular agenda to protect the Yoruba from marginalization with an ultimate objective for self-determination by cessation. At its peak, the OPC had 2786 branches and about 3 million members in Southwestern Nigeria (Akinyele 2001). Despite the initial popularized secessionist outlook, the OPC functioned more like a militancy-oriented vigilante group, with its membership drawn more from the proletarian class, largely illegally armed and operating as neighborhood security lords. In fact, the OPC vigilante operatives were readily hired by neighborhoods that view the OPC as more effective than the police in neighborhood security. Unfortunately, the OPC readily transformed into a pro-Yoruba ethnic militia whenever conflicts took on the inter-ethnic dimension (see Nolte 2004, 2008; Ikelegbe 2001, 2005).

Also, in the Niger Delta, the MEND, NDPVF, and NDVF emerged as the dominant Niger Delta

militancy groups with an agenda to sabotage oil investments and other government infrastructures in the Niger Delta, to draw attention to the economic deprivation of the Niger Delta and violently harness funds through bunkering and kidnapping for ransom (Omobowale et al. 2012; Ibaba 2011). The Niger Delta is the main producer of Nigeria's post-independence oil wealth. Nigeria is largely a mono-economy, mainly dependent on oil with 90% of foreign earnings coming from crude oil sales (Occhiali and Falchetta 2018; Elum et al. 2016). In contrast, the Niger Delta, which accommodates the oil and produces the national wealth, is one of the most economically deprived in Nigeria and environmentally polluted by oil spills and gas flaring. Farming and fishing, the main productive lines of the indigenous population, are affected by environmental pollution with more than 70% of the population living below the poverty line (Elum et al. 2016; Gonzalez 2016). Consequently, the militancy spearheaded by the MEND, NDPVF, and NDVF provided ready platforms for restive youths to vent their anger against the Nigerian state. The initial police and military action deployed by the Nigerian state had little or no achievement at redressing insecurity in the Niger Delta due to the difficult terrains of the creeks and the sophisticated weapons the militants possessed. Nigeria, subsequently in 2007, opted for an amnesty program, which entailed a voluntary surrender of arms in exchange for regular cash transfers and skill acquisition and training of militants by the Federal Government of Nigeria (Ogbogu 2016; Udoh 2013). The amnesty program seemed to have reduced militancy in the Niger Delta, but the region is still *weaponized* and restive, and attacks on security personnel, oil bunkering, illegal oil refining, and kidnapping of oil workers for ransom frequently occur in the region.

The MASSOB and IPOB are focused on achieving the state of Biafra. The first attempt at having the state of Biafra was in 1967, following a declaration by the then Military Governor of Eastern Nigeria, Colonel Ojukwu. Ojukwu's declaration resulted in the Nigeria Civil War, which lasted from 1967 to 1970. An estimated 2 million lives and multimillion dollar worth of investments were lost (Atata and Omobowale 2018; Omobowale 2009). Whereas the government declared a post-war 3R policy of Reconciliation, Reconstruction, and Rehabilitation, the pro-Biafra groups claim that the Igbo ethnic group has been economically and politically deprived in Nigeria (Onuoha 2014, 2016). Hence, the MASSOB emerged about the year 2000 to advance Igbo interests in the Nigerian state, with an ultimate aim to achieve a sovereign state of Biafra, while the IPOB subsequently evolved when the MASSOB seemed to have retracted from the objective of a sovereign state. The MASSOB and IPOB have propagated the Biafra objective through violent street protests, sit-at-home protests, and numerous violent exchanges with the police and the military (Atata and Omobowale 2018; Onwuegbuchulam and Mtshali 2017). The activities of the MASSOB and the IPOB and the violent exchanges with the coercive forces of the state are associated with perceived and actual economic deprivation of the Igbo working class from among whom the MASSOB and the IPOB have most of their "foot soldiers."

The most dreaded insurgency group in West Africa as from 2010 is Boko Haram. Boko Haram started as a radical Salafist movement in the year 2002 in Maiduguri, under the leadership of a young Islamic cleric, Mohammed Yusuf (Falode 2016). The group's Arabic name is *Jama'atu Ahlis Sunna Lidda'awati Wal-Jihad* (People Committed to the Propagation of the Prophet's Teachings and Jihad), but it is popularly known by its Hausa cum Arabic name, Boko Haram. Boko in Hausa means Western education/civilization and the Arabic word Haram means forbidden. Hence, Boko Haram means Western education/ civilization is forbidden (Agbiboa 2013). Yusuf drew membership especially from among the working class bonded by the Kanuri language from Northwest and Northeast Nigeria as well as the neighboring countries of Cameroon, Chad, and Niger. As Yusuf's followership significantly grew, his anti-establishment and anti-dominant Sunni Muslim leadership in Northern Nigeria preaching drew the attention of security forces. Following a sectarian crisis supposedly spearheaded by the group in July 2009, the

N

group was violently contained by the military, leading to the death of about 1000 members. Yusuf was arrested by the military and handed over to the police, and Yusuf thereafter died in police custody within 24 h.

The leadership of Boko Haram was passed to Abubakar Shekau, who retreated to the background. Empirical reports indicate that during the period of the retreat, surviving Boko Haram leadership and members moved to the Sahel and received training and funding from al-Qaeda-affiliated groups, particularly the al-Qaeda in the Islamic Maghreb and al-Shabab (Zenn 2017). In July 2010 Shekau declared a Jihad against Nigeria, and in September 2010, Boko Haram launched its first major attack on Bauchi prison where it freed about 250 Boko Haram detainees undergoing prosecution and trial (Zenn 2017; Falode 2016). Between 2010 and 2015, Boko Haram grew to become a monstrous guerrilla group, attacking state apparatuses; seizing territories; kidnapping school girls, women, and children; deploying kidnapped girls as suicide bombers; and imposing a most draconian form of the Sharia law in the territories where it predominates (Weeraratne 2017; Bloom and Matfess 2016). Boko Haram is a major cause of internal displacement in Northeastern Nigeria. At the peak of Boko Haram's onslaught against Nigeria, Falode (2016, p. 44) submitted that: "Boko Haram's arsenal...includes AK-47 rifles, grenades, rocket propelled grenades, automatic rifles, surface-to air- missiles, vehicle mounted machine guns with anti-aircraft visors, T-55 tanks, Panhard ERC-90 'Sagaie' and explosives such as Semtex." The sagacity of the Boko Haram insurgents at gaining territory in Northeastern Nigeria as well as incessant terrorist attacks even in the nation's capital city wrongly marked the military as incapable of containing the insurgency without external support. Hence, former President Jonathan secured the services of mercenaries in the war against Boko Haram (Varin 2018). Boko Haram attacks, underfunding and poor equipment of the military, and the engagement of mercenaries were some of the major highlights of the opposition during the campaigns for the 2015 general elections. Jonathan lost the elections to a former military general and head of state, Muhammadu Buhari. Buhari started with a strategy to militarily vanquish the Boko Haram. The new government ordered the head of the army to move his headquarters to the epicenter of the insurgency in Maiduguri, and the contract of the mercenaries was terminated. Whereas Boko Haram insurgency has been limited to a few locations in Northeastern Nigeria and the government has declared a technical victory, Boko Haram continues to carry out guerrilla attacks, suicide bombing, and kidnappings. In short, though contained, Boko Haram remains a formidable adversary of the Nigerian state.

Conclusion

The integration of Nigeria into the world capitalist system within the last 200 years has subjected the nation to sustained economic imperialism. Nigeria's post-independence economic policy advances the course of economic imperialism such that Nigeria only seems to have political independence; it is very much dependent on the international economic powers and institutions in economic policy formulation and implementation. The limited attempt at economic self-determination in the early 1970s produced no positive result with Nigeria emerging into the 1980s in massive economic depression and policy disorientation. Hence, once again, the liberal policy that the Nigerian government despised in the 1970s was presented as the panacea, in form of austerity measures. Full implementation of the reform program started under General Babangida's government in 1986 with the introduction of the Structural Adjustment Programme (SAP). The SAP advanced liberalism in full course, favoring the withdrawal of government from the provision of social services, currency devaluation and free trade, frugal expenditure, and lean bureaucracy in order to save funds to invest in critical areas of the economy and debt servicing. The social and economic implications of SAP were overwhelmingly devastating for the populace. Many industries

collapsed, while many Nigerians fell below the poverty line. Notwithstanding this, SAP ensured a class of economic elite profited through trade. While local industries collapsed, international trade boomed. The result of this, of course, was classic capital flight through debt servicing, massive imports, contracts to foreign contractors, and illicit siphoning of corrupt funds through international financial corporations. Thus the money saved through SAP ultimately benefited the developed countries in the metropolis who received legally repatriated profit from Nigeria and/or whose banks also received illicit funds stashed in secret bank accounts. In spite of SAP's discontinuation in 1996, it is pertinent to note that the economic policies of Nigeria's post 1996 democratic regimes have followed the liberal lines. Nigerians remain poor and impoverished, but huge capital is expropriated from the economy through unbalanced trade annually. Unfortunately, the pro-liberal and exploitative economic policy frame continues to produce a restive proletarian class, readily available as foot soldiers for militancy and insurgent groups that have worsened the insecurity in Nigeria. As long as Nigeria emphasizes pro-trade liberalism as against local production, processing, and marketing, it would remain a peripheral nation under perpetual yoke of economic imperialism to the overall benefit of the world capitalist system. Nigeria will thus produce wealth that would be appropriated by the capitalist powers under the guise of liberalism and "freedom."

Nineteenth-Century British Female Emigration Societies

Marie Ruiz
Université de Picardie Jules Verne, Amiens, France

Introduction

Empire migration was a gendered concept for the British Victorian female emigration societies whose role was to organize essentially unmarried women's emigration to the British colonies. After the 1851 Census officially revealed the extent of Britain's female overpopulation, some philanthropic societies focused on the redistribution of the so-called "surplus" women by relocating them to the colonies, along with British gender norms and economic prospects. Many newspaper editorials, parliamentarians, and key commentators of the day depicted these so-called "surplus" women as burdens because they were unmarried, childless, jobless, and so considered unproductive. At the intersection between the upper working class and the middle classes, "surplus" women were gentlewomen who embodied British traditions and norms. They were expected to show self-restraint, serve men, and be submissive and

N

feminine according to Victorian standards. They were educated in socially acceptable, religious, and conservative families and generally behaved on the upper-class model.

Female emigration was a compromise for women's access to work which was generally rendered difficult in androcentric Britain, but available in the colonies which ensured women's financial autonomy. As historian Adele Perry has pointed out, "inserting white women into the rhetoric and geopolitics of Empire proved easier than challenging the British gendered division of labour or even the more modest goal of finding women paid work in London" (Perry 2001). Therefore, the notion of voluntary emigration needs to be questioned in the case of organized "surplus" women's migration: were Victorian single gentlewomen emigrants voluntary migrants? As historian Bernard Porter has demonstrated, the term "voluntary" is inappropriate to qualify migrants who left home to avoid poverty (Porter 2006). Reminiscent of convict transportation, for some commentators of the time such as essayist and statistician William Rathbone Greg (1809–1881), "surplus" women were a problem to be transported elsewhere.

Female imperial migration also benefitted constructive imperialists who promoted a more organized settlement of the colonies. In 1899, historical economist W.A.S. Hewins described constructive imperialism as "the deliberate adoption of the Empire as distinguished from the United Kingdom as the basis of public policy" (quoted in Green 1999). Historians concur that the British Empire represented a political instrument to increase the metropole's revenue and profit, and this political economic approach impacted the populations in Britain as well as in the colonies. The female emigration societies partook in the constructive imperialist project to organize the Empire on economic and defensive. They also consolidated the political economy of the Empire by securing future market partners produced by their female emigrants. They guaranteed the racial unity of the Empire by sending out selected women who would then produce future partners in trade for the metropole and whose loyalty to Britain was expected to exclude external markets.

According to historian James Hammerton, Empire-building was a social engineering experiment: "to control sex ratios and to ensure male settler access to the services – domestic, sexual, and reproductive – of women" (Hammerton 2004). So, the role of the emigration societies was to redistribute the "surplus" women over the British Empire, and in turn these women were expected to guarantee imperial unity by producing British offspring. Yet, this view denies female emigrants' agency in the migration process. Intrinsically linked to the notion of "imperialism" is that of "power," but did the British Empire-building process empower these "surplus" women?

Female emigration societies used the British Empire "as a sphere of opportunity" (Midgley 1998) for gentlewomen emigrants as well as for themselves. Indeed, the female emigration organizers intruded upon a traditionally male sphere by taking a share in the Empire-building process, which turned them into female imperialists. Many emigration societies were founded in the nineteenth century; this chapter focuses on the later period's female emigration societies that organized the imperial migration of "surplus" women: Female Middle Class Emigration Society (1862–1886), the Church Emigration Society's Ladies Committee (CES 1886–1929), and the United British Women's Emigration Association (1884–1901) which was renamed the British Women's Emigration Association (1901–1919) in 1901. The sources used include the female emigration societies' publications in their official journals such as the BWEA's *The Imperial Colonist* and the CES's *The Emigrant* but also the Victorian press, emigrant letters, and colonial archives. The approach mainly dwells on constructionist imperialist theories, structuration theory, and philosopher Michel Foucault's spatial study of the heterotopias.

This chapter tackles the political economy of British Empire between 1860 and 1914 by focusing on selected women's imperial migration at a time when constructive imperialists promoted imperial unity. Indeed, government institutions and private organizations, such as the female emigration societies, examined the role and function

of the Empire in detail in order to appraise the benefits of the Empire for the metropole. I shall therefore investigate the female emigration societies' contribution to the political economy of the British Empire through their participation in the constructive imperialist project. I shall also look into organized female migration as a process of social reproduction and investigate the nature of Victorian female imperialism in the context of organized emigration to the antipodes – Australia and New Zealand.

The Female Emigration Societies' Constructive Imperialism

In 1883, British historian J.R. Seeley famously remarked in *The Expansion of Britain* that "we seem to have conquered and peopled half the world in a fit of absence of mind" (Seeley 1883). Seeley meant to attribute Britain's territorial expansion to private rather than state action. Female emigration societies led a private enterprise that was meant to consolidate the Empire without government support, which they were officially denied. Indeed, in 1897 Joseph Chamberlain (1836–1914), then at the head of the Colonial Office, clearly indicated that the government would give no funding to the female emigration societies, thus leaving "surplus" women's emigration to private organizations and colonial immigration schemes:

> I am afraid it will be felt that I am disappointing the audience when I say that I cannot offer pecuniary assistance on behalf of the British Government... I think it possible, if not probable, that the authorities of the new colonies, recognising the extreme importance of this work, the immense advantage it would be to them that the emigration of women should be successfully carried out, will find it possible to contribute towards the expense. But after all, in this as in most philanthropic work, it is to private beneficence, private philanthropy, we must look in the first place, and perhaps for our principal support. (UBWEA Report 1897)

The above quote thus coheres with Seeley's arguments concerning privately directed Empire-building as the government did not financially support the organization of "surplus" women's emigration. Yet, the female emigration societies

did not contribute to Empire-building "in a fit of absence of mind": they were rather well organized, visible, and showed obvious signs of imperialism.

The female emigration societies indeed contributed to the national effort turning the Empire into a coherent structure in order to organize the colonies on the British model. For instance, they participated in imperial conferences that examined the relationships between the metropole and its colonies, and the BWEA had its offices at the Imperial Institute in London. The female emigration societies' contribution to constructive imperialism was above all defensive. Indeed, the imperial nation was thought to face external menaces with the risk of exogenous intrusions from other imperial powers and neighboring nations. To counter these threats, the female emigration societies proposed creating a colonial space based on the British model, which would be safeguarded by respectable educated women. Their actions thus symbolically cohered with the defense policy promoted by constructive imperialists, which was essential to secure the economic stability and maintenance of the Empire.

In the new imperialism period (c. 1870–1914), the territorial race between imperialist nations implied a danger of exogenous invasion in the Pacific, which the British expected to imperatively erase in order to safeguard the "almost purely British Colony" (*The Imperial Colonist* 1911). Therefore, the female emigrants' main mission was preventive: they were expected to protect the imperial frontiers by acting as biological shields, ensuring the reproduction and the purity of the British imperial nation. This biological argument was taken up by the female emigration societies: "In what lies the hope of the Empire and the world? For what does the home primarily exist? There is but one answer to these questions: the child" (*The Imperial Colonist* 1914), the BWEA declared in an article promoting colonial motherhood. The female emigration societies were indeed well aware that they acted to defend the Empire against exogenous intrusion, as they declared in *The Imperial Colonist* in 1910: "Closely connected with the question of emigration was that of alien immigration" (*The Imperial*

N

Colonist 1910). Australasia, a white settlement colony surrounded by Asian nations, was expected to preserve its frontiers against potential neighboring intrusions. As a way of promoting patriotic emigration from Britain to Australia, references to this pressing issue affecting the Empire's borders were not rare in *The Imperial Colonist*. The following extract from an article entitled "Emigration and Common Sense" thus indicates "there is the grave danger that if Australia cannot acquire enough inhabitants of British stock she may be overrun by Asiatic races" (*The Imperial Colonist* 1913). The British Empire needed to consolidate its frontiers, a task commonly attributed to women as their natural biological and cultural mission. In 1897, BWEA's Vice-President Ellen Joyce described her emigrants as the "wives and mothers of the present and future makers of the history of our colonies" (*Westminster Gazette* 1897). Gentlewomen were thus expected to become the mothers of the British imperial race but also to consolidate the colonial identity by spreading the British norm.

The Political Economic Orthodoxy of Empire-Building

Linked with the political economy of the British Empire, imperial unity was expected to strengthen Britain facing international rivalry and to secure imperial trade. Indeed, the British Empire represented a potential market for Britain's export. As historian E.H.H. Green notes, in 1914 imperial markets were the recipients of 51.7% of British cotton exports, 33.5% of woolens, 45% of nontextile manufactures goods, and 48.2% of pig iron and metal goods. Although British trade outside the Empire was greater, imperial markets represented a future investment which was to be safeguarded through imperial unity (Green 1999). Imperial unity could be best sealed by the controlled settlement of British immigrants, such as the women selected by the female emigration societies.

In the 1860–1914 period, Britain possessed one of the largest Empires in the world, yet it was also a time marked by uncertainties as to its

sustainability and stability. The British female emigration societies participated in imperial consolidation by sending out selected women who would safeguard the British Empire against exogenous intrusion by producing the offspring of the imperial race – "pure" in blood and proud heirs of Britain's cultural heritage. In turn, these colonial settlers were expected to become Britain's customers and partners in trade. The metropole indeed had economic and political interests in the colonies, which the female emigration societies were well aware of. In 1912, the BWEA indicated that it encouraged the consolidation of commercial relations between Britain and its colonies through the migration of future commercial partners from Britain: "those settled under the Flag become at once customers and producers for us" (*The Imperial Colonist* 1912a). Indeed, Australia and New Zealand represented poles of influence and commerce in the Pacific, which the female emigration organizers promoted. The following article from 1912 thus read:

> To Australia, people mean wealth and security. To Great Britain, the filling up of this vast and enormously productive and exclusively British continent with more men and women of her own stock, means an indefinite enlargement of a most valuable market for British trade, as well as a great blood support in time of trouble. (*The Imperial Colonist* 1912a)

The female emigration societies were well aware of the political economic orthodoxy at the heart of the Empire-building process and thus promoted closer links with the Empire which would secure valuable markets for the metropole. Although they focused on organizing female emigrants' departures, their publications – as the above articles show – also reveal that they supported constructive imperialist endeavors and participated in the political economy of the Empire by securing future market partners produced by their female emigrants.

Given material value, female emigrants' human capital represented a British investment in the construction of the Empire and "a potential source of wealth" (*The Imperial Colonist* 1909). By organizing the departure of "surplus" women, the female emigration societies increased the

viability and *profitability of the Empire*, which depended on its reproductive capacity. They participated in the political economy of the Empire thanks to their organization of unmarried women's imperial migration, who would marry colonial settlers and reproduce the imperial race. Britain was thus getting rid of a population that the metropole could no longer maintain – the "surplus" women – and investing these women in the peopling of the colonies, a transaction which seemed beneficiary to both the sending and welcoming communities. Selected female emigrants were thus meant to sustain the growth and maintenance of the Empire by reproducing the race, and their biological contribution to the political economy of the British Empire was often praised, as in *The Imperial Colonist* in 1902: "Englishwomen make home wherever they settle all the world over and are the real builders of Empire" (*The Imperial Colonist* 1902). The female emigration societies thus resorted to the traditional values of the home to account for the emergence of female imperialism.

Women's Nuanced Empowerment and Imperial Unity

In turn, women's contribution to the colonies' domestic economy went along with their increased financial autonomy and nuanced empowerment. Whether they became teachers, school owners, or governesses, they now managed their own lives and budgets on their own terms as emigrant Mary Richardson wrote in her letter to the FMCES in 1863 from Australia: "I have no one to interfere with me in the least." Although not all female emigrants were successful, Miss Barlow's letter from Australia in 1863 is yet another example of women's nuanced empowerment through imperial migration, as new choices and autonomy opened to them: "My school has prospered beyond my expectations though I have had many heavy expenses and my remuneration is very small . . . however it is a much more independent life than that of the Governess and I like it." These women were often

aware of their contribution to the demographic stability of the imperial nation, as Annie Davis indicated in her letter from Australia in 1864: "According to statistics, men greatly outnumber women in this land, yet it seems to me that the women find it nearly as difficult to get their daily bread here in Sydney as in London, many are the sad tales." They also knew that they represented a burden to the metropole's economic stability as Gertrude Gooch acknowledged in a letter from Australia in 1862: "there are enough of us at home" (FMCES Letter Books).

In order to promote migration within the Empire, the female emigration societies refused to assist emigrants willing to settle outside the imperial frontiers. This was made clear by the CES's announcement in 1907 that "the Society does not assist with loans or grants of money those desiring to settle in the United States" (CES Report 1907). They were engaged in the Victorian movement against emigration and actively promoted imperial mobility as a component of the political economy of the British Empire, as the following article from 1912 shows "Among those who do not realise the Empire as an integral part of Britain, but talk of going abroad, there is an outcry against emigration. As if it were a loss and not a transplanting into better soil and sunshine of the human asset" (*The Imperial Colonist* 1912a).

This was meant to increase imperial loyalty and thus guarantee the unity of the Empire through controlled population settlement, in keeping with the constructivist imperialist project of Empire, as advocated by Chamberlain who linked his campaign for imperial preferential tariffs with the theme of racial unity. In 1903, Chamberlain stated that the aim of imperial preference was "to consolidate the British race" (quoted in Green 1999). Hence, constructivist imperialists promoted both a racially unified Empire and imperial economic interests.

In 1895, Chamberlain declared: "I believe that the British race is the greatest of governing races that the world has ever seen" (Chamberlain 1897), thus spelling out the ideology of triumphant Anglo-Saxonism. The female emigration societies were also convinced that Britain was a superior

N

nation. They exalted the British nation's exceptional fate, which they expected to become the global world matrix, hence promoting migration within the Empire as a patriotic act. To this end, they often reminded their readers that the power of the nation depended on its population. This was illustrated by *The Imperial Colonist* in 1911:

> Beyond all nations of the world, this Britain of ours had become a mother nation, a proud position. The fighting energy of our soldiers...had planted our race on all the new Continents... Today, after 125 years, we had become one of the mightiest nations of the world, with 90 millions of people, Australia had four millions, South Africa two millions, and New Zealand, one million of people. The future was pregnant with the greatest possibilities for the human race... That was how we had won our Empire. The only way to build the Empire was on homes. If we would reap the advantages we had got we must create homes in those countries, and we could not have homes without women. (*The Imperial Colonist* 1911)

In parallel to the ongoing national and imperial exaltation, the female emigration societies entrusted their emigrants with a monumental mission for Britain, but also for the whole of humankind. They were expected to become the proud representatives of the chosen nation and to act as "augmenters of Empire," as the title of a 1902 article indicated in bombastic terms: "They [women] must slough off the pettiness of the past and rise to the height of Imperial womanhood, remembering that to have had the vision of Greatness is an immense responsibility" (*The Imperial Colonist* 1902).

Although British gentlewomen were sometimes glorified, their role in the British Empire-building process was nevertheless commonly restricted to their basic biological function. They were even described as "human links" between the different parts of the Empire in 1904: "human links of Empire upon whom depend the unification, development, and perfection of that great and glorious country whereof we are sons and daughters, on which the sun never sets" (*The Imperial Colonist* 1904). Their role as unifiers and developers of Empire, here celebrated by Miss Chitty, symbolically turned female emigrants into active agents of Empire.

Although the female emigration societies presented their actions as social acts, in reality, at the beginning of the twentieth century, they acted in favor of the British imperialist ideology, the triumphant Anglo-Saxonist doctrine, and imperial patriotism. They aimed at safeguarding, justifying, and replicating Britain's conservative social classifications in the colonies. The emigrant gentlewomen's influence indeed reinforced the idea that the Anglo-Saxons were a dominant and organically unified race. Yet, this did not prevent the fractioning of the imperial nation. At the end of the nineteenth century, the colonies were emancipating themselves from Britain's domination, and the colonial settlers progressively redefined their identity on account of their location and birth land rather than their allegiance to the Empire. Nevertheless, the female emigration societies never failed promoting the organic unity of the Empire, thus participating in the constructive imperialist project that was grounded on a mixture of racial and economic endeavors.

Female Emigrants' Marketing Value

Female emigration societies offered "surplus" single gentlewomen individualism and a fresh start. They did invest their female emigrants with power and agency unlike the "shovelled out" (Wakefield 1849) pauper emigrants of the first half of the nineteenth century. Along with a developed access to work, these philanthropic societies were opening up a new role for women in the colonies and in gendered Empire history – that of Empire-builders. Quoted in the 1898 UBWEA's report, Sir George Baden Powell acknowledged the empowerment of "women, whom he considered exercised an enormous power in building up the Colonies" (UBWEA 1898).

However, the notion of female empowerment should be further investigated in this case. For philosopher Michel Foucault, some colonies were heterotopias born out of the metropole's need to compensate its failings. They were the same societies as home, but perfected (Foucault 1984). For instance, Tasmania was described as "a

better England" in a UBWEA's report (UBWEA 1891–1892). In the second half of the nineteenth century, Australia and New Zealand were often imagined as absolutely perfect places peopled with perfect British settlers, places where human perfection could be achieved when it had failed in the metropole. In the same vein, historian David Cannadine considers "the British Empire as a mechanism of export, projection and analogization of domestic social structures and social perceptions" (Cannadine 2002).

In the heterotopias that the Pacific colonies represented, British women were to be ideal women, especially when selected by British female emigration societies: "free from mental or bodily defect" (*The Woman's Gazette* 1877). In the economy of symbolic exchange and social construction, women are tools to reproduce men's symbolic capital (Bourdieu 2002) and domination. Single women were indeed generally perceived as national merchandises, as an Australian journalist quoted by the FMCES founder, Maria Rye (1829–1903), indicated: "We may bring the young women here, but what if they do not suit the young men? What shall we do with the articles which don't "move off", and the goods which are found unsaleable?" (Rye 1862).

In the "social engineering" process promoted by female emigration societies, the role attributed to women in Empire-building was to reproduce the British middle-classes' family model: women were to be kept at home under male control, even in the antipodes. This is exemplified by British imperialist writer Charles Dilke's (1843–1911) record in *Greater Britain*, which echoed judge William Blackstone's (1723–1780) 1765 theory on married women's legal status as being incorporated into their husband's and which denied married women's individuation: "Our theory of marriage – which has been tersely explained thus: "the husband and wife are one, and the husband is that one" – rules as absolutely at the antipodes as it does in Yorkshire" (Dilke 1885).

As sociologist Pierre Bourdieu argues, women – when considered symbolic goods constitutive of cultural capital – can be circulated and traded (Bourdieu 1994). Single female British emigrants

were thus symbolically traded between the metropole's men who did not need so many women and the colonial settlers in great demand for female partners. For instance, whereas the 1851 Census had revealed that there were about 300,000 "surplus" women in Britain, women only represented between 37% and 49% of the population in the Australasian colonies in 1861 and 1871 (Census 1851, 1861, 1871).

Central to contemporary debates, the use of the Empire for the metropole evolved from distress relief to British Empire consolidation, as it was clearly expressed at the 1889 CES Manchester Meeting: "being abroad should remain at home under the British flag" (CES 1889). It was the female emigration societies' role to ensure that the British colonies would be peopled with respectable young women who would keep up the British race's standards abroad: as the FMCES rules stated it, they concentrated their selection on educated gentlewomen: "The Society confines its assistance entirely to educated women... Every applicant is examined as far as possible, with regard to her knowledge of cooking, baking, washing, needlework, and housework" (FMCES 1862). The emigration societies proposed to turn the metropole's so-called idle "surplus" gentlewomen into useful Empire-builders, perfect keepers of traditional gendered structures. Yet, by making the decision to emigrate, women were empowered with an agency they never had before – the decision over their own fates – thus endangering Victorian gender norms. Women's emancipation symbolically materialized in the passage to the New World – in geographical as well as social terms. As sociologist Karen O'Reilly does, I consider migration "as a structured and a structuring process" (O'Reilly 2012).

If women were empowered with the decision to emigrate, their agency was however still limited by traditional structures – a concept Bourdieu has termed "habitus." Habitus is a combination of acquired dispositions produced by social and historical exposure, which determines individual agency. For Bourdieu, social interaction is set within fields with dominant capital owners and

N

agents striving to gain more capital and legitimacy – agency thus being limited by the field's contextual necessities. On the one hand, the British Empire allowed female emigrants to acquire more social capital by giving them access to work and financial opportunities. Yet, on the other hand, within the imperial field, women's role was limited, by gender habitus, to the displacement of their cultural and social capital to other territories.

According to sociologist Anthony Giddens's structuration theory, based upon the structure-action dyad, actors are self-reproducers of the conditions necessary to their activities, and norms are factual social limits (Giddens 2005). The dialectical combination of their developing agency and the gendered structures of power did not allow women to fully emancipate through emigration. Structures, both habilitating and constraining (Giddens 2005), were too constraining by gender habitus in this case. Hence, within the context of the British Empire, the antipodes offered a stage for social reproduction.

Mirroring the women they assisted, female emigration societies' organizers were generally religious, conservative gentlewomen well imbued by class and gender habitus. As such, female emigration leaders contributed to keeping women within the domestic field, the colonial professional opportunities that they advertised being mainly domestic and their selection generally based on domestic criteria. Under the cover of female access to work, emigration societies ensured the reproduction of traditional gendered structures. Recreating a social universe in the colonies, the female philanthropic societies conformed to British gendered traditions which they proposed to transport to the New World.

A constitutive element of Victorian Britain's identity, the Church of England also needed to secure its survival in the new geopolitical and social contexts: the CES was thus founded "to strengthen the hands of the Clergy in the Colonies" (CES 1887b). The Church needed to remain the repository of the salvation capital (Bourdieu 1971), which justified the CES's foundation in 1886. At a time when emigration societies were

proliferating, the Church needed to regain its symbolic capital and to secure its power and legitimacy against those who had taken a share in the salvation enterprise. The main reason for the CES's creation was the threat of the Church of England's followers turning to other religions, once away from the metropole: "emigrants [...] may be kept from settling far apart, as without this aid they usually do, in communities alien to the Church and without their ministrations, there to fall from her" (CES 1888a). Through the CES, the Church of England secured its symbolic and social capital in Victorian England with an obvious expansionist agenda: "for the interests of English colonization all over the world" (CES 1888a).

Educated British women could support the Anglican Church's preeminence and expansionist project. The ideal colonial female profile enhanced morality and healthy child-rearing potential, which model only gentlewomen were considered to correspond to at the time. Women were the most efficient medium to reproduce the Church of England's religious capital in the Empire. So, the Ladies' Committee of the CES was soon founded, led by Miss Denison, and given an office away from the main – the CES's office was located at 9 Victoria Chambers, Westminster, whereas its Ladies' Committee was at 196, Cromwell Road, South Westminster (CES 1887b). Indeed, reminiscent of Victorian gender norms, the emigration of men or families and that of single women were to be dealt with separately.

According to Bourdieu, the Church is anti-feminist, the official reproducer of a pessimistic vision of femininity following the patriarchal precepts according to which women are inferior beings (Bourdieu 2002). Indeed, the CES made sure that women were in charge of female emigrants, while men dealt with "serious" imperialist matters. Whereas legitimate Church authority figures were often quoted in the organization's quarterly *The Emigrant*, very rarely was Miss Denison so: she was not considered a legitimate dominant religious symbolic capital holder while clergymen were. Even though female emigration was publicly defended as an important matter to the Church, there were much fewer articles devoted

to women's than to men's and families' departures. The CES gave legitimacy to the norms imposed on women and thus operated the class-differentiated and gender-focused nature of Empire-building.

Female Imperialism

Empire-building can be analyzed as a strategy to maintain sex inequality, so-called "natural." Yet, the female emigration organizers managed to acquire symbolic capital as they soon turned into expert organizers of female migration: they were listened to by men and participated in official and public debates on migration, which was a way to do politics (Richardson 2013) when the political field excluded women at the time. Selecting and assisting their fellow female emigrants indeed gave legitimacy to their imperialist discourse. Female emigrants were to be kept under the domination of the higher capital owners – men – who delegated the organization of female emigration to female experts. The balance between deliberate action and cultural determinism structured the actions of female emigration promoters and their emigrants in the imperial context. Male domination needed no justification: the androcentric vision imposed itself as a legitimate toxic consensus that led to accepting the categories constructed by the dominants (Bourdieu 2002). This justifies the female emigration organizers' insistence upon keeping female emigrants within the domestic sphere.

Yet, as sociologist Umut Erel has pointed out, "the very act of migration disrupts ideas of linear reproduction of cultural capital" (Erel 2010). On the one hand, in contemporary propaganda, the British Empire was often referred to as a mere extension of Britain. However, on the other hand, female emigration societies provided training for emigrants before departure, such as in the Leaton Training House, which was necessary to model and adapt their female emigrants to the conditions in the colonies. Preparation to a new rougher context was required for gentlewomen emigrants to take up the domestic function they were assigned to. Adaptation thus contradicts cultural capital's linear reproduction.

To avoid failure, middle-class women (mainly lower middle-class) were preferred to working-class women by emigration societies. According to historian Philippa Levine, working-class women were believed to have a greater libido, and their alleged downgrading sexual and moral habits did not make them ideal representatives of the nation (Levine 2007); it was believed that only gentlewomen had the moral qualities required to spread Britishness. A class-differentiated access to the Empire was therefore initiated. To Cannadine, the British Empire was indeed "a class act" (Cannadine 2002). Maria Rye never concealed her class-structured attitude when she selected emigrants: "an elevation of morals being the inevitable result of the mere presence in the colony of a number of high class women" (Rye 1861). For Rye, "high class" women were religious, conservative, and submissive raised in respectable families. Highly moral and educated to become perfect wives and mothers, so were her "high class" women: women that Britain could be proud of and expected to reproduce in the colonies.

As a commentator declared in 1885, a skilled female emigrant was a nation's future mother, the repository of Britishness, responsible for making "the happy home of the future" (M.A.F. 1885). This notion was openly expressed by the FMCES's secretary in 1883: "These women are to be the mothers of the race in this province; shall we do what we may to attract the best of their class to Canterbury (Lewin 1883)?" They were to contribute to the nation's political economy by producing the imperial "race" and would thus no longer be Britain's unproductive "surplus" women. Their ethnic cultural capital was also based on national "character," an exclusive masculine notion of ethnicity modelled on moralistic whiteness. Women's appropriation of "character" was a claim to equality: they thus proclaimed their Britishness, on the same terms as their male counterparts.

Yet, this was to be at the expense of colonized men and women. Recent research has focused on the negative impact of British female imperialists' reforming actions on indigenous women as, for instance, Professor of Indigenous history Aileen

N

Moreton-Robinson's *Talkin' Up to the White Woman: Indigenous Women and Feminism*, among other works. Indigenous people, men and women, were neither granted existence nor any kind of recognition by the colonizers, unless as tools for imperial power. Writing from Australia in 1862, Maria Barrow described the Aborigines from an ethnocentric perspective and underlined their perceived weakness, creating a symbolic gap to the advantage of the British race: "They are very ugly and old, the women particularly and I was rather afraid of them. However they appear to be quite harmless" (FMCES Letter Books). This territorial perspective sheds a new light on the subject under analysis, as what was intended as a positive impact on British women sometimes ended up having a negative one on indigenous populations. If imperialist women endeavored to change their status from subjugated beings in the metropole to imperial agents in the colonies, some of them may simultaneously have contributed to the imperialist subjugation of other women and men, in the colonies.

Central to contemporary debates was the fear of exogenous intrusion, and Cruikshank's popular reaction to the British female "emigration mania" (Cruikshank 1851) took the shape of a sharp satire. He called Australia "the land of the wifeless" and debunked the propaganda toward single female emigration: "If the desire for emigration among females is not stopped, England will soon be like a bee-hive, with only one female in it, and that – the Queen. . . . London will be womanless." Besides, he denounced the risk of racial degeneracy and the threat of reverse colonial invasion into Britain, of intermarriages, and foreign influence upon Britishness when he said "Ladies will have to be imported to supply the place of the exported . . . The love-sick bachelor, armed with a "tasting order," will hurry to the docks to try the sweetness of the charming Negresses before taking them out of bond" (Cruikshank 1851). This description of men rushing to the harbor to find wives is reminiscent of the many tales of Australian men rushing at the arrival of vessels full of brides-to-be from Britain – situations mocked at in the metropole, still the dominant figure over its needy colonial offshoots. To female activists

who denounced the transportation of women as an excuse to postpone solutions to be found at home or who complained that the best stock was taken away, the female emigration societies responded that "they made special effort to promote the Emigration of those whose work is least needed and least productive here" (UBWEA 1889–1890), thus justifying their selection limited to the unproductive educated gentlewomen – "surplus" women – who were given a chance to turn productive in the Empire.

From the 1880s on, the emigration societies' rhetoric was overtly imperialistic, hegemonic, and expressed an "imperialism of inevitability" (Porter 1996): the world was to be British. Beyond concerns for endogenous reproduction, women were to spread ideological domination in the form of cultural imperialism which entailed the imposition of universal British standards (Dunch 2002). As feminist historian Leila J. Rupp put it, "women's internationalism in the period before World War II points the way to one form of global identity" (Rupp 1994). Through their Empire-building actions, women became the agents of dissemination of ethnocentric Britishness.

For British men, women were granted the roles of domination tools and foils as was declared in the female periodical *Woman* in 1887: "the Englishwoman abroad" is a glorious institution. [. . .] They say, of course: "If England produces this sort of women, what splendid fellows the men must be! She does more to maintain the prestige of the British Empire, than all our ironclads put together" (*Woman* 1887). The perfect female emigrant was a valuable asset to British male Empire-builders, an item of superiority over the other nations' men, thus reinforcing Britain's cultural and imperial capital. As expressed in an article published in *Macmillan's Magazine* in 1882, British women's physical superiority over the other nations was natural: "Englishwomen are, in general, the most beautiful in the world" (Ross 1882). If femininity is a form of complaisance toward men's symbolic domination (Bourdieu 2002), the emigration societies' careful selection, based on moral and physical grounds, thus served to assert both male domination and Britain's superiority. British superior masculinity over the other

races was to be asserted worldwide, and women were the most efficient tools to spread it. As Empire-builders, they were therefore given a secondary role in the male-centered imperial enterprise, the one of assisting foils.

Beyond cultural imperialism, by exporting their women, the British were trying to achieve identity imperialism. "Superior" British women were identity-keepers and spreading agents involved in what historian Denis Judd calls "imperial Darwinism" (Judd 1996). Traditions, common history, norms, and sense of belonging, which constitute national identity, were expected to be safeguarded by peopling the colonies with "respectable" British subjects. As historian Anna Davin has pointed out, "women would take their place not only as Empire-builders, but above all as Empire-conservers" (Davin 1978). For some French imperialists, imperial domination was best implemented through women and children and an article published in 1896 in *Le Moniteur Universel* described British female emigration societies as a model to be followed worldwide (*Le Moniteur Universel* 1896). This highlights that, to some extent, British female emigration societies succeeded in becoming a symbol envied by other nations, thus perfecting the objective for global cultural standardization, on the British model, endeavored by their fellow male imperialists.

By the end of the nineteenth century, British female emigration organizers managed to turn into imperial agents and assisted male Empire-builders in the construction of a collective global identity. To female imperialists, the Queen was the feminine model to follow: she embodied authority and maternity. The maternal rhetoric that historian Julia Bush defined as "imperious maternity" (Bush 1998) was the major instrument of female imperialist propaganda. Yet, gender habitus was still perceptible in the female emigration societies' discourse. They reproduced the male bombastic imperialist and expansionist rhetoric with a maternal touch:

> [England] is the mother of a large family of colonies scattered over the world. The sun no sooner sets on the parent shores than it rises on the cliffs of one of the colonial children; and, indeed, the empire of

Great Britain has been truly described as one on which 'the sun never sets.' . . . There is . . . plenty of room for more people, and this means plenty of work to be had. (*Work and Leisure* 1885)

Thus, a mixture of maternalism, patriotism, expansionism, and emancipation endeavor is what defined female imperialism in the last quarter of the Victorian era. Their imperialist propaganda was opinionated but ladylike, a new voicing mode for women. In this way, female imperialism endangered gendered norms, but it was a price British men had to pay to secure Britishness against external intrusion.

Conclusion

As introduced at the beginning of this chapter, the female emigration societies' participation in the organization of the Empire contradicts Seeley's analysis that the British Empire was gained "in a fit of absence of mind," at least until the last quarter of the nineteenth century when the organizations participated in the constructive imperialist project. In the New Imperialism period (c. 1870–1914) marked by worldwide expansionist race, the British Empire's stability was at stake, and female emigrants' symbolic capital was a tool to secure a stable colonial nation – on the metropolitan model – and to reinforce racial frontiers against exogenous intrusion. Female emigration organizers' newly acquired agency did not create a new social system but reproduced the traditional one within the imperial context. However, female emigration societies did threaten gender habitus by granting their leaders agency and by endowing their emigrants with decision-making power over their own fates. At the time, there were constraints that female emigration organizers could not overcome and traditional structures were to persist despite spatial mobility, but they – as imperialist women – used their agency as a medium to lead the way to their selected emigrants' nuanced empowerment. In this somewhat convoluted way, female emigration societies' leaders can be described as Empire and history agents.

Women's civilizing power, as well as their biological ability to reproduce the nation,

participated in the constructive imperialist project promoted by Chamberlain. The "surplus" women, who were expected to guarantee "the survival of the fittest" within the Empire, were thus turned into symbolic instruments of constructive imperialism. The philanthropic societies under study were finally going to make way for the state's official handling of selected female emigration in 1919 with the Society for the Overseas Settlement of British Women (SOSBW, 1919–1962). In 1962, the SOSBW was finally replaced by the Women's Migration and Overseas Appointments Society (1962–1964). This represented official acknowledgment that private enterprise was no longer deemed able to handle imperial responsibility. As E.H.H. Green puts it, "constructive imperialism was one of the first attempts to design a form of co-partnership of Commonwealth structure of Imperial relations, whose relevance was to become apparent in the inter-war period" (Green 1999). Hence, the female emigration societies' contribution to the British Empire's political economy focused on guaranteeing the racial unity of the Empire by sending out selected women who would then produce future partners in trade for the metropole and whose loyalty to Britain was expected to exclude external markets.

Definition

Kwame Nkrumah was one of the leading figures in the movement for the Gold Coast's (modern-day Ghana) independence from Great Britain as well as one of the most vocal and public campaigners for the African continent's independence from European rule. Politically active from his student days, Nkrumah went on to become Ghana's first prime minister (1957–60) and first president (1960–66). In addition to his political career, Nkrumah was a prolific author, writing on subjects ranging from philosophy to guerrilla warfare.

Introduction

Kwame Nkrumah was one of the leading figures in the movement for the Gold Coast's (modern-day Ghana) independence from Great Britain as well as one of the most vocal and public campaigners for the African continent's independence

from European rule. Politically active from his student days, Nkrumah went on to become Ghana's first prime minister (1957–60) and first president (1960–66). In addition to his political career, Nkrumah was a prolific author, writing on subjects ranging from philosophy to guerrilla warfare. Among the first generation of African heads of state, he was one of the most articulate proponents and theorists of Pan-Africanism. Antiimperialism and antiracism were central to Nkrumah's political thought and policies. A commitment to Pan- Africanist philosophy and politics remained a pivotal aspect of his thought throughout his life. He worked closely with major African- American and Afro-Caribbean intellectuals, including George Padmore, W.E.B. Du Bois, C.L.R. James, and the Nobel Prize winning economist W. Arthur Lewis. Nkrumah identified as a socialist, but chose not to ally himself with the superpowers during the Cold War. Instead, he worked to forge close ties with other heads of state who resisted joining either the Western or the Soviet bloc. He was an ardent supporter of Pan-African unity, advocating the creation of a federation of African states. While Nkrumah's foreign policy promoted the emancipation of colonised peoples, his national policies became harshly authoritarian, which included making strikes and opposing political parties illegal and empowering the state to detain and arrest suspected subversives. Nkrumah was overthrown in a coup in 1966 and died in exile. He spent his remaining years in Guinea.

Early life and the birth of a Pan-Africanist

Nkrumah was born in the village of Nkroful in the British Gold Coast. From 1925–30, he studied at the Achimota School in Accra, and for the following five years, he worked as a teacher and saved money to travel to the US to continue his education (see Birmingham 1998; Nkrumah 1971). In his autobiography, Nkrumah notes the impact that the writings of the Nigerian nationalist and the future first president of Nigeria Nnamdi Azikiwe

had on his own developing nationalism (Nkrumah 1971, p. 22). At that time, Azikiwe was the editor of the *African Morning Post*, based in Accra. In 1935, Nkrumah travelled to Britain. There, he learned of the Italian invasion of Abyssinia, which further fuelled his anti-colonialism. He arrived in the US in October 1935 and began attending Lincoln University – the first historically black university in the US and Azikiwe's alma mater. He received his Bachelor of Arts from Lincoln in 1939. There, Nkrumah developed an interest in European philosophy, a topic he would engage in his philosophical work *Consciencism* (Nkrumah 1964). He pursued his interest in philosophy, receiving a Bachelor of Theology degree from Lincoln in 1942 as well as a Master of Science in education in 1942 and a Master of Philosophy in 1943 from the University of Pennsylvania. During his education, Nkrumah worked as a lecturer and on ships as a member of the National Maritime Union. He also remained active in African politics, contributing to the growth of the African Students' Association of America and Canada. Nkrumah's interest in philosophy and politics drew him to radical thinkers such as the Trinidadian Trotskyist C.L.R. James.

In 1945, Nkrumah returned to London. He had contacted the Trinidadian Marxist George Padmore in advance and, on arrival, began to work closely with him. With Padmore, Nkrumah was one of the principal organisers of the Fifth Pan-African Congress in Manchester, which took place from 15–21 October 1945 (for primary sources see Padmore 1947; for critical discussion, see Cooper 2002, pp. 58–59). The gathering was sponsored by the Pan-African Federation, which had been founded the previous year. It was scheduled to coincide with the World Trade Union Conference in Paris. The Congress was timed immediately after the Second World War in order to mobilise for decolonisation, particularly after the defeat of the Axis empires. Over 90 delegates attended from throughout the African diaspora and British Empire. Though the gathering's stated purpose was to condemn all forms of imperialism, and its attendees came from throughout the British Empire, the discussion focused largely on peoples of African descent. Further, despite its

aspiration to represent Africa as a whole, all the African attendees came from British Africa. Each region represented prepared its own set of resolutions. The resolutions passed by the West African delegation were perhaps the most radical in explicitly connecting imperialism to economic exploitation (Padmore 1947, pp. 102–103).

Among the Fifth Congress's notable African attendees were the South African novelist Peter Abrahams, the future president of Kenya Jomo Kenyatta (who also helped to organise the Congress), Malawi's future president Dr Hastings Kamuzu Banda, and Nigeria's Obafemi Awolowo (for list of delegates, see Padmore 1947, pp. 117–120). The Congress's two most distinguished attendees were Amy Jacques Garvey, the widow of Marcus Garvey, and W.E.B. Du Bois, who served as the Congress' honorary president. Du Bois had attended the first Pan-African Conference in 1900 and organised the first Pan-African Congress in 1919. The attendance of Garvey and Du Bois leant credibility to the mostly young African delegates as heirs to the Pan-African movement. This first meeting between Nkrumah and Du Bois would later evolve into a lasting friendship and intellectual collaboration. Unlike the preceding gatherings, the Fifth Congress was distinguished by the increased presence of Africans as well as by the major role played by Africans, such as Nkrumah and Kenyatta, in organising the event, which undoubtedly moulded Nkrumah's thought and politics. He regularly cited the meeting as one of the key events in the anti-colonial movement and, as a statesman, he made Pan-African cooperation the centrepiece of his political work (Nkrumah 1963, 1964, 1971; Padmore 1971, p. 168). For him, the independence of individual African states served as a first step towards the greater goal of Pan-Africanism (Nkrumah 1971: x).

Founding of the Convention People's Party and Ghanaian independence

Nkrumah returned to the Gold Coast in 1947 to work for the United Gold Coast Convention (UGCC) (for more on the UGCC, see Adu

Boahen 2004). Soon thereafter, Nkrumah set to work organising the UGCC by forming a Shadow Cabinet to prepare for independence, recruiting supporters, consolidating the party's branches, and planning demonstrations (Nkrumah 1971). One of the UGCC's first actions was a boycott of European and Syrian merchants. On 28 February 1948, the same day the boycott was ended, a peaceful demonstration by the Ex-Servicemen's Union ended in a clash with the British colonial police. Two ex-servicemen were killed. The shootings led to riots in which Africans targeted the European and Syrian populations. The UGCC was blamed for the riots. Nkrumah was detained and arrested on 12 March 1948, but was released a month later after the UGCC was cleared of responsibility. Nkrumah's arrest, however, helped to solidify his reputation as a leading, young political leader. Young Ghanaians were becoming increasingly frustrated with the UGCC's moderate political strategies and its reluctance to demand immediate self-government. Nkrumah shared these frustrations. He began to tour the country and his skills as an organiser helped win support among groups that were usually fractured under the colonial administration, including urban intellectuals, war veterans, youths who had become disenchanted by their life prospects under colonial rule, women, trade unionists, and rural farmers. In 1949, he united his supporters to form the Convention People's Party (CPP), a central platform of which was the immediate implementation of self-government, and began his campaign of positive action, a form of nonviolent action, to press colonial authorities for self-government.

As leader of the CPP, Nkrumah constructed a People's Assembly that would convey grievances to the colonial authorities. The proposals included the call for universal suffrage and for self-governing status under the 1931 Statute of Westminster. When the colonial government rejected these proposed constitutional amendments, the CPP responded by launching its first major Positive Action campaign. On 1 January 1950, Ghanaians performed non-violent acts of civil disobedience, boycotted European goods, and trade unions went on strike. Nkrumah and other

N

members of the CPP were arrested that day. Support for Nkrumah continued to grow as a result. Due to continued unrest, on 1 January 1951, colonial authorities presented a new constitution that allowed for the creation of a Legislative Assembly and universal suffrage. The first elections took place on 5 February. Though still in prison, Nkrumah won a seat and the CPP won a majority in the Assembly. Nkrumah was released on 11 February and invited to form a government. The Gold Coast had not achieved full independence. Rather, Nkrumah's government was expected to co-operate with the British government in facilitating a gradual transition to independence. In 1952, Nkrumah became Ghana's first prime minister after an emendation to the Constitution.

Already in 1951, Nkrumah had began to consolidate his power. The greatest challenges to his nationalist political programmes came from chiefs throughout the Gold Coast and from Asante nationalists (for more on this, see Allman 1993; Rathbone 2000). Chiefs had ruled parts of the Gold Coast for hundreds of years and were seen as legitimate rulers. In particular, the Asantehene, the king of the Asante, could trace his family's rule back to 1707 and had a strong base of support in his kingdom's capital at Kumasi. Nkrumah viewed the chiefs as a threat to his nationalist programme and efforts to centralise power. He was in the precarious position of having to both publicly show reverence for the Asantehene as well as delegitimise him by associating him with feudal tyranny and anti-modernism (this is discussed in Rathbone 2000). The stronger political challenge came from the National Liberation Movement (NLM), which was the organisational body that opposed Nkrumah's nationalism. Beginning in 1954, the NLM began to advocate a federal system of government in Ghana. They opposed Nkrumah's centralisation of power and sought to preserve the culture and traditions of the Asante peoples. The NLM pursued its aims through electoral politics. This severely weakened the movement when, in 1954, the CPP once again won a majority. The CPP worked actively to weaken the movement and by 1958 had managed to completely marginalise it (see Allman 1993).

Independent Ghana

On 3 August 1956, the assembly authorised the government to request independence from Britain as a member of the Commonwealth. On 6 March 1957, Ghana became an independent member of the Commonwealth with Nkrumah staying on as prime minister and Queen Elizabeth II as its monarch. Nkrumah became known as 'Osagyefo' (redeemer). Ghana was the first of the major sub-Saharan African colonies to gain independence. Though the 1957 constitution initially included protections for the rights of chiefs and different regions, these protections were weakened as CPP supporters managed to infiltrate and take control over the country. Constitutional provisions that checked power were slowly abolished. Nkrumah's Government introduced a succession of measures to secure the authority of the CPP. In 1957, political parties founded on ethnic, religious, or regional interests were banned, thus, leading to the decline of the NLM. The NLM, however, merged with the United Party to form the major opposition party to the CPP. The Deportation Act allowed for the expulsion of non-Ghanaians perceived to be acting against Ghanaian interests, but was later applied to Ghanaians as well. In 1955, Nkrumah had already begun to evince autocratic tendencies after banning strikes in the name of patriotic duty in response to the 1955 Gold Miners' Strike. He strengthened the Trade Union Act in 1958, but also worked to remain on good terms with the powerful Gold Coast Trade Union Congress (TUC). Nkrumah dealt with the TUC leadership by integrating them into the CPP. His base among rank-and-file unionists would suffer further when he refused to support railway workers during their 1961 strike (see Birmingham 1998, pp. 74–76). In 1958, the Preventive Detention Act empowered Nkrumah to detain individuals without trial. Among those detained was his former ally Danquah. Danquah expressed support for the NLM's criticisms of Nkrumah, and would die in prison in 1965.

As Nkrumah instituted increasingly authoritarian policies within Ghana, he worked hard to cultivate an image as an international spokesman for African independence, inviting dignitaries and

travelling abroad frequently. Almost immediately after Ghana's independence, his attention shifted back to his Pan-Africanist vision of continental cooperation. By 15 April 1958, Nkrumah was already welcoming the representatives of the eight existing African states (Ghana, Egypt, Sudan, Ethiopia, Liberia, Libya, Tunisia, and Morocco) in Accra for the first Conference of Independent African States (Nkrumah 1963, p. 136). On 5 December of that year, he would host another meeting, the first All-African People's Conference, this time inviting delegates from the different African nationalist organisations throughout the continent. In 1960, Ghana left the Commonwealth and became a republic. The following year, Nkrumah brought Ghana into the Non-Aligned Movement, joining a group of four other states that rejected alliances with either of the Cold War superpowers. The Movement's other leaders were Jawaharlal Nehru of India, Josip Broz Tito of Yugoslavia, Gamal Abdel Nasser of Egypt, and Sukarno of Indonesia. In 1960, Nkrumah invited his old friend Du Bois to settle in Ghana and begin work on the *Encyclopedia Africana.* Du Bois died in Ghana in 1963 without living to see the *Encyclopedia* completed (for more on Du Bois' later years, see Lewis 2000). Padmore had died in 1959.

In 1963, Nkrumah was awarded the Lenin Peace Prize. That year also proved a decisive one for Nkrumah's Pan-Africanist aspirations. He had continued throughout the late 1950s and early 1960s to campaign for continental unity, particularly as an ever increasing number of African states became independent. On 25 May 1963, the Organisation of African Unity was established in Addis Ababa. In that same year, Nkrumah published *Africa Must Unite.* Echoing many of the Pan-Africanist sentiments of the Fifth Pan-African Congress, he drew on US and Soviet Union examples to argue for a union of African states. Nkrumah's position was supported by Algeria, Guinea, Morocco, Egypt, Mali, and Libya, which received the collective label of the 'Casablanca Bloc'. They were, however, defeated by the 'Monrovian Bloc', led by Léopold Senghor and other African leaders who either favoured

continued close relations with former colonial powers or a slower transition to political union. Nkrumah held out hopes that a union of states would, despite the delay, come eventually (see Manby 2009, p. 157).

Believing that modernisation was an essential component of the ultimate end of Pan-African union, Nkrumah had embarked on a variety of ambitious economic and industrial projects. He was able to harness Ghana's natural resources to bring enormous wealth to the country, which he used to finance further public works projects. This enabled him to introduce free education and health care. However, other major projects, such as the Akosombo Dam on the Volta River, helped to put Ghana into increasing debt. This was coupled with increasing expenditures to modernise the Ghanaian military. He lent military support to Rhodesian rebels battling Ian Smith's white-African government. Throughout this time, Nkrumah struggled to keep Ghana economically self-sufficient and not reliant on either the US, Europe, or the Soviet Union. But his regime was frequently susceptible to charges of corruption made against the beneficiaries of his industrialisation contracts.

Nkrumah was on a state visit to North Vietnam on 24 February 1966 when the National Liberation Council, led by eight high-ranking members of the military and the police force, overthrew his government in a military coup. Nkrumah had lost the support of his base. The Trade Union Act and his reprisals against strikers helped turn trade unionists against him. The Preventive Detention Act had helped nurture growing public disenchantment with Nkrumah's rule and fostered support for his political opponents. Danquah was dead. Yet, another former Nkrumah ally, Joe Appiah, had arisen as a popular critic of Nkrumah's rule. Nkrumah's refusal to take sides in the Cold War had also frustrated foreign powers, particularly the US and Britain. There is little evidence to back claims that the CIA had a direct hand in the coup, but foreign agencies were likely aware that it would take place. Nkrumah settled in exile in Guinea at the invitation of President Ahmed Sékou Touré. Touré and Nkrumah shared many ideological affinities. Both were viewed as

N

radicals among the new African leaders. Touré was the only African leader to reject Charles de Gaulle's offer to African states to join the French Community. They had also worked together as members of the Casablanca Bloc. During his exile, Nkrumah continued to support Pan-Africanism. His rhetoric took on an increasingly radical tone. He became more supportive of the notion of armed resistance to imperialism and was fearful of assassination attempts. In August 1971, he flew to Romania in ill-health to seek treatment for prostate cancer. He died on 27 April 1972.

Pan-Africanism and Consciencism

Despite his controversial presidency, Nkrumah has enjoyed a reputation as a significant Pan-African political theorist and philosopher. His Pan-Africanism can be traced back to his days in Britain working with Padmore. Certainly, the idea of a union of African states was one of the most consistent features of his political thought. He supported it throughout his life in various books and pamphlets. It informed his political policies and diplomatic missions. As a pre-independence intellectual, Nkrumah's promotion of Pan-Africanism was largely abstract. As a political organiser, his thought centred on the concept of 'positive action', which advocated non-violent civil disobedience in the vein of Gandhi and Martin Luther King, Jr. (explained in Nkrumah 1964). Once in power, his Pan-Africanism took on a more concrete form by way of referring to federal models for a union of states. After his expulsion from office, Nkrumah's Pan-Africanism turned to the critique of neo-colonialism, arguing that the continued European involvement in African affairs constituted a new phase of imperialism (Nkrumah 1966). Nkrumah's analyses proved all the more prescient as African states made greater concessions to Western and corporate interests, which led to debt and economic instability. Following the coup and fearful of a resurgent imperialism, Nkrumah would later argue that Africa had entered a period that necessitated armed revolution, which he discussed in his *Handbook of Revolutionary Warfare* (1968). Nkrumah's

strengths lay more in his abilities as a polemical pamphleteer than as a systematic theorist.

Nkrumah's most developed theoretical text is his 1964 work, *Consciencism: Philosophy and Ideology for Decolonization* (1964). The work is Nkrumah's strongest effort to participate in the philosophical discourses that first fascinated him in his youth. But, it is a clumsy text. Much of the book is mired in a confused and extended discussion of the history of European philosophy. It weakly argues that idealism is inherently reactionary and that materialism is inherently revolutionary. From this lengthy discussion, Nkrumah goes on to make broad and unsupported statements about the egalitarian nature of traditional African societies. These are highly questionable given the complex and diverse shapes of political governance one finds throughout the continent and historical record. The simplistic claims echo views that he had developed in his youth. Already in the West African Resolutions at the Fifth Pan-African Congress, which it is likely Nkrumah had a hand in drafting, one finds statements emphasising that among the West Africans' chief grievances with colonialism was the destruction of traditional African social structures. Nevertheless, the final section of the short book is the most interesting, if only for giving an insight into his thought and the justifications for his politics. Nkrumah argues that there is a natural affinity between the egalitarian aims of socialism and the egalitarianism that he attributes to traditional African society. However, he recognises that the effects of colonialism as well as the necessity of dealing within a global context make an unmediated return to traditional African social structures impossible. Hence, this becomes a justification for the continuation of certain colonial industrialising campaigns.

In the text, Nkrumah identifies positive elements in both Western and Islamic intellectual traditions and the impact both have had on African intellectual life. It therefore becomes necessary to cultivate a new ideological basis for African philosophy and politics, which Nkrumah calls Consciencism. Consciencism retains what he understands to be the fundamental egalitarian principles that underlie pre-colonial African societies, but appropriates ideas from the Western and

Islamic intellectual traditions and especially those socialist principles that would allow Africa to modernise and develop political institutions. Because Nkrumah finds a precedent for socialism in traditional African communalism, he implies that Africa's road to socialism relies more upon reform than violent revolution. With Consciencism serving as the ethical and intellectual foundation for a movement, Nkrumah argues that 'positive action' is that form of activism that serves African's interest in both the struggle against colonialism and the effort to build the individual nations and foment co-operation among the disparate African states. Nkrumah's argues that positive action is best directed by a single-party state run by his CPP, which suggests a certain conception of a vanguard that may or may not be linked to Lenin's thought of which Nkrumah was an admirer. African independence meant much more to Nkrumah than simply ousting a colonial power. In order for Africa to be truly independent, he believed it had to develop a fully functioning industrial and economic infrastructure. Yet, more importantly, independence, for Nkrumah, was about reclaiming Africa's intellectual heritage and synthesising it with other intellectual traditions. Independence requires creating a new intellectual tradition for Africans – Consciencism.

Legacy

The argument of Consciencism is not as philosophically sophisticated as Nkrumah might have hoped. The concept of Consciencism is remarkably vague and Nkrumah makes logical leaps that are unsupported by his argument. Nevertheless, the book does reveal some of the key features of Nkrumah's thought that have a bearing on his politics. Nkrumah may have paid homage to traditional African society, but he was an unapologetic moderniser who ultimately saw traditional society as a barrier to change. As pointed out earlier, he had little tolerance for the traditional culture of the Asante. This often meant resorting to questionable legal manoeuvres at the least and the outright use of force at worst. Nkrumah's

defence of the single-party state, which he would institute as president, is also intimately tied to his philosophy. There are strong affinities between his single-party state and the vanguard revolutionary theory of Lenin, of whom Nkrumah was a great admirer. Despite these authoritarian features, Nkrumah's thought is interesting insofar as it is an attempt, albeit a weak one, to bring Western, Islamic, and African philosophy into dialogue with one another. This enterprise has been taken up with greater success and more sophistication by a younger generation of philosophers. This is not to suggest that Nkrumah was unprecedented, but, in this regard, he was, in spite of his shortcomings as a philosopher, something of a pioneer. It therefore makes sense that Africana philosophers – who have done much to build a canon of Africana philosophy – have embraced Nkrumah the philosopher. He is also undoubtedly an important influence on modern Pan-Africanism. He was an articulate spokesperson for the movement and was the leading African statesman to try to make Pan-Africanism a political reality. This commitment to Pan-Africanism made him, along with Touré, one of the most uncompromising African leaders who sought to pave an independent path for African development. The lasting appeal of these features of Nkrumah's life and work are important and should not be underestimated. At the very least, they have helped to cultivate a mythic persona with strong resonance.

All of this helps to explain Nkrumah's current status as something of a hero among many modern-day Africans. But this is a relatively recent phenomenon. When he fell from power, he was largely unpopular among Ghanaians (for a discussion, see Appiah 1992, pp. 161–3). With the exception of Touré, Nkrumah's ouster elicited little outrage from his fellow African heads of state. Ghanaians better remembered him for his oppressiveness. Any movement that he was unable to incorporate into the programme of CPP was either severely weakened or abolished by his supporters or through his revisions to the constitution. While he publicly and in his writings expressed respect for traditional African culture, he banned parties that were founded on tribal, religious, or ethnic interests. Though trade

N

unionists helped bring him into power, Nkrumah's policies turned labour leaders into elites who were indebted to him and ignored the interests of the Ghanaian working class. He punished African workers for striking against inhumane working conditions. Competing political parties were labelled unpatriotic. Nkrumah made ready use of the Deportation Act and the Preventive Detention Act to silence his opponents. His ambitious modernisation programmes ultimately had the opposite effect of placing Ghana in debt and making it more reliant on foreign aid. Nkrumah's reputation began to undergo a cautious revival under the oversight of President Jerry Rawlings following the latter's coup in 1979. This period gave birth to 'Nkrumahism' to refer to Nkrumah's thought as a system of political philosophy (see Assensoh 1998; Martin 2012). But the oppressive elements of his regime linger.

It is difficult to disentangle Kwame Nkrumah the admired Pan-Africanist visionary from Kwame Nkrumah the despised authoritarian. At any given point, one view is privileged over another. They are not, perhaps, mutually exclusive. It is likely that Nkrumah himself saw little inconsistency between his ideas and his policies. The consolidation and abuse of power in the name of nationalism might, in his view, have been seen as a necessary condition for the kind of national unity that could serve as the basis for and make possible the grander goal of African unity. Nkrumah might be better understood less as a Ghanaian nationalist than as a Pan- Africanist for whom Ghanaian nationalism was an instrument (for a version of this claim see Appiah 1992, p. 162). Nevertheless, Nkrumah the one-time dissident did not tolerate dissent. He oversaw a thoroughly antidemocratic government, which regularly bought off or destroyed the opposition instead of negotiating with it. But Nkrumah very much remains the public face of African independence. He was the leader of the first major African state to achieve independence and was a stalwart, if not embattled, campaigner of a grander vision of African independence that extended beyond the end of colonial rule. He condemned ongoing colonial rule and white racism when other African heads of state were reluctant to do so. His lasting significance may best be understood, rightly or wrongly, as a symbol of African independence.

Non-Aligned Movement (Incorporating Yugoslavia)

Rinna Elina Kullaa
Department of History and Ethnology, University of Jyvaskyla, Jyväskylän, Finland

The Non-Aligned Movement is an international association of states that was established to co-ordinate co-operation globally and across regions outside the Cold War blocs of the two Superpowers – the US and the USSR. Its inaugural conference was held from 1 to 6 September 1961 in Belgrade, Yugoslavia. The leading figures of the foundational meeting were the President of Yugoslavia, Josip Broz 'Tito', and the President of Egypt and the United Arab Republic, Gamal Abd al-Nasser. Twenty-five states took part in this initial conference including Afghanistan, Algeria, Burma, Cuba, Cyprus, Ethiopia, Ghana, Guinea, India, Indonesia, Iraq, Kampuchea, Lebanon, Mali, Morocco, Nepal, Saudi Arabia, Somalia, Sri Lanka, Sudan, Tunisia, Yemen, and Zaire. The organisation grew rapidly to include 117 member states by 1971. Several countries including Cuba, Indonesia, and Ghana also played leading roles in setting the agenda of the association in the 1970s and 1980s. The Non-Aligned Movement formed a permanent committee and a co-ordinating bureau at the headquarters of the United Nations (UN) in New York and held frequent consultative meetings and ministerial conferences, as well as summit conferences approximately every 4 years (in Belgrade in 1961, Cairo 1964, Lusaka 1970, Algiers 1973, Colombo 1976, Havana 1979). The organisation continues to exist and function today in a modified form, even after the end of the Cold War.

As the formerly colonial states and otherwise recently self-determining states became independent after the Second World War, with the formation of the UN they searched for a 'Third Way' alternative to the East–West blocs. These states across the globe encountered difficulties in modernisation, but strove towards an independent course in foreign policy and development.

Third Way politics, in which the Non-Aligned Movement engaged, sought to represent small states and challenge bi-polar divisions by forming a multi-state coalition outside the East–West blocs. Development in the Mediterranean region that was important for the birth of the movement was shaped by the radicalisation of politics in the Cold War in the aftermath of decolonisation and by Superpower interventions across the globe. Choosing a Third Way foreign policy among the recently independent states influenced the construction of sovereignty, nationhood, and the state. The Non-Aligned Movement came to represent this crucial dynamic of international history.

The themes which encompassed the Non-Aligned Movement were international: anti-colonialism, anti-imperialism, antimilitarism, communism, dictatorship, and anti-apartheid action. These subjects left no region untouched in the post-Second World War period. The goal of this association of states was never clearly defined, but it worked to promote solidarity among those nations that were less powerful in international relations. It also functioned materially to facilitate large development projects among different member states, such as river water regulation systems and the building of large-scale constructions such as military complexes. In addition it fostered student exchanges.

The Initial Geo-Political Prerogative

The Non-Aligned Movement set the stage for alternative foreign policy strategies outside of the East–West blocs; it made use of transnational politics, an ideological alternative, and the cultural dynamics of the Cold War to advance not one, but several agendas. It is important, however, to understand that the association itself began as a geo-political prerogative. The balance-of-power status quo which emerged between the two Superpowers after the end of the Second World War was problematic for states such as Yugoslavia and Egypt. Yugoslavia had faced an initial split with the USSR in 1948 when it was expelled from the Cominform (Communist Information Bureau) by

the Soviet leader Josef Stalin. While Tito and Stalin had argued over numerous issues between 1945 and 1948, including the formation of a future Balkan federation, the basic underlying reason for the split was Tito's objection to Stalin's postwar foreign policy. The Yugoslav Communist leadership increasingly felt that Stalin was overly accommodating to the wartime Western allies, ready to grant them their sphere of influence in Western Europe, and that the USSR was not prepared to recognise Yugoslavia's leading role among European Communist parties. Tito's leadership in Belgrade was not willing to compromise its independence from the Soviet Communist Party which it had acquired during the Second World War by fighting and winning a civil war and a war against the Axis across Yugoslavia. It now rejected Soviet foreign policy in the post-Second World War world.

The Nikita Khrushchev-led Soviet–Yugoslav rapprochement of 1955 led only to a second conflict in 1956 when the USSR invaded Hungary. Military action to prevent a revolution in Hungary made the geographical and ideological position of Yugoslavia more difficult; Yugoslavia was an independent one-party communist state in Europe outside the Warsaw Pact. The Yugoslav leadership surrounding Tito still did not desire a close connection between the Yugoslav and Soviet Communist parties, and Tito himself underlined a need for state sovereignty also in foreign policy.

The second Yugoslav–Soviet split led to a permanent disconnection in the years after 1956. In that same year Egypt experienced a challenge from Great Britain and France in the form of the Suez crises. When Egypt decided to nationalise the Suez Canal, Israeli troops with the support of Great Britain and France invaded the waterway in October. The incident ended when British and French troops were replaced by UN peacekeepers in November 1956 and Israeli troops were withdrawn in March 1957. Nasser in Egypt also came to seek a foreign policy alternative after the invasion of the Suez Canal by stepping away from British and French pressure.

The political leaders of Yugoslavia and Egypt then began, with renewed political will, to look for an association and a geographical centre of gravity by means of which they could enforce their foreign policy agendas and secure the independent futures of their states outside the politics of the USSR (in the case of Yugoslavia) and the Western Allies (in the case of Egypt). Tito and Nasser strove to gather together the elements for the so-called Third Way from among those states which did not officially belong to either the US or the Soviet bloc.

Following Yugoslavia's expulsion from the Soviet bloc, the Yugoslav Communist Party leadership had sought refuge, successfully, in building wider international foreign policy connections. The party had increasingly granted to its foreign ministry the resources necessary to establish a broader and more important range of diplomatic relations than those of other Eastern European states. Yugoslavia quickly became a member of the UN, and achieved a term as a nonpermanent member of the Security Council as early as January 1950. It notoriously accused the USSR at the UN General Assembly of having started the Korean conflict. The country's representatives to the UN became very skilled at launching and supporting resolutions and other initiatives within the organisation. Yugoslavia was prepared to support to Egypt at the General Assembly over the Suez crises, securing a special emergency session under the 'Uniting for Peace' resolution. It also gave early and vocal support for a UN Emergency Force to intervene days after the Israeli invasion, and this prepared the way for Egyptian collaboration in later years in helping to organise the inaugural conference of the Non-Aligned Movement in Belgrade in September 1961 (see for example UN General Assembly 1956).

For Tito and for Nasser the Non-Aligned Movement served as a foreign policy solution against geo-political dilemmas posed by the USSR and by Britain and France, and it sought legitimacy in foreign policy away from the USSR and the Western Allies. The movement was internationally recognised and became highly visible through the influence of news media, and also helped to justify the domestic policies of 'brotherhood and unity' in Yugoslavia and Arab nationalism in Egypt. Both Tito and Nasser utilised images of the movement politically to convey its

international significance and its global weight. The leaders of the two states, and Tito in particular, dominated the political agenda of the movement in its early period. The first summit conferences of the organisation were held in Belgrade (1961) and Cairo (1964). Yugoslavia had not been engaged in the anti-colonial struggle before the birth of the Non-Aligned Movement. Despite the overwhelmingly global themes and anti-colonial context of the movement, Yugoslavia was not an anti-colonial state. Rather, it had established itself via the Non-Aligned Movement as firmly against the domination of its Communist Party and state by the USSR. The roots of Third Way politics through the key influences of Yugoslavia and Egypt were intimately connected to the need to shelter foreign and domestic politics from Superpower influence and the desire and need to build sovereign state structures after the Second World War.

The Role of the Global South and Asia

Many scholars have described the 1955 Asian–African meeting in Bandung, Indonesia, as a significant stage in the creation of the Non-Aligned Movement. The Bandung summit did bring together all 29 independent states of Asia and Africa except for Korea and Israel, and it raised many topics and debates of race and geo-politics which in the later decades of the 1970s and 1980s became crucially important to discussions within the Non-Aligned Movement as well (Lee 2010; Tan and Acharya 2008). These issues included, among others, anti-colonialism, the role of Soviet domination in Eastern Europe, and military pacts. The Bandung meeting was the first occasion on which a group of former colonial states gathered together without European powers, and it therefore played a significant role in the chronology of the post-colonial era. In 1960, the Indonesian leader Sukarno argued that the inaugural meeting of the Non-Aligned Movement at Belgrade should be planned as a follow-up to Bandung, or as a second Bandung. However, since such a theme would have limited the scope specifically to Afro-Asian states this did not come to pass. The

organisers of the Belgrade meeting, Tito and Nasser, did not accept this approach during the final preparations at the Cairo preparatory meeting of 5–12 June 1961 (Willets 1978). In fact, there is no evidence of an absolute connection between the birth of the Non-Aligned Movement and the Bandung conference of Afro-Asian states, despite numerous scholarly references to specific links between the two.

African and Asian states were crucially important to the Non-Aligned Movement in the wider context of the Global Cold War, and gave also crucial impetus to the organisation of its inaugural meeting: in the year preceding it alone, 16 new African states became independent and joined the UN. In 1960 the Algerian guerrilla war of independence against France (1954–62) was still running its cruel course and was a constant security concern across the Mediterranean. In the same year, in his speech to the General Assembly's 15th session, Khrushchev banged on the podium with a shoe that he had brought in his briefcase, in an attempt to inspire and persuade the Third World to support the USSR instead of the United States in the Cold War. In these circumstances of escalating geo-political unrest Tito, Nasser, the Indian leader Jawaharlal Nehru, the leader of Ghana Kwame Nkrumah, and Sukarno met at Yugoslavia's permanent mission to the UN in September 1960 to discuss a way forward for a future initiative. In the following year the continuing Cold War tensions between the US and the USSR involved Berlin as well between June and November 1961, intensifing the bi-polar fight. The ideas for the formation of an association crystallised at the inaugural conference of the Non-Aligned Movement in Belgrade, led by Tito and Nasser.

An important question regarding the birth of the movement concerns the role of India. India had become independent from the United Kingdom in 1947; its leader Nehru was an icon, and it bore legitimacy as an ideological forerunner of one of the large post-colonial states in Asia. India's foreign policy after independence has sometimes been interpreted as one of fundamental nonalignment. This is also because Nehru used this term early on. Egypt too had gained its

independence from the United Kingdom. Despite early important involvement in dialogue over the Bandung conference and the preparations for the Non-Aligned meeting, Nehru's and India's role in the actual Non-Aligned Movement was less central than has sometimes been described or than it could have been expected to be. The initial goals of the Non-Aligned Movement came to be defined as ones closely tied to representing small states outside the Superpowers of the Cold War. India's regional role in Asia and its overall role in the Global Cold War were markedly different from those of small states; India was an important power that sought to assert itself after its independence as one of the important great powers. India and its leader Nehru engaged in much debate about what a moral foreign policy in the tradition of Gandhi would consist of, but Nehru related questions of its geo-political role to the great power China. In 1954 India formulated its five principles of peaceful co-existence in a treaty with China. These included mutual respect for each other's territorial integrity and sovereignty; mutual non-aggression; mutual noninterference in each other's internal affairs; equality and mutual benefit; and peaceful coexistence. India, from its important geo-political perspective, proposed from the beginning that the Non-Aligned Movement should consist of a large number of states, among which it could have played a significant and dominant role. However, Tito and Nasser insisted on a relatively small group of states and were able to achieve their goal initially as the initiators of the first conference.

Outcomes

After the Second World War economic development remained fundamentally equated with industrialisation and the implementation of modern science within production and consumption processes. The US entered the markets of the postcolonial states in both competition and co-operation with European powers because of the enormous financial and technological capacities it possessed. The USSR entered the postcolonial markets often by default, as an alternative to Western capital and products, often especially providing armaments to post-colonial states. Both Superpowers tried to link economic co-operation to bloc alignment, but these attempts were frequently dismissed by elites of the states belonging to the Non-Aligned Movement, who believed that recent political independence fundamentally translated to the prerogative to shield the domestic decisionmaking process, and therefore technology, from foreign interventions. This was considered to be best accomplished by centralising and strengthening the institutions of the newly sovereign nation state. Thus pursuing a connection with the Non-Aligned Movement gave the nationalist elites the opportunity to select from both blocs the capital, technology, and educational institutional partnerships which they deemed most suitable for their priorities.

The resources which the Non-Aligned Movement amassed were important, for example, in Algeria, where American and Soviet concepts of modernisation had to compete with those of the Yugoslavia and later Cuba. On gaining independence in July 1962, Algeria became the arena of a multi-lateral contest between the modernisation programmes of France, the US, the USSR, and communist China. The Algerian leadership itself attached great importance to developing the country's own autonomous revolution, and saw their newly independent country as the vanguard for the rest of Africa, if not the entire Third World (Byrne 2009). The Syrian Ba'athist elite in Damascus made similar considerations: although highly wary of the risks involved in the military presence of the two Superpowers in the Mediterranean, the Ba'athists exploited the partnership with the Soviet camp to break the primacy of Western powers in the Syrian economy and foreign policy (Trentin 2010).

Yugoslavia exploited the relationships that it formed through the Non-Aligned Movement to build extensive foreign relations and participate in development and construction projects globally, including the Kemer dam in Turkey in 1954, the water supply in Lebanon in 1957, the Garabuli area dams in Libya in 1974, and the naval academy in Tripoli in 1986. The Non-Alignment Movement legitimated the practice of

differentiation of international relations and thus suited well the pluralism desired in the post-colonial states' economies and societies and by those states whose independence had otherwise been threatened in the post-war scenario.

The Relationship of the Non-Aligned Movement to Neutralism

The terms 'neutralism' and 'non-alignment' are often used interchangeably, but they should not be confused even in the historical and political context of the Cold War. One definition of neutralism is as a political strategy appropriate to the circumstances of the Cold War. The foreign policy of neutralism, as for example in the case of Finland according to the formulation of its presidents Juho K. Paasikivi and Urho Kekkonen, meant that the state would establish bilateral relations with the USSR but would remain outside the Western North Atlantic Treaty Organization (NATO), as well as outside other defensive international alignments. The experiences of Finnish–Soviet relations during and after the Second World War led the Finnish post-war political leadership to conclude that in order to avoid invasion, Finland would have to demonstrate a commitment to minimising security risks to the USSR along its European political border and to not interfering in the Soviet domination of domestic politics elsewhere in Eastern Europe. Neutral foreign policy defined by Paasikivi and Kekkonen demanded limiting relations with Euro-Atlantic institutions to economic agreements, refraining from security alliances, limiting co-operation with Western intelligence agencies, and allowing a domestic Communist Party to exist and be active. Finland shared an 800-mile-long border with the USSR, and the outcome of the post-war peace treaty threatened Finnish independence because parts of Finnish territory had been surrendered to the Soviet neighbour; Finland, like Yugoslavia and Egypt, dealt with security threats against its independence after 1945. However, Finland, like several other European states that engaged in neutralist foreign policy was not a post-colonial state.

States such as Finland and Sweden were invited to join the Non-Aligned Movement and asked to take part in its conferences. However, both of these states declined, identifying the movement as anti-colonial and also as leaning towards communist economic models. The attitudes in the 1960s were often ones of a shared interest in the declared goals of the Non-Aligned Movement, but hesitation to make the expected commitment to comment on questions relating to Superpower conflicts. Of the two states, Sweden was even more hesitant towards the movement than Finland on the USSR's border. Elements of geo-political strategy and the intention to reduce military tensions by the Non-Aligned Movement interested the European states that were engaged in a foreign policy of neutralism, but they were unwilling to criticise Western European institutions publicly. It is clear why this was an inescapable barrier for affiliation or cross-over if we consider that Finland, for example, had become an associate member of the European Free Trade Agreement EFTA in 1961, the year in which the Non-Aligned Movement was born. Neutralism foreign policy bears a closer connection to the Euro-Atlantic community through the economic ties of a few European states (Finland, Sweden, Ireland, Austria, Switzerland) to the West. In today's context it is also important to note that a country cannot be a member of both the Non-Aligned Movement and the European Union at once.

The Lack of a Coherent Agenda

The Non-Aligned Movement was never successful in formulating and putting forth a clear and ultimately effective concept of a global order as an alternative to that proposed by the two Superpowers. The agenda of the association was never crystal-clear, and instead was formulated mostly in terms of summit conference agendas, but at times it produced at a dynamic organisation which could promote several agendas and leaders at once. The organisational structure of this association was too loose, and its dynamics during various decades after its birth tended to favour

N

one part of the world and agenda over another. It was not democratic among its member states, and did not inspire solidarity. For this reason it is very difficult to define the ideology of the movement, because that would require assessing the relative importance of the different leaders of the movement and the occasions on which they were able to put forth their agendas.

In the late 1960s Non-Aligned member states struggled to agree on whether to condemn the US over its actions in Vietnam. Many of them then had also shifting partial allegiances and relationships with the USSR. Simultaneously the Arab states underlined the importance of the question of the Palestinian occupation by Israel after the 1967 war. As détente began to emerge across the European continent, there was a fear among the Non-Aligned states that the Cold War proxy conflicts would shift increasingly away from Europe to an even great extent, perhaps to their territories. Within the movement there was a general move away from presenting the limited, more coherent set of geo-political concerns of states like Yugoslavia and Egypt and towards treating anticolonialism as a more important major issue. From the 1970 Lusaka summit conference onwards, anticolonialism was placed as a main item on the agenda, whereas it had previously been listed under matters of peace and security. At the Lusaka summit the US was also directly blamed for escalating the Vietnam War. Issues including racism, apartheid, and imperialism were also raised in the agenda and were defined as forces which worked against peace. In the 1970s the movement highlighted problems of apartheid in South Africa and Portuguese colonialism, and economic issues were given more weight. Nonetheless the Non-Aligned Movement remained relevant because it was able to engage in fundamental questions including economic development. The Palestinian Liberation Organization was given observer status in the Non-Aligned Movement at the 1973 Algiers summit, but it did not agree to vote for the expulsion of Israel from the UN. After preoccupation with questions of race, post-colonialism, the Vietnam War, the Arab–Israeli conflict, and economic development in the 1970s, in the 1980s the focus of the association turned more towards Latin American concerns and priorities.

Relevance Today

As the Cold War came to an end the Non-Aligned Movement as a whole had difficulty in agreeing on a unified position on crucial events such as the USSR's invasion of Afghanistan. These issues emerged in debates, for example while setting the agenda for the Havana summit meeting in 1979. In many ways it is surprising that the movement has survived into the post-Cold War era. Its role and capacity have changed, but it continues to exist and claims to represent the interests of smaller states and a great variety of other states in international relations outside the Euro-Atlantic community.

The legacy and memory of the Non-Aligned Movement have also been utilised in current UN politics. In recent times, for example, two states emerging from Yugoslavia, Croatia and Serbia, have both sought out the structures and states of the Non-Aligned Movement to promote their foreign policy agendas. The support of Non-Aligned countries helped to vote Croatia in as a non-permanent member of the UN Security Council for 2008–09. Engagement with the legacy of the Non-Aligned Movement and the support of a significant number of African states also helped Serbia's foreign minister Vuk Jeremic to gain favour and to be voted in as the president of the UN General Assembly for 2012–13. Although many formerly communist states have sought to separate themselves from the legacies of their Cold War foreign policies, these formerly Yugoslav states have utilised their Non-Alignment past as an asset.

Bearing in mind the current interest in the Cold War period and important advances in the field of development studies, it is surprising how little we know of the Non-Aligned Movement. Studies are challenged by the lack of any single archive of documents for the association. In addition scholars have had only limited access to comprehensive collections of primary sources in many of the countries which played leading roles in the

organisation including Cuba, Egypt, Ghana, Indonesia, and the former Yugoslavia. Important research has been done on the relationships of individual countries with the Non-Alignment Movement, but more is required in order to further understand the history of this important player in the history of international relations. Once we begin to understand the strategies of the Non-Aligned Movement and the similarities as well as differences between the various member states, we will be better able to discern the historical significance of the association.

Non-governmental Organisations (NGOS)

Aziz Choudry
Canada Research Chair in Social Movement Learning and Knowledge Production, Department of Integrated Studies in Education, McGill University, QC, Canada
Centre for Education Rights and Transformation, University of Johannesburg, Johannesburg, South Africa

Definition

Non-Governmental Organisations (NGOs) have become increasingly major players across a range of social, political, economic and environmental terrains. NGOs have been active in the United Nations (UN) from the time it was established in 1945, since when the term has gained broader usage. While their politics, practices, histories and relationships to social movements, the state and capital vary, NGOs are frequently conflated with the concept of 'civil society'.

Many critics – from social movements and academia - contend that the ascendancy of NGOs is a key aspect of new market regimes that seek to replace citizen–state relationships under state

regulation with civil society–stakeholder relationships under market regulation. Further, they argue that most NGOs are key actors in maintaining, advancing and administering imperialism, undermining democracy and entrenching liberalism. Coupled with this, social movement activists often refer to the 'NGOisation' of movements and struggles – that is, their institutionalisation, professionalisation, depoliticisation, and demobilization.

Non-Governmental Organisations (NGOs)

Non-governmental organisations (NGOs) are not a new phenomenon. Arguably, we can see their earlier incarnations in the humanitarian assistance and anti-slavery societies of the late eighteenth and early nineteenth centuries, for example. Indeed, some contemporary NGOs have their roots in nineteenth-century missionary and/or faith-based charitable and philanthropic work (De Waal 1997; Manji and O'Coill 2002). NGOs have been active in the United Nations (UN) from the time it was established in 1945, since when the term has gained general currency. Today, the task of defining an NGO must contend with different descriptions employed by the state or inter-governmental institutions with which many of these organisations interact. The UN system defines an NGO as a legally constituted organisation created by natural or legal persons operating independently from any government. For the United States Agency for International Development (USAID), the term 'NGO' 'encompasses any private or nonprofit organization that is formed or organized independently from a national or local government entity' (USAID, n.d.).

On the one hand, whether or not they are active within the circuitry of the UN or other intergovernmental bodies, NGOs can be said to be defined by what they are not. Yet, on the other, the accuracy of this definition can be challenged because so many of them (although not all) depend on government funding and/or compliance with official regulation or registration requirements set by state or inter-governmental agencies. Indeed, Sangeeta Kamat (2013: xi) reminds us that

NGOs do not exist outside of the state, market or society, as some imply. She suggests that they represent 'one more institutional form through which class relations are being contested and reworked'.

The UN created institutional space for NGO participation in international policy forums such as those on population, human rights, the status of women, and the environment. Such participation, mainly of northern-based international organisations, increased throughout the 1970s and 1980s, further multiplying after the 1992 UN Conference on Environment and Development (the Rio Summit), when many more NGOs sought accreditation and access to UN fora. Improved communication technologies and international travel – for those who could afford or access these – and a growing identification of common issues and problems which transcended national borders also contributed to the rise in international NGO activity. In 1995, then UN Secretary General Boutros Boutros-Ghali (1995) said:

> Non-governmental organizations fulfil an essential representational role in the contemporary world. Their participation in international organizations is, in a way, a guarantee of the political legitimacy of those organizations. Today, on all continents, non-governmental organizations continue to multiply. ... I have had occasion to state on several occasions ... that I hoped that non-governmental organizations would be given an increasingly important place within the United Nations itself. From the standpoint of global democratization, we need the participation of international public opinion and the mobilizing power of non-governmental organizations.

In 1997, the UN General Assembly began to debate the possibility of extending the participation of NGOs to include all areas of UN activity. To obtain UN Economic and Social Council (ECOSOC) consultative status, NGOs must show that their activities are relevant to the work of ECOSOC, must have been in existence (officially registered) for at least two years, have a democratic decision-making mechanism; and the major portion of their funds should be derived from contributions from national affiliates, individual members, or other non-governmental components. The ECOSOC Committee on NGOs, comprising 19 UN member states, recommends

general, special or roster status for NGOs on the basis of an applicant's mandate, governance and financials, among other criteria (UN Department of Economic and Social Affairs, n.d.). Current UN Secretary General Ban Ki-Moon claims that the three main areas where NGOs are needed are 'sustainable development', 'disarmament', and 'helping countries in transition' (UN Radio 2011). NGOs have been dominant in the proliferation of numerous national and international coalitions and campaigns in recent years around the environment, food sovereignty, human rights, women, humanitarian intervention, aid, development, health, education and health, among other concerns. Some have played major roles in lobbying for various inter-governmental negotiations and agreements on sustainable development, the regulation of hazardous wastes, the global ban on landmines and the elimination of slavery.

International financial institutions such as the World Bank, the Asian Development Bank, the InterAmerican Development Bank and the African Development Bank have also increasingly involved NGOs (civil society organisations, CSOs) in financed development assistance. For the ADB, 'Civil society refers to groups distinct from the government and the private sector who operate around shared interests, purposes, and values. Civil society organizations (CSOs) encompass a wide range of organizations, including nongovernment organizations (NGOs); community-based organizations (CBOs); and people's organizations, mass organizations, professional associations, labor unions, private research institutes and universities, foundations, and social movements' (Asian Development Bank n.d). CSOs are increasingly involved in World Bank-financed projects in such areas as AIDS prevention, environmental protection, education, and even in macro-economic reform. Active CSO involvement in World Bank operations has risen steadily, from 21% of the total number of projects in 1990 to 82% in 2009 (World Bank, n.d.). Similarly according to the Asian Development Bank website (Asian Development Bank n.d), in 2010, 81% of approved loans, grants, and related technical assistance and 37% of stand-alone technical assistance approved included some form of CSO

participation. In turn, and as with the UN, the policies of these institutions also set parameters for which kinds of organisations will be involved in their programmes, and the terms of dialogue or other forms of engagement with official processes.

'Civil Society', Neo-Liberalism and Geopolitics

NGOs are often complex and difficult to fit into compartmentalised analyses or typologies, although many have tried to do so. Histories and context matter. NGOs operate in so many contexts and roles that it is difficult to generalise about them. Fisher (1997) argues that there is a danger of overessentialising them and a need to unpack micropolitics, complexities, and interconnections between local sites and larger contexts. However, critics urge that we must seriously examine commonly held assumptions that portray NGOs as inherently benign, neutral, and even apolitical actors; and to analyse the roles that they play. Radha D'Souza (2010: 249) holds that the ascendancy of NGOs is a key aspect of 'new market regimes that seek ways of replacing citizen–state relationships under state regulation with civil society–stakeholder relationships under market regulation. The UN Human Development Summit and the Copenhagen Declaration in 1995 forms a watershed moment for social movements in that the neo-liberal transformation of international organisations initiated by "globalisation" and spearheaded by the World Trade Organisation targeted social movements for the regime changes'. Uncompromising in their critique of NGOs, Petras and Veltmeyer (2001: 138) view most NGOs as agents of imperialism.

> Politically the NGOs fit into the new thinking of imperialist strategists. While the IMF [International Monetary Fund], World Bank and TNCs [transnational corporations] work with domestic elites at the top to pillage the economy, the NGOs engage in a complementary activity at the bottom, neutralizing and fragmenting the burgeoning discontent that results from the savaging of the economy.

Alongside their promotion by the UN, several factors account for the growth of aid and development NGOs, and their relationships with

governments and the private sector over the past three decades. The 1990s saw the further spread of NGOs and 'civil society' organisations and rhetoric worldwide. Increasingly, governments, inter-governmental organisations and international financial institutions promoted the policy and practice of 'strengthening civil society' along with 'good governance' and decentralisation. The dominant notion of 'civil society' emphasises the rights of individuals to pursue their self-interest rather than collective rights, and upholds the interests of state and capital. It also facilitates what Kamat (2004) calls the privatisation of the notion of public interest. Wood (1995: 254–256) cautions the following:

> 'Civil society' has given private property and its possessors a command over people and their daily lives, a power enforced by the state but accountable to no one, which many an old tyrannical state would have envied. . . . The rediscovery of liberalism in the revival of civil society thus has two sides. It is admirable in its intention of making the left more sensitive to civil liberties and the dangers of state oppression. But the cult of civil society also tends to reproduce the mystifications of liberalism, disguising the coercions of civil society and obscuring the ways in which the state oppression itself is rooted in the exploitative and coercive relations of civil society.

Given the role of NGOs as key 'civil society' actors, and indeed the conflation of the two concepts, Wood's observation seems highly pertinent.

Fowler (2000) sees a number of factors which account for the growth of NGOs involved in Third-World development, and their increased relationships with governments and the private sector. He sees the rightward shift in northern politics during the Reagan-Thatcher era as key to 'the start of the rise in official finance to, and number of NGOs that continues today' (2). This was due to the move away from government to the market as the engine of growth and progress, and 'meant more responsibility to citizens and their organizations' (ibid.). Although funds used to flow primarily from northern governments or financial institutions to southern governments, Many NGOs have increasingly become channels for, and direct recipients of this 'development assistance' (Biel 2000; Hancock 1989; Petras and Veltmeyer 2001; Wallace 2003). Priorities

for official development assistance had shifted gears after the end of the Cold War. Increasingly, governments, inter-governmental organisations and international financial institutions promoted the policy and practice of 'strengthening civil society' along with 'good governance' (Petras and Veltmeyer 2001, 2005; Veltmeyer 2007). These are intrinsic pillars of neo-liberal policy, as Kamat (2004) and Petras and Veltmeyer (2005) argue. Northern government and private-sector funding agencies resourced NGOs as part of an economic and foreign-policy strategy to 'democratize' countries through 'civil society' (Mojab 2009; Petras and Veltmeyer 2001, 2005; Veltmeyer 2007) in a unipolar world. With the invasion and occupation of Afghanistan and Iraq, as well as the broader focus on geopolitical and security concerns in economic and foreign policy since the attacks of 11 September 2001, came renewed explicit linkages gathering state actors, the private sector, and NGOs in the name of development, humanitarianism, peace, and security (Bebbington et al. 2008; Mojab 2009); what others have referenced as the militarisation of aid or humanitarian imperialism as development and security agendas cohere in the interests of global capitalist governance (Bricmont 2006; Duffield 2001). This entailed support for only a limited restructured state, free-market economic reforms, and an increased role for NGOs and private-sector organisations in providing social services and local development initiatives. For Kamat (2004) and Petras and Veltmeyer (2005), the professionalisation of community-based NGOs and their depoliticisation works well for neo-liberal regimes. Indeed, for Petras and Veltmeyer, this serves to keep 'the existing power structure (vis-à-vis the distribution of society's resources) intact while promoting a degree (and a local form) of change and development' (20). Instead, these organisations merely seek to ameliorate some of the social or environmental impacts through community development and participation-based development projects (on NGOs in Bangladesh and Sri Lanka, see Fernando 2011). With the rise of a range of international/community development, advocacy and other NGOs and the enlargement of

NGO-political-space, forms of hegemonic NGO politics emerged, wherein the terms of social change amount to limited gains as opportunities might permit *within* existing structures (Choudry and Shragge 2012). While there are NGOs which openly contest the power of states and capital, these are a minority. For Kamat (2004: 171), rather than 'deepening the gains made on the basis of popular democratic struggles, NGOs are being re-inscribed in the current policy discourse in ways that strengthen liberalism and undermine democracy'.

In many cases, and by no means only in the international development sector, NGOs have grown to fill gaps in providing services and public goods instead of the public sector. In many countries they also provide job opportunities for former civil servants as the public sector is slashed (Burrowes et al. 2007; Petras and Veltmeyer 2001).

Many NGOs are themselves sites of considerable internal struggle over politics, positioning, programme priorities – and power. They represent a multiplicity of agendas, functions, and organisational structures, and reflect a spectrum of histories, values, approaches to practice and ideologies. While the term 'NGO' is usually assumed to signify a nonprofit organisation, some NGOs are little more than businesses (Hancock 1989; Jordan and Maloney 1997; Petras and Veltmeyer 2001; Reinsborough 2004) and/or corporate structures. Some are volunteer-driven, and/or emerge from popular movements and a claim to have a democratic structure. Others, as Gallin (2000: 27) notes, 'have a self-appointed and co-opted leadership, are not accountable to any constituency other than public opinion and their funders, do not provide public financial information, and have no clear monitoring and evaluation procedures'. In different contexts, a range of NGO-related acronyms are used to further classify NGOs: business-interested NGOs (BINGOs), royal family NGOs/ religious NGOs (RINGOs), government-sponsored NGOs (GONGOs), environmental NGOs (ENGOs), among others.

Some NGOs contract directly with the state to provide services, some receive state and private sector funding, while others rely on charitable donations. Writing about international aid NGOs, De Waal (1997: 66) believes that:

> the expansion of internationalized humanitarianism in the 1980s and 1990s reflects a retreat from accountability, akin to the dominance of neoliberalism. This is no coincidence: the internationalization of social welfare is closely linked to the decline of state authority, which is central to the neo-liberal project. The humanitarian international may be the 'human face' of neo-liberalism, but it is a charitable face with little accountability.

He sees both neo-liberalism and international humanitarianism being used as justifications for foreign institutions to intrude into the domestic politics of Third-World countries. The imposition of neo-liberal policies is entirely consistent with downloading responsibility for service provision and development projects from the state onto NGOs and communities. For Kamat (2004) and Petras and Veltmeyer (2005), the professionalisation of community-based NGOs and their depoliticisation works well for neo-liberal regimes. Petras and Veltmeyer suggest that they keep 'the existing power structure (vis-à-vis the distribution of society's resources) intact while promoting a degree (and a local form) of change and development' (20).

Some NGOs have been set up by business lobby groups and industry think tanks and have been successful in gaining access to international policy forums through accreditation as NGOs or CSOs (Kamat 2004). Some supposedly community organisations, such as 'BINGOs', have been set up by corporations and public-relations consultants in an effort to counter opposition to corporate power and shape public opinion and debate on environmental and social issues As Beder (1997) notes, to cite one example of this trend, the 'Wise Use Movement' which emerged in the US, Canada and Australia in the 1980s and 1990s (which has campaigned against environmentalists, environmental regulation, and for guaranteed access for mining and forestry on public lands) portrayed itself as a 'poorly financed, grassroots movement' (51). But in the US it has been 'stage-managed' by a conservative foundation, the Center for the Defense of Free Enterprise. Many of the groups within the Wise Use Movement have received substantial industry funding and support.

N

In other cases, corporations sponsor or form 'partnerships' with existing NGOs in an attempt to improve their image. This phenomenon is well documented in Beder (1997), Dauvergne and LeBaron (2014), Lubbers (2002), and Rowell (1996). John Hilary (2013) notes the partnerships between a number of NGOs with big business and their active involvement in the 'corporate social responsibility'(CSR) programmes of business: 'This collaborationist turn on the part of NGOs – increasingly pronounced in recent years – has contributed to the closing down of critical space, as corporations have been able to point to their partnerships with "respectable" civil society (especially NGOs from the global North) as a means of marginalising more radical opposition to their operations and to the system as a whole' (147–148).

Some NGOs are essentially community-service or advocacy organisations with little focus on broader social, political, or economic issues, and no links to social movements. Others operate at a local and national level and combine policy analysis, lobbying, and mobilisation. 'Development' NGOs, largely but not solely based in the North, still focus mainly on poverty relief overseas, and are increasingly channels for government aid and development budgets. Some of these organisations maintain a very narrow, specialised, single-issue focus, while others have a broader global and local perspective.

In sum, the category 'NGO' is itself open to manipulation and control by states and intergovernmental institutions either through legal means such as NGO registration laws or through funding relations which allow for surveillance and regulation of NGO activities. This includes the power to confer or revoke charitable or tax-exempt status, and funding relationships which shape NGO policies and positions.

NGOisation and NGOism?

US activist and author Patrick Reinsborough writes:

> Just as service oriented NGOs have been tapped to fill the voids left by the state or the market, so have social change NGOs arisen to streamline the chaotic

> business of dissent. Let's call this trend NGOism, the belief – sometimes found among professional 'campaigners' – that social change is a highly specialized profession best left to experienced strategists, negotiators and policy wonks. NGOism is the conceit that intermediary organizations of paid staff, rather than communities, organizing themselves into movements, will be enough to save the world. (2004: 194)

The term 'NGOism' has become common among many in social movements and activist networks, especially those with commitments to decentralised, non-hierarchical modes of organising and mass-based peoples' movements with more radical platforms (Petras and Veltmeyer 2001; Reinsborough 2004). Many social movement activists also speak of the 'NGOisation' of movements and struggles – that is, their institutionalisation, professionalisation, depoliticisation, and demobilisation (Armstrong and Prashad 2005; Burrowes et al. 2007; Choudry and Kapoor 2013; Kamat 2004; Smith 2007a). Kamat (2004) argues that this process is driven by the neoliberal policy context in which NGOs operate. Organisations must demonstrate managerial and technical capabilities to administer, monitor, and account for project funding. While there are some NGOs which do serve people's movements struggling for more radical social change (see Africa 2013 for examples from the Philippines), mass-based organisations of movements who represent their demands themselves through various forms of political mobilisation have often been in conflict with organisations which claim to represent the poor and marginalised, but in fact have no mass base or popular mandate (Faraclas 2001; McNally 2002; Petras and Veltmeyer 2001, 2003, 2005; Veltmeyer 2007). When they are neither internally democratic nor accountable to a mass base, how are NGO demands for greater democracy and transparency of states or inter-governmental institutions and their legitimacy to speak on behalf of 'the people' to be understood?

NGOs, Policing Dissent, and Gatekeeping

Petras and Veltmeyer (2001) see the vast majority of NGOs as serving to displace, destroy. or neutralise

social movements fighting for economic and social injustice throughout the Third World. Elsewhere, they write that 'the forced professionalization of the community-based NGOs, and their subsequent depoliticization, represent two sides of the same development, producing a common set of effects: to keep the existing power structure (vis-à-vis the distribution of society's resources) intact while promoting a degree (and a local form) of change and development' (2005: 20). For these authors most NGOs are 'intellectual policemen who define "acceptable" research, distribute research funds and filter out topics and perspectives that project a class analysis and struggle perspective' (2001: 137). Some NGOs – especially aid and development agencies with funding relationships with partner organisations in the Third World, as well as some established research and advocacy NGOs in both North and South – position themselves as the gate-keepers between social movements and other organisations. That is, they act as intermediaries, and yet their roles and interests in doing so and the power inherent in acting in this way, are frequently opaque and rarely subject to critical examination (Burrowes et al. 2007; Choudry and Shragge 2012). Townsend and Townsend (2004: 281) note that gatekeeper NGOs 'command the discourse, can write the funding proposals . . . and are "in the information loop"', often creating a sense of powerlessness for those on the outside. Northern NGOs and social movement activists may be unaware of – or unconcerned about – whether Southern organisations and their representatives have a genuine grass-roots base; or, rather, whether they represent a professional class of NGO representatives with access to international networks but no accountability to those they claim to serve.

In many NGO networks, there is much focus on development and development models which often obscure the capitalist relations which underpin them. Critics charge that these organisations often merely seek to ameliorate some of the social or environmental impacts through community development and participation-based development projects. With their praxis and principles usually rooted in liberal notions about society and the state, many NGOs have distanced themselves from, or stigmatised activists and

movements that drew from Marxist traditions as doctrinaire, anachronistic ideologues, excluding them from their events (Petras 2002; Petras and Veltmeyer 2001). In some cases there is outright hostility and suspicion towards NGOs from mass movements, especially towards those which receive government and/or foreign funding. Further, some NGOs have been charged with, and exposed as complicit in, counter-insurgency and intelligence-gathering operations for domestic and foreign state powers (see, for example, Williams 2011). Does the institutionalisation and bureaucratisation of organisational forms advance or inhibit movements for social change? Do NGOs open up political space or represent a new form of regulation and containment?

Discussing human rights advocacy NGOs, Richard Falk (1999: 98) argues that:

> [t]he main human rights NGOs were very much outgrowths of Western liberal internationalism and looked mainly outward to identify abuses in Communist and Third World countries. In part, this reflected civilizational, as well as partisan and ideologized, orientations. It was expressed by a very selective emphasis by human rights organizations on the abuse of dissenters and political opposition or on the denial of Western-style political liberties . . . . In other words, human rights progress, while definitely subversive of statist pretensions in certain key respects, still remained generally compatible with the maintenance of existing geopolitical structures of authority and wealth in the world and, as such, exerted only a marginal influence.

Funding and other material support can orient NGOs to prioritise institutional survival and maintenance at the expense of mobilisation: NGO actions may be shaped by material incentives. This has implications for the professionalisation of social change (Reinsborough 2004; Smith 2007b) and the spread of forms of marketisation, territorialism, and competition among NGOs. Petras and Veltmeyer (2001) see the vast majority of NGOs as serving to displace, destroy, or neutralise social movements fighting for economic and social injustice throughout the Third World. Williams (2010) suggests that NGO-led processes of human rights intervention are often inherently imperialist and colonial, as opposed to struggles which address the processes of imperialism and colonialism as explicit targets for political action.

He contends that this is made evident in many NGOs' tolerance for and complicity with development/market violence in contexts of displacement and dispossession. Within the context of neo-liberal transformation, development and advocacy NGOs in particular come to contribute to managing and structuring dissent, channelling this into organisational structures and processes that do not threaten underlying power relations. Further, these organisations often act to absorb cuts in services and a reduced role for the state under neo-liberal restructuring and/or as a safety valve or lid on more militant opposition against such policies (Choudry and Shragge 2012).

Greenfield (2001), McNally (2002), and Petras and Veltmeyer (2001) suggest that most NGOs tend to operate in ways which accept capitalist globalisation rather than seeking to transform the system altogether. Instead, many of these organisations have focused on lobbying and trying to influence elites rather than movement building. In doing so, they have often become more driven by notions of polite reformism and self-interest in the maintenance of their organisation and funding relationships – and ultimately serve dominant political and economic interests (McNally 2002; Rojas 2007; Smith 2007a). In some cases, these organisations have become corporate entities in their own right (Blood 2005), part of what Rojas (2007) and Smith (2007b) describe as 'the non-profit industrial complex' (Smith 2007b: 3), modelled after capitalist structures. While some NGOs maintain a focus almost solely on the international arena, and some look for new opportunities for political leverage at a supranational or transnational level, for many NGOs and social movements the state remains both a target and terrain of struggle (Goodman 2002; Keck and Sikkink 1998). Some NGOs co-operate closely with domestic governments at an international level, while others are diametrically opposed to such collaboration. Organisations that frame their demands in liberal social-democratic traditions tend to demand a humanised form of capitalism and a retooled state, although some view incremental gains and reforms as necessary steps in a longer-term transformation of society and social and economic relations.

Goodman (2002: xvii) raises important questions about the legitimacy of international NGOs, predominantly based in the North, becoming vehicles for 'people power' in this international space, and also questions their political leverage and institutional capacity to perform this task. He sees NGOs that operate at this level as broadly reformist, seeking greater institutional accountability and the formulation of goals that address popular priorities rather than elite interests. But this mode of operating is itself elitist and only open to a privileged few with access (albeit limited and contested) to either critique or advise agents of globalisation, and who are willing to operate within the parameters set by those institutions. The ability for these actors to pursue such a mode of action is frequently linked to their relationships with state governments in Northern countries, and the fact that their ideologies and political platforms do not reject the fundamental principles of these institutions.

Yet some NGOs were set up by, and have managed to remain attached and accountable to, people's movements for specific purposes (Burrowes et al. 2007; Petras and Veltmeyer 2001, 2005; Rojas 2007). However, these tend to be exceptions. Such organisations are often hybrid activist/social movement organisations which work at building social movements and community mobilisation, and are also constituted in a way to be recognised in an organisational form which allows them to seek support from philanthropic foundations, or state funding and tax-exempt status where these exist (Burrowes et al. 2007; Smith 2007b). For example, Burrowes et al. (2007: 231) note that Brazil's Movimento dos Trabalhadore Rurais Sem Terra MST; a landless rural workers' movement) has had strategic relationships with NGOs, many of which 'were started at the request of the movements, usually to provide specific skills or resources' but 'ultimately . . . are not essential. If those NGOs collapsed tomorrow, the movements would remain intact'.

Like Petras and Veltmeyer (2001), Fowler sees another factor in the emergence of NGOs as the creation of a safer space for intellectuals and others on the left during periods of heightened

repression, often under authoritarian dictatorships. Meanwhile, sometimes funded by northern NGOs, private foundations, and government development-assistance programmes, some Third-World NGOs have been vehicles for relatively privileged intellectuals to research, or to conduct professionalised lobbying of, governments or international institutions, but have later reached out to social movements as their legitimacy and lack of a grass-roots base have been challenged, for example, in the context of the growth of the global justice movement.

Some NGOs with roots in popular progressive social movements become disconnected from them and institutionalised (Burrowes et al. 2007; Petras and Veltmeyer 2005). Kamat (2004) highlights a shift among community-based NGOs (sometimes referred to as community-based organisations or CBOs) in a number of Third-World contexts 'from broad-based political education and organization of the poor to providing social and economic inputs based on a technical assessment of capacities and needs of the community' (168). This resonates with critical perspectives on trends in community organising in the global North. For Piven and Cloward (1977: xi), for example, writing on poor people's movements in the US, '[o]rganizations endure, in short, by abandoning their oppositional politics'. They hold that the preoccupation with financial survival, and building and maintaining these organisations divert energy and resources away from organising and escalating popular protest movements, and indeed often blunts or curbs them. This trend can be seen at the local, national, and international levels, where many NGOs lose their capacity (assuming that they ever had one) to remain critical or to support popular education and mobilisation programmes. For Biel (2000: 298), NGOs as key actors in a liberal pluralist civil society are central to a 'new political economy of co-opted empowerment' which promotes fragmentation and inhibits 'the gathering-together of the forces of the poor'. Mathew (2005: 193) also notes the 'self-fragmenting' tendency of progressive movements in the US which comes with the institutionalisation of the separation of communities at each and every level possible,

resulting in a rise and proliferation of community-based organisations which each have their own interests (but not necessarily accountability back to the community that they claim to represent). Yet Rucht (1999: 220) notes that the 'shift from radical challenger groups to pragmatically oriented pressure organizations' can lead to a 're-radicalization at the fringes'. Thus, while changed structures and self-interest in organisational survival may often lead to changed, deradicalised ideologies, this process of institutionalisation can drive others to seek different, more contestational forms of politics and models for their movements. In this dynamic and in longer-term social movement struggles arguably lie the most compelling prospects for building intellectual spaces, counter-power, and action for systemic change that go beyond dominant NGO/'civil society' activities and politics.

Nordic Colonialism and Indigenous Peoples

Tiffany Boyle[1] and Jessica Carden[2]
[1]Mother Tongue, Stockholm, Sweden
[2]University of the Arts London, Research Centre for Transnational Art, Identity and Nation, London, UK

Definition

Nordic colonialism of the land inhabited by Arctic indigenous peoples, although having earlier precedents in the region, came into full force with the mercantilism of seventeenth- and eighteenth-century Europe, and the subsequently confirmed dissolution in 1814 of the Denmark–Norway personal union as a result of their losses in the Napoleonic Wars.

This essay will focus on two of the most prominent examples of Nordic colonialism of indigenous peoples in the Arctic region: the Inuit of Greenland and Sweden–Sámi relations. It will focus largely on the period from the seventeenth century onwards, and place significant emphasis on the recent history of the Sámi and Inuit, since de-colonisation in the region is a relatively late phenomena still in flux (or arguably, yet to begin).

From No Colonialism to Post-colonialism

Nordic colonialism of the land inhabited by Arctic indigenous peoples, although having earlier precedents in the region, came into full force with the mercantilism of seventeenth- and eighteenth-century Europe, and the subsequently confirmed dissolution in 1814 of the Denmark–Norway personal union as a result of their losses in the Napoleonic Wars. The colonial powers in the Nordic region from this point onwards were Sweden and Denmark, whose separate colonial policy making was 'often guided by regional competition over the Baltic trade and the control of the Sound' (Naum and Nordin 2013, p. 8). Dominating Arctic indigenous peoples and their land was a

N

means to securing control over 'the mining industry and other assets such as fur, game and natural resources' (ibid.). Territories were charted, mapped out, and domesticated; the subordination of the land going 'hand in hand with [the] domestication of its dwellers' (Lindmark 2013, p. 133). There are approximately 400,000 Arctic indigenous people residing in the circumpolar region, divided between eight Arctic countries; Canada, United States, Russia, Finland, Sweden, Norway, Iceland, and Denmark. There are over 40 different ethnic groups indigenous to the Arctic, including amongst others the Sámi [also spelled Saami] in circumpolar areas of Finland, Sweden, Norway, and north-west Russia; Nenets, Khanty, Evenk and Chukchi in Russia; Aleut, Yupik, and Inuit (Iñupiat) in Alaska; Inuit (Inuvialuit) in Canada; and Inuit (Kalaallit) in Greenland (Arctic Centre of Lapland 2010).

This essay will focus on two of the most prominent examples of Nordic colonialism of indigenous peoples in the Arctic region: the Inuit of Greenland and Sweden–Sámi relations. It will focus largely on the period from the seventeenth century onwards, and place significant emphasis on the recent history of the Sámi and Inuit, since de-colonisation in the region is a relatively late phenomena still in flux (or arguably, yet to begin). Both examples follow the distinctive characteristic of the colonial relationship in that neither of the colonised parties has chosen whom they have been dominated by for the past 500 years (Gad 2009, p. 149).

There are many specificities of the Nordic colonial context that denote its contemporary significance. As the scholar Lars Jensen has identified, what distinguishes 'each and every European imperial power from the others, is the particular culture around imperialism that grew out both of the imperial experiences with the colonised world, and imperialism's relationship to nationalism' (Jensen 2008, p. 59). In the case of Sweden and Denmark, therefore, what is particular is the lack of acknowledgement: a strong element of denial exists in Sweden and Denmark with regards to the ownership of colonial holdings. As the sociologists Stan Cohen and Paul Gilroy have noted, denial in social, historical,

political and psychological terms requires constant reiteration, and thus functions as a major site of repression. Even when the existence of colonies is acknowledged, the majority opinion seems to be that the Danish and Swedish empires were 'smaller, less violent, and made less money than the other empires did from their colonies' (60). For example, it is often noted in the context of the paternalistic relationship between Denmark and Greenland that the Danish administration never resorted to violent actions against the Greenlandic Inuit. It is worth noting that any 'gentleness' (Petersen 1995, p. 18) that may have existed on the side of the Danish and Swedish colonists was not necessarily the result of more liberal or humanistic values, but instead an indicator of their 'small-time agent status, [and failures on] the very tenets of colonialism' (Horning 2013, p. 298). Sweden, for example, never established a profitable Caribbean venture; accepting the near barren island of St Barthelémy, which it gave back to France in 1878 after less than 100 years' rule. This prolific reworking of the past is heavily intertwined with the Nordic countries' modern reputation, known throughout the world, for best demonstrating the practice of 'social democratic principles' (Gilroy 2006) and in the Swedish context also political neutrality and intake of political refugees. This reworking and creation of 'national blind-spot[s]' (Jensen 2008, p. 61) was fabricated in:

> the twentieth-century [as the] Danish perception of its national identity was transformed from a multi-cultural, multiethnic seafarers' nation involved in the worlds' politics into the idea of an agrarian-based and mono-cultural society. ... Twentieth-century Denmark was *deglobalized,* i.e. seemingly detached from the ebbs and flows of colonial and global history. The development in Sweden was rather similar, only here the colonial past and the notion of colonial history played an even smaller part than in Denmark. The Swedish historic narrative is colored by methodological nationalism, meaning that the state, nation and history are three aspects of a common whole – one can hardly be separated from the other. (Naum 2013, p. 4)

The imperialist undertakings of the Danish and Swedish administrations are often described as internal colonialism, within which political and economic inequalities are inbuilt into the

governing apparatus between regions of the nation state. It is significant, however, to bear in mind that such definitions tend to place more emphasis on the role of the colonisers and their vantage point, whereas the following definition from Sukarno of Indonesia explicates the perspective of those colonised: 'a situation in which a people was governed by other people politically, economically, intellectually and physically' (Petersen 1995, p. 119). As such, we must place at the forefront of this entry the following enquiry from Kobena Mercer: '[H]ow is the temporal quality of belated recognition to be understood from the perspective of those, such as the Sámi, who are, in fact, historical survivors of such "internal colonialism"?' (Mercer 2006, p. 2).

Greenlandic Inuit

Danish Constitution Day, 5 June 1953, marked the legal incorporation of Greenland as a county of equal standing into the Kingdom of Denmark, the decision to do so being voted upon by Danes in Denmark, not the Greenlandic people. Please note that the exceptions to this were East Greenland and Thule in northernmost West Greenland, neither of which was integrated until the early 1960s, as noted by Mette Rønsager (2008, p. 71). Alongside the award of two seats to Greenland within the Danish Parliament, this signalled the formal end of Greenland's colonial status and the official integration of its inhabitants as Danish citizens (Gad 2009, p. 136). This was then followed by: the Home Rule Act of 1979; favourable results in a nonbinding referendum on self-governance on 25 November 2008; and the subsequent assumption of, and negotiations towards, self-determination. With self-rule and the possibility of independence advocated by Greenland's two most prominent political parties Forward and Inuit Ataqatigiit, it is planned that the annual subsidies made to Greenland by Denmark will decrementally diminish. These subsidies have served to alleviate any serious 'politics of embarrassment' (Kristensen 2004) that contemporary Denmark may have experienced with regard to its previous colony, but they have also

resulted in a situation whereby it is a commonplace opinion in Denmark that the Greenlander is an 'ungrateful and somehow lacking citizen' (Jensen 2008, p. 59). Such revelations (along with statements such as the Danish prime minister's warning to the Faroe Islands in 2000: 'If you slam the door, I will slam the till' [61]) display the 'post imperial-colonial bind [as it continues] to be acted out today' (61). Greenland differed from Denmark's colonial holdings in the Caribbean, which were undertaken strictly for economic and strategic gains. Greenland was an 'inherited dependency', as the Danish vocabulary attests, to with the word *bilande* (in English: dependencies). This term was used to describe Greenland, while only trading and mission stations were labelled 'colonies' (Petersen 1995, p. 119).

The passing of time has shown the granting of independence from Denmark to Greenland to be a pragmatic decision by the Danish government, made under duress from the United Nations. It also followed the failed 1946 attempt by the US government – pre-Cold War – to buy Greenland from Denmark for a sum thought to have been in the region of $100 million (Miller 2001). The location of Greenland and the US desire for a military base there allowed Denmark to hold a disproportionate amount of influence within NATO and to have discounted membership. The decision not to sell Greenland was also based on Denmark's continued economic interests there, mining especially, and on the fact that by 1946, Greenland and the Faeroe Islands were the only two remaining vestiges of Denmark's colonial empire, Greenland surpassing by 30 times in terms of land mass (Hoydal 2006, p. 1) the territory of Denmark. Prior to 1953, representatives of the Danish government had sought to counter the articulation of Greenlandic and Faroese desire for self-governance by claiming that both nations felt Danish, which the UN rejected (Poddar et al. 2008, p. 74).

The period between 1953 and 1979 has been referred to as the 'Danisation' period of modernisation (Petersen 1995, p. 121), which included: medical campaigns; improvements in housing conditions; and the remodelling of the school system, separating it for the first time from the

(predominantly Lutheran) Church. As Robert Petersen has pointed out, the:

> modernization of Greenland was planned in Copenhagen . . . paid for by the Danish state and realized by imported Danish manpower. [Post-1953] Greenland was in fact more than ever governed politically, economically, intellectually, and physically by another people. (120–121)

Concurrent with this were the arguments that, in fact, the decolonisation process was still very much underway as membership of Greenland and the Faroe Islands within the Commonwealth of the Realm (in Danish, Rigsfællesskabet; in Greenlandic, Naalagaaffeqatigiit) continues to this day. Conversely, others assert that the process of Home Rule since 1953 has been legally void. This challenge has been made by law academics on the basis of 'nonfulfillment of the substantive and procedural prerequisites of exercizing self-determination, as well as partial misinformation provided by the Danish government to the UN' (Rytter 2008, p. 365).

Denmark's colonial ventures began in the early thirteenth century with Estonia (Jónsson 2006, p. 4), then later acquisition of Iceland, Greenland, the Faroe Islands, and the Northern Isles in the personal union of Denmark-Norway in 1524, following the demise of the 1397 Kalmar Union. Norse settlement in the west of Greenland was initially that of Icelanders and Norwegians from 986 CE (Langgård, quoted in Symonds 2013, p. 313), with these 'independent Norse medieval communities in Greenland [agreeing] to pay taxes to the Norwegian king about AD 1260' (Petersen 1995, p. 119). It was these Norse settlers who gave the nation the name of Greenland (which the Inuit themselves refer to as Kalaallit Nunaat, meaning land of the Kalaallit Inuit), and who 'disparagingly referred to the Inuit as *skraellings*, or 'small weaklings'. Paleo-Eskimo cultures are known to have entered Greenland as early as 2500 BC. Early Dorset culture emerged around 800 BC, and Thule culture (the direct ancestors of the indigenous Greenlandic Inuit population today) began to reach Greenland by 1000 CE. Although the Norse settlements disappeared, when the Danish re-established contact in the 18th century they interpreted the community ownership of land by the Inuit to mean 'no ownership or "crown land"' (120). This contact came in two particular forms: the first being Lutheran and Moravian missionaries, beginning with Hans Egede in 1711. A significant factor in the mental colonisation of the Inuit, it was largely the Church which was responsible for the transformation of the Inuit (oral) language into its written form, as 'both the Danish mission and the Moravian Brethren wrote hymnbooks in Greenlandic' (Poddar et al. 2006, p. 71). The second form of contact was through trade, which the Danish government monopolised in 1726. The Royal Greenlandic Trade Company (known as KGH: Det Kongelinge Grønlandske Handelskompani) was founded in 1776, and 'kept Greenland closed off from the rest of the world [;] even Danish citizens were not allowed to enter Greenland without a permit' (70). As in other colonies around the world, ethnographic material and artefacts were systematically collected in Greenland, particularly in the late nineteenth century, making their way into major public and royal collections in Denmark and the US. Following the Home Rule Act in 1979, 'all matters relating to museums and protection of ancient monuments' (Thorleifsen 2009, p. 26) were transferred to the home-rule government, a process which continues with the current building of the National Gallery of Greenland.

Swedish-Sápmi Relations

In the opening paragraphs of Kobena Mercer's essay 'Art as a Dialogue in Social Space' (produced as part of the exhibition series Re-Thinking Nordic Colonialism), the author stresses the importance of examining 'intra-Nordic territorial struggles [suggesting an analysis of internal colonialism with direct reference to the Sámi] as a First Nations people dealing with a colonial legacy that has not yet been recognized as such' (Mercer 2006, p. 2). Curated by Kuratorisk Aktion for the Nordic Institute for Contemporary Art (NIFCA), the project combined exhibitions with workshops, conferences, hearings, and happenings in the locations of Reykjavik (Iceland), Nuuk (Greenland), Tórshavn

(Faroe Islands), Rovaniemi (Finnish Sápmi), Copenhagen (Denmark), Helsinki (Finland), Oslo (Norway), and Stockholm (Sweden) from 24 March–25 November 2006. As Naum and Nordin point to in their analysis of Swedish expansionism, the 'whitewashed and keenly reproduced picture of minimal or noninvolvement in colonial expansion is [also] a result of adopting a narrow definition of colonialism, which reduces it to the possession of colonies in the far corners of the world' (Naum 2013, p. 4).

Sápmi (the name assigned to Samiland) extends from Idre, Dalarna in northern Norway across to the Kola Penninsula in Russia. Spanning four countries, the area's landmass has changed over time with the implementation of national borders. Following the colonial period, Sápmi measures in total 157,487km^2, with an estimated population of 70,000 indigenous people. This population is divided into: 20,000 living in Sweden; 40,000 in Norway; 6,000 in Finland; and 2,000 in Russia. The definition of what constitutes being Sámi is currently experiencing a major political flux. Sámi are best known for their semi-nomadic livelihood of reindeer herding, with other trades including coastal fishing and fur trapping. An estimated 20,000 of the population speak one of the three main Sámi languages, which are further subdivided into nine dialects, all belonging to the Uralic language family. In 2000, UNESCO declared each of the Sámi languages critically endangered, whereby the youngest speakers are grandparents or older, and who speak the language partially and infrequently (Sami – an indigenous people in Sweden). Formerly referred to as Lapps, Lapland and Lapponia (a term the Sámi consider to be pejorative, instead assigning the official name of Sámi and Sápmi), such terms continue to be used in the region for touristic purposes.

The fifteenth and sixteenh centuries marked the beginning of Swedish colonial activity in Sami ancestral land, following the discovery of silver in Nasafjäll in 1634. Mining ensued in the region and eventually resulted in the Swedish state's determination to further foster mineral riches from the land, resulting in the 1673 Lapland Bill, which officially established colonial settlement in

Sápmi. The perception of the Swedish state's expansion within the country's historiography is conceptualised as a mild intervention in agricultural terms, or at its most severe, internal colonisation. As Lindmark notes, in direct relation to the term *internal colonisation*, 'such framing of this expansion also contains the implicit perception of Sápmi as a purely Swedish region. Choosing to define Sápmi as part of the Swedish realm, one ignores the possibility of placing Swedish policy in Sápmi in a colonial context. Thus, the development of the Swedish Lapland becomes something essentially different from the colonialism practised by European powers on other continents' (Lindmark 2013, p. 132).

As Lindmark suggests, the asymmetrical colonial power relations put into place by the dominant forces of Sweden have been negated, and their actions grossly underrated by the term 'expansion' given to activity at this time. The mines reaped relatively little capital for the Swedish state and so lasted a mere 25 years. However, during this time, Sámi were subjected to indentured labour and forced migration to Norwegian soil ensued. Slavery in Sweden was banned in the early fourteenth century, with the exclusion of any Sámi who had not fully converted to Christianity. The land, rich in other raw materials such as ore and timber, continued to be mapped, measured, and divided. Tax sanctions were placed upon each province, with some Sámi communities being forced to pay taxes to three separate states as a result of imposed borderlines.

Throughout the seventeenth, eighteenth and ninteenth centuries, the Swedish state conducted 'civilising' missions. Rendering Sámi identity and practices as 'primitive', these programmes were predominantly carried out through education involving young Sámi children being extracted from their families and communities by missionaries. The programme 'was essentially driven by the desire "for a reformed, recognizable other" and [the] creation of a class of interpreters between the colonial elites and the masses they governed, native "in blood and color" but European in "tastes, in opinions, in morals and intellect"' (Bhabha, quoted in Lindmark 2013, p. 135). This educational drive forged a divide

within the Sámi communities, and provided the foundations for political dominance followed by capital gain. Concurrent with Sweden's colonial activity in the North, the state developed missions outside of Europe including the colony of New Sweden in North America (1638–55), slave trading in Africa (1649–58), and the slave trade port of Saint-Barthélèmy (1784–1878). Each of these colonial ventures was short-lived and ultimately failed (Ghose 2008, p. 419).

Perhaps informed by the prevalence of the Eugenics movement in Sweden in the ninteenth and twentieth centuries, the Sámi were defined by the state as a separate, primitive racial group, 'which resulted in paternalistic policies circumscribing the Sámi's access to education, housing, choice of profession (they were deemed capable mainly of reindeer herding) and land ownership' (419). The prevalence of racial discrimination continued to make itself apparent in the form of Swedish state papers and reports, the last case of which is an official paper dated 1945, cited as the end of such rhetoric by Lennart Lundmark in his influential text 'Swedish State Sámi Politics in the Era of Racism (ibid.). However, the Swedish state refused to acknowledge its treatment of the Sámi in a colonial context, providing the following reasons in a 1986 governmental report:

> (1) Sápmi is not located at a distance from the national states that established the borders cutting across Sámi lands; (2) the extent and influence of colonization (meaning establishment of non-Sámi settlements) and assimilation policies have been much more radical and successful than, for example the Danish influence on the Inuit of Greenland; and (3) the Nordic states have claimed the area as part of their Kingdoms since the 16th century and have never expressly carried out a colonial program in this region. (Fur 2013, p. 26)

The Swedish state did not officially recognise the Sámi as an indigenous people and national minority until 1977.

Two moments yielding significance for Sámi autonomy include the creation of the Sámi Council in 1956, with the aim of strengthening cross-border solidarity, and the establishment of the Sámi Parliament in 1993, which consists of a publicly held elected body and state authority, with the overall task of achieving a living Sámi

culture (Sami Information Centre n.d.). Whilst the parliament is not a body for self-governance and is ultimately controlled by the Swedish state, its presence marks progression for Sámi self-determination. Land and water rights, reindeer husbandry legislation, logging, military activity, tourism and debates about ever increasing climate change are amongst the challenges faced by Sámi in contemporary society.

Conclusion

There is a distinct absence of scholarship surrounding about Nordic colonialism, with a particular lack of literature available in English. Furthermore, despite the 'remarkable continuity in the [manner] in which Denmark has looked differently at its tropical and Arctic possessions' (Jensen 2008, p. 60), the scholar Lars Jensen notes the difficulty in finding writers willing to elaborate upon these parallels. Challenging the common representations of untainted histories is critical not only for multicultural European societies living within the Nordic region, but also for post-colonial discourse as an academic field. Comparisons must be drawn and engaged with in order to counteract the cultural amnesia regarding Scandinavian imperial projects, crucially in this moment of increased European anxiety surrounding notions of nationalism, purity, and the rise of the right. As the cultural theorist Paul Gilroy asserts in his essay *Colonial Crimes and Convivial Cultures,* the Nordic region is distinctive in that it is very much in the grip of what he calls *the new racism* (Gilroy 2006). Most importantly, as an historiographical project, it is essential to reinscribe indigenous peoples into a pluralised history of the region, and to acknowledge their 'formative influence' (both then and now) upon their colonisers (Jensen 2008, p. 59).

Definition

This entry follows the emergence and development of nuclear energy and nuclear weapons as part of a renewed form of imperialism during and after the Cold War. Through the cases of the United States, United Kingdom, Japan and Australia, in particular, the entry examines the links between nuclear energy, nuclear testing and security alliances. It then turns to testing by core nations in peripheral regions and the negative impacts on populations in the peripheries and on test workers and indigenous communities. It shows how radiological health regimes support the transnational nuclear industry to continue its activities. It suggests how anti-nuclear movements are necessarily a part of an anti-imperialist movement resisting a renewed form of imperialism.

Imperialism

The twenty-first century began with a profusion of ideas pertaining to empire and imperialism. Provoked by a unilateralist expansion by the US in its launch of the War on Terror in 2002–03, supported by claims of being an unrivalled military superpower and the global hegemon, many scholars have found cause to reconsider the formations of the post-war world order since 1945. Of the myriad forms of empire – political centralisation under an emperor; colonial acquisition in empire building; monopoly capitalist formations; direct military intervention and basing; ideological and material domination and subjugation of one group, nation state or ideology by another – yet another form was to emerge through the development of nuclear weapons and energy technology in the post-war world system.

Unlike the sectioning of the world into colonial assets amid the inter-imperialist rivalries for geopolitical accumulation of capital and power in the nineteenth and twentieth centuries, a new form of imperialism was forged through a Cold War conflict between two distinct spheres. The ensuing proxy and covert wars and bitter ideological conflict that enforced this division only gradually dispersed as one sphere was interpenetrated through an increasingly diversified network of private capital, industrial firms, nation states, financial and political institutions, and media outlets. From 1991, the globalised acceleration of production, circulation, and investment ran in parallel with a spreading chain of US military ('lilypad') bases and installations. In the 'new

imperialism', these military platforms served to pave the way for transnational network operations to flourish, opening and penetrating new markets (Callinicos 2003; Forte 2010: 2–5; Harvey 2003; Johnson 2007).

Certainly, the US military and economic occupations of client states such as Japan, West Germany, Italy, and to an extent the UK, established the architecture of a US-designed Cold War alliance. Having secured the US dollar as the world currency reserve, the Bretton Woods international financial institutions instrumentalised a global capitalist order in which national economies, state leadership and ruling elites at 'the periphery' were penetrated and reorganised into trade and military zones conducive to primarily US and UK banks banks and transnational corporations at 'the centre'. Where this ideological, strategic, and structural reshaping of world order by the 'Western' empire under US leadership was a prerequisite to meet the challenge of the 'Eastern' communist bloc during the Cold War, the concerns for decolonisation and local relations between and within non-aligned states, and for poverty, famine, and disease in Third- and Fourth-World societies complicated the binary struggle between the superpowers and their spheres of influence.

The interstitial operation of US 'liberal' or 'capitalist imperialism' can be traced to at least the Spanish-American war of 1898. A recent reiteration has taken the form of Washington's National Security Council and the Project for a New American Century (PNAC) since the late 1990s. (Arrighi 1994; Harvey 2003: 26–30). In this dynamic penetration of states by a combination of capital accumulation and military threat/protection, as it has been underpinned by an apparently immutable law of globalisation and decorated with exhortations to 'the good', 'freedom', 'justice', 'humanity', 'democracy', perceptions of an 'informal US empire' have been sustained (Panitch and Gindin 2004: 16–19).

There are significant design flaws in the idea of an advanced capitalist 'free' world under US leadership, however. Aside from orchestrated attacks on sovereign states, progressive or otherwise, through covert means and proxies in resource-

rich regions of interest to the US since the 1950s, the long-term structural impact of profitability and over-accumulation produced crisis in the form of recessions, inflation, and monetary instability during the 1970s (peak oil) (Brenner 1998). The Soviet occupation of Afghanistan, Iran's Islamic revolution, China's reform, and Israel's armistice with Egypt in 1979 reverberated at the very centre of imperial capital. The US responded by funding radical Islamists abroad and, together with the UK, implemented a programwhich became known as 'neoliberalism', organised labour and national protectionism by introducing further privatisation and austerity measures both at home and in developing nations through the G7, the International Monetary Fund, and the World Bank in the late 1970s and early 1980s (Freeman and Kagarlitsky 2004; Panitch and Gindin, 2004: 50).

With the unifying force of the Cold War divide and contest no longer available by 1991, the expanded transnational economic and geopolitical space put previously allied states and corporations into new alignments. NATO and the EU, backed by the neo-liberal Washington Consensus, sought to extend free-market capitalism into Eastern and Central Europe. Yet, as the US sought to control resource access and distribution, concentrate wealth and financial control in US-UK banks and corporations, and increase dependency on US military protection, with 737 US bases officially recognised in 63 countries as of 2005 and a likely total of roughly 1,000 bases, its ever increasing national debt indicated that the US was experiencing 'imperial overreach' (Johnson 2007: 143; Kolko 1994).

The process of increased economic interdependence may have reduced the likelihood of a twentieth-century-style world war, yet the 'post-war' era saw a proliferation of smaller wars, conflicts, and operations as well as famines and diseases. The legacy of direct, indirect, and pre-emptive US wars and operations from 1947 onward is instability and unquantified destruction in specific regions. While serving to warn other nations who might plan to challenge the US economically or militarily, such (para)military activities have also helped to secure greater control

over surplus extraction and the distribution of 'global resources' upon which potential rivals depend (Harvey 2003: 19). This has been dubbed 'making it safe to do business' in foreign territories.

The unlimited unilateralism of the US posture in the twenty-first century can be seen as the fruit of the past two centuries of liberal rhetoric concerning spreading good in the world, combined with long-nurtured Euro-American anxieties to contain an emergent power on the Eurasian landmass (Mackinder 1969: 89). Somewhat paradoxically, this recent form of imperialist architecture matured when US domestic instability and economic vulnerability have grown more acute. With Chinese and Japanese banks central financing asignificant proportion of US fiscal and trade deficits, the EU and NATO, China, Russia, India and Brazil, among others, and a suite of supranational corporations diversified their networks and establishing independent pacts and agreements (Arrighi 2005: 61–80). In the greater uncertainty of having neither communism nor jihadism as 'lightningrods' against which to unify multiple actors in one order, transnational and corporate militarisation is increasingly entangled within the global accumulation process.

Nuclear

In the formation of the new imperialist order, it is instructive to consider the influence of nuclear technology. Coveted as a means by which to gain access to an ascendant transnational club, it is no surprise that the permanent members of the UN Security Council rapidly developed nuclear weapons capabilities in the 1950s and 1960s. The geostrategic and economic effect on the international hierarchy indicated the importance of nuclear technology.

The US was the first in the world to prepare and conduct an atomic weapon test. Codenamed Trinity, and held in the Alamogordo, New Mexico on 16 July 1945, this was as much a symbol to mark the changing order as it was a scientific test. With the Allied West–Soviet East divide having opened up as early as 1943, informed by relational

dynamics since 1917, in June 1946 the US presented the Baruch plan to the United Nations (UNAEC) which launched the atomic age and its intrinsic dualism: 'between the quick and the dead', between 'world peace or world destruction', the 'new hope for salvation or slavery to fear'. The Soviet leaders rejected this plan as disingenuous, as the US had cast itself as the sole supplier of nuclear material and technology to the UNAEC after all other powerswere expected to reliquish all atomic-related technology and materials. On 1 July 1946 the Americans responded with Operation Crossroads, a series of atomic bomb tests on the Bikini atoll in the Marshall Islands. Eventually, the Soviet Union followed suit with its own successful atomic bomb test in 1949.

If the US could not be the sole possessor of atomic weapons, it would attempt to become the possessor of the most number of warheads while seeking to control and profit from extending a limited supply of nuclear technology to select states, thereby multiplying the threat to the socialist bloc. A nuclear trap had been set. To 'become nuclear', enormous investments were required to overcome technical engineering requirements. With the US Atomic Energy Commission (AEC) presiding over the nuclear resources, market devices and techno-political instruments, it was perceived that no nation could secure its independence without nuclear power (and protect against nuclear blackmail). Becoming nuclear meant a long-term commitment to development, structural change, and maintenance. The insecurity of the Cold War increased, as having nuclear weapons implied having to use them (as Truman would say), which meant planning for nuclear war.

As part of his 'New Look' strategy, President Eisenhower launched the Atoms for Peace program with a speech at the United Nations on 8 December 1953 to promote the peaceful use of nuclear power. Many nations were already actively sourcing uranium and nuclear resources. As most national elites were aware, nuclear power plants were inherently dual-use and could be used for both military and energy production purposes. Much like the Baruch plan, Eisenhower's rhetoric separated commercial and military aspects so as to

depoliticise nuclear power as a constructive, banal, and peaceful enterprise. The launch of the first US commercial nuclear reactor in July 1955 led to contracts with 37 nations and expressions of interest from 14 others. The US AEC quickly marketed an atomic-powered merchant ship and atomic aeroplane as well (Tanaka and Kuznick 2011).

The US aimed to compete with its communist rivals to supply nuclear technologies to Third-World nations that were seeking to protect their hard-won sovereignty and build their economies. Diffusing the operation of nuclear imperialism through neutral technopolitical devices such as the UN International Atomic Energy Association (IAEA), mandated to promote the peaceful use of nuclear power (1957), assisted in recapturing these nascent states by controlling the flow of monopolised uranium processing and nuclear technologies.

Denied access to American nuclear technology, imperialist rivals such as the UK Atomic Energy Authority (1945) launched independent atomic programmes to maintain status and leverage in the post-war system. As a case of the centre exploiting the periphery, the British turned to Commonwealth countries like Australia for the raw uranium necessary for enrichment and bomb preparation in the UK, which would then be used at test sites in Australian territory. British corporations such as Cozinc Rio Tinto (CRA) subsequently claimed the majority share of uranium mining rights, in collaboration with US, Canadian, and Australian corporations. Between 1952 and 1963, tests were held at Monte Bello Island (1952, ×1), Emu Field (1953, ×2), Maralinga (1956–57, ×7), as well as on the Kiritibati and Malden Islands of Kiribati. Dubbed a 'triumph for British scientists and industry', the radioactive fallout was passed off as being 'almost negligible'.

In 1954, when Prince Philip 'left his mark in the South Australian desert' (opening the Maralinga testing range in an area traditionally owned by the Pitjantjatjara, Kokatha, and Tjarutja people and which contained sites dating back to the giant Emu), the British military scientists had already been granted permission to 'shoot anything they liked', as the minister for external affairs, Richard Casey, put it in 1953. Instead of receiving the nuclear reactors, bombs, submarines, and satellites the Menzies Government had anticipated in return for fossicking, mining, infrastructure development, and technical assistance to the imperial alliance, Australians received 100,000km^2 of contaminated land. Ultimately, alongside the exposures to radioactive fallout suffered by indigenous inhabitants and Atomic Veterans from the tests, with the land permanently contaminated, the Maralinga and Pitjantjantjara peoples, have been removed from those particular lands were also dispossessed of their lifeways which had been passed down over millennia and which were inseparable from those lands.

In the mid-1950s, the United States Information Agency (USIA) distributed US AEC packages in countries like Australia which promoted nuclear power and isotopes as the magic elixir to reduce distances, improve crops, power cities, cure the sick, and provide industry jobs. It was further added that nuclear power would rejuvenate the 'lonely and silent outback' as a useful place that hummed with machinery. Philip Baxter (head of the Australian Atomic Energy Commission) imagined nuclear power and nuclear weapons as the way toward self-sufficiency, national security ('one man to hold off a hundred') in a region of growing uncertainty, and to ascend to great power status (Reynolds 2000).

The poisonous nuclear rituals conducted in post-colonial peripheries bound national and supranational entities to the imperial centre within the postwar realignment. The client state was rewarded for consenting to the dominant modality with a greater sense of 'security' as it facilitated greater penetration by the hegemonic power. Nuclear protocols magnified the historical relations between the internally colonised, settler colonial society, and imperial power. Just as Marshallese inhabitants of Bikini were misled and dispossessed of their ancestral home to become captive experimental subjects of the US government, indigenous Australians and Australian and British soldier-workers were neglected both prior to and after the tests and they and their progeny

N

suffered from fatal and chronic effects from exposures to blast fallout and radioactive waste.

Another client state and one of the first to sign up to the American nuclear model was Japan. Often described as a Faustian bargain, with the aid of US agencies during the Occupation period and after (1945–52), the case for the peaceful uses of nuclear power exploited received ideas about the causes of Imperial Japan's humiliating defeat – energy scarcity and superior American technology. Widely broadcast through national and local outlets including the Asahi, Chugoku, Mainichi, Nihon Keizai and Yomiuri newspapers (Takekawa 2012), for many, atomic energy was the 'third fire' which heralded the Atomic Age as part of a 'second industrial revolution'.

In order to transition Japan into a nuclear client, the US wartime narrative of 'the Japanese' had to be rapidly reversed from fanatical and undivided devotees of Imperial Japan to model students of American democracy. Imbricated with Harry S. Truman's 'Campaign for Truth' offensive against communism in 1950, a precedent of collaborating with high officials in bothImperial Japan and Nazi wartime regimes selected for their potential as intelligence assets (including former secret police, biological and nuclear weapons researchers, mafia leaders) was established putatively 'to contain' the influence of the USSR. Practised by the US Embassy, US Information Service (USIS) and CIA, among others, after 1947, if not earlier, individuals such as Shôriki Matsutarô became ideal collaborators in overcoming Japanese society's so-called 'nuclear allergy' and undermining the political left. Resuming his position as editor in chief of the *Yomiuri shinbun* after a stint at Sugamo prison as a suspected war criminal, Shôriki actively encouraged peaceful nuclear power as an apparently neutral opportunity for Japan to overcome its pariah status and renew itself as the techno-scientific-industrial powerhouse of Asia. His influence expanded when he founded the commercial station Nippon Television in 1953 (with Shibata Hidetoshi as director), which broadcast the first professional all-Japan baseball game. At the urging of a young Nakasone Yasuhirô recently returned from the US, a significant nuclear

research and development budget was passed in 1953 and General Electric reactor blueprints for local manufacturing were acquired in 1954.

At this critical juncture, in March 1954, when the path was laid for a nuclear-powered future, 23 Japanese fishermen on the *Daigo Fukuryūmaru,* among other fishing vessels and fish caught from the area, were exposed to the 15 megaton 'Bravo shot' hydrogen bomb test as part of Operation Castle on Bikini atoll. By the time the ship returned to port in Japan, one fisherman had died and the others had advanced symptoms of acute radiation sickness. Petitions organised by citizens of Tokyo and local governments saw the collection of 32 million signatures nationwide and 600 million worldwide by August 1954. Stout resistance from a nascent anti-nuclear movement led by the political left and trade unions converged in the first World Conference against Atomic and Hydrogen bombs in Hiroshima in 1955.

The foundations for a 'plutonium economy' were already underway, however. Known as the '1955 system', in that year the Liberal Democratic Party (Jimintō) was founded, the *Yomiuri* co-sponsored the Atoms for Peace exhibition in November, the US-Japan Atomic Energy Agreement was signed in December, and the Atomic Energy Basic Law was passed to found the Japanese Atomic Energy Commission (JAEC) in January 1956. Shôriki was appointed minister of atomic energy, chair of the JAEC, and head of the Science and Technology Agency. With Kishi Nobusuke, another rehabilitated war criminal, leading the LDP to victory in 1957, a pro-nuclear, pro-American conservative policy platform became the bedrock for extending and projecting US imperial policies throughout 'free Asia', in the name of containing communism. Seeing nuclear weapons as a way to stem the 'human sea' military tactics of communist powers, Kishi stated that it was not unconstitutional to acquire tactical nuclear weapons in the defence of the nation and to (re)gain power in East Asia (Office of Intelligence Research 1957: 2). Along with the bad old days of the Japanese Empire, living memories of Hiroshima and Nagasaki were converted to support a 'victimhood nationalist' narrative to support the foundations of the new nation state.

While the world was alerted to the dangers of nuclear brinksmanship during the Cuban Missile Crisis in October 1962, the massive losses of human life from a nuclear exchange had already been factored-in by US and Soviet leaders and their strategic advisors. The decisions of US leaders were informed by reports from nuclear and strategic analysts, who argued that nuclear wars, even small tactical ones, could be won (Kahn 1960; Kissinger 1957). The US had already threatened the People's Republic of China with nuclear weapons several times during the Korean War, and had accumulated a large arsenal of nuclear tipped TM-76 mace missiles stored on Okinawa for this purpose (Komine 2013; Mitchell 2012; Rabson 2013). In addition, the total number of nuclear weapons tests (ground/air, underground, underwater) and ventilations from nuclear power plants since 1945 had already dramatically raised background radiation levels in air, land, and oceans. When the US and Soviet Union signed the Partial Test Ban Treaty in 1963 it was partially due to official and scientific recognition of the fact that these activities had permanently altered the environmental conditions of the planet.

Nuclear energy and other related technological (dual-use) capabilities mirrored the arms race between the US and USSR in the 1970s and 1980s. Based on the US 'nuclear umbrella', states like Japan calibrated their defence postures so as to balance non-nuclear weapons status with a capacity to produce weapons-grade fuel, aeronautical delivery systems, and fuel for satellite systems. Multilateral and regional agreements to control nuclear proliferation, such as nuclear-free zones or UN-led arms control initiatives, have often been ignored or obstructed primarilyby the US, which prefers bilateral security agreements. For nation states with limited options for independence in the new imperialist system, nuclear weapons capabilities have proved to be a useful, if cavalier, bargaining tool to at least avoid total subjugation and collapse. As of 2014, however, undisputed military superiority has not deterred the US from committing to an expensive upgrade of its mlitary systems including nuclear weapons to meet the 'threats' posed by China and Russia.

Health and Environmental Effects

Long before the discovery of uranium fission, it was known that uranium mining produced pulmonary diseases. The consistently of such cases led to the establishment of the International Commission for Radiological Protection (ICRP). Dr Herman Müller's research on the mutagenic and generational effects of X-rays in 1928 (*Drosophila fly*) and physicians' reports on radium exposure, dust particles, and radon gases were made known in the early 1930s. From 1939, scientists employed on the Manhattan Project knew of the intergenerational health and reproductive risks posed by ingested uranium fission materials. Prior to the development of the atomic bomb, they researched the potential of fission products (strontium) for use in environmental weapons which could disperse the materials over enemy territory, and contaminate enemy food and water supplies (Conant et al. 1943; Hamilton 1943; Smyth 1945: 65, 71; Bernstein 1985: 14–17; Langley 2012).

Between the 1940s and 1960s, despite prior knowledge of the radiological warfare tests, the US AEC calculated the risk of fatality from cancer in proportion to the dose received. This was based on studies by the Atomic Bomb Casualty Commission (ABCC) on acute and short-lived external gamma exposure from a Hiroshima-type bomb within a 2 km blast radius. Averaged for the 30 year-old male, any exposure below 100 milliSv/year was considered negligible to human health. The ICRP adopted this model as the international standard for radiation exposure and safety standards. Disparities of gender, age, physiological variation, period of exposure, diet, or environmental specificity were occluded, as were non-cancer, non-genetic or non-fatal chronic illnesses (auto-immune disease, fertility impairment, or toxic combination with other carcinogens).

This ICRP standard used to dispel public fear during intensive nuclear testing in the 1950s and 1960s masked the fact that ionising radiation particles had been introduced into all levels of life for eternity (on average 100,000 years). Having recognised that even small amounts of radiation can induce some mutations, especially in the

N

reproductive cells, which can accumulate in successive generations (e.g. US National Academy of Sciences 1956), conscientious scientists (such as Linus Pauling and Andrei Sakharov) and public intellectuals actively protested against nuclear testing. In 1963, Ernest Sternglass calculated that between 1951 and 1966, fallout from nuclear testing in the US alone had caused increased infant mortality (375,000 additional deaths) and 'countless fetal deaths'. He also found greater frequency of infant asphyxiation and respiratory distress in areas downwind of nuclear reactors. (Freeman 1982: 76–81; Sternglass 1969: 26–28).

In 1971, the ICRP set a universal occupational limit of 50 mSv/y, which was revised down to 20 mSv/y in 1990. Over the past 20 years, in vitro and in vivo studies confirm that uranium products, when ingested in micro-particles, can be genotoxic (damaging DNA), cytotoxic (damaging cells), and mutagenic (mutation inducing) to living beings (US ATSDR 2013).

The geostrategic and capital investment to obtain the most 'competitive' yellowcake by powerful states and corporations has intensified the exploitation of vulnerable resource-rich states and peoples. In their precarious conditions, these states and communities have grown moredependent on the revenue generated from supplying uranium, labour, and sites for nuclear testing. They frequently argue that 'overstringent' safety measures would bring mine closures, thus placing the burden on workers in need who 'choose' to forgo the risk of radiation exposures and tolerate looser monitoring and conditions. While states and corporations have inserted barriers between them and the metropolitan regulator, the ICRP has accommodated their priorities by adopting an ALARA clause (as low as reasonably acceptable). This serves to minimise financial loss through flexible radiation protection standards (whole body testing, ambient dosimetry, whole population averaging, no alpha-beta measurements, defective records, skewed data interpretation) (Hecht 2012: 207).

This process has also been evident in Japan, an advanced capitalist technocracy, in the nuclear disaster at the Fukushima Dai-ichi Nuclear Power Station ongoing since 11 March 2011. The responses from the state, corporations,

media outlets, and institutional regulators (WHO, UNSCEAR, IAEA) to waive international standards and to downplay the huge scale of radiation releases demonstrates their entanglement within a 'global nuclear village'. While denying and trivialising the danger, and exploiting uncertainties about ionising radiation (Grover 2013), the Japanese government and the utility have selectively shared information on the reactors, delimited evacuation zones, re-set radiation safety levels, monitored food, water, soil, and air, altered diagnostic and medical registry practices, and curtailed and sought to control media reporting. This has ensured plausible deniability, minimised understanding of risk, and blocked culpability for the inevitable health damages received by a portion of the population, in Japan and elsewhere which will manifest over several decades and generations.

The implications of the unlocated totality of the corium from Reactors 1, 2, and 3 and the evaporation of water from the spent fuel pool of Unit 4, are more serious than has been officially acknowledged. Given the stochastic rather than even dispersal of radioactive contaminants, those who are most exposed are workers at the damaged nuclear reactor sites and areas of waste management and 'disposal', sites, and those who reside in environmental distribution pathways with a greater danger posed to young people and women in particular, and children and infants with their faster metabolisms. Those who were not provided with the requisite information by the government for protection from radiation exposures after 11 March, or who have not evacuated from contaminated areas (for economic reasons or otherwise), are more likely to have consistently consumed food and water that is contaminated with radioactive materials. Those who cannot afford to procure foods from elsewhere, who are ill-informed of the need to do so, or who consume it where nations have agreed to accept food products from contaminated areas as 'economic aid', are also likely to be harmed. Further, those from lower socio-economic strata who cannot afford to take respite trips, take health supplements or specialist medical care, or from nations which are denied access to expensive pharmaceutical products, are more

exposed. In Japan, citizens who are not professional scientists or doctors in Tohoku and Kanto areas are adopting methods of self-monitoring food, water, and radiation distribution in inhabited environs, using dietary mineral supplements, and selectively screening food products.

Conclusion

Since 1945, for the first time in history, human beings have developed a clear capacity to destroy conditions conducive to the continuation of human life on the planet. Ascendant in the post-war world order, the leading proponents of nuclear imperialism have facilitated the invasion, occupation, division, and dispossession of the affected lands indigenous and local peoples own and belong to, and the water, food, and air they require to sustain healthy lives. In even a limited exchange of nuclear weapons, organised human existence would be terminated (Helfland 2013). This could also occur over a longer period of time, through ingestion of on-going releases of 'low-level' radiation into the environment from uranium mines and reprocessing facilities, uranium-related weapons use, nuclear reactors, and waste sites. As the effects of radiation on the unborn and very young are far more critical than on a mature adult, adults may pass on the heritable effects of cellular damage through reproduction even if the harm they receive is ostensibly minimal. Through the intensification of cellular damage from accumulated and magnified radiation exposures, humans could extinguish themselves over subsequent generations of declining fertility.

The long latency periods from the bioaccumulation of radiotoxic materials have made it easier to conceal the effects from the past two centuries of mining, atomic tests, power plants and dumping. As nuclear technology is a pillar of the new imperialism, the global nuclear industry has steadily captured and funnelled enormous human, technical, and financial resources away from local industry and the communities that it supports, such as manufacturing and food, energy and cultural production, toward the centres

of capital. With few incentives for rigorous monitoring and safety programmes at nuclear sites, particularly in poorer economies such as in Namibia or Congo but also in the 'internal colonies' of wealthier economies such as Japan, the US, India, Canada, or Australia, the exposure and replacement of workers (including but not limited to casual, menial, itinerant, non-white, indigenous) provides a bulwark to absorb the violence of capital accumulation and its inherent risks. While disseminated confusion regarding health risks serves to blur causation between exposure, illness and comorbidities, a biopolitical regime shields the experts, bureaucrats, and business people who are invested in prolonging the nuclear regime from liability for the multiple negative impacts of industrial toxicity, at least in the short term. Invocations of stability in the form of economic and political stability and security have served to consolidate the transnational nuclear industry as a pillar in the new imperialism.

As long as the entangled relations of nuclear imperialism continue to remain invisible, it is reasonable to assume that institutional dosimetry models of radiation safety will continue to reflect its interests. It is unlikely that analysts and advisors to political and corporate leaders will have accurately or judiciously calculated the low-scores in social and environmental justice due to the high costs in reproductive capacity and clean and reliable food sources in the biosphere from the nuclear industry and its associated activities.

Some of the most critical proponents of an anti-nuclear movement are those who live on the lands which are designated for nuclear related activities and who are exposed to nuclear and other industrial sites. As witnesses to the near-permanent destruction of their life-worlds, first-nation indigenous representatives have demanded recognition of their prior ownership of lands and restitution for any damage done. Seeking to de-centre the universality of capitalist values in which economic and security evaluation transforms the commons into resources, and men and women into commodified labour, while choosing to 'outsource' any social costs as external liabilities, these voices have maintained more direct forms of surplus distribution to sustain collective

N

cultural and material autonomy and to re-include the non-negotiable 'rights of nature' in law (Gibson-Graham 2005: 5–16; Povinelli 1993). Given the alternative of permanent war, accelerated climate change, and near to mid-term extinction, a majority of humans could do worse than to take such demands seriously.

Nyerere, Julius Kamparage (1922–1999)

Mark Omorovie Ikeke
Delta State University, Abraka, Nigeria

Defnition

Julius Kamparage Nyerere committed his life to working assiduously against the oppression and marginalisation of his people. He saw colonialism as destroying cherished African and human values. He argued for the revival of those values, which he encapsulated in the term 'Ujamaa'.

Early Life and Education

Julius Kamparage Nyerere was born on 13 April 1922 and died on 14 October 1999. He was born in the village of Butiama on the eastern shores of Lake Victoria in northwestern Tanzania (formerly Tanganyika), the son of Burito Nyerere, a chief in a village of the Zanaki tribe. His mother was Mgaya Wanyang'ombe, the fifth of his father's 22 wives. He was one of 26 children. He died in a London hospital in England where he was being treated for leukaemia. A Tanzanian politician, he became the first president of Tanzania when the country achieved independence in 1961. He committed his life to working assiduously against the oppression and marginalisation of his people. He saw colonialism as destroying cherished African and human values. He argued for the revival of those values, which he encapsulated in the term 'Ujamaa'. It is worth noting that before his career as a politician he was a professional teacher, which is why he was popularly known as Mwalimu, which means teacher in the Kiswahili language.

It was not until the age of 12 that he started primary school. He had to walk a distance of about 26 miles to Musoma to attend. There he completed the 4-year programme in 3 years. In 1937 he started at Tabora Secondary School, a Roman Catholic Mission school. He was baptised as a

N

Roman Catholic on 23 December 1943 with the name Julius. While at Secondary School his excellent behaviour and intelligence were recognised by the Catholic priests who taught him, and they were the ones who encouraged and helped him to train to be a teacher at Makerere University, Kampala from 1943–45. After his teacher training and certification, he taught Biology and English for 3 years at St Mary's Secondary School, Tabora. He was then granted a government scholarship with which he was able to study for a Master of Arts degree in History and Economics at the University of Edinburgh. He obtained this degree in 1952, and was the first Taganyikan to study at a British university.

Nyerere's Politics and Views

When he returned to Tanganyika after his studies, Nyerere first taught History, English, and Kiswahili at St Francis College, near Dar es Salaam. It was there that he founded the Tanganyikan African National Union (TANU). He faced hostility from the colonial authorities, which were afraid of his political activities, and he was forced to make a choice between teaching and political activities. TANU was founded in 1954 and Nyerere was able to reorganise the divided nationalist camps into this union. He was president of the organisation until 1977. In 1958, he entered the Legislative Council, and became chief minister in 1960. His party helped in the struggle for independence, and when Tanzania was granted self-rule in 1961 he was made premier, then president on independence in 1962. In 1964 he negotiated the union of Tanganyika and Zanzibar as Tanzania. He retired from the presidency in 1985, though he remained party chairman until 1990. The *Encyclopaedia Britannica* (2012) noted that at the time Nyerere entered politics, the old League of Nations' mandate exercised by the British over Tanganyika had been converted into a United Nations trusteeship aiming at independence. And it was due to his uncompromisingly resolute stance in the quest for independence that Tanganyika was eventually to gain independence from the British.

Nyerere was not interested solely in the independence of Tanzania; he was a pan-Africanist to the core and advocated the total independence of Africa. Campbell (2010) has shown that Nyerere was one of the strong individuals who helped form the Pan-African movement for East and Central African (PAFMECA) in 1958, which would later become the Pan-African Freedom Movement for East, Central and Southern African (PAFMECSA). This organisation would help in the struggle for African independence and become 'the nucleus of the liberation committee of the Organisation of African Unity (OAU)' (178). When the OAU was formed in May 1963, its Liberation Committee opened its office in Dar es Salaam, testifying to Nyerere's and Tanzania's importance in the independence of Africa. Groups such as the African National Congress (ANC), the Pan African Congress of South Africa, FRELIMO, and many others received his support (Campbell 2010).

Nyerere was a strong voice for the rights and freedom of the African people. And so, for instance, he did not hesitate to oppose the brutal rule of Idi Amin in Uganda. When Amin dared to invade Tanzania in 1978, the Tanzanian army defeated him and restored Uganda's first president, Milton Obote. Nyerere's significant contributions also include having been the chief mediator in the Burundi conflict of 1996.

There were difficult times in his career. No African country at independence was economically self-sufficient. Colonialism had sucked the immense resources of the African soil and transferred them to the homeland of the colonialists. Like other African countries, Tanganyika was a poor country and suffered under the bondage of foreign debts after independence. Nyerere expressed his firm belief in the doctrine of Ujamaa (African socialism) and Tanzania's ability to be self-reliant in the Arusha Declaration (Nyerere 1967). He implemented policies to enhance communal agriculture and there was large-scale nationalisation. The Arusha Declaration stated that Tanzanian society aimed to provide equal rights and opportunities for all to live in peace with their neighbours free from suffering, injustice, and exploitation. All were to live a

satisfactory material life. The villages were to be organised as Ujamaa villages on a co-operative basis, with residents living and working according to the cherished value of family-hood. People all over Tanzania were to live as one family of brothers and sisters, using traditional African values rooted in socialism through sharing food, water, health services, and housing and other essential resources.

Nyerere's political views stemmed from his background and education. Campbell (2010, p. 177) writes that, 'He learned the values of sharing and cooperation that later inspired his philosophical understanding of *Ujamaa* from his local village community and the African environment'. He claims that Nyerere's studies in Scotland exposed him to the Fabian movement and socialists in the United Kingdom, and that it was during this period that his philosophical outlook on socialism and co-operation was further shaped. The Fabian movement also helped him to see a relationship between certain socialist values and African communalism.

In his book *Ujamaa: Essays in Socialism*, Nyerere (1968) argued that socialism is not foreign to traditional African society; rather it is capitalism that is the stranger. Individualism and selfish consumerism has never been part of traditional Africa. African societies lived in harmony. There was a spirit of community and brotherhood. There was a spirit of cordiality and hospitality. People readily came to the aid of those in need. He also made clear that the kind of socialism present in traditional Africa was not Marxist socialism, rooted in class struggle and violence. African society was one of 'family-hood', based on cordial family relationships. He believed that as traditional societies entered into the modern world; the idea of familyhood must be extended to embrace the whole society, the African continent, and the entire human race. Makumba (2007) rightly notes that Nyerere on this point was in consonance with Nkrumah and Kenneth Kaunda, who saw African brotherhood as larger than the tribe and embracing all humanity. It began with the family but did not end there. Love and solidarity must move from the local family to the universal family. This traditional African value

of Ujamaa helped to counter social ills such as individualism, greed, exploitation, embezzlement of public funds, and selfishness. A society that cherished Ujamaa would work towards self-reliance and freedom from freedom from foreign control and influence. Furthermore, the landmark Arusha Declaration (which equally contained TANU's policy on socialism and self-reliance) affirmed fundamental human rights such as: the right to dignity and respect; the right to freedom of expression, of movement, association, and religious belief; the right to a just wage. It also enunciated the right of the state to intervene in the economy and to act as a democratic socialist government, to co-operate with Africans engaged in liberation struggles, and to exercise effective control over the principal means of production and exchange. It is important to quote directly from the Declaration to reveal the crux of Nyerere's thinking. It states:

> Socialism is a way of life, and a socialist society cannot simply come into existence. A socialist society can only be built by those who believe in, and who themselves practice, the principles of socialism. A committed member of TANU will be a socialist and his fellow socialist – that is, his fellow believers in this political and economic system – are all those in Africa or elsewhere in the world that fight for the rights of peasants and workers. The first duty of TANU members, and especially as a TANU leader, is to accept these socialist principles, and to live one's own life in accordance with them. In particular, a genuine TANU leader will not live off the sweat of another man, nor commit any feudalistic or capitalistic actions.

> The successful implementation of socialist objectives depends very much upon the leaders, because socialism is a belief in a particular system of living, and it is difficult for leaders to promote its growth if they do not themselves accept it. TANU is involved in a war against poverty and oppression in our country; the struggle is aimed at moving the people of Tanzania (and the people of Africa as a whole) from a state of poverty to a state of prosperity. (Nyerere 1967)

Nyerere as an anti-imperialist fighter saw imperialism or colonialism as a form of capitalism, and hence rooted in the exploitation of humans by humans. In capitalism, a few individuals enrich themselves to the detriment of the masses. Many African leaders and nationalists who replaced the

colonisers simply continued the oppression of their people while enjoying abundant privileges. Omoregbe (2010, pp. 140–141), commenting on Nyerere, writes:

> Thus the perpetuation of capitalism in Africa by the colonizers and its acceptance by Africans was mainly because African leaders and nationalists were more concerned about replacing the European colonizers and enjoying the privileges that they were enjoying. All they wanted was the exit of the whites while they themselves would take their places. The people accepted capitalism because they trusted their nationalist leaders, respected them and wanted to co-operate with them.

At the heart of Nyerere's political views were the dignity and well-being of the human being. The people are at the heart of the society; everything must be done to ensure their wellbeing. The goals of socialism should foster an adult education system that makes the people free, inculcates the values of development and freedom, and enhances co-operation and solidarity among them. Nyerere's written works clearly express such values. They include, *Democracy and the Party System* (1963), *Socialism and Rural Development* (1967), *Freedom and Unity: A Selection from Writings and Speeches* (1967), *Ujamaa: Essays on Socialism* (1968), *Freedom and Socialism: A Selection from Writings and Speeches* (1968), *Freedom and Development* (1974), *Man and Development* (1974), and *Crusade for Development* (l979).

Critique and Conclusion

Nyerere's Tanzania was a one-party state. We cannot gloss over the fact that he handpicked his successor (thus violating the tenets of democracy), and left the country very poor and dependent on foreign aid. He ended up imprisoning political opponents, thus violating human rights. Some scholars may explain this away as necessary for unity in the country. In implementing his socialist vision, people were forcefully displaced and uprooted from their localities into collective farms, and many villages were burned down.

In his thought, he seems to belittle the presence of exploitation and oppression in traditional African societies. There is no gainsaying the fact that in traditional African societies there were some elements of corruption, or that some powerful people such as kings and village elders were oppressive. There were also conflicts and strife in traditional African societies, and inequalities arose as some people were considered outcast because they were children of slaves.

On the other hand, some would argue that nationalisation did not go far enough in Tanzania to allow it to succeed, with many foreign organisations maintaining their stranglehold on industry. Crucially, without workers' ownership of industry, nationalisation tended to facilitate the growth of bureaucratic state capitalism, rather than socialism. The villagisation programmes pursued by the Nyerere Government also ran into difficulties, since there was little articulation between socialist industrialisation (as opposed to the strategy of national industrialisation actually favoured) and rural collectivisation. Rather, villagisation tended to reinforce the colonial *ante,* whereby farmers continued to direct most of their efforts toward export crop production. Moreover, a class of land-owning bureaucrats took advantage of state patronage to further their individual interests at the expense of the poorer peasantry.

Ujamaa is a form of African socialism and so it is proper to evaluate it in the light of socialism. African socialism combines some values from African communal ways of life with some values from Marxist social and economic theories (Makumba 2007); Nkrumah's Consciencism, Kaunda's African Humanism, and Awolowo's Democratic Socialism are other forms. Appadurai (2004, p. 115) sees socialism as concerned with 'collective organisation of the community in the interests of the mass of the people through the common ownership and collective control of the means of production and exchange'. It arose as a protest against the exploitation, oppression, alienation, and other ills of capitalism. Socialists can be broadly divided into revolutionariy/scientific and evolutionary. On this, Appadurai (2004) states that the revolutionary group believes in bringing about socialism through violent change, and that other groups believe in gradual constitutional change.

Nyerere's Ujamaa is unlike the socialism just described, even though he called it Tanzanian socialism. In scientific socialism, socialism is just a stage on the route to a communist society. The socialist society is rooted in central economic planning, and revolutionary violent change. One of the fundamental requirements of a democratic society is that economic decisions and policies should be subjected to the democratic process either through parliament or referendum. Ujamaa did not originate from the grass roots or the people. It was Nyerere's conception of how society should be organised. Thus conceived, it was an imposition, and because of that ran into many of the problems already mentioned. Ibhawoh and Dibua (2003) have suggested that though there was nationalisation, nationalised institutions still partnered foreign firms, thus total control was not exercised by Tanzania. The implementation of Ujamaa even allowed for some private firms to own factories without state control. Indeed, Ujamaa is an aberration from socialism. Colllectivity or communalistic values do not mean a society is in consonance with socialistic values.

Pre-colonial African societies from which Nyerere drew inspiration were patriarchal, monarchical, lacked egalitarianism, and even what was owned in common was often fought over leading to the killing and destruction of peoples and properties. The many inter-tribal and ethnic wars in pre-colonial Africa negated the so-called humanistic values vaunted by Nyerere. State control did not guarantee effective restructuring of the economy and nationalisation often led to bureaucracy, inefficiency, and corruption (ibid.). A core aspect of Ujamaa was the implementation of villagisation aimed at the development of rural places. In the Ujamaa villages, people were meant to focus their lives on a common service centre (not living in separate homesteads) and the land was to be farmed by co-operative groups not individual farmers (ibid.). Many villagers were unwilling to come to the Ujamaa villages as they were afraid their lands would be nationalised. Because of this and other difficulties, the policy was abandoned in 1975 (ibid.).

Ujamaa should be evaluated within the post-independence era of Africa. It was overly optimistic and utopian. Zinhle (2010) says that as African countries were gaining independence they wanted to create a political and economic system rooted in African traditional values in opposition to capitalism, which they saw as foreign to African tradition. Ujamaa or Tanzanian socialism should never be equated with scientific socialism. Ujamaa, like some other forms of African socialism, is not materialist, atheistic, and deterministic as Marxian or scientific socialism is. While scientific socialism is mainly focused on the future of human history and society, Ujamaa looks back to draw lessons from African history. Though this is the case, both share a vision of a society free from exploitation of man by man, oppression, and alienation.

Despite the limitations and failings of Ujamaa, the social and political significance of Nyerere and his thoughts should not be underestimated. He struggled against imperialism. He advocated authentic African and human values. What Campbell (2010) writes about the significance of Nyerere is very helpful as this essay begins to draw to a close. He says of him that he: voluntarily stepped down from power in 1985; saw political power not as a route to personal gain but to the good of the people; inspired the struggle for justice, peace, and liberation; developed the doctrine of Ujamaa (African socialism) as an African contribution to human freedom; acted as a strong moral leader where many were corrupt and embezzled public funds; and practised religious tolerance towards people of other faiths. His sole interest was the restoration of the dignity of the human being. In all, he is considered as among the foremost champions of African liberation and one who struggled against imperialism.

Orientalism

Patrick Williams
Nottingham Trent University, Nottingham, UK

Definition

Orientalism is most usefully understood as the ways in which the West has represented the East to itself, and the ways in which it has behaved towards the East.

If it were not for the work of one man, and the impact of one book in particular, then it is entirely possible that Orientalism would still continue to be what it had previously been: the relatively

lesser-known or under-explored corner of the academic world devoting itself to a study of the Orient. Although Edward Said's *Orientalism* (1978) was not the first work to offer a critique of Orientalist assumptions and practices, its impact has far outstripped anything written before or since in relation to the field. Indeed, Orientalism's influence has been quite simply transformative in a whole range of academic disciplines, and much of what follows in this essay will therefore (entirely properly, I would argue, given its importance) concern itself with the arguments and implications of Said's book, as well as some of the criticisms levelled against it.

One of Said's crucial first steps (and already a step too far for those with an investment in traditional Orientalism) was to broaden the meaning of the term far beyond its ordinary academic reference. Said's repositioning begins with what he calls 'imaginative geography'. For Said, all cultures divide the world into those who are like us, and those who are not: Us and Them, or, borrowing from philosophy, Self and Other. Ideas are then created about Us and Them, stories are told, myths embroidered, values ascribed; in other words, representations are produced about the two groups. Unsurprisingly, our representations of Us are usually very positive, while those of Them are not infrequently the negative opposites. The difficult final step concerns what We feel licensed to do towards Them (avoidance, aggression, negotiation, incorporation, subjugation) on the basis of the knowledge derived from the representations.

For Said, Orientalism is most usefully understood as the ways in which the West has represented the East to itself, and the ways in which it has behaved towards the East. He sees that process beginning as far back as the ancient Greeks (Homer, Aeschylus, Euripides) which has earned him criticism from those who, quite erroneously, think that he is suggesting an unbroken continuity of attitude and interest spanning two millennia. On the contrary, however, although certain aspects are by and large consistent (the division into East and West; the tendency to regard the West as superior), Said is very clear that different ages and different circumstances produce

different Oriental 'Others' through their systems of representation. Medieval Christian Orientalism, for example, operates with a very different set of concerns and conceptions regarding the East from those which were prevalent in the period of classical Greece. The particular history Said intends to explore focuses on the ways in which Western countries, especially those with colonial ambitions, have, from the eighteenth century onwards, felt licensed to behave towards the Orient on the basis of the knowledge derived from Orientalist representations of that part of the world.

The intimate connection between 'knowledge' (representation) and power is something that Said takes from the work of Michel Foucault. For Foucault, 'savoir/pouvoir' is a relationship of mutual implication and production: knowledge leads to power; power enables the production of knowledge. By the eighteenth and nineteenth centuries, what the West knew about the Orient centred on the range of disciplines (long-established, such as philology and history; or newly emergent, such as ethnography, and encompassing linguistics, theology, economics, geography, literature, archaeology, among others) that concern themselves in different ways with matters Oriental. For Said, this period marks a major shift: 'Taking the late 18th century as a very roughly defined starting point, Orientalism can be discussed and analysed as the corporate institution for dealing with the Orient – dealing with it by making statements about it, authorising views of it, describing it, by teaching it, settling it, ruling over it: in short, Orientalism as a Western style for dominating, restructuring, and having authority over the Orient' (3). Not just Western knowledge, but the deployment of Western power marks Orientalism henceforth, as would-be disinterested knowledge is increasingly made to serve very 'interested' material ends.

Central to Said's argument is the way in which the types of knowledge (widely divergent, at least as far as their sources are concerned) act to inform and legitimate the political, economic, and military power which is unleashed on the Orient. In particular, the supposedly discrete academic disciplines produce astonishingly similar, and mutually reinforcing, 'knowledge' about the Orient as

deviant, dysfunctional, civilisationally stagnant, technologically backward, socially retrogressive, morally deficient, culturally impoverished; in all senses the Other to the West. The mutually reinforcing nature of Orientalist 'knowledge' is, on one level, to be expected, insofar as Said is making use of Foucault's concept of a discourse as a framework within which 'appropriate' knowledge is regulated, produced, and constrained, (though arguably he might have been better served by treating it as an ideological formation, which has different theoretical and political implications). As he says: 'My contention is that without examining Orientalism as a discourse one cannot possibly understand the enormously systematic discipline by which European culture was able to manage – and even produce – the Orient politically, sociologically, militarily, ideologically, scientifically, and imaginatively during the post-Enlightenment period' (ibid.). From 'hard' science to imaginative literature, the Orient is constructed as inferior, in need of Western intervention, and whether the representations aim to be sympathetic or are unrepentantly derogatory, they are recuperated by Orientalism in the production of its sanctioned forms of knowledge. One result of the operations of Orientalism as a discourse is therefore that the representations it produces are much more concerned with internal consistency than with providing the truth about the Orient (though they nevertheless claim to do that also). That focus on internal consistency helps explain the strength of the discourse and the longevity of Orientalist ideas over several centuries, factual contradiction notwithstanding.

The inferiority of the Orient and Orientals is marked by the fact that, in the phrase from Marx's *The Eighteenth Brumaire of Louis Bonaparte* which Said uses as one of the epigraphs for the book, 'They cannot represent themselves; they must be represented' (1978, p. xiii). The power, cultural and Other, of the West allows it to represent the Orient as it chooses, but in addition there is the legitimating 'must': since they are incapable of representing themselves, it falls to us to do it for them. This doubles the power of the West, as it speaks not only in its own voice, but also in that of the Other.

A great deal of critical attention has been devoted to the process of Orientalist representation, as well as its object, the Orient. Said, for example, argues that there is no such thing as a true representation, only varying degrees of misrepresentation, and also that there is no such thing as a real Orient to be represented. Without entering unnecessarily into the prolonged theoretical debates (for a representative poststructuralist critique, see Young, 1990), it is important to clarify Said's position. First, a representation cannot provide a perfect copy of the original, and therefore is inevitably to some degree a misrepresentation. Much more important for Said than any question of putative fidelity to the original, however, is what the representation actually does: its power to persuade, to legitimate, to dominate. Second, because the Orient is a Western construct, there is indeed no 'real' Orient for Orientalism to 'truthfully' represent. As Said comments, 'There were – and are – cultures and nations whose location is in the East, and their lives, histories and customs have a brute reality obviously greater than anything that could be said about them in the West' (1978, p. 5); and they are not the 'Orient'.

The truth of knowledge is another of those apparently uncontroversial topics which somehow become controversial when articulated by Said. As he says, 'the general liberal consensus that "true" knowledge is fundamentally non-political (and conversely that overt political knowledge is not "true" knowledge) obscures the highly if obscurely organised political circumstances obtaining when knowledge is produced' (10). Scholars in the humanities, and Orientalists above all, were, however, scandalised at the suggestion that their work was not disinterested, above politics as they claimed (and some, like Bernard Lewis, still claim). It is, nevertheless, one of the successes of *Orientalism* that it demonstrates so convincingly that not only is Orientalist knowledge not above politics, but it is precisely and deeply enmeshed in the very worst sort of politics, namely colonial domination and exploitation.

One of the principal objects of Orientalist knowledge has been, at least since the Middle Ages, Islam and the Muslim world more

generally. As Said comments, 'For much of its history, then, Orientalism carries within it the stamp of a problematic European attitude towards Islam ...' (1978, p. 74). More than this, wrote Said, 'I have not been able to discover any period in European or American history since the Middle Ages in which Islam was generally discussed or thought about outside a framework created by passion, prejudice and political interests' (Said 1981, p. 24). He then adds: 'This may not seem a surprising discovery ...'; perhaps not, but its unsurprising assertion is precisely the kind of claim which makes Said a controversial figure.

Even as nineteenth-century European colonial expansion moved the territory of the Orient beyond the confines of the Muslim world, and the terms of representation changed, Islam continued to function negatively in the Orientalist imaginary: 'the "good" Orient was invariably a classical period somewhere in a long-gone India, whereas the "bad" Orient lingered in present-day Asia, parts of North Africa, and Islam everywhere' (1978, p. 99). However, although the geographical location might change, and although the categories of representation might alter, what remained the same was the hierarchical nature of the relationship: 'In a quite constant way, Orientalism depends for its strategy on this flexible *positional* superiority, which puts the Westerner in a whole series of possible relationships with the Orient without ever losing him the relative upper hand' (7).

In the central chapters of *Orientalism,* Said tracks the assumptions, forms, languages, and outcomes of 'this flexible *positional* superiority' through the great age of European, particularly British and French, colonial expansion in the nineteenth and early twentieth centuries, and on into the contemporary world where the US has taken over the role of pre-eminent Orientalist power. In so doing, he analyses the works of a range of representative figures: travellers such as Edward Lane, Richard Burton, Gerard de Nerval, and Chateaubriand; politicians like Balfour and Cromer; novelists including Flaubert and Kipling; scholars of many kinds, including Ernest Renan, Silvestre de Sacy, H.L.R. Gibb and Louis Massignon, as well as ones like Bernard Lewis,

whose Orientalism is so egregious that Said would have difficulty including him among the ranks of the scholarly. This period marks the definitive shift in Orientalism 'from an academic to an *instrumental* attitude' (246), its forms of knowledge ever more useful for, and used by, the institutions of Western power. The categorical flexibility is demonstrated by the shift around one term – 'Semite' – from the European Ernest Renan to modern US-led Orientalism. For Renan, the great philologist, practitioner of the discipline that Said so much admires, 'the Semitic languages are inorganic, arrested, totally ossified, incapable of self-regeneration; in other words, he proves that Semitic is not a live language, and for that matter, neither are Semites live creatures' (145). Here, Semitic covers both Jew and Arab, to the benefit of neither. Later, in the period of American dominance, there is a need to shift and differentiate the representation of Semites: around the time of the 1967 and 1973 wars between Israel and its Arab neighbours, Arabs take on all the negative characteristics ('their sharply hooked noses, the evil moustachioed leer on their faces' [286]) that might previously have been shared by, or indeed have belonged principally to, Jews. 'The transference of a popular anti-Semitic animus from a Jewish to an Arab target was made smoothly, since the figure was essentially the same' (ibid.).

Another significant shift in the period of US dominance is from the figure of the scholar to that of the 'expert', and for Said, this is an altogether negative transformation since 'the experts instruct policy on the basis of such marketable abstractions as political elites, modernisation and stability, most of which are simply the old Orientalist stereotypes dressed up in policy jargon, and most of which have been completely inadequate to describe what took place recently in Lebanon or earlier in Palestinian popular resistance to Israel' (1978, p. 321). Inadequate or not, Orientalist 'expertise' continues to have significant influence on US foreign policy, so much so that 'the accommodation between the intellectual class and the new imperialism might well be accounted one of the special triumphs of Orientalism' (322).

For Said, writing in 1978 in the phase of US Orientalism, the centuries-long persistence of

Orientalist modes of thought and representation was remarkable. Some 25 years later, in the context of the invasion of Iraq, the situation in terms of representing and understanding Muslims was visibly much worse. While this offers little comfort to those who might hope that critique as powerful as Said's could bring the ideology it is attacking to an end, it does nevertheless demonstrate the accuracy of his contention that the knowledge production of Orientalism is intimately linked to the material interests of Western (in this case US) supremacy, and sadly is unlikely to disappear any time soon.

The problem of Orientalist representations is exacerbated by the proliferation of modes for their transmission. In the 1970s, 'One aspect of the electronic, post-modern world is that there has been a reinforcement of the stereotypes by which the Orient is viewed. Television, the films, and all the media's resources have forced information into more and more standardised moulds' (26). In the twenty-first century, this is even more the case, with the appalling stereotypes circulated by the likes of Fox News and CNN, and the expansion of the domain of popular culture: 'These contemporary Orientalist attitudes flood the press and the popular mind. Arabs, for example, are thought of as camelriding, terroristic, hooknosed, venal lechers whose undeserved wealth is an affront to real civilisation' (108). Although commentators would no doubt also point to the way in which proliferating media forms and technologies such as the Internet, smart phones and social media may be able to play an empowering role, as, for example, in the uprisings of the Arab Spring, they are equally available for the circulation of Orientalist stereotypes.

Assessing Orientalism

Some years ago, in the introduction to a collection of critical work on Edward Said, I suggested that 'in general, Said has not been well served by his critics' (Williams 2000, p. xxv). Over a decade later, the situation is, if anything, rather worse, since the period following Said's death has witnessed the emergence of a sub-genre of attacks

(often scurrilous and personalised) claiming to give a more clear-sighted or balanced assessment of this over-rated individual. We will return to these later, but firstly it is important to note the surprisingly widespread inability of critics, even those well-disposed towards Said, to read him with any degree of accuracy. That is all the more surprising when we consider that Said's style is not obscure, nor as theoretically dense as that of many of his contemporaries. It is perhaps a little unfair to highlight any of the well-disposed, but A.L. Macfie may stand as an example. In his introduction to *Orientalism: A Reader,* he says: 'What divides Said from many of his critics is the fact that while Said, in *Orientalism,* tends to view his subject through the prism of modern and postmodern philosophy (in particular the philosophies of Nietzsche, Foucault, Derrida and, surprisingly, the Marxist Gramsci), his critics remain, for the most part, firmly wedded to a traditional (realist) approach to the writing of history' (2000, p. 5). This is an unusual sentence. *Orientalism* has nothing whatsoever to do with Derridean deconstruction, particularly not in a formal or philosophical sense. Nietzsche appears a couple of times in the book but could hardly be said to offer an analytical framework for Said. On the other hand, the idea that Said's use of Gramsci is surprising is, well, surprising: although Said never declared himself a Marxist, his engagement with, and interest in, a range of Marxist thinkers (Gramsci, Adorno, Lukacs, C.L.R. James, Fanon, Raymond Williams, and others) forms a long-running thread through his work. Also, the idea that Said is seeing the world through a post-modern prism is not borne out by evidence, either here or elsewhere. Indeed, post-modernism for Said precisely typifies a great many of the problems of contemporary intellectual practice.

Orientalism has been criticised for many things, often in completely contradictory fashion. It has, for example, been accused of being wildly over-theoretical, or of being insufficiently theoretical; of being excessively indebted to Foucault, or of failing to make proper use of the range of insights a Foucauldian perspective offered. It has also been taken to task for not including an examination of the gendered dimensions of

Orientalism, as well as for not including any consideration of the resistance on the part of colonised people to Orientalist and colonialist incursions. The first of these, typified by a book like Meyda Yegenoglu's *Colonial Fantasies: Towards a Feminist Reading of Orientalism* (1998), is an example of the slightly better or more accurate criticisms of *Orientalism* (gender was arguably never one of Said's strong points in any of his books), but it hardly constitutes a total omission in the way that is often asserted. The second typifies the way in which Said is criticised for not doing something which he had no intention of doing: *Orientalism* is a study of the forms of power (discursive, textual, and ideological, as well as economic, political, and military) deployed by the West in its relations with non-Western cultures; indigenous resistance is dealt with elsewhere, particularly in *Culture and Imperialism* (1993).

That trope of criticising *Orientalism* for failing to provide something that was never part of the book's project in the first place occurs in some surprising contexts. Daniel Martin Varisco's *Reading Orientalism: Said and the Unsaid* (2007) is by far the best of those posthumous reassessments of Said mentioned a little earlier. His is the most thoughtful and scholarly of any of these works. Nevertheless, despite spending several hundred pages carefully and critically dissecting *Orientalism*, he is still able to summarise the book, and Said's intentions, in ways which may be critical, but do not seem particularly careful. 'The notion of a single conceptual essence of Orient is the linchpin in Said's polemical reduction of all Western interpretation of the real or imagined geographical space to a single and latently homogeneous discourse' (290). 'Single conceptual essence ...', 'single and latently homogeneous discourse': arguably, the excessive reductiveness here is Varisco's, since despite Said's highlighting of Orientalism's efforts to create internal consistency out of disciplinary multiplicity, singularity and homogeneity are not the result. As Said says, 'My whole point about this system is not that it is a misrepresentation of some Oriental essence – in which I do not for a moment believe – but that it operates as representations

usually do, for a purpose, according to a tendency, in a specific historical, intellectual, and even economic setting' (1978, p. 273). Undeterred, Varisco continues: 'What is missing from *Orientalism* is any systematic sense of what that real Orient was and how individuals reacted to the imposing forces that sought to label it and theoretically control it' (2007, p. 291), yet Said had already addressed that point in his introduction to *Orientalism:* 'There were – and are – cultures and nations whose location is in the East, and their lives, histories, and customs have a brute reality obviously greater than anything that could be said about them in the West. About that fact this study of Orientalism has very little to contribute, except to acknowledge it tacitly' (1978, p. 5). Finally, Varisco concludes that 'It is time to read beyond *Orientalism*', since 'The goal of serious scholarship should be to improve understanding of self and other, not to whine endlessly or wallow selfrighteously in continual opposition' (2007, p. 304). However, to suggest that Said, as someone subjected to repeated death threats, the firebombing of his university office, and routine vicious abuse from political opponents, 'whine[d] endlessly' in a position of victim-hood is as straightforwardly preposterous as to claim that his 'continual opposition' to the (continual) brutal treatment of his people by the Israeli state constitutes anything like selfrighteous wallowing.

A different kind of (unsuccessful) undermining of Said occurs in the work of the sociologist Bryan Turner. In *Orientalism, Post-Modernism and Globalism*, for example, Turner says 'the book [*Orientalism*] is now obviously outdated ...' (1994, p. 4) because, among other things, 'It is simply the case that globalisation makes it very difficult to carry on talking about Oriental and Occidental cultures as separate, autonomous or independent cultural regimes' (8). Apart from the fact that Said was at great pains to stress the inter-related and overlapping nature of cultures, the ability to represent the West and the East as indeed separate, if not fundamentally antagonistic, in classic Orientalist fashion, has obviously been one of the defining features of the history of

the world in the last decade, in the context of the 'War on Terror' and the wars in Iraq and Afghanistan. In a more recent piece, 'Orientalism, or the politics of the text', Turner criticises Said for errors of which he is arguably not guilty, and concludes that, 'The traditional game of the Orientalist text appears to have come to an end' (2002, p. 30). Part of the reason for this is that in a putatively post-modern world, 'intellectuals are unwilling or unable to defend grand narratives, since academic intellectuals no longer have the authority to pronounce on such matters' (29). If nothing else, however, Said's life and work provide a powerful example (though by no means the only one from the 'postmodern' world) of precisely why Turner is wrong. As the editors of a recent collection of essays on Said point out (Iskander and Rustom 2010), it was the analysis offered by *Orientalism* which was revelatory for them as undergraduates in the mid-1990s (i.e. after Turner had already declared the book was outdated), while at the same time it was Said's unwavering determination to defend grand narratives of enlightenment and liberation that inspired them and their contemporaries.

While it would indeed be wonderful if we lived in a world where the insights and analyses of *Orientalism* were no longer relevant, that is unfortunately not the case. The current spread of Islamophobia marks the return of Islam as the always available supreme ideological Other, while, in the context that was closest to Said's heart, there is the unedifying spectacle of one Semitic people (the Jews, particularly as the State of Israeli) Westernising themselves at the same time as they perversely construct another Semitic people, and their closest neighbours (the Palestinians) as Orientalised Others (cf. Laor 2009; Piterberg 2013; Williams 2013). The final and longest chapter in *Orientalism* is entitled 'Orientalism Now', and the final words in the book are: 'If the knowledge of Orientalism has any meaning, it is in being a reminder of the seductive degradation of knowledge, of any knowledge, anywhere, at any time. Now perhaps more than before' (Said 1978, p. 328). Now more than before, indeed.

Capital exports; Imperialism; Ottoman colonialism; Ottoman Empire; Peripheralization; World-systems theory

Introduction

This essay aims to outline the history of imperialism in the Ottoman Empire by focusing on the period until the beginning of the Great War in 1914. But such an effort unavoidably confronts a terminology problem. Imperialism is a term that is frequently used in different meanings and contexts. This observation holds true particularly for today's Turkey, where leftist, progressive, and radical movements make great use of the term, but imperialism also figures in the political vocabulary of right-wing politics. Conspiracy theories and chauvinist politicians do often speak of imperialism by reference to the intrigues of the Western powers allegedly ruling the world. On the other hand, there is no single definition of imperialism in contemporary academic literature either. The

term may refer to the monopoly stage of capitalism, power struggles in the interstate system, colonialist polices of modern empires, or the imperial mentality of ruling elites. Therefore, the main objective of this essay is to evaluate the history of imperialism in the Ottoman Empire by simultaneously addressing how that term has been conceptualized in historiography. Rather than providing an exhaustive review of the contemporary literature, I refer to the major trends in this respect starting with the classical theories of imperialism and their relevance for the Ottoman history. The second part of the essay deals with the question of imperialism in the context of the peripheralization of the Ottoman Empire, pointing out the influence of the dependency/world-systems perspective in Ottoman historiography. The final section focuses on a more recent literature emphasizing the colonialist mindset and imperialist ambitions of the Ottoman statesmen rather than the economic and political dynamics underlying the Ottoman peripheralization process.

Finance Capital

During the early decades of the twentieth century, there was a strong tendency to conceptualize imperialism as the monopoly stage of capitalism and identify it with the hegemony of finance capital. The liberal journalist John A. Hobson (2016) was among the first to employ the concept in this sense, drawing attention to the rise of economic monopolies across the core capitalist countries in parallel with the increasing centralization and concentration of capital starting in the last third of the nineteenth century. Yet it was the Austro-Marxist economist Rudolf Hilferding (1981) who provided the most systematic analysis of the merge of the financial capital and industrial capital. He observed that joint-stock companies led to economic monopolies, the number of banks was reduced in the process, and a handful of them seized control of industrial firms in the key sectors of the economy. Drawing on Hilferding's concept of finance capital, Lenin (1999) developed the theory of imperialism further. For monopolies, emphasized by Lenin (1999, pp. 70–74), the

export of capital to less-developed areas was an effective way of increasing profit rates. They pushed the governments to pursue aggressive expansionist policies and colonial conquests so as to obtain monopoly profits under military protection. It was the imperialist struggle for the division and re-division of the world that triggered the Great War in 1914.

The early-twentieth-century critiques of imperialism focused mostly on the industrialized metropole countries, where intense developments in the technologies of production, transportation, and communication had emerged, leading to the formation of a single world-economy. Colonies and peripheral areas were discussed to a lesser degree. Nikolai Bukharin (1929, p. 96), for example, called attention to different aspects of the influence of international capital movements for the countries that export capital and those that import. However, he speaks little of the socioeconomic and political results of capital import for such countries as the Ottoman Empire. Both Bukharin (1929, p. 86) and Lenin (1999, pp. 30–31) categorized the Ottoman Empire (Turkey) as a semicolony, along with Persia and China. According to Lenin (1999, pp. 85–86), semicolonial states were transitional forms. Finance capital was capable of subjecting to itself even such states that enjoyed full political independence, although the imperialist powers were able to extract the greatest profits from the countries completely subjugated as colonies.

Of the so-called classical theories of imperialism, Rosa Luxemburg's *The Accumulation of Capital* devotes relatively more consideration to the Ottoman Empire. Luxemburg explains the underlying motive of imperialism by reference to the tendency of capital to expand toward noncapitalist areas. That is because, argues Luxemburg (2003, p. 401), "while realization of surplus value requires only the general spreading of commodity production, its capitalization demands the progressive supersession of simple commodity production by capitalist economy." For Luxemburg, too, the export of capital was one of the identifying features of imperialism: realized surplus value that cannot be capitalized in the industrialized countries was employed to

construct railways and infrastructures in different parts of the world (Luxemburg 2003, p. 407), serving the monopolization of capital and domination of Asia and Africa (p. 402). In the 1850s and 1860s, according to Luxemburg, British capital built the railway lines of parts of Asia Minor, later French capital took part in the business, and German capital appeared on the scene in the late 1880s (pp. 419–422). Luxemburg discusses the complex mechanisms underlying how railway building, and accompanying commodity exchange, led to the exploitation and rapid disintegration of peasant economy in Asia Minor and how, in this process, the Ottoman state was subordinated to European capital economically and politically (pp. 423–425).

Alexander Helpland, known as Parvus Efendi in Ottoman-Turkish historiography, provided one of the earliest analyses of the impact of imperialism specifically on the Ottoman Empire. Parvus was an intriguing figure who lived quite an adventurous life (Scharlau and Zeman 2007). He took part in the Russian Revolution of 1905 and then spent the greater part of his political life in Germany. He ended up living in the Ottoman capital Istanbul between 1910 and 1914, advising the Young Turks on economic policies on the eve of the Great War (Sencer 2005). Parvus was an influential theorist who, along with Trotsky, contributed to the formulation of the theory of permanent revolution and reflected on imperialism. He provided a solid critique of the domination of the Ottoman economy by European financial power, which began colonizing the country through debts and direct investments, turning the Ottoman state into its own instrument through the Public Debt Administration (PDA) (Karaömerlioglu 2004, pp. 152–153).

Parvus was an important link between the European critiques of imperialism and the Young Turks, whom he advised to build up a national economy and industry to free the Empire from the domination of European finance capital. It appears that his ideas had considerable influence over the Young Turk circles. In the course of the Great War, during which the Committee of Union and Progress (CUP) was in power, some of the Young Turk leaders interpreted the national economy

policy from an anti-liberal and corporatist perspective (Tekeli and İlkin 2003; Tunçay 2009, pp. 266–268). After the war ended and the Allied powers embarked on partitioning the Ottoman Empire, this interpretation became one of the major reference points for some of the radical groups and organizations involved in the Turkish national movement, which was justified as a struggle against European colonialism and imperialism in the peculiar historical context created by the October Revolution of 1917 (Tunçay 2009, pp. 268–315). Next to such radical and anti-imperialist movements originating from the Young Turks, the Turkish communist movement that came into existence in the armistice period subscribed to an anti-imperialist paradigm and labeled the national struggle as a struggle against imperialism (Tunçay 2009, pp. 315–345; Akbulut and Tunçay 2012).

This anti-imperialist framework maintained its political and intellectual importance in the next years. After the Republic was established, quite a few critiques of foreign capital in the Ottoman Empire and interwar Turkey were produced drawing on the basic notions introduced by the classical theories of imperialism (Şanda 1932, 1935; Kıvılcımlı 1989; Blaisdell 1979). Moreover, during the 1960s and 1970s, all factions of the socialist left were subscribed to an anti-imperialist paradigm, claiming that the prevailing regime in Turkey was dominated by imperialist forces, particularly the United States (Atılgan 2008, Bora 2017, pp. 652–681). There were mentions of the penetration of imperialism into the Ottoman Empire and the semi-colonization of this polity in the publications of the opposition groups (Yıldırım 2008, p. 243; Çayan 2008, pp. 299–302). This context motivated many radical intellectuals and academics to reflect more systematically and analytically on the implications of imperialism for the Ottoman Empire and its relations with the European colonial powers (Çavdar 1970; Kurmuş 2007; Varlık 1976).

Peripheralization

By then, however, there had been significant changes in the conceptualization of imperialism

(Adas 1993; Brown 1972). As mentioned above, the earlier criticism of imperialism concentrated on the ascendancy of finance capital in the core industrialized countries and the results of that for the interstate system. After the Second World War, the focus of the prevailing analyses shifted toward the Third World countries in the context of the decolonization and national liberation movements that appeared in Asia and Africa. The optimism that marked the modernization and development approaches concerning the possibility of economic and political development for postcolonial countries rapidly faded. What replaced it was an argument that former colonies and developing countries were still subject to imperialist domination. This perspective found one of its strongest expressions in Andre Gunder Frank's remarkable discussion on the development of underdevelopment, which signified the imperialist links of dependence and exploitation between metropolis and satellite (Frank 1970). Different versions of dependency perspective highlighted systemic and global mechanisms underlying the formation of unequal relations between the central and peripheral states of the capitalist world-economy (Amin 2000, pp. 45–102).

In the 1960s and 1970s, dependency theory had a considerable following in Turkey. Many leftwing intellectuals drew on this perspective in their engagements with the questions of imperialism and underdevelopment in Ottoman-Turkish history (Karaömerlioğlu 2001, pp. 86–88). It was in this context that the scholars of Ottoman history developed interest in the world-systems theory (Karaömerlioğlu 2001, pp. 88–96; Ceylan 2003; Emrence 2011, pp. 15–27). The foundations of this interdisciplinary approach had been laid by the leading sociologist Immanuel Wallerstein by the mid-1970s, with the first volume of his *Modern World-System* published in 1974 for the first time (Wallerstein 2011). According to Wallerstein (1979, pp. 37–48), prior to the sixteenth century, redistributive world empires, world economies, and mini-systems coexisted. The baseline of his theory is that the modern world-economy, to be identified with the global predominance of market trade (Wallerstein 1979, p. 6), emerged in Europe during what Fernand Braudel calls the long sixteenth

century, which roughly covers the period 1450–1640. The modern capitalist world-economy born in Europe rested on the division among the core, peripheral, and semi-peripheral states. It expanded till the twentieth century by incorporating the world empires and mini-systems as peripheral or semi-peripheral areas where production processes were restructured in accordance with the necessities of capital accumulation (Wallerstein et al. 2004, p. 88).

The world-system perspective provided the Ottomanists with a solid conceptual framework to analyze the social and economic history of the Ottoman Empire. Consideration has been given to the implications of foreign trade and capital movements for the Ottoman integration into the capitalist world-economy, but the world-system perspective signified a broader research agenda. There has been considerable scholarship dealing with various forms of resistance to European economic penetration, such as labor unrests in those sectors of the economy dominated by European corporations (Quataert 1983). Having been the major outlets of connection between the Ottoman Empire and the world economy, the social, political, and economic history of the Ottoman port cities, like İzmir, Salonika, and Istanbul, has been extensively studied as well (Kasaba et al. 1986; Keyder et al. 1993; Eldem et al. 1999).

Peripheralization has been one of the most critical terms of the world-system perspective in Ottoman studies. In an important article on the subject, Huri Cihan İslamoğlu and Çağlar Keyder (İslamoglu-İnan and Keyder 2004, p. 42) identified the Ottoman peripheralization process as one of the transitions from a world empire dominated by the Asiatic mode of production to a peripheral status within the capitalist world-economy. In the late 1970s and 1980s, an influential group of historians and social scientists, including Wallerstein (1979) himself, set off on exploring research questions such as how and when the peripheralization of the Ottoman Empire started. What were the social, economic, financial, and political implications of integration with the capitalist world-economy in Ottoman domains? Addressing such questions required the Ottomanists to revise their research agenda concerning imperialism. Studies based on the

classical understanding of imperialism had called attention to the nineteenth century, especially to the period that followed the signing of a free trade treaty with Britain in 1838. The world-system perspective, on the other hand, signified a broader period of the Ottoman history.

The course of the Ottoman peripheralization was determined by the combination of a set of internal and external factors that gradually disrupted the ancient system of production from the sixteenth century onward (İslamoglu-İnan and Keyder 2004). In addition to the factors such as population increase and price inflation, peripheralization was asserted by the commercialization of agricultural production through the selling of cash crops in European markets for profits. Thereby the Ottoman economy was gradually reduced to a supplier of agricultural produce and raw materials for the expanding European economies where the process of industrialization was underway. Incorporation into the capitalist world-economy occurred in the Ottoman Balkans in the course of the eighteenth century with the rise of commercial estates (çiftliks), and it occurred in Anatolia starting in the 1830s with a large increase in the volume of commercialized production by independent peasant farms (İslamoglu-İnan and Keyder 2004, p. 60). With the growing import of European industrial goods came the decline of the guilds and crafts that had been the centers of Ottoman traditional manufactures (İslamoglu-İnan and Keyder 2004, p. 61; Keyder 1987, pp. 25–48).

It was with the growth of trade for international markets that the peripheralization of the Ottoman Empire gained momentum (Kasaba 1988, pp. 11–35). Although commercialization of agriculture and trade with Europe began at different times in different localities, the signing of the Balta Limanı Treaty with Britain in 1838 was a significant turning point (Pamuk 1994, pp. 17–22). This free trade treaty removed most of the restrictions on foreign trade; it expanded the privileges of foreign merchants to reside, navigate, and carry out commercial activities in Ottoman domains, also reducing the state's ability to control tariffs (Kasaba 1993, pp. 215–219). The 1838 treaty sealed the change in the character of capitulations. Since the early modern period, the Ottoman state had

O

provided the merchants of certain European powers with economic and commercial privileges to carry out business in Ottoman territories. Capitulations were extended for many different reasons such as improving diplomatic relations with a European power, promoting commerce, and provisioning the Ottoman cities. In theory, if not always in practice, the Porte provided them unilaterally. Yet the 1838 treaty was a bilateral one laying the foundations of a free trade regime. The Porte had had a similar deal with the Russian Empire with the Adrianople Treaty of 1829 (Kasaba 1993, p. 220), and the terms of the Balta Limanı Treaty were extended to the other European powers in the next few years (Elmacı 2005, p. 22).

While the growth of external trade accelerated the Ottoman integration into the capitalist world-economy, the Ottoman peripheralization process also concerned capital exports to the Empire. The Ottoman state borrowed its first foreign loan in 1854 to finance the Crimean War against Russia. On the authorization of Sultan Abdülmecid, three million pounds sterling was received from Dent, Palmer, and Company of London (Geyikdağı 2011, p. 32). To cover the war expenses, five million pounds sterling of additional loan was borrowed, with Britain and France guaranteeing the interest payments. In the next years the Porte kept borrowing new loans and that continued until 1875, when the Ottoman state declared moratorium (Geyikdağı 2011, pp. 32–33). As a result, the Public Debt Administration was founded in 1881 (Birdal 2010; Blaisdell 1979; Sencer 2005). Even after the loan borrowed in 1855, the British and French were authorized to audit the Ottoman treasury (Geyikdağı 2011, p. 32). With the establishment of the PDA, over which the British and French representatives presided, this authority increased to a great degree. Much of the Ottoman economy came under the control of the PDA, whose duty was to make sure that the revenues of the state were well regulated and channeled into the repayment of the Ottoman debts.

The second form of capital export to the Ottoman Empire consisted of direct investments, which started coming to Ottoman domains in increasing amounts from the 1840s onward. The initial concessions were provided to the British and French individuals and companies. Of great importance for the integration of the Ottoman economy with the world market, ports and railways received the highest share of capital investments (Keyder 1987, p. 44; Quataert 1983, pp. 7–9). This was followed by direct investments in mining and agriculture and a corresponding increase in the number of banks and insurance companies (Geyikdağı 2011, p. 54). The PDA's establishment and its control over the economy encouraged direct investments by reducing the political and economic risks of investing in the Ottoman domains (Geyikdağı 2011, p. 55). The inflow of capital investments speeded up in the period of 1888–1896 and continued up until the Great War (Pamuk 1994, p. 72). Although European firms and holding companies channeled some of their investments into different sectors, such as urban utilities, mining, and industrial production, the largest proportion of European capital kept concentrating in railways until the war. In the middle and long run, foreign investors transferred more capital to their headquarters in Europe than what they had brought in the Ottoman Empire through the repayment of debts and profits (Pamuk 1994, pp. 72–77).

The national composition of foreign capital investments significantly changed during this whole process. The participation of British companies significantly fell from 56.2% in 1888 to 14% in 1914 (Geyikdağı 2011, p. 57). Part of the reason was the opening of the Suez Canal in Egypt in 1869 and the occupation of this country by the British in 1882. These developments reduced the strategic importance of the Ottoman Empire for the British political and economic interests in the Middle East and for the safety of the route to India (Geyikdağı 2011, p. 60). Also the economic depression of the 1870s resulted in a relative decline in Britain's economic and political supremacy. In this context, British investments began concentrating in the colonies (Kurmuş 2007, pp. 229–230; Pamuk 1994, pp. 87–89). Compared to the French and German governments, the British government's support for the investments of its subjects in Ottoman lands remained rather weak (Pamuk 1994, p. 89). As a

result, the British began selling their investments, while the French and German investors filled the gap. The rate of French capital in the foreign direct investments in Ottoman lands increased from 31.7% in 1888 to 45.3% in 1914. But the most substantial increase was registered by German capital with 1.1% in 1888 and 34% in 1914 (Geyikdağı 2011, p. 57).

The growth of German investments in the Ottoman Empire was not a coincidence. The German Empire was a latecomer to the imperialist competition for the division of the world. By the 1880s, when it began taking part in the struggle for natural resources and external markets, France and Britain had already dominated the richest parts of Africa and Asia. Furthermore, France had established itself as the most powerful economic and political partner of Russia, which had been significantly industrialized, Iran was divided between the Russian and British spheres of influence, and Japan had become one of the powers dominating China economically and politically (Geyikdağı 2011, pp. 64–65). But the Ottoman Empire was not yet fully dominated by any of the great powers. German investors were able to operate in Ottoman domains, benefit from the same trade advantages as their British and French rivals, and compete with them for concessions (Pamuk 1994, p. 89). Hence German merchants began to show in various parts of the Ottoman Empire, and, in parallel with the rapidly rising volume of trade, German direct investments substantially increased.

German investors greatly benefited from their government's proactive support in their hunt for concessions from the Ottoman state. This was true especially for railway concessions, which provided the capital exporting country with great political, economic, and financial advantages. "The country that obtained such a concession would gain influence in that area, get revenues from the sale of materials, equipment and vehicles used in railway construction and operations, and become a creditor right away" (Geyikdağı 2011, p. 77). Therefore, the European diplomatic missions, including those of Germany, actively took part in the competition for railway concessions by trying to influence the Ottoman

government's decisions in that respect (Ortaylı 2003, pp. 127–170). Railway concessions granted to Germans signified the German *pénétration pacifique* into the Ottoman Empire.

Both German and French investors had the support of their governments in their businesses in the Ottoman Empire. What particularly underlay the German superiority was the role of monopolies, that is, the participation of big German banks and industrial firms in investments throughout the Ottoman Empire (Pamuk 1994, p. 90). This trend displayed most characteristics that the early-twentieth-century critiques of imperialism attributed to monopolies. The German banks, such as the Deutsche Bank and the Dresdner Bank, took active roles in the formation of consortiums to finance ambitious and expensive projects, provided credits for investments, helped the failing companies by purchasing their capital shares, and even collected the debts of German investors from the Ottoman state when necessary (Ortaylı 2003, p. 73). In 1888, for example, the Ottoman government granted a concession for the Anatolian railways to a German consortium headed by the Deutsche Bank (Ortaylı 2003, 138). In 1902, the Deutsche Bank and the Anatolian Railway Company received another concession for the construction of the Bagdad Railways, which included many other economic privileges, such as the right to exploit the mines and forests in the vicinity of the railways (Geyikdağı 2011, pp. 95–98; Ortaylı 2003, pp. 145–156). That was a huge and politically prestigious project intended to connect Berlin and the Ottoman city of Bagdad in the Middle East (Özyüksel 2016). By the time the Great War broke out, some 1060 kilometers of railways had been constructed beyond the Ottoman city of Konya (Geyikdaği 2011, p. 98).

As İlber Ortaylı (2003) demonstrates in detail, Germany's economic penetration into the Ottoman Empire went hand in hand with the improvement of their military and political relations. Starting in the reign of Abdülhamid II, the Ottoman statesmen perceived Germany as a potential ally to counterbalance the other imperialist powers of the time, above all Britain and France, which annexed certain parts of the Ottoman Empire as their colonies in the course of the

nineteenth century. In the eyes of the German decision-makers, on the other hand, strong political relations would help German enterprises improve trade with, acquire concessions from, and exploit the natural resources of the Ottoman Empire. This alliance eventually culminated in the Ottomans' participation in the Great War on the side of Germany and Austria-Hungary against the Allied Powers.

Ottoman Imperialism?

What has to be highlighted before concluding this paper is that the Ottoman Empire was not simply a passive recipient of capital movements or a battleground for the colonialist struggles of the European powers. From the late eighteenth century onward, the Ottoman elite attempted to implement a set of reforms to reinvigorate the Empire's position in the competitive interstate system dominated by the European colonial empires. With the Tanzimat Edict promulgated in 1839, modernization efforts intensified. In the second half of the century, the reform movement was intended to transform not only the bureaucratic, fiscal, and military institutions of the state but also the Empire's socioeconomic structure and state-society relations as a whole. The government expanded its powers in the process and became capable of exerting authority even in the remote localities thanks to the development of transportation and communication infrastructures. At the same time, the Ottoman imperial center acquired some degree of autonomy in European diplomacy by playing off the rival powers against one another.

Starting in the late 1990s, historians have emphasized the Ottoman Empire's political autonomy rather than its economic dependency. It is no longer viewed simply as a semi-periphery or a prey to European imperialism, but as another imperial polity whose rulers shared a similar colonialist mindset as their counterparts in Europe (Gölbaşı 2011; Türesay 2013). According to Selim Deringil (2003, pp. 311–312), one of the pioneers of this new paradigm, "sometime in the nineteenth century the Ottoman elite adopted

the mindset of their enemies, the arch-imperialists, and came to conceive of its periphery as a colonial setting." Similarly, Ussama Makdisi (2000, p. 7) asserts in his *Culture of Sectarianism* that the character of sectarian politics in Ottoman Lebanon of the mid-nineteenth century depended on "an intermingling of both precolonial (before the age of Ottoman Reform) and postcolonial (during and after the age of reform)." For Deringil (2003, p. 316) "…what is true for religious sectarianism at a local level is also true for the elite's perception that of itself and its peripheral populations, the same 'intermingling' is very much in evidence."

So far quite a number of historical researches have presented the Ottoman reform movement of the nineteenth century as a colonialist design by reference to different but related terms, such as Ottoman orientalism (Makdisi 2002), orientalism *alla turca* (Herzog and Motika 2000), or colonial Ottomanism (Kühn 2007). One of the common themes in this literature is the civilizing mission that the Ottomans assigned to themselves in their engagements with the peripheral and not-yet-Ottomanized communities mostly inhabiting the Empire's Arab provinces. The Ottoman elite emphasized the authenticity of Islam as the marker of Ottoman modernity. Especially under the reign of Abdülhamid II (r. 1876–1909), the idea of Ottoman civilization was identified increasingly more with an official version of Sunni Islam based on Hanafi jurisprudence (Deringil 1998). Not only did this representation single out the distinction of Ottoman modernity, but it also created the category of pre-modern designating the Empire's peripheral populations not-yet-assimilated into the official understanding of Islam. It was this latter category that was subject to the civilizing mission of the Ottoman statesmen.

To be sure, this rich literature brings important insights into the cultural and ideological background of the Ottoman reform movement. Nonetheless, as Özgür Türesay (2013, pp. 133–136) mentions in a critical assessment of historiography on the subject, Ottoman colonialism was not based on a genuine distinction between metropole and colony. Indeed, it would be

misleading to view the peripheral provinces of the Ottoman Empire in the same category as the colonies of the European imperialist powers. Colonial states in Asia and Africa were organized as instruments of exercising power and authority in accordance with the economic and political priorities of the European metropoles. They were built on the hierarchically organized categories of race, and that was in sharp contradiction with the universalism of Enlightenment and bureaucratic rationality for which the European civilization supposedly stood (Chatterjee 2002, pp. 35–67). None of this can be observed in the Ottoman Empire's relations with its periphery, which is why Türesay speaks of Ottoman "colonialism without colonies."

Deringil problematizes this difference by employing the term Ottoman *borrowed* colonialism. He relates this term to the concept of "borrowed imperialism" that the historian Dietrich Geyer (1987) employs with respect to the Russian Empire of the second half of the nineteenth century. According to Geyer (1987, p. 186), after a certain level of industrialization and state-led economic expansion, the basic characteristics of modern imperialism came to shape the Russian Empire's relations with its periphery. For Geyer (1987, p. 187), the mentality of Russian statesmen was characterized by the conviction that "...only by becoming a metropolis herself could Russia overcome her historic 'backwardness and her subservient role as a colonial source of exploitable resources for the more developed powers...." Deringil argues that the Ottoman borrowed colonialism, too, was "a survival tactic. It was "a modern way of being," which should have saved the Empire from becoming a colony itself (Deringil 2003, p. 313).

There is no doubt that the Ottomans pursued a defensive strategy against European colonialism, which involved showing imperial attitudes in both peripheral setting and interstate context (Türesay 2013, p. 134). However, a recent scholarship on the subject has established that Ottoman colonialism was not all about survival strategies. Mostafa Minawi's (2016a, b) recent research on the late Ottoman diplomacy demonstrates that the Ottoman government also followed competitive,

dynamic, and expansionist strategies of power in the frontiers of the Empire. Focusing on the period between the 1880s and the initial years of the twentieth century, Minawi shows how the Ottomans participated in the scramble for Africa by seeking to carve a sphere of influence along the Empire's African and Arabian borderlands and competing with the British, French, and Italian imperialist forces toward that goal. Minawi (2016a, p. 3) suggests conceptualizing imperialism as a process, not a category, and asks "how the Ottoman Empire adapted to the new demands of imperialism in the late nineteenth century." This perspective renders possible for him to present Ottoman imperialism in a different way from defensive imperialism or borrowed colonialism – as a new form of imperialism that followed the terms of European colonialism (Minawi 2016b, p. 570).

Minawi makes it clear that the Ottoman government tried to adapt to the challenges of the imperialist struggles taking place along its frontiers. The question of whether the Ottoman state was among the imperialist forces of the late nineteenth century cannot be fully answered within the limits of this essay. What is clear is that the colonialist and imperialist ambitions of the Ottoman ruling elite brought about concrete results. Cemil Aydın, for example, calls attention to an ideological transformation. He discusses how the "civilizationist" stance adopted by the Ottoman elite in the course of the nineteenth century paved the way for the idea of creating the transnational solidarity of all Muslims from the 1870s onward. This transition, argues Aydın, came about in the face of the Western powers' imperialist aggressions and the orientalist attitudes excluding the Ottomans from the Western discourse of civilization. It culminated in the Young Turks' Pan-Islamic imperial policy, supported even by the secular-minded members of the ruling elite as a realistic imperial strategy (Aydın 2007, p. 82). According to Aydın, Pan-Islamism was formulated from an "anti-imperialist" viewpoint aiming at the unity of Muslims and their freedom from the domination of colonial powers.

In November 1914, the Ottoman Empire declared Jihad against the enemies of Islam.

Thereby Pan-Islamism functioned as an important component of the Ottoman imperial ideology in the course of the Great War. In the eyes of the Young Turks, the war provided a unique context in which they could put their imperialist ambitions into practice. They embarked on military adventures based on Pan-Islamist and Pan-Turkist dreams, but their imperialist agenda was not limited to territorial expansion. The Young Turks desired to consolidate the Ottoman state into a modern imperial power by leading a large spectrum of social, economic, and demographic transformations. This process brought disastrous outcomes and was interrupted only with the Ottoman Empire's ultimate defeat in the Great War.

Definition

This essay explores the life and work of pan-Africanist, journalist, and author George Padmore (1903–1959).

George Padmore was a radical anti-imperial activist most well-known for his leadership of the Communist International's Negro Bureau in the early 1930s, his key role in organizing the 1945 Manchester Pan-African Congress, and as a political mentor to Kwame Nkrumah, first prime minister of Ghana. Born in the British colony of Trinidad in 1903 under the name Malcolm Nurse, the boy who would become known as George Padmore is usually celebrated as an important leader of the Pan-African movement. His thinking and his activism, however, actually encompassed a much wider and more complex range of traditions that was most sharply focused on a Marxian analysis of capitalism and imperialism. He published ten books and thousands of newspaper articles that focused on the policies and practices of colonialism, as well as the governing ideological tenets of imperialism, especially in relation to Africa.

Tracing George Padmore's life of political activism provides a snapshot of many of the most important trends of thinking about British imperialism and anti-imperialism in the first half of the 20th century. Padmore came of age in the British West Indies at a time of significant political activity characterised by post-war disturbances and the rapid spread of Marcus Garvey's Universal Negro Improvement Association. He entered the international communist movement at a moment when it played a particularly prominent role in black politics. Moving to metropolitan London in the 1930s, he was involved in contentious debates among the British left about its position on imperialism and fascism, as well as the

catalytic events of the Italo-Abyssinian crisis. His continued criticism of British imperial policy in the 1940s, particularly its new policy of colonial development, reflected the early contingencies of the Cold War and the response of British imperial policymakers to decolonisation and nationalist movements. He became a close adviser to Kwame Nkrumah in the late 1940s and worked with him to negotiate the independence of the first British African territory, Ghana, in 1957. His presence in Ghana from 1957 until his death on 23 September 1959 witnessed the earliest signs of the problems and contradictions new African leaders began to evidence once they attained political power.

George Padmore viewed imperialism as a system of exploitation arising from monopoly capitalism and perpetuated through racism. Padmore also argued, along with others at the time, that all people of colour were subjugated under a system of power relations rooted in imperialism. His 'anti-imperialism' articulated liberation for all peoples of colour, whether living under formal colonial rule or not. Padmore's ideas about imperialism and his anti-imperial activism emerge from three important strands of anti-imperial thinking in the first decades of the 20th century: a West Indian intellectual tradition; radical left anti-imperialism; and the rise of fascism in Europe.

Padmore's anti-imperialism was forged in the early 20th-century Caribbean and, in particular, the West Indian middle class. This world produced an attitude of responsibility that embedded a deep respect for those who committed themselves to causes for which they received a high standing within the community but little financial reward. A tradition of voicing opposition to injustice and exploitation emerged among the West Indian middle class that often used the newspaper as a means of articulating opinion and engaging in dialogue among a highly migratory population. His boyhood friend and future political comrade C.L.R. James has positioned Padmore within a group of 'remarkable West Indian men' including Toussaint L'Ouverture and Henry Sylvester Williams, as well as contemporaries like Aimé Césaire, Marcus Garvey, and Frantz Fanon. Their tradition also often recalled the memories

of slavery and fed into a powerful rhetoric of moral and intellectual opposition to empire. Part of this West Indian intellectual tradition also, however, embodied complex contradictions with regard to elite and popular politics. Padmore came of age among a generation who still struggled with these ambiguities but also aligned more concretely with working-class movements. This generation also began to challenge the idea of imperialism itself rather than simply the morality of its administration (Cudjoe 2003: 16–33; Smith 2002: 33).

At the end of 1924 Padmore moved to the US to train for a profession. This brought him to two prominent African-American universities: Fisk University in Nashville, Tennessee and Howard University in Washington, DC. The dynamic space of these increasingly radical 'hybrid diasporic settings' drew him into student politics and, over time, into the Communist Party (Gaines 2006; King 1970). His entry into US communism and to the international communist movement in general occurred in a uniquely fertile period of communist activity regarding the 'Negro Question'. The American Negro Labour Congress (ANLC), which Padmore had joined by 1928, emerged out of the work of Cyril Briggs and the African Blood Brotherhood (ABB), and the political milieu of places like New York and Chicago that were heightened by the ferment of the Harlem Renaissance and the effects of Garveyism (Makalani 2011; Wilson 1976). His move to Moscow at the end of 1929 coincided with the growth of Third Period Comintern policy which engaged more directly than ever before with, in particular, the situation of black peoples (Callahan 1995; McClellan 2007: 61–84). Padmore became one of the foremost black activists for the Comintern through his editorship of the *Negro Worker* and the publication of his book *The Life and Struggles of Negro Toilers* (1931). The port of Hamburg, from which he worked from 1932 until his office was raided by Nazi officials two weeks after Hitler came to power in February 1933, had become a convergence point for colonial seamen from all over the world that was utilised as a central depot for dispersing what was deemed in the colonies as 'subversive literature'.

Padmore's rapid rise within the Comintern and equally swift departure by the end of 1933 has come to represent, for historians, the attraction and subsequent disillusionment with European communism by many black radicals. For the Communist International in this period, and its work with Africa and the 'Negro Question', see Adi (2008). To establish his position outside the bounds of the Comintern, Padmore published *How Britain Rules Africa* (1936) – a book that provided a forensic outline of conditions in British African territory and in South Africa, and responded to communist debates about colonial revolution by arguing that the unique conditions of racial prejudice in Africa required different strategies for instigating a socialist revolution that would end imperial rule. Importantly, Padmore remained a committed Marxist after he moved to London in 1935. But his networks widened significantly as he worked from the metropolis to explain imperialism to British workers and to advocate for colonial nationalists. From London he befriended Indian nationalists, engaged with all the various strands of the British left, and built alliances with campaigners of all political stripes who were interested in questioning the British Empire. For example, Pennybacker's study of Padmore and other activists who addressed racial politics draws attention to the wide geography of campaigns which converged in London and usually involved organisations led by socialists and communists. Padmore's politics, Pennybacker highlights, were part of a larger discourse that 'condemn[ed] imperialism and fascism in the same breath' (Louis 2006: 974–989; Pennybacker 2009: 13).

Padmore's life was spent attacking the purported liberalism of empire as a sham. All of his writing utilised government reports and statistics about conditions in the colonies as a means of countering the dominant narrative of imperial historians, which told the history of Empire 'as the unfolding story of liberty'. His work was a response to 'immensely influential' contemporaries like Lord Lugard and Margery Perham, who championed 'indirect rule' and gradual reform in order to stall the advance of radical colonial nationalists. In the 1930s, Padmore

countered their narrative by arguing – perhaps more vehemently than anyone else at the time – that European rule in its colonies was itself fascist. He also argued that the Italian invasion of Abyssinia in 1935, and the rumoured appeasement of Hitler via the return of former German colonies in Africa, proved that imperialism was the result of the present state of capitalism by which industrialised countries strove to monopolise markets, raw materials, and spheres of investment. His work in this regard displays the greatest influence on Padmore's ideas about imperialism, which came from the British anti-imperial theoretician J.A. Hobson and, most influentially, from V.I. Lenin. Imperialism, in this analysis, provided an outlet for markets and a source of raw materials. Thus, not only were fascist countries aiming to acquire colonies, Padmore argued, but British and French colonial governments were behaving in their colonies in a manner similar to Germany and Italy in their own territory.

Padmore's continued Marxism and persistent encouragement of colonial unity came together in the late 1930s in his support for Caribbean workers who were waging a revolt across the British West Indies. These revolts became a major subject of Padmore's journalism and a key action point for the organisation he had founded with C.L.R. James and other black radicals in London: the International African Service Bureau (IASB). After the Second World War, Padmore transformed the IASB into a much wider alliance in Britain called the Pan-African Federation (PAF). His lead role in organising the Manchester Pan-African Congress was crucial to establishing a much stronger orientation to colonial workers than previous Pan-African Congresses. The Congress also marked an important turn for Pan-Africanism in its approval of, for the first time, the use of force and mass action (Adi and Sherwood 1995).

Padmore's work at the end of the Second World War embodied the sense of both hope and scepticism that many anti-colonial activists articulated in the 'new era' of the United Nations. He believed that new strategies needed to be employed in the post-war period that exploited the changes in the international order and Britain's increasing ambivalence towards colonial policy; but he also

P

increasingly argued that colonial independence would only be won through careful negotiation and strategic resistance on the part of colonial peoples. Padmore's *How Russia Transformed Her Colonial Empire: A Challenge to the Imperialist Powers* examined how the nationalities policy of the USSR contributed to the national liberation of countries formerly contained within the tsarist empire and how socialism was effective in resolving the colonial problem in a progressive manner. When, in one of the first manifestations of Cold War tension, British imperialism became a prime target of the Soviet Union after 1946, Padmore's journalism and his books were at the centre of British official debates about the suppression of anti-colonial movements and their potential communist ties. He continued to counter the narrative of a liberal empire by reporting regularly on the presence of a colour bar in Britain and attacking what he argued was the underlying exploitative intentions of Britain's new colonial policy of 'development' (Lewis 2011). Padmore's strength as a journalist was his ability to link popular and unpopular events across the Empire together. In particular, he relentlessly covered developments in South Africa and the solidification of the apartheid state, arguing that every progressive step in an African or Caribbean colony towards independence challenged the racial supremacy and segregation of apartheid.

Padmore's most frequently cited example of this was Kwame Nkrumah's march towards self-government in the Gold Coast. Although Padmore maintained interest in and contacts with anti-colonial nationalists in South Asia and the Caribbean, he became increasingly focused on Africa and on the Gold Coast as a beacon for other anti-colonial movements. He engaged much more closely with the party political system and harnessed the processes of government to the cause of negotiating independence, arguing that success in one colony would have a catalytic effect on others. Ending imperialism became, in some respects for Padmore, a game of dominos; in which victory in one colony would lead to victory in others, and political independence would be the first stage of combating the social and economic strands of imperialism's many permeations. Indeed, Nkrumah's famous refrain to 'seek ye

first the political kingdom' is a mark of the close thinking these two political allies maintained.

Yet as an end to formal colonial rule became real, Padmore's arguments about the use of violence became ambiguous, and his ideas about mass action and the strategic manipulation of elite party politics began to collide. Contentious questions about how former colonies would be governed, how their economies would be structured, and who would 'belong' in these communities also emerged. The transnational, anti-imperial vision of Padmore which sought to create entirely new societies, clashed with that of some anti-colonial nationalists. Indeed, the encounter between transnational antiimperial thinkers like Padmore with a new generation of anti-colonial nationalists, particularly after the Second World War, provides much fertile ground for future research. The impact of the continued influence of Marxism on many of these thinkers is another, highly relevant area for research.

Ultimately, Padmore's form of Marxism did not wane in the face of a stronger commitment to black unity nor the evolving ideas of 'pan-Africanism' after he left the Communist International in 1934. But his form of Marxism shifted to one in support of a Labourite commitment to 'democratic socialism' or 'libertarian socialism', as he termed it. Padmore denounced communism in his later years as something that was largely formulated according to the interests of the Soviet Union and profoundly opposed to freedom, this even after the Comintern had been disbanded. Padmore seems to have taken non-Marxists like Gandhi and Nehru in India as models.

Instead these ideas were for Padmore central aspects of the same logic that understood racism as a product of imperialism, and imperialism as both a political and economic system of dominance that could not be modified by those bound up in its interests. When the British Labour Party came to power in 1945, he exposed the hypocrisy of their support for empire against their previous promises, and identified resource extraction as the exploitative intention of colonial development policy. Contrasting the peaceful negotiation of independence in the Gold Coast with the brutal suppression of Mau Mau in Kenya, he placed the

blame for violence squarely at the feet of the imperialists and the nature of the system they perpetuated. He held up a mirror to late imperial Britain and expressed what 'outsiders' saw.

Pan-Africanism

Hakim Adi
University of Chichester, Chichester, UK

Synonyms

Africa; Anti-racism; Capitalism; Colonialism; Racism; Slavery

Definition

This essay xamines how Pan-Africanism evolved as a variety of ideas, activities, organisations, and movements that resisted the exploitation and oppression of all those of African heritage, opposed the ideologies of racism, and celebrated African achievement and being African. It describes the manifold visions and approaches of Pan-Africanism and Pan-Africanists as a belief in the unity, common history, and common purpose of the peoples of Africa and the African diaspora, and the idea that their destinies are interconnected. Such perspectives may be traced back to ancient times, but Pan-Africanist thought and action is principally connected with, and provoked by, the modern dispersal of Africans resulting from the trafficking of captives across the Atlantic to the Americas, as well as elsewhere, from the end of the fifteenth century. This 'forced migration', the largest in history, and the creation of the African diaspora were accompanied by the emergence of global capitalism, European colonial rule, and racism.

Introduction

There has never been one universally accepted definition of exactly what constitutes Pan-Africanism. Some writers on the subject are even reluctant to provide a definition, or suggest that one cannot be found, acknowledging that the vagueness of the term reflects the fact that Pan-Africanism has taken different forms at different historical moments and geographical locations (Ackah 1999, pp. 12–36; Geiss 1974, pp. 3–15; Shepperson 1962). Nevertheless, most writers would agree that the phenomenon has emerged in the modern period and is concerned with the social, economic, cultural, and political emancipation of African peoples, including those of the African diaspora. What underlies the manifold visions and approaches of Pan-Africanism and Pan-Africanists is a belief in the unity, common history, and common purpose of the peoples of Africa and the African diaspora, and the notion

that their destinies are interconnected. In addition, many would highlight the importance of the liberation and advancement of the African continent itself, not just for its inhabitants, but also as the homeland of the entire African diaspora. Such perspectives may be traced back to ancient times, but Pan-Africanist thought and action is principally connected with, and provoked by, the modern dispersal of Africans resulting from the trafficking of captives across the Atlantic to the Americas, as well as elsewhere, from the end of the fifteenth century. This 'forced migration', the largest in history, and the creation of the African diaspora were accompanied by the emergence of global capitalism, European colonial rule, and racism. Pan-Africanism evolved as a variety of ideas, activities, organisations, and movements that, sometimes in concert, resisted the exploitation and oppression of all those of African heritage, opposed the ideologies of racism, and celebrated African achievement and being African.

Forerunners

Before the concepts of Pan-African and Pan-Africanism emerged at the end of the nineteenth century, there were various organised efforts by Africans in the diaspora during the eighteenth century to join together in order to combat racism, to campaign for an end to the kidnapping and trafficking of Africans, or to organise repatriation to the African continent. In Britain, for example, there appear to have been several informal efforts before African abolitionists such as Olaudah Equiano and Ottobah Cugoano formed the Sons of Africa organisation to collectively campaign for an end to Britain's participation in the trans-Atlantic trafficking of enslaved Africans (Adi 2007). In Boston in 1784, the abolitionist Prince Hall organised the first African Masonic lodge in North America as a means of combatting racism and for mutual support and with a clear orientation towards Africa. Three years later, an African Church movement developed in North America out of the Free Africa

Society founded in Philadelphia by Richard Allen and Absalom Jones with similar anti-racist aims (Geiss 1974, p. 34). Such early initiatives were often accompanied by efforts to refute the dominant racist ideology of the day, which argued that Africans were inferior to Europeans, subhuman and only fit for enslavement. The best-selling writing of Equiano and Cugoano, for instance, aimed to undermine the racism that justified slavery, as well as attacking the slave trade and slavery itself. Such writing was sometimes a collective endeavour undertaken in the interests of all Africans and had a wide influence.

Perhaps the most important event to undermine both racism and the slave system during this period was the revolution that broke out in the French Caribbean colony of St Domingue in August 1791. That revolutionary struggle eventually led to the creation of Haiti, the first modern 'black' republic anywhere in the world and only the second independent country in the entire American continent. The revolution elevated Haiti to iconic status amongst all those of African descent, and produced new heroes such as Toussaint L'Ouverture, Dessalines, Christophe, and Pétion. The country's constitution established the principle of equal human rights and established the country as a safe haven for all Africans (for a useful summary, see Popkin 2012). Indeed, in the early nineteenth century, several thousand African Americans migrated to Haiti from Philadelphia and other US cities (Geiss 1974, p. 86). Haiti also acted as a base for future assaults on the ideology of racism by some of Haiti's leading intellectuals and statesmen such as Anténor Firmin and Benito Sylvain.

There were several efforts by Africans in the diaspora to return to the African continent. Thomas Peters, born in Africa, enslaved and then self-liberated during the American War of Independence, led over a thousand 'Black Loyalists' from Nova Scotia in Canada to the new British colony of Sierra Leone, where they continued to agitate for their rights and even self-government (Walker 1992). Other African Americans also organised repatriation to Sierra Leone in the nineteenth century, including the

Bostonian merchant Paul Cuffee. Similar efforts to repatriate to West Africa were also made by Africans and their descendants who had been kidnapped, enslaved, and transported to Brazil and the Caribbean. The West African country of Liberia, which was founded and developed by the American Colonization Society in the early nineteenth century, also became a haven for repatriated African Americans and after its declaration of independence in 1847 was viewed by many as yet another symbol of African achievement, alongside Haiti and the African kingdom of Abyssinia.

The growth of colonies of Western-educated Africans in Sierra Leone, Liberia and elsewhere in West Africa, many of whom were personally connected with the struggle against enslavement and racism, was certainly a factor contributing to the emergence of emancipatory ideas with a broad Pan-African rather than just local character throughout the nineteenth century. Indeed, it could be said that an African intelligentsia (clergymen, doctors, lawyers, and teachers) emerged on all sides of the Atlantic, that is to say in Europe, the Americas and in Africa during this period, whose members influenced and drew inspiration from each other. Several prominent figures emerged such as Martin Delany, from the US and Edward Blyden from the Caribbean. Delany, an abolitionist, writer, and medical practitioner, welcomed the 'common cause' that was developing between 'the blacks and colored races' of the world, travelled to West Africa and advocated the 'regeneration of Africa' by those in the diaspora. He clearly stated his policy: 'Africa for the African race and black men to rule them' (Adi and Sherwood 2003, pp. 34–39). Blyden, a politician, writer, educator, and diplomat, has been seen as one of the key thinkers in the development of Pan-Africanism. He emigrated to Liberia and became a strong advocate of 'racial pride' and repatriation to Africa from the diaspora. His newspaper Negro was specifically aimed at audiences in Africa, the Caribbean, and the US. Blyden believed that Africans had their own unique contribution to make to the world and an equally unique 'African personality'. During his own lifetime he was a very influential figure and his contradictory ideas can be seen as influencing later Pan-Africanists such as Marcus Garvey and even Kwame Nkrumah. However, he was also a firm supporter of British and other forms of colonialism in Africa, a position that he shared with many other Western-educated Africans in the nineteenth century (11–15).

Ethiopianism

At the end of the nineteenth century the strivings of Africans in West Africa and southern Africa against what were perceived as racist practices and attitudes within Christian Churches led to what was commonly referred to as the Ethiopian movement, a movement to establish independent African Churches such as the Ethiopia Church founded in South Africa in 1892 and the Native Baptist Church founded in Nigeria in 1888. In both regions, the movement was sometimes influenced by African American missionaries, and although often expressing itself through religion, it also articulated a range of anti-colonial strivings encapsulated in the slogan 'Africa for the Africans' (Esedebe 1992, pp. 23–24). As a broad cultural and political movement, an early form of Pan-Africanism, it was enhanced by Abyssinia's military victory over Italy at the Battle of Adowa in 1896. Ethiopianism was also seen as being a contributory factor to the Zulu or Bambatha Rebellion in Natal in 1906, a struggle which led to one of the earliest Pan-Africanist texts, Bandele Omoniyi's *A Defence of the Ethiopian Movement* (Adi 1991).

The First Pan-African Conference

The first gathering to be described as 'pan-African' was the Chicago Congress on Africa held in 1894, but the first Pan-African Conference was held in London in July 1900, convened by Henry Sylvester Williams, a Trinidadian lawyer, and the organisation he founded in 1897, the African Association. The African Association was mainly concerned with various injustices in

Britain's African and Caribbean colonies but it soon consulted leading African Americans such as Booker T. Washington about its aims to hold a conference. This was timed to coincide with the Paris Exhibition in order to assemble 'men and women of African blood, to deliberate solemnly upon the present situation and the outlook for the darker races of mankind', and establish 'a general union amongst the descendants of Ham'. Plans for the conference, which was still mainly aimed at influencing enlightened public opinion in Britain, were also widely reported in the African American press, as well as in Anglophone Africa and the Caribbean. It seems that after Williams met Benito Sylvain in Paris, the scope of the conference was broadened to include 'the treatment of native races under European and American rule. One important aim of the conference was to demonstrate that those of African descent could speak for themselves against all the injustices they faced and contemporary reports stressed that this was the first occasion on which Africans had united for 'the attainment of equality and freedom'. Benito Sylvain, who represented Emperor Menelik of Ethiopia, the African American educator and activist Anna J. Cooper, and W.E.B. Du Bois were amongst the distinguished participants of this international gathering, which concerned itself with many of the key issues and problems facing 'African humanity'. The conference 'Address to the Nations of the World', which condemned racial oppression in the US as well as throughout Africa and demanded self-government for Britain's colonies, was drafted under the chairmanship of Du Bois and included the famous phrase 'the problem of the 20th century is the problem of the color-line'. The conference recognised the importance of the 'three sovereign states' and intended to establish branches in Africa, the Caribbean and North America of a new Pan-African Association. Plans were also announced for a second conference in the US in 1902, and Williams was able to launch the first few issues of a magazine the *Pan-African*. However, despite Williams's strenuous efforts and extensive travel, both the Pan-African Association and the *Pan-African* soon collapsed (Sherwood 2011).

Du Bois and the Pan-African Congresses

Following the London conference, several years passed before such a major event was again organised. In 1912, Booker T. Washington convened an 'International Conference on the Negro' at Tuskegee. It is possible that both Washington and the editor Thomas T. Fortune had planned to hold such a gathering even earlier, but it was not designed to develop the overtly political concerns established in 1900. W.E.B. Du Bois had emerged as one of the key figures in London in 1900, and 3 years earlier had elaborated his views on what he referred to as 'Pan-Negroism' and the need for a 'Pan-Negro movement in his well-known essay, published in 1897, 'The Conservation of Races' (Du Bois 2010/1897). It was Du Bois who sought to continue the tradition of major international Pan-African gatherings when he organised the first Pan-African Congress in Paris in 1919.

Du Bois had some official support from the French government for the Congress, but faced opposition from the governments of Britain and the US. Nevertheless, 57 participants from Africa, the Caribbean and the US made their way to Paris. Du Bois proposed the creation of new states in Africa based around the confiscation of some of Germany's former colonies, supervised by the other major colonial powers but taking into account the views of the 'civilized Negro world', by which he had in mind mainly African Americans. He also called for a permanent Pan-African secretariat based in Paris and hoped that the Congress would enable the voice of the 'children of Africa' to be heard at the post-war peace conferences held in the city. However, the first Pan-African Congress had little lasting influence, was criticised for its proximity to the French government, and its demand that the rights of Africans and those of African descent should be protected by the League of Nations was ignored (Geiss 1974: 234–258).

Du Bois then took the initiative to organise a second congress, held in 1921 in London, Paris, and Brussels, then a third in London and Lisbon in 1923, and a fourth, originally scheduled to take place in the Caribbean but finally held in New York in 1927. In 1929 he also made plans

P

to hold a fifth congress in Tunis in North Africa, but was denied permission by the French government. The four congresses established the idea of Pan-Africanism, consolidated Pan-African networks, and drew activists from the US, Liberia, Ethiopia, and Haiti, as well as those from Africa and the Caribbean resident in Europe. The congresses took a stand against racism and began to raise the demand for self-determination in the colonies. However, few representatives from organisations in the African continent participated, there was little support from African American organisations, and no permanent organisation, organising centre, or publication was established. The congresses were also criticised for the moderate political views expressed and for the exclusion of Marcus Garvey, perhaps the leading Pan-Africanist of the time (ibid.).

Garvey and Garveyism

The Jamaican writer and activist Marcus Garvey first established his Universal Negro Improvement Association and African Communities League (UNIA) in Jamaica in 1914. It included amongst its aims 'a universal confederacy amongst the race', as well as promoting 'racial pride', education, commercial enterprises, 'conscientious Christian worship', and assisting in 'the civilizing of backward tribes in Africa' (Adi and Sherwood 2003, p. 76). Garvey re-established the UNIA in New York in 1917 where it soon attracted thousands of adherents, first throughout the US and soon after internationally. At its height, the UNIA's membership has been estimated to have been over four million, but no precise figures exist. Undoubtedly it was the largest political movement of Africans during the twentieth century, embracing not just a few intellectuals but the masses both on the African continent and throughout the diaspora. The organisation's newspaper *Negro World* preached an anti-colonial message, 'Africa for the Africans at home and abroad', challenged notions of white supremacy, and extolled the greatness of Africa's history and of Africans. It circulated, often

illegally, throughout colonial Africa and the Caribbean, indeed throughout the diaspora. The UNIA established women's and children's organisations, and promoted commercial ventures of many kinds. The best known of these was the ill-fated Black Star shipping line which aimed to aid commercial ties between West Africa, the Caribbean, and the US.

The UNIA's *Declaration of Rights of the Negro Peoples of the World,* launched in 1920, demanded self-determination, condemned anti-African racism, and defended 'the inherent right of the Negro to possess himself of Africa', and the 'necessity of Negro nationalism, political power and control'. The UNIA also envisaged a 'Negro independent nation on the continent of Africa' to which those in the diaspora could return (78). In the meantime, Garvey attempted to forge links with the government of Liberia and declared himself provisional president of a future independent African republic. Garvey's politics, overtures to the Ku Klux Klan, and links with the masses put him at odds with Du Bois and other African American leaders, while his movement was feared by the major colonial powers and the US government. In 1922 he was arrested in the US on charges of fraud, eventually imprisoned and then in 1927 deported to Jamaica. Garvey remained active in Jamaica, Britain, Canada, and elsewhere until his death in 1940, but the UNIA became divided and Garvey himself sometimes espoused a political orientation that was rejected as too moderate by other Pan-Africanists. Nevertheless his legacy was immense, particularly in Jamaica where, following his death, his ideas exerted a major influence on the Rastafarians and where he was subsequently declared the country's first national hero. His influence was acknowledged by other Pan-Africanists, most notably Kwame Nkrumah. Garveyism too has remained an influential trend of Pan-Africanism, especially in the African diaspora.

Despite the undoubted influence of Garvey and the UNIA, many radical activists were as critical of his politics as they were of Du Bois. The most significant critics and those who developed a different Pan-African vision were those connected with the international communist movement of

the 1920s and 1930s. Although acknowledging that Africans worldwide faced similar problems of racism and various forms of colonial oppression and exploitation, the black communists advocated the need for a united struggle of all Africans in unity with working and oppressed people of all countries, and disseminated their views through a publication, the *Negro Worker,* as well as through communist parties internationally. In 1930 in Hamburg, Germany, the communists even held their own Pan-African gathering, drawing participants from Africa, the Caribbean, the US, and Europe. The politics of the communists did not attract as many adherents as the UNIA but it was significant for its critique of colonialism and imperialism, its insistence on the need for an organised struggle around specific demands which would lead to a socialist future in which all Africans would be empowered. One of the most notable black communists before the mid-1930s was the Trinidadian George Padmore, who acted as the editor of the *Negro*. After he parted company with the communist movement, Padmore became a leading Pan-Africanist. Communism, or various aspects of Marxism, also had a significant influence on other Pan-Africanists including Du Bois, Aimé Césaire and Kwame Nkrumah (Adi 2013).

Négritude

Yet another strand of Pan-Africanism developed amongst African and Caribbean intellectuals living in France between the two wars. Known as Négritude, the movement was principally developed by three students (Aimé Césaire from Martinique, the Senegalese Léopold Senghor, and Léon Damas from Guyana) who had come under a variety of influences including Marxism and the Harlem Renaissance. Négritude propounded a reconciliation between those from the continent and the diaspora, through a rejection of assimilation, colonialism, and Eurocentrism and a common struggle to embrace and celebrate African culture and the uniqueness of being African, at times almost harking back to the notion of 'African personality' espoused by Blyden. Its

impact was greatest in the Francophone world and exemplified in Césaire's poem *Cahiers d'un retour au pays natal* (Kestleloot 1974).

Ethiopia and Radical Pan-Africanism

In the mid-1930s the Pan-African movement was further radicalised by the influence of Marxism, especially in Britain and France and many of the colonies of these two imperialist powers. It was the Communist International that first promoted the idea of a United States of Socialist Africa and provided an uncompromising critique of colonialism, while several activists were impressed by the economic developments in the Soviet Union and that country's attempts to end racism and national oppression. A more radical approach to colonial rule was also the consequence of the dire economic situation during the Depression years, which led to major strikes and rebellions throughout the Caribbean, and by fascist Italy's invasion of Ethiopia in 1935, which led to a major international campaign to support Ethiopia that was particularly strong in many parts of Africa and throughout the diaspora. The outbreak of the Second World War only strengthened Pan-African demands for an end to colonial rule; while in Britain, Padmore and the Pan-African Federation made preparations for a new Pan-African congress.

The Manchester Pan-African Congress

The Manchester or Fifth Pan-African Congress, held in Britain in 1945, has been seen as the most important of all the Pan-African conferences. It was dominated by the thinking of Padmore and other British-based Pan-Africanists, including by this time Kwame Nkrumah. The Manchester Congress grew out of the radicalism of the 1930s and the war years, as well as Padmore's experience as a key organiser of the communist-led International Conference of Negro Workers in Hamburg in 1930. One of the main features of the congress was that its participation was restricted to representatives of workers' and

P

farmers' organisations: 'the masses' who were considered to be the main force that would end colonial rule by force if necessary. It therefore also broke with previous gatherings that had merely the aim of lobbying the governments of the imperialist powers. The congress expressed its opposition to the 'rule of capital' and the imposition of Eurocentric values and political institutions in the colonies. It also condemned the colonial borders that had been imposed on African states, an issue that would later become controversial in the post-independence period. Although it did not openly refer to the need for socialism, the Congress clearly had this general orientation. Several of the participants had also attended the recent founding conferences of the World Federation of Trade Unions (WFTU), and proceedings in Manchester reflected an internationalist spirit in the espousal of the slogan 'Workers and oppressed people of all countries unite!' Although Du Bois attended, there was very little emphasis on the US. Participants were mainly from Britain's colonies in Africa and the Caribbean, and there was an increasing emphasis on African liberation (Adi and Sherwood 1995).

Pan-Africanism in Africa

Although the Manchester Congress and the activities of Padmore and others made Britain an important centre of Pan-Africanism, in the period after 1945 the centre of the Pan-African world was already shifting to Africa. In 1947, the WFTU organised two Pan-African trade union conferences. The first was held in Dakar and 4 years later a second, similar conference took place in Bamako, attended by over 140 delegates including the future leader of Guinea and leading Pan-Africanist Sékou Touré. Nkrumah had returned to the Gold Coast in 1947 and his Pan-Africanist activity was initially focused on achieving the independence of that country from British colonial rule, although he had already indicated his aim of a federation of independent states in West Africa, both Anglophone and Francophone, as a step towards the 'United Socialist States of Africa'. With this aim in mind, Nkrumah had made plans on several occasions to hold a conference of nationalist movements in Africa, particularly those in West Africa such as the Rassemblement Démocratique Africain, but evidently without success. Finally, as 'leader of government business' in the Gold Coast, he convened the West African Federation Conference, which was held in Kumasi in December 1953. The participants discussed how to establish a West African federation that could create the conditions for the liberation of the entire African continent and the African diaspora.

Nkrumah and the Road to the OAU

Nkrumah played a major role in reinvigorating an African-centred Pan-Africanism even before 1957, but in that year the independence of the Gold Coast from British colonial rule created the conditions for a new stage in the Pan-African struggle to liberate and unite the entire African continent. As the new Ghana celebrated its independence, Nkrumah declared that it was 'meaningless unless it is linked up with the total liberation of Africa', and he began to organise to achieve that liberation and his vision of a United States of Africa. In 1958, with the assistance of George Padmore, he hosted the Conference of Independent African States, (at that time a gathering of Ethiopia, Ghana, Liberia, Libya, Morocco, the Sudan, Tunisia, and the United Arab Republic). It was the first time in history that such a meeting had taken place. Later the same year, Nkrumah hosted the All-African Peoples Conference, which brought together over 300 representatives of political movements, trade unions, and other organisations from 28 African countries, including those still under colonial rule. Both conferences aimed to encourage a spirit of Pan-African unity amongst the participants and to discuss ways of working jointly to ensure the end of colonial rule throughout the continent. Even at this early stage, Nkrumah urged the African states to consider measures to enhance economic co-operation and to develop a common foreign policy, and both conferences looked forward to a commonwealth of independent African states.

The same year the Pan-African Freedom Movement for East and Central Africa (PAFMECA) was founded, with Julius Nyerere and Kenneth Kaunda playing leading roles, and with the aim of facilitating the independence of colonies in that part of Africa. These initiatives were followed by a series of other conferences in Africa in the years before 1963, and Nkrumah and Sékou Touré also agreed to establish a union between their two independent countries as the basis for a federation of African states and an eventual United States of Africa. However, their initiative was seen as too radical by many other African governments and reflected differing approaches to the question of African unity and whether this meant merely increasing economic cooperation or implied a more immediate political union (Nkrumah 1963). The growing differences between African states, which all claimed to be adhering to the principles of Pan-Africanism, were exacerbated by the continuing interference of the big powers in Africa's affairs, but this did not prevent the founding of the Organisation of African Unity (OAU) in 1963 (Legum 1962: esp. chs 3–5).

Organisation of African Unity

The founding of the OAU in Addis Ababa in 1963 has been seen as a compromise between 'radical' and 'moderate' African governments. Its formation was clearly a major victory for Pan-Africanism on the African continent, although it also had a significant influence amongst the African diaspora. It was, however, the Pan-Africanism of African governments not of the peoples of Africa, although there were also attempts to forge that kind of unity, too, most notably through the labour organisation the All-African Trade Union Federation, established in 1961 (Agyeman 2003).

The OAU was established with four main aims:

  To promote the unity and solidarity of the African States;
  To coordinate and intensify their cooperation and efforts to achieve a better life for the peoples of Africa;

  To defend their sovereignty, their territorial integrity and independence;
  To eradicate all forms of colonialism from Africa. (Organization of African Unity 2004)

However, it was also confronted with what was increasingly being called neocolonialism: the attempts by the major imperialist powers to maintain economic and other forms of control of nominally independent states. The impact of neo-colonialism, the legacy of colonialism, and the effects of the Cold War in Africa all contributed to increasingly undemocratic African governments and an ineffective OAU. Perhaps its greatest achievement was the support given to those struggling to remove the remaining colonial regimes in Africa, in the Portuguese colonies, Namibia, and Zimbabwe, as well as the apartheid regime in South Africa, through the auspices of the OAU's Coordinating Committee for the Liberation of Africa (Salim 1996).

Although it had no direct mandate in regard to the African diaspora, the OAU's influence and the manifestation of African unity could still have an influence. It was particularly evident in the work of the African American activist Malcolm X, who established his Organisation of Afro-American Unity in order to address the many problems still faced by those not just in the US but also throughout the diaspora. At the end of his life, Malcolm X spoke for a whole generation when he called not only for those in the diaspora to identify and learn from Africa but also demanded that the OAU take up for solution the problems confronting African Americans. The militant approach of Malcolm X and others ushered in a new era and a demand for what was referred to as Black Power, a new Pan-Africanist trend that exerted its influence not only amongst those in the diaspora from Britain to Brazil, but even in parts of the African continent, most notably in the Black Consciousness Movement led by Steve Biko in South Africa (West and Martin 2009: esp 24–28).

Sixth and Seventh Pan-African Congresses

Attempts to strengthen the links between the diaspora and Africa, between African and Caribbean

P

governments and nongovernmental organisations, led to the convening of the 6th Pan-African Congress in Tanzania in 1974. Indeed, Julius Nyerere, the president of Tanzania, played a leading role in convening the congress, although the original initiative and many of the key organisers were based in the US. The Sixth PAC, as it was often known, was often presented as the first such congress to take place on the African continent. Its main aims included:

> Increasing the political unity between African people in the west and African people on the continent . . .
>
> Exploring strategies for increasing our support for the liberation wars in southern Africa . . .
>
> Encouraging a need for self-reliance and self-determination among the masses of African people wherever we may find ourselves. (Hill 1974)

The congress aimed to discuss practical solutions to a range of problems including greater unity amongst Caribbean states and greater economic cooperation and ways to eliminate 'economic dependency and exploitation' (Cox 1974).

However, it represented an uneasy alliance of delegates from 26 African governments (and one from the Caribbean), several southern African national liberation organisations and those from the diaspora communities in the US, Canada, Britain, Brazil, the Caribbean, and elsewhere. Nevertheless, it could certainly claim to be the largest and one of the most representative of all the Pan-African congresses. The congress undoubtedly played an important role in consolidating support for the liberation struggle in southern Africa, one of the few issues that united all strands of the Pan-African movement. However, at the same time, there were many who were critical of what they saw as the hijacking of Pan-Africanism by the unrepresentative member governments of the OAU and their staunch defence of colonial boundaries. As the well-known Guyanese historian and activist Walter Rodney put it, 'the OAU does far more to frustrate rather than to realize the concept of African unity'. In his remarks before the Sixth PAC, Rodney also urged that the Pan-African movement should re-establish the revolutionary and socialist orientation it manifested at the time of the Manchester Congress. The Sixth PAC eventually resolved that Pan-Africanism should be a force for liberation 'within the context of the class struggle' (Rodney 1975).

The Sixth PAC reflected the fact that Pan-Africanism had become a broad movement that encompassed governments and NGOs, those who demanded the political union of African states as well as those that defended national boundaries. It was also apparent that the clear political orientation that existed in 1945 was no longer so much in evidence, and the demands for revolution and socialism by some were seen as a threat by others, not least by most African and Caribbean governments. The years that followed did nothing to minimise the differences that existed amongst all those claiming adherence to Pan-Africanism, although there were also many cultural manifestations of Pan-Africanism, especially musical ones, the reggae of the Jamaican Bob Marley and the Afro-Beat of the Nigerian Fela Kuti, for example, that served as unifying factors. Cultural manifestations had long existed and were evident in the two Conferences of Negro Writers and Artists held in Paris and Rome in 1956 and 1959, and the World Festivals of African Arts and Culture held in Senegal and Nigeria in 1966 and 1976, although a diversity of approaches could also be found in these Pan-African events. New ideological currents, such as Afrocentrism, that emerged at the end of the twentieth century only contributed to the diversity of opinions but did not prevent the convening of another Pan-African congress in Uganda in 1994.

The Seventh Pan-African congress brought together over 800 delegates under the theme 'Facing the Future in Unity, Social Progress and Democracy'. The congress was held at a time when the entire African continent had been liberated from colonialism and apartheid had been defeated. It was most notable for the fact that at its conclusion a Pan-African Women's Liberation Organisation was established, and for the decision to establish a permanent Pan-African Secretariat hosted by the government of Uganda (Abdul-Raheem 1996). Unlike the previous congress, the event was dominated by non-

governmental organisations, although some nine governments sent delegations including Libya and Cuba. However, just as during the Sixth PAC, there were major ideological differences during the proceedings, even over the definition of who was an African. Several major issues were debated including the preferred scope and meaning of reparations for Africa and the diaspora and most importantly the role and position of women and youth. A key declaration at the conclusion of the congress was that Africans should resist economic and other forms of recolonisation, oppose the 'New World Order', and 'take action that will rid the world of the curse that has plagued humanity for over five centuries' (Campbell 1998). The congress also resolved to hold an eighth congress in Libya, a meeting that was eventually not convened.

The African Union

Although the eighth Pan-African congress was not held in Libya, that country and its leader began to assume an increasingly important role in Pan-African affairs on the African continent. There had been many criticisms of the OAU from those outside it but there was also a recognition from member states that the organisation required an overhaul if it were to be fit for purpose in the twenty-first century. This became particularly evident after the founding of the African Economic Community (AEC) in 1994. The AEC aims to bring about the eventual economic integration of the entire continent leading to an African central bank and single currency. It was the initiative of the Libyan leader Muammar Gaddafi to convene an extraordinary summit of OAU heads of state in his hometown Sirte in 1999, and from this summit emerged the Sirte Declaration and a new organisation of African states, the African Union (AU). The AU was an attempt to revitalise the OAU, which had become widely discredited as a 'club of dictators', but also to establish a more robust continental organisation in the era of globalisation. Gaddafi was the most enthusiastic proponent of a United States of Africa and a strong and united continent able to stand up for itself in the

world, and although other leaders were more cautious there was an agreement to speed up the founding of continental institutions such as the Pan-African Parliament. The aims of the AU are much wider than those of the OAU and specifically include accelerating 'the political and socio-economic integration of the continent', promoting 'peace, security and stability', and promoting 'democratic principles and institutions, popular participation and good governance' (African Union 2002). The AU was officially founded in May 2001.

Although the AU also has many critics, one of its most important acts was to recognise the importance of involving the African diaspora in its activities and deliberations. In subsequent years the African diaspora has been more fully incorporated within the structures of the AU as the 'sixth region', although it is clear that these structures and the heterogeneous nature of the diaspora do not allow easy integration. Nevertheless, such steps are more than symbolic and have been extended by Haiti's application to be the first country situated in the Caribbean to become a full associate member of the AU.

In 2013 the AU celebrated the 50th anniversary of the founding of the OAU by promoting the theme 'Pan-Africanism and African Renaissance', although it had been powerless to prevent NATO intervention and the toppling and assassination of one its key architects, Muammar Gaddafi, 2 years earlier. Nevertheless, both inside and outside meetings and conferences held during the anniversary year, Pan-Africanism was celebrated and invoked by its numerous and disparate adherents, some of whom looked forward to an imminent 8th Pan-African Congress. The problems and challenges confronting Africa and its diaspora remain and so too does a sense of common purpose and aspiration, the basis for Pan-Africanism and a Pan-African movement in the twenty-first century.

Pan-Arabism

Pan-Arabism and Iran

Kaveh Farrokh
Institute of Historical Iranian Studies, History, Methodolgica Governance University, Paris, France

Synonyms

Anti-Iranian Sentiment; Arab Nationalism; Baathism; Nasserism

Definition

Pan-Arabism is the philosophy of unifying all present-day Arab nations and Arab-speaking regions into a singular and unified superstate stretching from the Atlantic Ocean to the Persian Gulf (Davis 1993: 266). More specifically, Baathist philosophy defines the greater Arab nation as consisting of Arab League countries as well as non-Arab territories such as Alexandretta (Iskenderun) in Turkey and Khuzestan in Iran. Pan-Arabism has also been characterised as inciting prejudice against and downplaying the role of non-Arab Muslim peoples such as Turks and Iranians (Chaudhary and Chaudhary 2009: 172). The relation of Pan-Arabism towards Iran can be described within four broad categories: (1) historical antecedents of twentieth-century Pan-Arabism; (2) the formulisation of anti-Iranism in twentieth-century Pan-Arabism; (3) retroactive Arabisation of history and geography; and (4) the Iran–Iraq War and Pan-Arabism.

Historical Antecedents of Twentieth-Century Pan-Arabism

One defining feature of Pan-Arabism is its negative characterisations of Iranians, a phenomenon existing since at least the Islamic conquest of (predominantly Zoroastrian) Sassanian Iran (637–51). As noted by Ettinghausen (1972: 1), Iran after the Arab-Islamic conquests 'had lost

its independence, though not its cultural identity'. As noted by Zarrin'kub (2002), the Ummayad caliphate (661–750) instituted a number of discriminatory anti-Iranian measures for eliminating the Persian language and wider Iranian culture, a dynamic corroborated by Islamic sources reporting of punitive measures taken against Persian-speakers (Al-Isfahani 2004: vol. 4, 423). The Persian language was banned in Iran for nearly three centuries by the caliphates (Abivardi 2001: 468).

The caliphate's discriminatory practices were not confined to the followers of the Zoroastrian faith but also operated against Iranian converts to Islam. Clawson (2005: 17) writes of the Arabs implementing a system of 'ethnic stratification that discriminated against Iranians', who then 'chafed under Arab rule'. A prominent example is Al-Baladhuri's report of Ummayad Caliph Muawiyah (602–80), who declared in his letter, 'never treat them [Iranians] as equals of the Arabs' (Al-Baladhuri 1916: 417). The caliph's letter to Ziyad Ibn Abih stated (Bahar 2002: 82; Qomi 1982: 254–256) that the caliphate's Iranian Muslim subjects were to be (1) barred from frontier duties safeguarding the caliphate's frontiers; (2) granted lower pensions and jobs; (3) discriminated against in prayers when Arabs were present (i.e. they were not to stand in the first row or lead prayer congregations); (4) forbidden to marry Arab women (Arab men were allowed to marry Iranian women); and (5) forbidden to dress in Arab garb (Goldziher 1889–90: vol. 2, 138–139). Other discriminatory measures against non-Arabs included declarations that only persons of 'pure Arab blood' were worthy to rule in the caliphate (Momtahen 1989: 145). The succeeding Abbasid caliphate (750–1258) failed to adequately address the discriminatory practices against the Iranian population.

Negative views of Iranians are documented centuries later and into the early twentieth century. A clear reference to this is seen in a meeting in 1911 between Ibn Saud (Abdul Aziz bin Abdul-Rahman Ibn Saud, 1876–1953, founder and first king of modern Saudi Arabia) and William Shakespear (a British political agent in Arabia at the time), in which they discussed the possibility

of forming a common front against the Ottomans. It was during this meeting that Ibn Saud told Shakespear, 'we hate the Persians' (Allen 2006: 245). What is significant about the Ibn Saud–Shakespear exchange is the articulation of the Arab cultural dislike of Iranians, despite the mainly anti-Ottoman character of the meeting.

The Formulisation of Anti-Iranism in Twentieth-Century Pan-Arabism

The roots of modern Pan-Arabism have often been attributed to the great Arab revolt in Hijaz during the First World War (1914–18), which was essentially organised and led by the British intelligence officer T.E. Lawrence (1888–1935). As an anti-Ottoman movement, the Hijaz revolt was fought by the Arabs to carve out a singular Arab state in the aftermath of the First World War. This ambition was to be unfulfilled in the wake of the Versailles post-war negotiations in Paris. Despite this failure, the idea of a large Pan-Arab state had taken hold among the Arab intelligentsia of the Middle East.

It was in the newly formed post-Ottoman states of Syria and Iraq that the modern basis of Pan-Arabism was to be formulated. Notable figures in Iraq (which was recognised as an independent country by the League of Nations in 1932) were Rashid Ali (who led the anti-British revolt in 1941) and resident Syrians (especially Jamil Mardam and Shukri al-Quwatli) and the Mufti of Jerusalem (Haj Amin al-Husseini), who were exiled to Iraq for their political activities against the French and British. Prominent Syrian Pan-Arabists were Salah al-Din Bitar and Michel Aflaq (1910–89; a Christian), who were influenced by European-style fascism during the 1930s (Davis 1993: 266). The Pan-Arabist origins of anti-Iranism were mainly constructed in Iraq, especially from 1921 when King Faisal I (1885–1935) bought Satia al-Husri (1882–1968; of Syrian-Turkish descent) to Iraq; he first became the director-general of education and later dean of Iraq's Law College. Al-Husri was soon accompanied to Iraq by a number of Palestinian, Lebanese, and Syrian Pan-Arabist thinkers to help implement King Faisal's project of establishing Iraq's educational system. Masalha (1991: 690) has noted that Syrian Pan-Arab educators were 'Ummayad in their perspective', which may partly explain the implementation of anti-Iranism by Husri and his team into the Iraqi educational system and mass media in 1921–41 (Adib-Moghaddam 2006: 19).

Makiya (1998: 153–160) outlines Husri's anti-Persian educational policies in Iraqi schools, such as the publication of the monograph *Iranian Teachers who Caused us [Arabs] Big Problems*. This may have contributed to the perception among Pan-Arabist thinkers that the historical decline of the Arabs was due to the Persians (Keddie 1969: 18). Husri is also notable for his discriminatory practices in the Iraqi education system in rejecting the appointment of teachers of Iranian origin.

The advocacy of force for the advancement of Pan-Arabism is traced to Sami (Saib) Shawkat, who became director-general of education in 1938. He is notable for his 1933 speech 'Sina'at al-Mawt' ('Manufacturing of Death') promoting militarism and mass violence, which was printed for mass distribution in Iraqi schools (Makiya 1998: 177; Miller and Mylroie 1990: 73). This provided the ideological foundation for Iraq's manufacture and deployment of chemical weapons decades later, during the Iran–Iraq War. Shawkat became the leader of the Nazi-inspired Nadi al-Muthanna society (active c. 1935–41) (Ghareeb and Dougherty 2004: 167), and in 1939 founded the organisation's youth wing, the Futtuwa, which was patterned after the Nazi Hitler Youth movement (Makiya 1998: 178). Shawkat's fascist organisations are believed to have provided the model for their later counterparts in the Baath regime of Iraq (Kechichian and Von Grunebaum Center 2001: 84).

The Retroactive Arabisation of History and Geography

Pan-Arabist history revisionism involves retroactive Arabisation. This is the process of attributing Arabic origins to non-Arab entities and domains

(e.g. non-Arab scholars, regions, and so on). Retroactive Arabisation revises the legacy of Persia's heritage in Arabic and Islamic civilisations with respect to Persian cultural and scientific achievements and Persian geographical areas (the Persian Gulf and Iran's Khuzestan province). Mojtahed-Zadeh has noted this process in Arab history and geography textbooks which aim to revise history in an anti-Iranian manner (2007: 350). Several Arab states (e.g. Iraq, Egypt, Sharjah, Abu-Dhabi, Saudi Arabia) as well as a select number of Western academic institutions have been involved in retroactive Arabisation. Mcloughlin (2002: 218) and Parsons (1985: 38) have noted significant funding accorded to British Arabist studies by wealthy Persian Gulf Arab states.

The re-naming of historical territories and waterways often leads to irredentist claims on the territorial integrity of the present Iranian state. The attempt to define the Persian Gulf as the 'Arabian Gulf' was first initiated without success by Richard Belgrave. The term was first officially used in a political context by Egypt's Pan-Arabist president Gamal Abdul Nasser (1918–70) from the 1950s onwards (Taheri 2010: 135); prior to this he had referred to the waterway as the Persian Gulf. Support for this name change came soon with Roderick Owen's text *The Golden Bubble of the Arabian Gulf: A Documentary* (1957). The process of re-defining the history of the Persian Gulf as the 'Arabian Gulf' is largely funded by the Arab states of the Persian Gulf. Examples include Michael Rice's *Archaeology of the Arabian Gulf* (1994), which acknowledges the support of Bahrain, Saudi Arabia, Kuwait, the United Arab Emirates, Oman, and Qatar (1994: xvii). Daniel Potts's two-volume *The Arabian Gulf in Antiquity* acknowledges the support of Saddam Hussein's Tikriti clan (1990: vol. 1, vii). Primary sources and cartography spanning the Classical, Islamic, and Medieval eras fail to corroborate the thesis that the Persian Gulf has been known as the 'Arabian Gulf' since antiquity (Hansen 1962: 135–138; Mojtahed-Zadeh 2007: 20–21, 64; Sahab et al. 2005). Notably, Arab maps up to the 1960s cite the Persian Gulf by its correct historical name (Abdul-Karim 1965; Hasan 1935; Heikal 1968). The United

Nations has twice recognised the legality of the term 'Persian Gulf' for this body of water (UNAD 311 of 5 March 1971 and UNLA 45.8.2(c) of 10 August 1984; for more on these documents see Abdi 2007: 221, 232).

Pan-Arabism also lays territorial claims to Iran's south-west Khuzestan province (Parsi 2007: 22), called 'Arabistan' by Pan-Arabist thinkers who describe this as an ancient Arab territory (Seliktar 2008: 30) that must be restored to the greater Arab nation (Gieling 1999: 13). Historiography however challenges the Pan-Arab thesis, as Khuzestan was the basis of the ancient Elamite civilisation, which heavily influenced the Achaemenid Persian Empire (559–331 BCE), with Khuzestan being an integral part of Parthian (c. 250 BCE–224 CE) and Sassanian Persia (224–651 CE) (De Graef and Tavernier 2012; Zarrin'kub 2002: 185; see also the Shapur inscription of Sassanian provinces from the early third century CE cited in Wiesehofer 2001: 184). Khuzistan remained politically intertwined with Iran in the post-Islamic era after the Arab conquests (Farrokh 2011: 76–77, 153–158; Kasravi 2005).

Retroactive Arabisation redefines past non-Arab peoples (notably Iranian scientific figures in Islam) and their achievements as Arab (Lewis 1989: 33). This cultural appropriation process may have historical antecedents, such as the aforementioned letter of Muawiyah, which also states, 'Arabs are entitled to inherit their [the Persians'] legacy.' Specifically, persons such as Omar Khayyam, Ibn Sina, Farabi, and so on are retroactively Arabised in Arab educational, political, and media outlets. This process is contradicted by primary Islamic sources such as the *Muqaddimah* of Ibn Khaldun (1332–95), which report the majority of Muslim intellectual-scientific scholars as having been of Iranian descent (Frye 1977: 91; Ibn Khaldun 1967: vol. 3, 271–274, 311–315). Pan-Arab educators, notably Sami Shawkat, have called for the elimination of books such as those of Ibn Khaldun because they discredit Pan-Arab theories that all Muslim sages were Arabs (Makiya 1998: 177). While mainstream scholarship has outlined the extent and significance of Persian contribution to Arabo-Muslim civilisation

P

with respect to sciences, medicine, mathematics, grammar, and so on (e.g. Abivardi 2001: 148–149; Elgood 2010: 58–301; Kennedy 1975; Nasr 1975; Saliba 1998; Yarshater 1998), Arabian historiography in general rejects the Persian legacy in Arabo-Muslim civilisation.

Other examples of historical revisionism include attempts by the Iraqi state to link Iraq's Shiite population with the country's pre-Islamic Iranian population, a theory first propagated in two books published in 1927 and 1933 (Dawisha 2003: 90; Masalha 1991: 690). The notion of viewing Iraqi Shiites as an Iranian fifth column inside Iraq was expanded during the Saddam Hussein era (Ajami 2003: 12). This may be explained by the Pan-Arabist dynamic of culturally distancing the Arabian world from Iran; as Shiism is the official state religion of Iran, Iraqi Shiites, though Arab, are retroactively redefined as Persians.

A number of official events in the Western world have engaged in retroactive Arabisation, such as the Centre d'Études Euro-Arabe of Paris, which hosted a conference in November 1992 defining over 80% of Iranian artistic displays as Arab (Matini 1993: 467) and the Saudi Arabian government's exhibitions in London (October 2004) and Washington, DC (August 1989) displaying Persian cultural artifacts as Arabic or Turkish (Matini 1989). Another example is Toronto's 33rd International Congress of Asian and North African Studies, in which the Persian poetry of Jalal-e-Din Rumi was erroneously presented as 'Arabic Literature' (Estelami 1992: 305). More recently (August 2012) the Louvre museum used the term 'Islamic' in reference to its post-Islamic Iranian artifacts. This may have been related to the museum's decision to establish a branch in the United Arab Emirates, an initiative characterised by academics such as Marjolein (2007) as 'a clearly-defined strategy: profit maximization'. The British Broadcasting Corporation reported a total of 400 million Euros being paid by the Emirates to the Louvre for this project (BBC News 2007). Matini asserts that terms such as 'Arab science' or 'Islamic art' are European academic inventions that have been adopted by new Arab nation states such as Bahrain, Iraq, the United Arab Emirates, Saudi Arabia, and Kuwait (1992; 1993: 465).

The Iran–Iraq War and Pan-Arabism

Following the overthrow of the Pahlavi order by February 1979, Saddam Hussein and the Baath Party, who were cognisant of Iranian military weakness, hoped to facilitate a rapid Iraqi conquest of Iran's Khuzestan province, which as noted previously was claimed as part of the greater Pan-Arab state. The invasion of Iran was officially known by the Baathist regime as the 'Qadissiya Saddam' in reference to the Arab victory over the Sassanian Empire (224–651 CE) in 637 CE, which led to the conquest of Iran (Adib-Moghaddam 2006: 37–38). Saddam made specific reference to the Iranians as 'the magi' who were to be crushed once again by the Arabs (Mackie 1996: 318).

There have been a myriad of reasons proposed as to the causes of the Iran–Iraq War, such as border disputes traced back to the Ottoman–Iranian wars as well as sectarian (Shia versus Sunni) rivalry (Souresrafil 2006: 27). Baathist philosophy regarded as a primary cause of the war the supposed racialist 'Aryan versus Semite' rivalries dating back thousands of years (Makiya 1998: 264; Pipes 1983). This thesis contradicts the long-term history of cultural and anthropological admixture between the Iranian plateau, Fertile Crescent, Anatolia, Caucasus, and Central Asia. As noted by Halliday, Iraq is the Arab state with the strongest Persian legacy in the Arab world.

Tehran's Pan-Islamic rhetoric of unity between all Muslim (Arab and non-Arab) peoples contradicted Michel Aflaq's Baathist definition of Islam as 'a revolutionary Arab movement whose meaning was the renewal of Arabism' (Makiya 1998: 198). When the war was ignited by Saddam Hussein's invasion of Iran on 22 September 1980, King Khalid of Saudi Arabia (ruled 1975–82) supported the annexation of Iran's Khuzestan province by stating that he stood with Saddam Hussein in the 'pan-Arab battle and its conflict with the Persians, the enemies of the Arab nation' (*Guardian* 1980). The Iraqi educational system also produced textbooks promoting conspiracy theories and alleging a collusion between Iranians and Jews against the Arabs that went back thousands of

years to the time of Cyrus the Great (559–530 BCE) (Adib-Moghaddam 2006: 36).

Baathist propaganda participated in the war effort by promoting racism. Propaganda films often equated the Arabic–Islamic conquests of the Sassanian Empire with the contemporary Iran–Iraq War (Mackie 1996: 318). Racist writings were widely distributed to Iraqi government institutions, educational settings, and the military establishment, notably with the republishing in 1981 of the pamphlet *Three Whom God Should Not Have Created: Persians, Jews and Flies* by Khairallah Tulfah, Saddam Hussein's maternal uncle (Bengio 2011: 133). The publication defined Iranians as 'animals god created in the shape of humans' (Karsh and Rautsi 1991: 15). Official racist discourse in fact involved descriptions of Iranians as animals (mainly insects and donkeys), especially by the high echelons of the Baathist leadership, for example General Maher Abdul Rasheed (Hiro 1991: 108). Racist literature (textbooks, poetry, newspaper articles, etc.) described Iranians as bearing racial characteristics such as cruelty, mercilessness, hatred against Arabs, 'backstabbing', and 'the destructive Persian mentality' (Adib-Moghaddam 2006: 35–36). Nazi-type race laws were instituted against Iraqis of Iranian background, including financial incentives for Iraqis to divorce marriage partners of Iranian ancestry (Aburish 2000: 123), and Iraqis of Iranian ancestry were deported en masse to Iran by Saddam Hussein's regime (Al-Ansari 1991; Al-Zubaidi 2010: 49). The Baathist regime also attempted to destroy Iran's historical identity through 'archeological warfare' by deploying artillery, missiles, and aerial bombardment against ancient Iranian historical sites, including UNESCO World Heritage sites (Hojjat 1993).

Pan-Arab philosophy significantly influenced Baathist military planning in four ways. First was the tendency of Iraqi military planners to underestimate Iranian military capabilities, leading to inadequate war preparations (Woods et al. 2011: 8) and assumptions of a rapid victory over Iran within 10–14 days (Zabih 1988: 169). While many of the Iraqi assumptions of victory rested upon the state of Iranian military disarray following the 1979 revolution (Farrokh 2011: 346–349),

Pan-Arabism appears to have influenced Iraqi assumptions of the Iranian will to resist the invasion. As noted by Jawdat, 'Iraqi strategy bears no evidence of any planning beyond the assumption that the Iranian armed forces would collapse at the first shot' (1983: 91). Even as Iraqi forces were ejected from Khuzestan by late May 1982, Saddam Hussein and the Iraqi leadership often relied on Pan-Arabist assumptions of Persian military inferiority by claiming that their ejection from Iranian territory in late May 1982 was due to the 'voluntary' withdrawal of Iraqi forces from Iran (Hiro 1991: 56).

The second impact of Pan-Arabism on Iraqi military planning was in the assumption that Iranian Arabs would welcome Iraqi troops as they entered into Khuzestan's provincial cities. This led the Iraqi military brass to conclude that close-quarter urban combat would not take place as they invaded Iran, which may partly explain why they failed to provide adequate infantry forces to support their tank thrusts into Khuzestan. The majority of Iranian Arabs did not support the invasion, with many joining the Iranian military in resisting the Iraqis (Hiro 1991: 43). This resulted in Iraq's failure to capture all major Khuzestani cities, except for Khorramshahr, which fell only after very heavy urban combat over several weeks, another factor preventing the Iraq conquest of Khuzestan in 1980.

The third impact of Pan-Arabism on the Iraqi war effort was in its success in recruiting Arab volunteers from various non-Arab countries to fight against Iran, notably Jordan's Yarmuk Brigade (Rajaee 1997: 15). Dawisha however notes that the majority of the 'volunteers' were non-Iraqi Arab guest workers forcibly recruited by Iraq into the war (2003: 275).

The fourth manner in which Pan-Arabism affected Iraqi military planning was in terms of chemical warfare. The Iraqi media promoted Pan-Arabist propaganda by de-humanising Iranians through violent imagery and language, thus helping to minimise the moral impact of non-conventional weapons. The Iraqi press often produced various de-humanising cartoons portraying Iranians as animals, burning in furnaces, being eaten by fishes, and so on (Bengio 1986: 474). When

General Mahir Abdul Rashid deployed chemical weapons to kill Iranian troops, he officially characterised his dead Iranian victims as 'Majoosi [Zoroastrian Magi] insects' (Bengio 1998: 153), a description announced on Baghdad Radio on 28 February 1984 (Hiro 1991: 278). Iraqi television would support this process by broadcasting images of dead and mutilated Iranians for hours.

Conclusion: Educational Discourse and Cultural Rapprochement

Negative characterisations of Iranians continue to appear at the official level in the Arab world, one prominent example being the Iraqi Sunni politician Adnan Al-Dulaimi, who made the following statements on Saudi Arabia's Safa TV (aired on 17 January 2012): 'When facing the Persian personality you have no choice but to use force, they understand nothing but force ... whenever they are in power, they want you to worship them, but when they are ruled by others who are stronger, they lick their boots ... they become submissive to the point of masochism ... Persian personality is characterised by insolence.'

Educational discourse is recommended as the primary tool of overcoming the anti-Persian element of Pan-Arabist discourse. This process may be put into practice by the organisation of conferences and seminars involving Arabian, Western, and Iranian educational and academic institutions specialising in the Islamic domains. It may be hypothesised that such proceedings should help to overcome Arab perceptions of Iranians with respect to their collective characteristics as well as their legacy in Arab-Islamic civilisation.

Pan-Asianism

Torsten Weber
History, German Institute for Japanese Studies,
DIJ Tokyo, Tokyo, Japan

Synonyms

Asianism; Chinese history; Internationalism; Japanese history; White peril; Yellow peril

Definition

Pan-Asianism (or Asianism) had a strong influence on political discourse and international relations during the first half of the twentieth century, particularly in East Asia. Pan-Asianist conceptions were diverse but usually focused on the assumed common heritage and fate of 'yellow' people vis-à-vis 'Western' civilization. As a political doctrine or principle, it first gained influence during the early 1910s in the context of anti-Asian immigration legislation in the United States and during World War One. As a statement of Asian self-determination ('Asia for the Asians', Asian Monroe Doctrine) and self-affirmation, it criticised negative and Orientalist portrayals of Asia as an exotic and backward place. It also rejected 'Euro-American' imperialism in Asia ('White Peril') and demanded the liberation of Asia from 'Western' imperialist powers. In this anti-imperialist version, Pan-Asianism was supported by many Asians but there was no consensus on its precise policies or implementation. In his speech on 'Greater Asianism' in Japan in 1924, the founder of modern China, Sun Yat-sen (Sun Zhongshan, 1866–1925), summarized Pan-Asianism as an anti-imperialist and largely anti-Western political and cultural principle.

Many Indian and Chinese used Pan-Asianism to promote national liberation movements and showed little interest in supra-national activities, while Japanese conceptions often overlapped with Japan's imperialist ambitions. The Pan-Asian Conferences in Nagasaki and Shanghai (1926 & 1927), jointly convened by Japanese and Chinese organisations, failed to initiate a political movement (Weber 2017). From the 1930s onwards, the Japanese government and military used Pan-Asianist slogans as propaganda for Japan's own military and economic expansion in East and Southeast Asia (so-called 'Greater East Asia Co-Prosperity Sphere'). During the 2000s, Pan-Asianism was rediscovered by East Asian intellectuals and politicians as critiques of a Western-centric, neo-liberal, or neo-imperialist world order. Around the same time, Chinese politicians proposed a neo-Asianist global order, led by China. In scholarship, the influence of the Japanese China scholar Takeuchi Yoshimi has been paramount. Takeuchi alerted to the coexistent *anti-imperialist* aspiration and *imperialist* reality of pan-Asianism by contrasting its 'intention of solidarity' to its function as an 'instrument of invasion'.

Introduction

Pan-Asianism (also referred to as Asianism) is an idea, movement, and ideology based on an assumed cultural and ethnic commonality of Asians. It assumes the existence of common political and economic interests and of a shared destiny which necessitate a union of Asian peoples or countries to realize common aims. Such politicized ideas of Asian commonality and unity probably originated in Japan in the late nineteenth century but quickly became known throughout East Asia, in other parts of Asia, and outside Asia. One major impetus to the spread of Pan-Asianism was the racial exclusion legislation in the US from the 1880s onwards and the accompanying 'Yellow Peril' discourse there and in Europe. Depending on whether one prefers to interpret Pan-Asianism as an idea, as a movement, or as an ideology, the period during which its impact was strongest can be placed at different times between the 1880s and the early 1940s. However, as a political concept, discussed at first only occasionally by a specialist minority and later widely in mainstream public discourse, pan-Asianism has never completely disappeared since its inception and continues to be invoked frequently in social, economic, and political discourse today.

Concept and Conceptions

Pan-Asianism as a concept can be approached by analysing its semantic components: 'pan' (Greek: all) signifies togetherness, completion, or unity, while 'ism' refers to a theory, doctrine, or principle. 'Pan-Asianism' could therefore be translated as 'All Asia Principle' or 'Theory of Asian Unity'. In Japan and China, Pan-Asianism became widespread under the term 'Greater Asianism' (Jap. *Dai Ajiashugi,* Ch. *Da Yazhouzhuyi*) or simply Asianism (Jap. *Ajiashugi,* Ch. *Yazhouzhuyi*); for a discussion of different terminological nuances see Weber (2018). The most ambiguous part of the concept is its regional referent, Asia. Since Asia discourse in the 'West' usually ascribed Asian commonality to the 'yellow races' of East Asia,

and because Pan-Asianism as a self-referential concept had the greatest impact in Japan and China, most discussions of Pan-Asianism centre on the region today comprising Japan, China, Taiwan, and the Koreas, with occasional references to South-East Asia and South Asia and only rare inclusions of Western Asia. Pan-Asianism's Asia therefore by and large refers to the region that was traditionally under the strong influence of Chinese civilisation, including its material culture (diet, chopsticks) and non-material culture (script, Confucianism), as well as its political and social order (tributary and dynastic system, scholar-officials, examination system). While this heritage served as a basic unifying factor in many conceptions of Pan-Asianism, the central focus usually lay on Japan, not China. The main reasons for this are, first, Chinese disinterest in alternative concepts of Asia (other than the hegemonic, but looser, Sinocentric tributary order), second, the Japanese origin of Pan-Asianism as a new political concept which was viewed with suspicion by many in China, and third, the shift in power relations within East Asia from Chinese to Japanese dominance by the late nineteenth century. As a consequence of the latter, most Japanese conceptions of Pan-Asianism included a self-assigned leadership role for Japan as the strongest and most 'modern' or 'advanced' country in East Asia. This position is prominently reflected in the Japanese proposals for the Asian Monroe Doctrine, which was formulated in imitation of the Monroe Doctrine declared by the US president James Monroe in 1826. Just as the original Monroe Doctrine was not a non-hegemonic policy, but aimed rather at securing the national interests of the US in the Americas vis-à-vis the European colonial powers, the Asian Monroe Doctrine proposed a Japan-centred equivalent in opposition to the Western colonial powers in Asia. Asian Monroeism, like its American model, symbolises the ambivalence of Pan-Asianism as a concept that accommodates both imperialist and anti-imperialist views. While, on the one hand, most conceptions of Pan-Asianism argued for the liberation of Asian peoples and territory from Western imperialism, they implied – or explicitly called for – the replacement

of Western hegemony by Japanese leadership. Most Asianist conceptions are therefore both imperialist and anti-imperialist. This co-existence of opposing political agendas made Pan-Asianism a highly contested concept, an extremely disputed political agenda, and an ideal concept for imperialist propaganda in the name of anti-imperialism. The over-use of Pan-Asianism as an instrument of propaganda by the Japanese military and state authorities during the so-called Fifteen Years War (1931–45) in East Asia discredited the concept until the 1960s and may have contributed to the fact that scholars only hesitantly started to study Pan-Asianism in the first post-war decades (on the development of scholarship on Asianism in Japan see Furuya 1996). With few exceptions, scholarship in Western languages on the subject appeared only from the late 1990s onwards; among the first substantial articles dealing with Pan-Asianism in English are Beasley (1987), Hashikawa (1980), and Miwa (1990).

Scholarship and Classifications

The rehabilitation of ideas of Asian commonality in the context of the anti-imperialist Afro-Asian Bandung movement from the mid-1950s onwards encouraged the emergence of the first academic studies of Pan-Asianism in post-war Japan. Shorter articles on the development of Japanese Pan-Asianism by the historians Harada Katsumasa (1959) and Nohara Shirō (1960) formed the analytical basis of a first longer essay by the Japanese China scholar Takeuchi Yoshimi (1910–77) on 'The Prospect of Asianism' (*Ajiashugi no tenbō*), published in 1963 (see Weber 2018 and, for a full and annotated translation in German, Uhl 2005). This study has remained the most influential scholarly work on Pan-Asianism up to the present day. Takeuchi defined Asianism as an 'inclination', not an independent school of thought, contrasted Asianism's 'intention of solidarity' to its function as an 'instrument of invasion', and distinguished between 'real' and 'self-professed' Asianism. In addition, Takeuchi established a canon of thought and thinkers that he viewed as representative of

Asianism. This canon included, among others, activists of the left-wing Freedom and People's Rights Movement of the 1880s (Ueki Emori, Tarui Tōkichi, Ōi Kentarō), radical right-wing groups such as the Kokuryūkai (Black Dragon Society) and the Genyōsha (Dark Ocean Society) that supported Japan's imperial expansion on the Asian mainland, the art historian Okakura Tenshin (who established the phrase 'Asia is one': see below), and the Sinophile writer and activist Miyazaki Tōten (supporter of the Chinese revolutionary Sun Yat-sen) (for these groups and thinkers see the relevant chapters in Saaler and Szpilman 2011). Takeuchi's main concern was to (re-)establish an understanding of Asianism that emphasised solidarity over invasion and that would, consequently, facilitate a positive Japanese understanding of Asia. In other words, he aimed at the rehabilitation of Asianism without denying the crimes committed in its name. Takeuchi therefore dismissed Asianist political and military propaganda, such as the euphemism 'Greater East Asia Co-Prosperity Sphere' which the Japanese government used to disguise its imperialist policy in Asia, as well as apologetic and self-professed conceptions of Asianism as 'pseudo-thought', 'non-intellectual', and eventually non-Asianist.

Since the 1990s, Japanese scholarship has gradually started to shift its focus away from the Takeuchian approach, beginning instead to focus on Pan-Asianism's 'Asia' as a significant element of understanding the concept's meaning and implications. For example, the historians Furuya Tetsuo (1996) and Yamamuro Shin'ichi (2001) have historicised Asia with a focus on functional aspects of Asianism. Yamamuro distinguishes between Asia as a conceived, linked, and projected space. In his view, the Japanese were initially forced to accept Asia as a Western spatial classification, together with its negative civilisational implications. Eventually, however, they managed to utilise the concept for their own purposes. More than any previous studies, Furuya and Yamamuro have explored the historical use and meaning of Asianism and thereby contributed to the diversification of the Asianist canon. In addition, they have integrated Asianism discourse into the wider context of transnational and global

history by emphasising linkages between political reality and discourse in Japan, different parts of East Asia, and the world. One important result of this re-contextualisation is the discussion of Asianism in the (perceived) global hierarchy of West → Japan → rest of Asia that informed the world view of many thinkers and activists in Japan from the mid-nineteenth to the mid-twentieth century.

In twentieth-century China, studies of Asianism usually indiscriminately dismissed Japanese Asianism as blunt imperialism, while praising Li Dazhao's 'anti-imperialist' and Sun Yat-sen's 'patriotic' conceptions of Asianism. Since the early 2000s, however, Chinese scholars have started to revise this orthodox interpretation of Asianism. In 2004, the historian of modern Japan Wang Ping has proposed to evaluate Asianism chronologically, in terms of co-operative Classical Asianism (until 1898), expansive Greater Asianism (until 1928), and the invasive 'Greater East Asia Co-Prosperity Sphere' (until 1945) (see Weber 2018). Against the background of China's contemporary rise, partial affirmations of historical Asianism have started to emerge in public discourse too. They imply that neo-Asianism could become a formula for China's new approach to Asia in the twenty-first century but, at the same time, are rather explicit about China's self-appointed leadership role in any such project. If one sees present-day China as a post-modern empire, this conception of new Chinese Asianism could be classified as new imperialist Asianism.

Unlike scholarship in China and Japan, scholarship in English has often focused on Pan-Asianism's 'pan' and the assumed common genealogy of Pan-Asianism and other pan-movements. For example, William G. Beasley distinguished between transnational anti-hegemonic pan-movements (e.g. Balkan Pan-Slavism, Pan-Africanism) as an expression of anti-colonial resistance and interventionist hegemonic pan-movements (e.g. Russian Pan-Slavism, Pan-Germanism) as instruments of expansion (see Beasley 1987). Beasley concluded that Japanese Pan-Asianism contained both elements of anti-colonialism (stemming from its weakness vis-à-vis the West) and expansionism (stemming from its strength vis-à-vis Asia).

Approximately half a century after scholarship on Asianism began with a simple solidarity-versus-invasion dichotomy, scholars today have returned to contrasting two types of Pan-Asianism: imperialist and anti-imperialist conceptions (Itō 1990). Placing current discussions of regionalism and mechanisms of regionalisation into a historical context, Prasenjit Duara has proposed to discuss Asianism in the framework of a distinction between 'imperial regionalism' and 'anti-imperialist regionalization'. According to Duara, both types can be found in historical Asianism: 'Japanese pan-Asianism at the turn of the century had several different strains, including imperialistic ones, but also egalitarian and compassionate feelings toward fellow Asians who had been exploited and devastated by more aggressive cultures' (Duara 2010: 970). Intentionally or not, Duara's binary typology constitutes a return to the Takeuchian distinction between (imperialist) invasion and (anti-imperialist) solidarity.

A possible conclusion drawn from these different attempts at classifying Pan-Asianism may be that both in thought and practice different conceptions of Pan-Asianism varied greatly in content and intention. During most of its history these conceptions co-existed but differed in influence. When ideas and practices of Asian commonality and solidarity were 'hijacked by Japanese militarism' (Duara 2010: 973) from the 1930s onwards, however, Pan-Asianism became meaningless beyond its function as propaganda.

Pan-Asianism Before the First World War

While 'Pan-Asianism' as a term appears not to have been in use in East Asia before the early 1890s, other concepts implying cultural and ethnic commonality or the common political fate of Asians in opposition to the West had been used in Japan and China from no later than the 1880s onwards. Among them were 'same culture, same race' (Jap. *dōbun dōshu*, Ch. *tongwen tongzhong*) implying cultural and ethnic commonality, 'lips and teeth' (Jap. *shinshi hosha*, Ch. *chunchi fuche*) implying economic and strategic interdependence based on territorial proximity, or the more

practically oriented terms 'revive Asia' (Jap. *Shin-A*, Ch. *Zhen Ya*) and 'raise Asia' (Jap. *Kō-A*, Ch. *Xing Ya*) (on these concepts and their relation to Asianism see Furuya 1996). Some of these concepts served as names of Asianist organisations active before and around the turn of the century, such as the Kō-A Kai (Raise Asia Society, 1880–1900), the Dōbun Kai (Common Culture Society, 1898), or the Tōa Dōbun Kai (East Asia Common Culture Society, 1898–1946) (see Zachmann 2009). The founding of Asianist organisations since the 1880s in Japan must above all be seen in the context of anti-Westernism. This anti-Westernism both directly and indirectly targeted the West, seen as a more or less monolithic bloc representing political, economic, and rhetorical oppression of the non-West. Most immediately this anti-Westernism was directed *internally* at the Japanese Meiji government, which preferred to modernise by adapting models in law, education, economy, politics, military, and other areas from European countries and the US, thereby neglecting Japan's long-standing links with East Asia. In addition, it was also directed *externally* at the West itself; by forming personal alliances with like-minded Chinese, Koreans, and other Asians, Japanese Asianists hoped to prepare for an eventual clash with the West in order to regain freedom from Western oppression. The anti-imperialist element is therefore deeply rooted in the programmes of early Asianist organisations. However, the self-assigned privilege of leadership of Pan-Asia by Japanese Asianists increasingly came under attack from non-Japanese participants as relations between Japan and its Asian neighbours deteriorated, first in the struggle over Korea (since 1875, leading to annexation in 1910), then during the Sino-Japanese War (1894–95), and finally during and in the immediate aftermath of the First World War (the Twenty-One Demands of 1915, the anti-Japanese demonstrations in Korea and China in 1919).

The activities of these Pan-Asianist organisations were nevertheless meaningful. In meetings, in publications, and most importantly through educational activities (such as the establishment of language schools, e.g. Tōa Dōbun Shoin in Nanjing/Shanghai) they contributed, in the literal sense, to a growing mutual understanding, to the spread of political and scientific knowledge, and to an awareness of Asian commonality. In the decade following the Sino-Japanese War of 1894–95, which had ended with China's defeat and its partial colonisation by Japan, exchanges between students and teachers from both countries boomed to an unprecedented degree (see Reynolds 1993). During this time, the first proposals emerged that not only suggested assistance and co-operation but went one step further to propose political unions of Japan and other parts of East Asia. The most famous proposal was authored by the liberal activist Tarui Tōkichi (1850–1922), who proposed 'to ally with the friendly nations of the same Asian race'. His *Union of the Great East* (written in 1885, published in 1893) envisaged an alliance of Japan and Korea, later to be joined by China. Such a union, Tarui argued, would be advantageous economically and militarily, particularly in opposition to Russia, and would also strengthen the sense of East Asian racial commonality versus the White race (Neuhaus 2020). Tarui's treatise today is usually interpreted as a counterpart of the more well-known *Leaving Asia Thesis* (Jap. *Datsu-A Ron*, 1885) by the famous Meiji thinker Fukuzawa Yukichi (1834–1901), who had taken a stance completely opposite to Tarui's (for an English translation of this classic text see Lu 1997). After the failed Japanese intervention in Korea in 1885, Fukuzawa had called upon Japan to depart from 'the bad company of Asia' and to join the West in order to be recognised by it as a civilised country that was – despite its shared historic roots and geographical position – fundamentally different from the Asian barbarians. Against this anti-Asianist civilisational argument, Tarui's Asianism focused on a combination of practical and racial arguments. Despite the existence of Asianist organisations and ideas, Fukuzawa's call to depart from Asia is believed to be more representative of the dominant politico-intellectual mood of the late nineteenth and early twentieth centuries in Japan.

A second important Asianist writing produced around the turn of the century was *Ideals of the*

East (1903) by Okakura Kakuzō (1862–1913, better known as Tenshin) (see Tankha 2009). This book, written in English for a foreign audience and not published in Japanese before the 1920s, contains the famous line 'Asia is one', which today is often quoted as the politico-cultural epitome of Asianism. Okakura, however, admired the diversity of Asian civilisational traditions and arts, which only appeared as 'one' when compared with the external other, namely the West. This West increasingly came to be negatively portrayed, not only in the parts of Asia that had been colonised by the West, but also in Japan. After Japan's victory over China in 1895, the so-called Triple Intervention by Russia, Germany, and France forbade Japan extensive territorial gains in China. While even Japanese Asianists had been tolerant to some degree of the Western colonial presence in Asia, there was little tolerance in Japan of the Western restriction of Japan's own expansive ambitions within Asia. In this context Japanese politicians and thinkers coined an imperialist version of Asianism which constituted an imitation of a Western policy: the Asian Monroe Doctrine. One of the first proponents of this doctrine was the prominent politician Prince Konoe Atsumaro, who was also the leading figure in the Asianist East Asia Common Culture Society. In 1898, Konoe first proposed the adoption of an Asian Monroe Doctrine to the Chinese reformer Kang Youwei: 'The East is the East of the East. Only the peoples of the East must have the right to decide the matters of the East. The American Monroe Doctrine denotes exactly this. It is the duty of our two peoples [Chinese and Japanese] to implement an Asian Monroe Doctrine in the East' (see Zachmann 2009). While in this formulation the idea appeared to be anti-imperialist and pluralist in character, it lent itself perfectly to the justification of Japanese claims of hegemony and imperialist expansion when China continued to struggle politically, economically, and militarily around the time of the Republican Revolution (1911–12). In fact, Asian Monroeism became a key concept in the justification for Japan's assumed special mission in Asia during the 1910s and was a key argument also in the 1930s when the Japanese government sought

to justify its establishment of Manchukuo as a protectorate in north China (Young 1998).

The anti-Western element in Pan-Asianism was not fuelled solely by Western imperialism in Asia. Another source was the rhetorical denigration of Asians in Western political and popular discourse. Movements in the US to ban Chinese immigration in the late nineteenth century were accompanied by an array of racist statements known as 'Yellow Peril' discourse. When Japan, too, became increasingly affected by these policies and discourse from the early twentieth century onwards, Asianist thought and proposals spread rapidly. As the antithesis of Yellow Peril discourse, the term 'White Peril' was coined and interpreted by some as the core meaning of racialist conceptions of Asianism (Kamachi 2005). While various ideas of Asian commonality had been discussed in Japan (and to a much lesser degree in China) since the 1880s, it is important to note that debates on Pan-Asianism were highly unpopular with the Japanese government. This stance was part of its pro-Western and accommodationist orientation, which produced an imperialist-cum-anti-Asianist rather than Asianist position and changed openly only when Japan announced its departure from the League of Nations in 1933.

Pan-Asianism in the Twentieth Century

The greatest impact on the spread of Pan-Asianist ideas in Japan and China may be attributed to the First World War. It not only triggered the birth of a great diversity of Asianist conceptions, adding economic, educational, academic, literary, and other elements to the previous range of mainly political and racialist-culturalist ideas. It also brought discussions about the meaning, significance, and usefulness of Asianism to the mainstream of public debate. Articles discussing Pan-Asianism now started to appear in national newspapers and widely read journals. Despite very obvious imperialist tendencies in Japan's Asia policy during the 1910s (the annexation of Korea in 1910, the Twenty-One Demands to China in 1915, the Siberian Expedition during

P

1918–22), this was also the period during which Asianism exerted the strongest appeal throughout Asia, including China and India.

The First World War served as a trigger since it challenged the widespread belief in the superiority of Western civilisation and modernity. More practically, the focus of the Western powers on Europe as the main theatre of war allowed for the planning of more proactive policies by Asians in Asia, including renewed demands for the declaration and implementation of an Asian Monroe Doctrine. In addition, the refusal to accept the Japan-sponsored racial equality clause at the Paris Peace Conference in 1919 fuelled the growing disillusionment with the West and became a perfect occasion for anti-Western agitation in Japan (Shimazu 1998). The protests against Western racial discrimination reached a peak with the US–American Racial Exclusion Legislation of 1924 and stimulated racialist Asianist thought and activities in Japan to an unprecedented degree (Stalker 2006). This stream of Asianism would remain at the forefront of debate (and later of propaganda) until the end of the Second World War (Dower 1986).

However, the legacy of the war and of Versailles, including Wilson's (and Lenin's) declaration of the self-determination of nations, also inspired different anti-imperialist conceptions of Asianism in the colonised parts of Asia, including West Asia. In fact, after the Japanese victory over Russia (1905) Japan had begun 'to serve as a metaphor for Asian modernity for the Ottomans, Egyptians, and Indians' (Aydin 2007: 78). In particular, many Indians came to study and live in Japan, although their concern with national independence seems to have mostly taken priority over a substantially Pan-Asian cause. This is very obvious in the writings of Rash Bihari Bose (1886–1945), the most famous Indian dissident in Japan. He had fled to Japan in 1915, acquired Japanese citizenship in 1923, founded the Indian Independence League in Tokyo, and used the Pan-Asianist boom in Japan to promote Indian independence (Hotta 2007). Bose's activities in exile illustrate the dilemma of Pan-Asianism at that time. There was no other Asian power to appeal to in the fight for independence but Japan.

However, from 1902 to 1922 Japan had been an ally of India's coloniser, and, even after the abolition of the Anglo-Japanese Alliance, it showed little interest in participating in or even leading anti-colonial national liberation movements because it had itself become an imperial power. Bose's explicit Japanophilism therefore damaged his position within the Indian independence movement. As Bose had to learn, it was difficult to be pro-Japanese and anti-imperialist at the same time. This balancing act became almost impossible after the war when Japan's imperialism triggered anti-Japanese movements and violent suppressions in Korea (the March First Movement, 1919) and China (the May Fourth Movement, 1919, the May Thirtieth Incident, 1925). But criticism of Japanese conceptions of Pan-Asianism did not preclude affirmations of the concept itself. For example, Li Dazhao (1889–1927), a well-known Marxist thinker and co-founder of the Chinese Communist Party who had studied in Japan between 1913 and 1916, harshly criticised Japanese 'Greater Asianism' as a 'different name for Greater Japanism' and as a principle of invasion and Japanese militarism (Matten 2016). Initially, however, Li embraced Asianism as an instrument to overcome rival nationalisms. Yet for Li it was no contradiction to reject *Japanese* nationalism while advancing the revival of *Chinese* nationalism as the core message of Chinese Pan-Asianism. According to Li, Chinese nationalism should first free and unite China, then proceed to unite East Asia, and later unify the world. In this sense, Li's 'New Asianism' was as nationalistic and self-centred as Japanese proposals for an Asian Monroe Doctrine. The important difference, of course, was that the realisation of such China-centred interpretations of Asianism were – at that time, at least – unrealistic given China's internal state and international status, whereas Japan-centred visions had already begun to be implemented as imperialist policies.

Although originating from a very different position – that of a nationalist statesman, not a Marxist activist – the most famous Chinese contribution to Asianism discourse by the 'Father of the Chinese Republic', Sun Yat-sen (1866–1925), resembles Li's 'New Asianism'. The basic line for

Sun, too, was anti-colonialism, at least as far as China's emancipation from the colonial powers was concerned. While Sun harshly criticised the West for its racism and imperialism, his stance towards Japan was more ambivalent. On the one hand he portrayed modern Japan as a model for China and other Asian nations, while on the other hand he criticised Japan's lack of commitment to the traditional Asian value of benevolent rule (Jap. Ōdō, Ch. wangdao). Reportedly, Sun ended his famous speech on 'Greater Asianism', delivered in the Japanese port city of Kobe in November 1924, with the following statement: 'The Japanese have already arrived at the Western culture of the Rule of Might. But they retain the substance of the Asian Rule of Right. Will Japan from today onwards for the future of the culture of the world become the hunting dog of the Western Rule of Might or the bulwark of the Eastern Rule of Right? This, my Japanese friends, you must thoroughly consider and make one choice' (Weber 2018: 206). The terms 'Rule of Might' and 'Rule of Right' refer to the Confucian concepts wangdao (lit. Kingly Way: benevolent rule) and badao (lit. Despotic Way: hegemonic rule). Transferred to the political context of the late nineteenth to mid-twentieth centuries, they may also be understood as representing anti-imperialism and imperialism, respectively. Sun's final question to Japan addresses the co-existence of imperialist and anti-imperialist conceptions of Asianism. But his conceptual choice and his euphemistic portrayal of China's own previous imperialist-like tributary relations with other parts of Asia leave little doubt about the Sinocentrism inherent in his conception of Asianism (Duara 2001). In other words, for many Asianists, including also Chinese, Asianism's anti-imperialist dimension went only so far as to criticise the imperialism of others while conveniently making use of the concept to disguise one's own hegemonic agenda (e. g. cultural dominance in the region or ethnic hegemony within one country).

The Pan-Asian Conferences held in Nagasaki in 1926 and in Shanghai in 1927 were the last notable efforts 'from below' to divorce Japanese imperialism from Japanese-driven Asianism (see Aydin 2007). Convened by a Chinese and a Japanese Asianist organisation, the conferences brought together Asian-minded activists, including Rash Bihari Bose and the Indian revolutionary Mahendra Pratap (see Stolte 2012). However, Chinese suspicions of Japanese proposals, for example for the building of an Asian railway and the planning of an Asian Development Bank, and the Japanese delegates' hesitant stance towards condemning Japan's imperialist policies, obstructed any fruitful debate. Given the obstructive circumstances, however, the convening of these conferences alone may be regarded as proof of Pan-Asianism's appeal to thinkers and activists in Asia during the mid-1920s.

Any discussions of Pan-Asianist alternatives to imperialism or nationalism became obsolete when the Japanese military and government began to adopt the concept to propagate its policies in its new colonies. Most notoriously, Pan-Asianist notions were instrumentalised when Japan created the puppet state of Manchukuo in 1932 (Young 1998). According to Japanese propaganda, Manchukuo represented the realisation of a Pan-Asianist ideal state in which different Asian nations could co-exist peacefully and in harmony. The founding of Manchukuo also inspired new Asianist organisations, which often had prominent political or military leaders as patrons. One of the key figures behind the activities of the Greater Asia Association (Dai Ajia Kyōkai, 1933–45; see Weber 2018), for example, was General Matsui Iwane (1878–1948), who was later executed as a class A war criminal for his role in the military campaign in Central China and in the infamous Nanjing Massacre committed by Japanese soldiers in the Chinese capital in 1937–38. The Greater Asia Association used Japan's military advance to set up branches in occupied areas that were instructed to spread Pan-Asianist propaganda to gain local collaboration. In Japan itself reports about and by the Association's Asia network implied that Japan-sponsored Pan-Asianism was the key to Japan's assumed successes and popularity throughout Asia. With the Japanese declaration of the 'Greater East Asia Co-Prosperity Sphere' in 1940 (Yellen 2019) Pan-Asianism completely degenerated into an ideology for empire. In addition, following ever stricter

P

censorship regulations and the establishment of a nationwide 'thought police' in Japan in 1928, controversial discussions and anti-government activism had become close to impossible even before the mobilisation for total war from 1941 onwards. The most prominent use of non-Japanese conceptions of Pan-Asianism during that period was the attempt by Wang Jingwei's collaborationist Nanjing regime to link Japanese hegemonism to Sun Yat-sen's pan-Asianism (Weber 2018). Wang's outspoken focus on Sun's Sinocentric Asianism was tolerated by the Japanese to a large degree because the Japanese government itself had started to use Sun as an instrument for the promotion of 'Sino-Japanese friendship' under Japanese guidance.

The Bandung conference of 1955 is often interpreted as an early revival of political Pan-Asianism, although the joint African–Asian dimension may qualify the movement more correctly as an expression of non-regionalist anti-colonialism and a stepping stone towards the Non-Aligned Movement. In its regional, cultural, and ideological heterogeneity it shared little of the elements of Pan-Asianism during the first half of the twentieth century. Pan-Asianist notions, at best, informed one stream of thought within the Bandung movement.

Pan-Asianism in the Twenty-First Century

Towards the end of the twentieth century, with the breakdown of the Soviet Bloc and the economic rise of many Asian countries, new affirmations of Asia emerged that revived some of the themes of historical Pan-Asianism (Jenco 2013). Initially, the main proponents of such ideas were neither Japanese nor Chinese, but included the former prime ministers of Singapore, Lee Kwan Yew (1923–2015), and Malaysia, Mohamad Mahathir (born 1925). Both used Pan-Asianist notions to justify the authoritarian and patriarchic rule in their countries, which – in their view – corresponded better to Asian socio-political traditions than Western democracy. Lee in 1994 proposed a cultural Asianism through which East

Asian people were allegedly connected by tradition and fate. According to Lee they shared a belief in the superiority of groupism over individualism and 'core values' such as 'thrift, hard work, filial piety, and loyalty in the extended family' (quoted in Jenco 2013: 250). Similarly, Mahathir (2000) denounced the promotion of human rights and democracy by Western governments as a new quasi-imperialist method to continue their domination over Asia. Instead he encouraged Asians to 'have pride in their values and culture and their ways of managing their countries and their problems. The attempts by the West to force their values and ideologies on Asians must be resisted.'

In the context of regional integration and attempts at historical reconciliation, Pan-Asianist visions also re-emerged in political discourse in China, Japan, and Korea during the 2000s. While in official statements by politicians from these countries Pan-Asianism once again appears to have become a tool for reaffirming or claiming one country's centrality and leadership position in (East) Asia, initiatives from below appeal to notions of commonality for the purpose of fostering exchange, mutual interest and understanding, and historical reconciliation. Many of the intellectuals and activists in such transnational networks, including the Chinese Sun Ge, the Taiwanese Chen Kuan-hsing, and the Korean Baik Yong-seo, take inspiration from Takeuchi Yoshimi's pro-Asianist writings. Their discovery of Takeuchi and their promotion of East Asian reconciliation have triggered a boom in the study of Takeuchi since the early 2000s (Sun 2007; Chen 2010; Baik 2002). Linked to this focus on non-hegemonic visions of Asia is the re-emergence of Asianism as a critique of regionalism that is solely driven by capitalist interests. Against the tendency to conceive of Asia as merely a market obeying neoliberal mechanisms, many Asianist-inclined thinkers and activists have warned of an 'Asia for the rich' (Duara 2010: 983). In opposition to this capitalist vision of Asia the Japanese historian Wada Haruki and the Korean-born scholar Kang Sang-jung, among others, have proposed a people-centred approach to Asia that could lead to the creation of a Common House of North East Asia (Weber 2014). In these ways pro-Asianist civil

society networks and scholarly communities are once again forming a transnational opposition to top-down projects that promote state-centred, neoliberal, or other hegemonic visions of Asia.

Definition/Description

The Peruvian state has a long history of using
structural and legal violence as a means to
advance foreign imperial and capitalist interests.
Although the history of anti-imperial (resistance
to cultural domination.) and anti-capitalist (resis-
tance to economic domination.) struggles in Latin
America is vast, the case of Peru is noteworthy
because it often went in opposite direction from its
neighboring countries. Following the sociopoliti-
cal-economic upheaval that began in the 1930s
and peaked during the 1960s, most Latin Ameri-
can countries saw democracy replaced by right-
wing military governments, whereas, in Peru, it
was a socialist military government. Furthermore,
despite anti-imperialist and anti-capitalist move-
ments in most of Latin America opting for non-
military strategies in their struggles during the
1980s, the PCP-SL (Peruvian Communist Party-
Shining Path, a Maoist organization that splin-
tered off the PCP in 1968.) and the MRTA (Rev-
olutionary Movement Túpac Amaru formed
through alliances between the remnants of the
1960s guerrillas inspired by the Cuban revolution
and in particular by the Che Guevara.) opted to
begin an armed insurgency. Finally, whereas the

return to democracy in most Latin American
countries decreased the level of overt political
violence, in Peru the end of the military govern-
ment marked the beginning of a 20-year internal
armed conflict that would cost the lives of over
70,000 people and would pave the way for a right-
wing civilian authoritarian government from 1990
to 2001. This entry examines how the Peruvian
state used the anti-capitalist and anti-imperialist
struggles from 1960 to 2001 to reinforce imperial
justifications for neocolonial forms of interven-
tion, strengthen capitalism, and implement drastic
neoliberal policies. As a result, the plundering of
natural resources and the exploitation of labor
benefiting capitalist interests intensified signifi-
cantly; the use of overt violence by the state
became further embedded in parts of the collective
imaginary as necessary and legitimate means to
quell social unrest; state crimes remained essential
to the protection and advancement of capitalism
and imperialism.

Situating the Historical Origins of Economic Exploitation, Cultural Domination, and State Violence in Peru

Colonization of the Americas, Asia, and Africa
paved the way for imperial advancement by pro-
viding European capital unbounded resource
extraction (McNelly 2006). The colonization pro-
cess imposed an economic model geared toward
accumulation by dispossession Harvey (2004).
He argues that the concept "original" or "primi-
tive" accumulation is misleading; it implies that
the predatory practices that gave way to capital
creation and capital accumulation during capital-
ism's early beginnings are no longer relevant
when, in fact, they remain central to capitalism.
"The commodification and privatization of land,
the forceful expulsion of peasant populations, the
commodification of labor power and the suppres-
sion of alternative, indigenous forms of produc-
tion and consumption. . ." (p.74) are few examples
of ongoing practices. The "patenting and licens-
ing of genetic materials, the commodification of
nature in all its forms as well as of cultural pro-
ductions, the depletion of global environmental

P

commons and other forms of habitat degradation. . ." (p.75) are new manifestations of the same predatory practices. Harvey (2004) proposes accumulation by dispossession as a more accurate description of these predatory practices that relied on the expropriation of land from the original inhabitants of the newly founded colonies; the pilfering of the natural resources found in those territories; the exploitation of the labor of Indigenous peoples; and the transformation of Indigenous societies into markets for colonial industrial products. Spain deployed diverse forms of overt violence to secure control over the land and its inhabitants as well as to impose a system that would render violence invisible and unrecognizable. Whereas the overt violence of colonizers killed, injured, and maimed Indigenous peoples, the systemic and structural violence debilitated the local population through the endemic injury and exclusion of certain bodies due to the logics of racial capitalism (Puar 2017), produced the slow death of millions of people through a violence that appears as natural and disconnected from the systemic and structural factors that, through a trickling effect, reduce life chances, quality of living, and length of living of certain categories of the population (Nixon 2011), and hindered the possibility of resistance across generations (Nixon 2011; Puar 2017). The ripple effects of visible and invisible colonial violence continue until today (Manrique 2002; Degregori 2010).

Although international law criminalized the seizing of land already occupied by people, Europeans rendered colonization lawful by legally excluding the Indigenous inhabitants of the Americas, Asia, and Africa from the realm of the human (Said 1993; Montaner 2001; Nixon 2011). Hence, Europe's imperialist ideology partly emerged out of the need to legitimize their criminal actions. This ideology limited humanity to Europeans and granted the rest of humankind different degrees of humanness depending on their likeness, adaptability, and willingness to adopt a European way of life. By construing Indigenous peoples of colonized lands as semi-human, child, barbarians, savages, etc., Europeans were able to justify not only the taking

over their lands but their subjugation, domination, and the destruction of their political-social-economic structures (Muiu and Martin 2009). Imperial ideology equated Europeans with whiteness, natural superiority, and civilization, whereas it construed non-Europeans as intrinsically racialized, naturally inferior, perpetually underdeveloped, and needing brute force to comply (Said 1993). Imperial ideology interpreted any use of overt violence to resist their subjugation as further proof of the savagery of the local population and legitimated the violence deployed by the colonizer. As overt violence is never sustainable in the long term, symbolic violence (Bourdieu) and cultural violence (Fanon 1951) were used to ensure the dissemination and assimilation of imperial ideology within the local population. This facilitated the creation of internal casts where European descendants assumed the right to dominate everyone deemed non-European through overt and structural violence (Lumbreras 1985; Manrique 2002). Within non-European societies, claims of whiteness became a strategy to assert power and superiority over others (Arat-Koc 2010). Consequently, the symbolic, structural, and physical violence deployed by the colonial state continued after independence (Galeano 1971).

Latin America originated out of the violence of colonization and remains trapped in it; violence became a normalized response and proof of its existence as a political body (Lora Cam 2001). The use of physical violence by the colonizers and the use of the same violence in order to gain independence laid out the ground for a construction of a collective imagery where violence is a legitimate tool to achieve political goals (Manrique 2002). This collective imagery facilitated the constitution of the military under the model of political armies. Unlike in Europe where the creation of the nation state required military forces to be brought under the control of the state (Foucault 1976), in the global South, the nation state came to be through the waging of a war of independence by a national army (Francisco 2000). Therefore, the birth of the nation state happened at the same time as the emergence of a national army; consequently, the military used

this historical fact to justify its misappropriation of politics as one of its prerogatives (Koonings and Krujit 2003). The armed forces in Latin America choose to abstain from politics until they deem it necessary to intervene.

Political armies deem civilians greedy, incompetent, and corrupt while considering themselves as having the training, values, and expertise to lead the nation. Furthermore, given that they have sacrificed themselves for the nation, they believe they are entitled to shape the essence of the nation and to decide on the future of the nation (Toche 2008). As a result, out of 107 rulers since Peru's independence, approximately 56 have been military men. Furthermore, between 1956 and 2002 (period with the highest level of social unrest), five governments were de facto and six democratic. Yet, whether dictatorship or democracy, Peruvian governments have been incapable of protecting the state from capital influence and imperial intervention (Lora Cam 2001).

Although the political chains that tied it to Spain were broken through the acquisition of political sovereignty, the social and economic order founded in a racist capitalist system and mode of governance remained (Lora Cam 2001; Manrique 2002). Unlike Spain who implemented a formal imperial relationship, the UK and the USA have established an informal imperial relationship built upon economic and cultural dependence; political and military collaboration; and collusion with the national elite (Doyle 1985; Lora Cam 2001). The dominant classes of ex-colonies benefit economically from serving the interests of imperial forces and therefore have actively impeded the implementation of alternative economic systems, have limited their own investment in national industries, have hindered the generation of national capital, and refused to develop other ways of doing politics (Nkrumah 1973). Peru and the rest of Latin America continue to exist in order to serve foreign needs. Oppressor countries get richer in absolute and relative terms because imperial powers force ex-colonies to hand out resources at low prices and labor at low wages. Furthermore, the development of national capital is hindered by imperial forces coercing ex-colonies into mono-agriculture,

dependent industrialization, and a mining economy that responds to the needs of the metropolis (Galeano 1971). Latin America's underdevelopment is therefore the direct consequence of capitalism's international division of labor geared toward the continuous economic growth of the global North (Galeano 1971; McNelly 2006; Gordon and Webber 2016). The global North then uses the South's underdevelopment as proof of ex-colonies' backwardness and to normalize the right of the North to dictate the liberalization of national markets and impose other structural reforms in developing and transitional economies (Abrahamsen 2003; Shore and Haller 2005; Ayissi 2008).

Anti-imperial and Anti-capitalism Struggles

Peru has a long history of movements attempting to challenge capitalism and imperialism. However, these struggles have mostly been issue oriented and identity based (workers, students, peasants, Indigenous peoples) without being successful in reaching out to other groups and involving diverse sectors of the population (Degregori 2010). Between the 1950s and 1970s, the number of movements advocating for social justice and seeking political, cultural, social, and economic transformations grew exponentially and adopted different approaches. Social movements made claims and demanded changes through institutional channels and through public demonstrations without success. As a result, these movements turned to direct action strategies: peasants and Indigenous peoples attempted to repossess land taken away by the state, corporations, or landowners; workers went on strike or seized factories; and students disturbed classes and occupied schools or universities (Béjar 1969). These strategies required a certain use of overt violence directed at people and property, which the state then used to justify the violence and unreasonable force the police and the military deployed to regain control over those spaces. In their reporting of the events, the media exaggerated the violence used by these movements and

denied or minimized the abuses committed by state forces (Degregori 2010). By providing the public with a distorted view of the events, the state succeeded in portraying anti-capitalism and anti-imperial struggles as criminal, dangerous, destructive, and infringing on the rights of law-abiding citizens.

Up to the 1960s, political parties represented the interest of the oligarchy and therefore were located at the center right of the political spectrum. APRA (American Popular Revolutionary Alliance, founded in 1924 by Victor Raul Haya de la Torre.) and the PCP (Peruvian Communist Party, founded in 1928 under the name Peruvian Socialist Party by José Carlos Mariátegui.) were the only left-wing political parties in existence, performing poorly during elections. Their political platforms challenged imperialism and capitalism and called for economic nationalism or homegrown socialism. Considered at times a threat to social order, the Peruvian government banned them in multiple instances forcing their leaders to live clandestinely or in exile. The convoluted history of APRA and the PCP and the political turmoil of the 1960s resulted in several internal schisms within those two parties that led to an exponential growth of left-wing political parties. These parties called for the eradication of the social inequalities produced by capitalism in urban centers and by the semi-feudal situation in rural areas, where 1% of the population owned 60% of agricultural lands (Béjar 1969), through radical social change (Lora Cam 2001). Although they used their calls for insurrection demagogically, the effect was nonetheless to introduce it into the public's consciousness as a legitimate strategy. Although none of those parties gained significant electoral success and remain marginal in the political scene, their reformist or revolutionary stances became a credible alternative for the urban population dissatisfied with the solutions proposed by traditional political parties (Pásara 1980).

Parallel to the arrival of multiple left-wing political parties to the electoral process, the political scene saw the entrance of political groups created by ex-members of electoral parties who, disaffected with the electoral system, advocated for insurrection as the only viable option to take power and transform society (Béjar 1969). These groups presented violence as necessary evil to the overt and structural violence perpetrated by the state and capital. These groups understood that an insurrection without the support of the masses was unsustainable and therefore embarked on political work with students, workers, and peasants in rural and urban sectors. However, their approach had limited success because they were mostly privileged young middle-class educated white men attempting to *enlighten* those marginalized and exploited by the system without acknowledging that they were partly responsible for the exploitation of those they were trying to *awaken* (de la Cadena 1998).

The 1960s brought around an unprecedented actor within anti-capitalism and anti-imperial struggles. Traditionally, the Catholic Church had supported and legitimated the exploitative, oppressive, and racialized social order. For instance, priest would preach that the landowner in rural areas and the employer in urban areas were representatives of God on earth and therefore their word was equivalent to a divine command (Béjar 1969). In the mid-1960s, an alternative discourse appeared. Liberation theology had a significant impact around the world but particularly in Latin America and Africa because it argued for a Marxist analysis to be at the basis of religious dogma and precepts. Liberation theology preached that every Christian is obligated to denounce any unjust political, economic, and social system and to demand immediate and concrete action in order to transform society (Gutierrez 1972). It is a Christian duty to participate in bringing about "heaven here on earth" by defending the poor, resisting oppression, and partaking in the fight for social justice. Due to the preeminence of the Catholic Church in Peru, around 90% of the population identifies as Catholic, the anti-capital and anti-imperial discourse of liberation theology gave credence and a certain level of legitimacy to similar discourses from different sources.

Despite failing to effect significant and lasting social change, the multiple movements, groups, and parties were successful in normalizing anti-

imperial and anti-capitalist discourses. As a result, by the 1960s, most Peruvians were aware of the inequality, exploitation, discrimination, and oppression experienced by the majority of the population on behalf of a minority whose interests were protected by the state, religion, and other social institutions. When the FIR (Left-wing Revolutionary Front), the MIR (Revolutionary Movement of the Left, founded by ex-members of APRA), and the ELN (National Liberation Army, founded by ex-members of the PCP) took up arms against the state between 1963 and 1965, they targeted capitalist and imperialist infrastructures or members of the armed forces who were protecting an illegitimate order. Despite some limited initial success and support from the population, they failed to galvanize it into a larger political mobilization at the national level (Lora Cam 2001). The Peruvian state took advantage of this and deployed the army who neutralized the guerrillas rapidly; the insurgents were either imprisoned, killed, or murdered (Pireto Celi 2010).

The defeat of the guerrillas did not bring about the end of social turmoil. Political instability continued until 1968 when the military, led by General Velasco, deposed the democratically elected president and put in place a left-wing nationalist military government. Velasco justified the coup d'état by arguing that the country was heading toward utter chaos given that politicians were incapable of making the necessary transformations to ensure social justice and to protect the interests of the majority (Velasco 1973). When Velasco addressed the nation on October 2, 1968, he justified the intervention of the armed forces by blaming the turmoil on the widespread corruption and immorality of politicians who put their interests ahead of those of the nation. He claimed it was the responsibility of the army to take power and ensure the necessary transformations put in place to avoid the collapse of the state (Velasco 1973). Velasco assured the population that social justice and nationalist interest were behind the military's actions and that his government would be independent of capitalist, communist, and imperial influences.

Velasco conducted numerous anti-imperialist and anti-capitalist reforms within agriculture, industry, education, and worker's rights; he also renationalized the exploitation of natural resources and increased regulation over international corporations (Krujit and del Pilar Tello 2003). Although the measures struck at the core of capitalist interest and appeased most of the left, it generated economic instability, pressure from those negatively affected by the reforms, and internal discontent from opposing high-ranking members of the military (Pásara 1980; Escárzaga 2001). As a result, in 1975, General Morales Bermudez replaced Velasco, reversed many of the reforms, and organized free democratic elections in 1980.

The reversal of some of Velasco's reforms placed the political left at a crossroads; it needed to decide whether to give a chance to the electoral process and participate in the election or take up arms against the state (Hinojosa 1998). Although the majority of the political organizations participated in the election, the PCP-SL began its armed insurgency during the elections. Four years into the internal armed conflict, the MRTA became the second insurgent organization to use military strategies as means of seizing power. Aside from attacking infrastructures, symbols, and representatives of the state, both organizations systematically and continually targeted national and international capital as well as imperialist entities, symbols, and representatives. Although early on both organizations garnered significant support from the political left, social movements, popular organizations, as well as the urban and rural poor, by the end of the 1980s, they had lost most of it (Escárzaga 2001).

Support for both organizations declined for different reasons. In the case of the MRTA, their ideological and organizational link to the 1960s guerrillas had contributed to their popularity, but by the end of the 1980s, public support dwindled significantly. Its supporters were disillusioned by the MRTA's purportedly association with drug trafficking and redirection of fundraising activities (such as kidnappings and extorting quotas) from targeting representatives of imperialism and capitalism to targeting regular folk. They saw these changes as veering away from a revolutionary struggle and into ordinary criminal

activity. Furthermore, the state and the media continuously undermined the leadership by providing information that presented them as weak and frivolous, marred with internal fighting over women. This led the MRTA's supporters to question the sincerity, commitment, and determination of the leadership.

The loss of support experienced by the PCP-SL resulted from three distinct yet linked factors. On one hand, the PCP-SL positioned Abimael Guzmán as bearer of historical truth and sole leader of the revolution (Gorriti 1990). Consequently, throughout its history, the PCP-SL attempted to bring under its control any organization, group, or movement advocating for social change and the transformation of society (Degregori 2010). Those who refused the authority of the PCP-SL were deemed reactionary forces hindering the revolution (Burt 1998). Although the PCP-SL attacks on state institutions, capitalist infrastructures, and imperial entities generated a positive response from parts of the population, their purported attacks on anti-imperial and anti-capitalist groups as well as grassroots organizations seen by the public as working toward equality and fighting poverty sapped public support.

The second factor was the PCP-SL use of violence. Although its supporters had accepted that a certain level of violence might be needed to transform social order, the majority of the population repudiated the extent of the violence and the methods used by the PCP-SL. Guzmán (1988) publicly acknowledged killing 80 peasants including children in Lucanamarca in 1983 as a way of sending a message to all reactionary forces. The media frequently reported on the use of violence and the alleged cruelty displayed by members of the PCP-SL during its military actions. The press coverage had a negative effect on public perception and Abimael Guzmán decried the fact that it had resulted in the PCP-SL being perceived as a "demented, messianic, bloodthirsty, Pol Potian, dogmatic, sectarian, narcoterrorist and genocidal movement" (Guzmán 1988). Yet, the PCP-SL actively contributed to this perception through their own interviews, ideological documents, and artistic productions made available to the public. These documents presented violence not only as means to defeat the state (PCP-SL s.d. a; PCP-SL s.d.c; PCP-SL 1982; Gonzales 1986) but also as means of purifying the nation from its reactionary tendencies and its immorality (PCP-SL 1986a, b; Granados 1987). The PCP-SL claimed that "combatants should be ready for a bloodbath" (Hinojosa 1998) given that "a genocide might be necessary" (Guzmán 1988) to create a blank slate on which to build the new state (Guzmán 1982; PCP-SL s.d. b).

A final reason for the dwindling of public support was the lifestyle led by the leadership of the PCP-SL. When the police raided safe houses occupied by its leader, they displayed a series of images showing empty bottles of alcohol and expensive food packaging that seemed to indicate a lavish lifestyle in contradiction to the austere and ascetic life proclaimed by Guzmán and demanded of its members. Furthermore, in a video filmed by members of the PCP-SL, Abimael Guzmán appears drunk and dancing. The unflattering images although trivial appeared incongruous with the persona Guzmán had crafted since the 1960s. The state used these images to undermine the PCP-SL and attempt to erode its combatants' morale by depicting the leadership as immoral, disreputable, lacking ideological resolve, and living off the sacrifices made by their members.

Although the early 1980s appeared to bode well for the PCP-SL and the MRTA, by the end of the decade, popular support for armed struggle had dropped significantly, as the population increasingly felt the human, social, and economic cost of the internal war. This had a negative ripple effect on other anti-capitalist and anti-imperialist movements struggling with limited human and material resources and having to fend off the discursive and physical attacks coming from the state and from both insurgent organizations. Furthermore, the pro-capital reforms imposed by the IMF between 1980 and 1985 that significantly reduced governmental spending and social programs (Crabtree 1992; Roberts 1995) and the anti-capital reforms adopted by García that limited international debt payments to 10% of national exports, increased salaries, controlled prices of

basic products, artificially set the US dollar exchange rate, and, in 1987, announced the nationalization of all banking institutions (Crabtree 1992; Roberts 1995). combined with the internal war resulted in the second worst inflation (7,650%) in Latin America's history (Kenney 2004) that hurt investments and created an environment unconducive to capital's interests. By 1990, international pressure to stabilize the economy reached its highest point and generated lightly disguised threats paralleled with offers of assistance from economic agencies, consultancies from imperial think tanks, and foreign aid from the global North. The table was set for the pacification that occurred in the 1990s. Pacification seeks to produce and maintain a social order amenable to capitalism through a reordering of the social world and the production of responsible, peaceful, and disciplined subjects whose approach to politics and activism is nondisruptive (Jackson 2013; Neocleous 2014). To achieve this, pacification produces a rhetoric of security interconnecting the economy, politics, and society where nothing is out of its purview (Neocleous 2008). Emergency power institutes temporary measures, which swiftly become permanent (Neocleous 2008). These measures tend to include the conditions for the construction of a free market, the means to discipline and indoctrinate the population, as well as the power to surveil and coerce those representing a threat to capital interests (Neocleous 2014). The pro-capital social order must be enshrined in law to alter permanently the social fabric in a legitimate way (Neocleous 2007).

Pacification, Legality, and Crime

The disenchantment with traditional politics and its alternatives accompanied by a rise of populism meant that the 1990 elections took place between two candidates with no previous political experience. Fujimori won the election by quieting people's fear over the economy as well as by presenting himself as hardworking, self-made man and an outsider to the political class who wanted change. Upon coming to power, Fujimori began the first stage of pacification by seeking from Congress the authorization to rule by decree on economic and national security matters. In 1991, Fujimori decreed 120 new laws targeting the economy and national security (Mauceri 1996). He then relied on emergency legislation to enact security, governance, and economic reforms.

Security Reforms

Prior to engaging in pacification, Fujimori changed the rules and regulations of the military, law enforcement agencies, and the intelligence services to bring them under his control (Bowen and Holligan 2003). The restructuring of the security apparatus gave Fujimori control over promotions and placements inside each institution, forcing his adversaries into retirement and putting his supporters in key positions (Kenney 2004). Fujimori made the SIN (National Intelligence Service) an autonomous entity under the direct command of the President, unobstructed by any civilian, judicial, or military authority (Degregori 1994). Fujimori then named Vladimiro Montesinos – an ex-army captain dishonorably discharged for drug trafficking and selling state secrets to the United States who became a lawyer specialized in defending drug traffickers and police officers charged with corruption and human rights violations (Jara 2003) – as the de facto chief of the SIN throughout the duration of the regime. Fujimori also granted the Executive the power to name the General Commander of the Armed Forces and to allow him to remain in place as long as the president deemed it advisable (Degregori 1994). Thus, General Hermoza Ríos remained in an unprecedented 8 years as General Commander of the Armed Forces.

After ensuring control over the military and all security agencies, Fujimori embarked on an all-out war against the PCP-SL and the MRTA. He implemented an array of emergency legislation, antiterrorism laws, and other security decrees between 1991 and 1995 which granted the police and the military extensive powers and prerogatives (such as the right to intervene in universities and prisons); broadened the mandate of the SIN; and expanded the authority of military

commanders in conflict areas (Schulte-Bockholt 2013). Furthermore, the new laws criminalized non-violent activities; restricted freedom of expression; redefined certain crimes as acts of treason judged by military courts; designated harsher sentences for all crimes linked to terrorism or treason; and changed the minimum age of criminal responsibility for terrorist activities from 18 to 15. The new legislation made it legal for armed forces to confiscate property, interfere with journalist, as well as detain civilians and maintain them incommunicado for long periods of time (Mauceri 1996). Finally, judicial reform restricted the rights of those suspected of terrorism or treason; they lost the right to habeas corpus as well as the right to counsel. The reforms created courts with anonymous judges who could try and sentence suspects of terrorism in absentia; authorized military courts to try civilians; and prohibited lawyers from accessing the evidence against their clients, attending their interrogation, or cross-examining witnesses (Americas Watch 1993). The judicial reforms resulted in an unprecedented and outstanding conviction rate of 97% (Mauceri 2006).

Governance Reforms

Almost 2 years into his mandate, Fujimori suspended the constitution and established a civilian dictatorship on April 5, 1992, after declaring that Congress was hampering his ability to pass necessary legislation to win the internal war (Mauceri 2006). Fujimori ordered a complete overhaul of the Judiciary (National Magistrates Council, Tribunal of Constitutional Guarantees, as well as the Attorney General's Office) and shut down the Congress until the approval of a new organic structure of the Legislature (Kenney 2004). During this time, Fujimori reorganized public administration by legalizing mass firings in the public sector (Conaghan 2005); dissolving institutions, boards, and committees; creating new institutions under his direct control such as the Ministry of the Presidency; reducing long-held prerogatives of municipal governments; and personally appointing key positions within the public sector (Mauceri 2006).

In 1993, the newly elected Constitutional Congress wrote a new Constitution that concentrated power in the hands of the Executive by reducing the size of Congress and significantly curtailing its power to control the Executive while making it more vulnerable to the threat of dissolution by the president (Mauceri 2006). It created new oversight mechanisms and institutions that gave the Executive de facto control over the Legislative and Judicial powers; authorized the Executive to implement urgent decrees without authorization from Congress (Between 1993 and 2000, the Executive passed 1003 urgent decrees (Schulte-Bockholt 2013).); and allowed the introduction of new items for immediate congressional deliberation if the majority present voted in favor (Conaghan 2005). Through this mechanism, the Congress was able to pass controversial laws, such as a general amnesty law 26479, at three in the morning.

Economic Reforms

Immediately after coming into office, Fujimori conducted a wide range of economic reforms that brought Peru back into the international financial community (Kenney 2004). Fujimori's regime, following recommendations from international economic agencies and imperial think tanks, successfully implemented a neoliberal ideology that constituted the market as the organizing principle of the economy, the state, and the society as a whole.

Fujimori's economic policy started with renewing payments to the external debt followed by the introduction of two sets of major reforms. The first wave of reforms stabilized the economy by cutting price subsidies, social spending, and employment in the public sector; increasing interest rates and taxes; and unifying exchange rates. The second wave of reforms deregulated financial and labor markets; reduced and unified tariffs; and privatized public enterprises (Roberts 1995). During the second wave, Fujimori privatized almost 90% of over 300 state-owned companies from strategic sectors such as mining, oil, electricity, and telecommunication (Duvillier 2016). The new Constitution contributed to these reforms by: limiting the right to collective negotiation and the right to strike while simultaneously decreasing state's responsibility toward workers (Fernández-Maldonado 2011); giving employers the right to

fire without cause (Duvallier 2016); and expanding the use of temporary contracts and outsourcing (Loayza 2011).

Aside from eliminating many fundamental individual and collective workers' rights, Fujimori signed stability agreements with transnational corporations. These agreements implemented accelerated depreciation; allowed for investments in public infrastructure as well as for the cost of research and mining exploration to be deducted from tax payments; and exonerated tax payments until the initial investment was recuperated or until production was increased more than 10% by reinvesting income already generated (Campodónico Sanchez 1999). The new Constitution prohibited any changes to laws protecting the interests of transnational extractive capital (Lust 2016). Surprisingly, the economic reforms adopted by Fujimori went further than what financial institutions demanded at that time (Vergara and Encinas 2016). Unsurprisingly, these reforms resulted in significant gains for capital, but they did not benefit the majority of the population. Stabilizing the economy sharpens inequalities; devaluation concentrates internal capital to the benefit of the dominant classes and encourages the denationalization of industry at cheap prices (Galeano 1971). Consequently, unemployment levels did not change, and purchasing power levels remained the same to those of the hyperinflation period of 1988–1989 (Fernández-Maldonado 2011).

Institutionalization of Neoliberal Populism

The Peruvian pacification process took place in an international context where the fall of communism gave way to capitalism being heralded as the victorious economic model (Jackson 2013). At the national level, the state used the violence deployed by the MRTA and the PCP-SL to delegitimize all anti-capitalist and anti-imperialist demands. In a context with no apparent credible and viable alternatives to capitalism, Fujimori encountered no actual opposition or significant challenge to his neoliberal ideological push and managed to maintain an unprecedented level of public support throughout his regime (Barr 2003; Carrión 2006). Between 1993 and 1994, at the

height of his controversial reforms, his approval rating was between 60% and 70% (Conaghan 2005).

Pacification in Peru was possible through the articulation of neoliberal ideas and values with authoritarian legacies and populist politics. Fujimori successfully transformed the political, economic, and social landscape of the country. By enshrining authoritarian practices and neoliberal principles in the 1993 Constitution, the current democratic structure has neoliberal and authoritarian values and principles at its core. Consequently, the downfall of Fujimori represented the end of an authoritarian regime but not the end of neoliberal populism. Between 2001 and 2016, the three democratically elected presidents continued to engage in neoliberal populist politics. Toledo promised to follow market economics with a human face (Barr 2003). García was reelected in 2006 using the slogan "you know how I work!" despite the debacle of his previous government. Finally, Humala aligned himself with Morales and Chavez and pledged a neo-developmentalist economic program that would put an end to neoliberal policies (Burron 2011; Vergara and Encinas 2016). Despite having campaigned on promises and platforms that challenged neoliberalism, nothing changed. Toledo continued Fujimori's neoliberal policies while attempting to put in place social programs and increasing social expenditure (Burron 2011; Lust 2016); García became a "born-again neoliberal" and intensified the economic liberalization policies and market reforms put in place by Fujimori (Gordon and Webber 2016); and Humala did an about-face turn and embraced neoliberalism and extractive capital (Lust 2016).

Human Rights Violations

The PCP-SL launched the internal war at a crucial moment. The exiting military government did not want to acknowledge that an insurrection had been brewing during its regime, while the democratic government was afraid that acknowledging the existence of a serious threat to the state would provide the armed forces with a legitimate reason to reclaim power (Gorriti 1990). As a result, both regimes undermined the level of preparation,

extent of resources, and the range of support the PCP-SL had. However, by 1982, the government had to admit the police was ill prepared to confront the insurgency and declared a state of emergency. The government authorized the armed forces to act within the territory without a clear strategic plan and no political control (Desco 1989). Following the advice of Argentinian generals and the strategies taught in the School of the Americas – a military assistance program to train Latin American armed forces in the fight against anti-capitalist insurgency through – the armed forces engaged in human rights violations, crimes against humanity, and genocidal strategies against Indigenous peoples, peasants, and the racialized poor, all presumed to be members of the insurgency because of their social location (Manrique 2002; Toche 2008). Under Fujimori, human rights violations increased and the use of disappearances and extrajudicial executions intensified. According to Congress (2003), there were 586 registered disappearances between July 1990 and April 1993 compared to 283 during the 5 years of García's administration. The flow of the justice systems also improved through systematic torture to gather information and obtain confessions (Comisión de la verdad y reconciliación 2003). The state also violated children's rights as minors accused of terrorism served their sentences in the same units as adults in maximum-security prisons (Congreso de la República 2003).) and were tactical, deliberate, premeditated, methodical, and many of them ordered by the regime (Comisión de la verdad y reconciliación 2003; Jara 2003; Uceda 2004).

The Peruvian state wielded the force of the law and legal violence to ensure its own survival and to protect capitalism from the political and military danger presented by the MRTA and the PCP-SL. Although the 1980s state's response facilitated the advancement of the MRTA and the PCP-SL, the beginning of the 1990s brought about a significant shift in the internal war that had crucial implications for anti-imperial and anti-capitalist struggles. The Executive used the Judiciary to persecute the opposition and relied on extensive use of imprisonment to deal with political opposition (Comisión de la verdad y

reconciliación 2003). Youngers (2006) reckons that during Fujimori's regime, 22,000 people out of a population estimated at 27 million were unjustly detained or imprisoned for months without charges ever being laid. They were human rights workers, community leaders, journalists, and members of the civilian population with no connection to the PCP-SL or the MRTA (Americas Watch 1993). It also used the Judiciary to pardon crimes and human rights violations from sympathizers or allies (Apoyo 2001). Law decree 26479 of June 14, 1995, absolved from criminal responsibility and from all forms of accountability all military, police, and civilian agents of the state who were accused, investigated, charged, processed, or convicted for common and military crimes caused by the war against terrorism from May 1980 until June 1995 (Conaghan 2005).

During the 10 years of Fujimori's regime, human rights violations were committed in the name of national security and to enact social policies. Between 1990 and 2000, a minimum of 272,028 women and 22,004 men (mostly poor indigenous and living in rural areas) were forcibly sterilized or sterilized without their knowledge as part of a population growth control policy). Human rights violations were also committed in order to ensure the continuation of the regime. Once the regime defeated the PCP-SL and the MRTA, Fujimori maintained and expanded the state of emergency as means of ensuring continued electoral success and political control (Comisión de la verdad y reconciliación 2003). In 1991, at the height of the armed conflict, 48.7% of the population lived in areas declared as emergency zones compared to 57% in 1995 when the insurgent groups had been neutralized (Borja 1996). By 1995, the country was under a joint armed forces-Fujimori government, its democratic institutions were precarious, and state power was exercised in a coercive, manipulative, and arbitrary fashion with no organized opposition (Quijano 1995). Aside from detaining those who spoke against the regime, the regime used a wide array of strategies to ensure compliance and cooperation from all sectors of the population. The SIN routinely collected information that

could be used to blackmail or discredit anyone who opposed the regime or who did not follow orders (Conaghan 2005). When the regime was not able to influence or corrupt someone, they would be transferred, blackmailed or threatened, and, in extreme cases, tortured or killed (Comisión de la verdad y reconciliación 2003).

The security reforms implemented during the internal war hardened the security apparatus and have since been used to discipline challenges to the neoliberal social order (Gordon and Webber 2016). Although the extent of human right's violations appears to have significantly lessened since the end of Fujimori's regime, they continue to take place as means of controlling social unrest. Continued pacification is necessary because it ensures the secured foundation for practices of capital accumulation but, most importantly, because the neoliberal economic system put in place creates harms through the persistent predatory practices of capital (Harvey 2004; Neocleous 2013). Neoliberal populist policies and practices cause serious harms by expropriating indigenous communities' land (in 2004 13% of indigenous communities' territory was given in concession to gas and petroleum companies, by the end of 2008, it had been increased to 70% (Pinto 2009)); forcing the relocation or displacement of communities and populations; causing environmental pollution and degradation; criminalizing social protest; generating unstable and dangerous working conditions; and facilitating the predatory extraction of natural resources (mining investment went from 200 million in 1993 to 1.5 billion in 200 and 5 billion in 2010 (Gordon and Webber 2016).). The harms and crimes resulting from extractive neoliberalism have given way to social protest and unrest. Whereas Toledo's strategy was to weaken the protestors through mechanisms of concertation that yielded no actual results, García relied on criminalization and repression (on June 5, 2009, during the height of mobilizations against the PTPA which made possible to sell 64% of Peruvian forests to transnational corporations, 33 people were killed (Burron 2011).). Humala continued this approach; in the first 23 months of his government, state agents killed 19 protestors (Lust 2016). The narrow definition of politics and of rightful political action produced by neo-liberal order neutralizes legitimate politics as a source of social change while criminalizing alternative forms of politics (Jackson 2013). In this regard, pacification secures the insecurity caused by capitalist accumulation (Neocleous 2011).

Corruption

Corruption is not an abnormality of the system; fraud and corruption are encouraged by a moral culture present in capitalist societies (Whyte and Wiegratz 2016). In fact, capitalism is by definition a system of corruption that involves violence, fraud, and authoritarian practices essential to domination (Hardt and Negri 2000; Gordon and Webber 2016). Fujimori's regime promoted a culture of corruption where laws and rules were continuously broken (Comisión de la verdad y reconciliación 2003). The regime embezzled money from the sale of hundreds of state-owned enterprises. The sale of state-owned enterprises generated 9.221 billion US dollars, but only 6.993 billion entered the public treasury (Schulte-Bockholt 2013). It also swindled money from contracts awarded, from development or aid programs, and from the national budget. Although the level of corruption between 1990 and 2001 was unprecedented, it is difficult to ascertain the extent of the economic crimes committed (Escárzaga 2001). Nonetheless, it is estimated that economic crimes and corruption during this time cost the Peruvian economy between 1.5 and 4 billion USD (Quiroz 2008). The money syphoned out was used for personal gain and to ensure the continuity of the regime (Comisión de la verdad y reconciliación 2003; Conaghan 2005; Schulte-Bockholt 2013). To this effect, Montesinos put in place a broad and multi-level network of corruption that included government officials, judges, prosecutors, congressmen, businessmen, owners of newspapers, radio and TV, bankers, CEOs of financial institutions, and renowned journalists as well as TV and radio personalities and videotaped his exchanges for leverage (Jochamowitz 2002). Over 3000 videos have been found (Cameron 2006).

The control the Executive had over the Legislative and Judiciary power was so extensive that

even though accusations have begun to appear as early as 1993 against Montesinos and Fujimori for corruption, fraud, embezzlement, racketeering, illegal wiretapping, human rights violations, as well as arms and drug trafficking, no heed was paid. Since then, Montesinos, Fujimori, and General Hermoza have been found guilty of economic crimes and human rights violations. Corruption did not stop with the regime change. The four presidents of Peru since 2001 (Alan García, Alejandro Toledo, Ollanta Humala, and Pedro Pablo Kuczynski) are currently under investigation for corruption or are serving time in prison for corruption and human rights violations.

Conclusion

Despite a long history of anti-capitalism and anti-imperialism struggles, the 1960s marks a turning point in Peruvian history as social movements become less reformist or issue oriented and attempt instead to gain control over the Peruvian state in order to transform it or reconstitute it. Yet, the alternatives that emerged during that time were incapable of toppling the government due to lack of organization and lack of support but most importantly, due to the Peruvian state's military action, human rights violations, legal strategies and use of mainstream media to delegitimise anti-capitalism and anti-imperialism struggles. Furthermore, the overt violence ensuing from the internal armed conflict between the PCP-SL, the MRTA, and the Peruvian state in the 1980s and 1990s became a source of legitimacy for the latter who used it to delegitimize alternative social and economic orders. The Peruvian state's response to anti-capitalism and anti-imperialism struggles has further entrenched the identification of the interests of the Peruvian state with those of imperial/capitalist forces and has relied on the use of pacification for their advancement. Consequently, any political organization (regardless of ideological affiliation) bestowed with the power of the state has a stake in maintaining the current social and economic order. This explains why, whether from the left, the right, or the center, all governments since the end of the military regime in 1980

have contributed to the ongoing pacification of Peru.

The multiple challenges to imperialism and capitalism created a breaking point in Peruvian history. The civilian dictatorship of Alberto Fujimori, with the backing of imperial powers and its consultants, engaged in a pacification process that render the mechanisms of imperialism and capitalism visible. Fujimori was successful in implementing a neoliberal social order because, aside from providing a quick, effective, and resolute solution to the economic crisis and the internal war, he was effective in articulating neoliberal principles with the *end of politics*, the rise of populism, and an authoritarian tradition. Since 2001, the different governments have attempted to hide the pacification process behind the veil of socially conscious neoliberal democracy in order to render the economic and political system more palatable and legitimate. Notwithstanding, the destructive effects of capitalism and imperialism are still present, but the internal war broke down collective struggles and has replaced them with local and interest-driven struggles which attempt to help specific groups without really challenging the system. Anti-capitalist and anti-imperial movements lost traction and were unable or unwilling to organize and act collectively at the national level. As a result, some grassroots organizations have been able to impose limitations to capital pilfering of natural resources within their respective communities, but they have not been able to challenge the predatory exploitation of natural resources elsewhere. The demonization of anti-imperial anti-capital struggles by the Peruvian state and mainstream media has therefore been successful in strengthening the grip of imperial forces and advancing transnational capital interests.

Currency hegemony; Dollar hegemony; Middle East wars; Petrodollar recycling

Definition

Known by a variety of other terms, including 'dollar hegemony', 'dollar dominance', the 'dollar Wall Street regime' and 'exorbitant privilege', petrodollar imperialism is the theory that the US primary position in the world economy is due to the fact that since 1944 oil has been almost exclusively priced in American dollars. This means that every country in the world that imports oil (the vast majority of the world's nations) has to have immense quantities of dollars in reserve. Because they are US dollars, they are invested in US Treasury bills and other dollar interest-bearing securities that can be easily converted to purchase dollar-priced commodities like oil. This is what allows the US to run up trillions of dollars of debt; the rest of the world simply buys up that debt in the form of US interest-bearing securities. This system can only function if oil exporters refuse to accept anything other than American dollars for payment. With few exceptions, oil exporters have done this since the early 1970s, when the US Nixon Administration successfully negotiated with Saudi Arabia, traditionally the world's

dominant producer, to accept only American dollars for its oil. Crucially, most Arab oil exporters since that time have also agreed to invest their surplus oil revenues in US government securities. This recycling of oil revenues is known as 'petrodollars', or petrodollar recycling. In addition to being the exclusive currency for all oil sales, the dollar is also the primary currency for global trade, ensuring that countries need to have dollars at hand not only to pay for oil, but also to facilitate trade. Thus, the US directly benefits from both the importing and exporting of oil, and from global trade activity in general. It is a key underpinning of the US economy, and a benefit not available to other countries. This is what in large part allows the US to be in debt for $17.567 trillion as of April 2014; so much of the world economy gets invested back into the US economy, and indirectly guarantees US debt will always be bought up, allowing the US to carry on printing money to fund tax cuts, increase military spending, and consumer spending on imports without fear of inflation or that these loans will be called in.

> American imperialism, no domain escapes it. It takes all shapes, but the most insidious is that of the dollar. The United States is not capable of balancing its budget. It allows itself to have enormous debts. Since the dollar is the reference currency everywhere, it can use others to suffer the effects of its poor management. (French president Charles de Gaulle, 1963, quoted in Brands 2011: 75)

De Gaulle's quote provides an excellent introduction to petrodollar imperialism. Known by a variety of other terms, including 'dollar hegemony', 'dollar dominance', the 'dollar Wall Street regime' and 'exorbitant privilege', petrodollar imperialism is the theory that the US primary control of the world economy is due to the fact that since 1944 oil has been almost exclusively priced in American dollars.

This means that every country in the world that imports oil (the vast majority of the world's nations) has to have immense quantities of dollars in reserve. Because they are US dollars, they are invested in US Treasury bills and other dollar interest-bearing securities that can be easily converted to purchase dollar-priced commodities like oil. This is what allows the US to run up

P

trillions of dollars of debt; the rest of the world simply buys up that debt in the form of US interest-bearing securities.

This system can only function if oil exporters refuse to accept anything other than American dollars for payment. With few exceptions, oil exporters have done this since the early 1970s, when the US Nixon Administration successfully negotiated with Saudi Arabia, traditionally the world's dominant producer, to accept only American dollars for its oil. Saudi Arabia then used its influence to get the rest of OPEC (Organization of Petroleum Exporting Countries) to agree as well. Crucially, most Arab oil exporters since that time have also agreed to invest their surplus oil revenues in US government securities. This recycling of oil revenues is known as 'petrodollars', or petrodollar recycling. Between 1973 and 2000, Saudi Arabia recycled as much as $1 trillion of its oil profits, primarily in US Treasury notes and other government interestbearing securities. Kuwait and the United Arab Emirates recycled between $200 and $300 billion (Cleveland 2000: 468). While it is difficult to ascertain exact numbers as many countries do not itemise specific holdings, recent estimates are that Saudi Arabia, Kuwait, United Arab Emirates, and Qatar currently hold $2.1 trillion in dollar reserves (Fisk 2009).

In addition to being the exclusive currency for all oil sales, the dollar is also the primary currency for global trade in general. If Mexico wants to purchase manufactured goods from China, it must first convert its pesos to dollars; China in turn accepts dollars and then converts them to yuan. This means that countries need to have dollars at hand not only to pay for oil, but also to facilitate trade in general. Some 80% of all world trade is denominated in dollars and more than two-thirds of foreign held reserves worldwide are also in dollars (Prasad 2014).

Thus, the US directly benefits from both the importing and exporting of oil, and from global trade activity in general. It is a key underpinning of the US economy, and a benefit not available to other countries. This is what in large part allows the US to be in debt for $17,567,647,844,797 ($17.567 trillion) as of April 2014 (US Debt Clock 2014); so much of the world economy gets invested back into the US economy, and indirectly guarantees US debt will always be bought up. According to the US Treasury, foreign investors accounted for about 33% of all US federal government debt. As of February 2014, major oil-importing and dominant manufacturing countries China and Japan held $1.27 and $1.21 trillion in US Treasury Securities (US Treasury 2014).

Author John Perkins helped negotiate one of the first petrodollar recycling agreements with Saudi Arabia. In *Confessions of an Economic Hit Man,* he writes:

> In the final analysis, the [US] global empire depends to a large extent on the fact that the dollar acts as the standard world currency, and that the United States Mint has the right to print those dollars. . . . It means, among other things, that we can continue to make loans that will never be repaid – and that we ourselves can accumulate huge debts. (Perkins 2004: 250–251)

Observer (UK) newspaper business writer Faisal Islam explains that this is what allows the US to:

> carry on printing money – effectively IOUs – to fund tax cuts, increase military spending, and consumer spending on imports without fear of inflation or that these loans will be called in. As keeper of the global currency there is always the last-ditch resort to devaluation, which forces other countries' exporters to pay for US economic distress. It's probably the nearest thing to a 'free lunch' in global economics. (Islam 2003)

Petrodollar imperialism gained more popular credence with the publication of William Clark's 2005 book *Petrodollar Warfare,* which posited that the 2003 US invasion of Iraq had been in large part to prevent the Saddam Hussein regime from pricing its oil in euros instead of dollars. The belief that US imperialism is directly linked to the dollar as the de facto global currency for oil was also strengthened by the 2011 US and NATO intervention in Libya, which followed shortly after Muammar Qaddafi's regime proposed a gold dinar as the currency for all of Africa and the exclusive payment currency for Libyan oil. In February of the same year, International Monetary Fund chief Dominique Strauss- Kahn openly called for a new global reserve currency. Three months later he was forced out in disgrace when a

New York hotel maid accused him of sexual assault. He was replaced by the dollar-embracing Christine Lagarde. Strauss-Kahn has since been cleared of all charges (Katusa 2012).

Proponents of this theory also point to US-led attempts to contain Iran's nuclear power ambitions as a ploy to distract from the real issue of concern, that Iran announced it would stop accepting dollars for its oil in 2007, and that ongoing US tensions with Iranian ally Syria were severely exacerbated when Syria switched to the euro for all international trade in 2006.

History

The international agreement to price oil in dollars was part of the 1944 Bretton Woods agreements for how the post-Second World War global economy would function. Bretton Woods was intended to provide a stable international financial regime which would ensure that the type of economic collapses that had led to the Great Depression, and the subsequent rise of fascism and the carnage of war, did not occur again. This meant establishing a rule-based system that could not be manipulated by more powerful states to their own advantage (Korten 2001: 161–162).

Gold was set as the anchor of the new system. The US dollar was established as the de facto global currency for trade and commerce, but the price of the dollar was pegged directly to actual gold reserves, and gold was set at $35 an ounce. Other countries' currencies were then fixed against the dollar; changes in currency rates could only occur via the International Monetary Fund. The criteria for a change in a country's currency exchange relative to the dollar was if the country needed to address a 'fundamental disequilibrium' in its current account. While the dollar served as the main currency for international trade, its exchange rate was similarly fixed to any other country's currency because it was fixed against gold. The system encouraged states to stay in surplus; they could then demand that their surplus dollars be exchanged for gold.

But by the late 1960s, under the strain of financing the Vietnam War, the US was running out of gold reserves sufficient to exchange other countries' surplus dollars for gold (178–179). The American government had a number of options to address this predicament. These included bringing its own deficit under control by cutting back on the tremendous military costs from the Vietnam War, or by reducing imports, or by devaluing the dollar against gold, which would have meant countries got less gold for their surplus dollars. Instead, in 1971, the Nixon Administration pulled the US out of the gold standard altogether. By removing the need to have enough gold reserves relative to the amount of dollars it printed, the US gained instant and significant leverage over other countries, in particular regarding oil (Gowan 1999: 19).

While assuring the rest of the world that it would not impede moves to a basket of currencies to replace the dollar as the exclusive currency for oil, Nixon and his secretary of state Henry Kissinger were secretly and successfully negotiating with Saudi Arabia to guarantee that international oil sales would continue to be priced exclusively in dollars. The Nixon Administration also negotiated that Saudi Arabia's significantly increased oil profits would be invested in the US economy, primarily in government interest-bearing securities, and that its profits would be directly invested in US and British private banks (Spiro 1999: 121–123). Petrodollar recycling was thus born, and the first billions of what would become trillions began flowing into the US.

Nixon and Kissinger's manoeuvring was part of a long-standing US relationship with the Saud royal family. In 1945, US President Franklin Roosevelt ensured that Saudi Arabian oil would be under US control when he entered into an agreement with Saudi Arabia's King Saud. The US would protect and guarantee the Saudi regime, in return for exclusive access to Saudi oil (Yergin 1991: 413–416).

John Perkins worked as a consultant for a private firm that helped the US government negotiate trade deals. In *Confessions of an Economic Hit Man,* he details how he directly worked on the initial post OPEC oil crisis deal between the US and Saudi Arabia. Perkins writes, 'I understood, of course, that the primary objective here was not the usual – to burden this country with debts it

could never repay – but rather to find ways that would assure that a large portion of petrodollars found their way back to the United States' (Perkins 2004: 97).

Perkins said of the plan he helped to develop:

Under this evolving plan, Washington wanted the Saudis to guarantee to maintain oil supplies and prices at levels that could fluctuate but that would always remain acceptable to the United States and our allies. If other countries such as Iran, Iraq, Indonesia, or Venezuela threatened embargoes, Saudi Arabia, with its vast petroleum supplies, would step in to fill the gap; simply the knowledge that they might do so would, in the long run, discourage other countries from even considering an embargo. In exchange for this guarantee, Washington would offer the House of Saud an amazingly attractive deal; a commitment to provide total and unequivocal US political and – if necessary – military support, thereby ensuring their continued existence as the rulers of their country. . . . The condition was that Saudi Arabia would use its petrodollars to purchase US government securities . . . (102–103)

But the true essence of petrodollar imperialism rests on the next moves pursued by the Nixon Administration: its manipulation of the 1973 OPEC Oil Embargo. On 15 October 1973, the Organization of Arab Petroleum Exporting Countries (OAPEC), consisting of its Arab members plus Egypt and Syria, declared they would embargo oil sales to any country that supplied arms to Israel during the Yom Kippur War. As a result of the embargo, the price of oil quadrupled to nearly US$12 per barrel by 1974 (Hammes and Wills 2005: 501–511). The US was embargoed, and the crisis impacted its economy, but less so than it did other countries because America was a domestic producer of oil and therefore less dependent on OPEC and the Middle East.

As detailed in Peter Gowan's *Global Gamble* (1999: 21, 27), Nixon and Kissinger had been pressuring Saudi Arabia to significantly increase global oil prices via OPEC 2 years before the Embargo began. By manipulating the OPEC Oil Crisis, the US was able to guarantee a financial windfall for itself; higher oil prices meant countries purchasing oil had to have more American dollars in reserve to purchase that oil. When the OPEC crisis quadrupled the price of oil, countries suddenly needed four times as many American

dollar reserves to purchase oil supplies. This meant a near immediate 400% increase in foreign investment in the American economy, primarily in short-term US government debt securities. For those poor countries that did not have the available revenues to pay for this, the Saudi Arabian surplus oil revenue was now available from US banks as loans (22).

Which brings us to the final but by no means least significant of the petrodollar imperialism underpinnings orchestrated by Nixon and Kissinger. As well as dismantling the gold standard as the backbone of the international financial and currency regime, the Nixon Administration succeeded in eliminating the previous limitations on private banks as a source of direct capital for international finance. Under Bretton Woods, international finance and loans were under the direct control of government-controlled central banks. Private banks and investment firms were prohibited from moving their funds freely to other countries, although there were some exceptions for financing trade and specific foreign-development investment. The idea was that money would stay in that country and contribute to the country's economic and social development goals, thus contributing to internal financial and, theoretically, social stability, rather than seeking profit opportunities elsewhere (Beder 2006: 48–49).

In 1974, the US simply eliminated its own limits on external and internal capital flows. By dropping the capital constraints previously placed on private financial institutions, the increased and considerable OPEC oil revenue was available to be invested directly into New York banks. US private banks and investment firms then became the dominant international financial force, largely replacing the Bretton Woods government-controlled central banks (Gowan 1999: 21).

Eric Helleiner, who has written extensively on this issue, says 'the basis of American hegemony was being shifted from one of direct power over other states to a more market-based or "structural" form of power' (Helleiner 2005).

Crucial to petrodollar imperialism is the control it gives the US over developing countries via its ability to manipulate their debt. This achieved

firstly by creating or exacerbating existing debt, as evidenced by the US initiation of the OPEC oil crisis and the subsequent quadrupling of the cost of oil. But the US can also manipulate other countries' debt by simply lowering or raising its domestic interest rates via the Federal Reserve, which is then passed on to any and all international loans. A rise in domestic US interest rates means that countries which have taken out loans from US banks or the IMF/World Bank are now faced with a sudden increase in the interest tied to those loans, and hence an almost automatic increase in dollars going back to the US.

This is what happened with the Third- World debt crisis of the early 1980s, when fiscal policy under the Reagan Administration saw US interest rates rise to 21%. This in turn skyrocketed Third-World debt, which had to be repaid in dollars. This debt had grown substantially from 1973 onwards, when oil-importing countries had to borrow funds to cover the 400% sudden increase in global oil prices as a result of the OPEC crisis. The Saudi and Gulf States' petrodollars that had been invested in the US were then available as loans, directly or via the World Bank and IMF, to these countries. The foreign debts of 100 developing countries (excluding oil exporters) increased 150% between 1973 and 1977 to cover the quadrupled cost of oil (International Monetary Fund n.d.)

Many of these same countries then faced even more severe economic crises in the aftermath of the first round of the debt crisis brought on by the significant rise in interest rates. The debt was owed primarily to the World Bank, IMF, and the New York private banks that had been liberated under Nixon from the capital restraints built into the original Bretton Woods structure. Bail-out packages from the World Bank and IMF came with stringent neo-liberal conditions requiring privatisation, deregulation, and cutbacks on government spending. These structural adjustment programmes became the ultimate means of US control over a soon to be neo-liberalised global economy, with significant financial flows to the US and the developed world occurring as a result.

By 2004, this arrangement had seen the world's poorest countries pay an estimated $4.6 trillion in debt repayments to the world's richest countries, a significant portion of which went to the US. In 2011, they paid over $620 billion servicing this debt. As of the end of 2012, the total debt owed by so-called developing countries was $4.8 trillion (Elmers 2014). Many of these countries have paid back their initial loans many times over, but are kept in a state of indebtedness due to interest rises, as highlighted by the 21% US interest rate rise in the early 1980s.

In an unfortunately typical example, in 2005 and 2006, Kenya paid as much in debt repayments as it did for providing critical services to its people like health care, roads, public transport, and provision of clean drinking water *combined.* Between 1970 and 2002, sub Saharan Africa, the poorest region in the world, paid $550 billion on loans totalling $540 billion. Yet it still owed an incredible $295 billion due to interest (Jubilee UK 2011).

Thus, the US can run up staggering debts with no significant consequences, while simultaneously benefiting immensely from other countries' debt and guaranteeing that the world's poorest countries will disproportionately support the US economy.

Iraq's Threat to Petrodollar Imperialism

In *Petrodollar Warfare: Oil, Iraq, and the Future of the Dollar,* analyst William Clark (2005) put forward his theory that Iraq's switch to the euro, and the threat that other oil-producing countries might follow, was the primary motivation for the 2003 US-led invasion of Iraq. The book was preceded by a widely read and discussed article by Clark just prior to the invasion.

In September 2000, Saddam Hussein announced that Iraq would no longer accept the 'currency of its enemy', the US dollar, for its oil and would instead accept only euros. Iraq openly encouraged the rest of OPEC to do the same (Sachs 2000). If every oil-producing nation followed Iraq's lead and accepted euros instead of dollars, it would mean the end of the US empire. Oil-importing countries (most of the world) would have to convert their dollar reserves into euro reserves, and thus would remove the trillions invested in the US economy.

A resurgent and regionally strong post UN sanctions Iraq, supported politically and economically by European rival oil powers involved in rebuilding its oil-producing infrastructure, would then have been in a position to encourage vocal US critics Iran and Venezuela to switch as well from the dollar to the euro.

Writing in 1999 before the euro had been introduced as a currency, Peter Gowan said:

> Directly threatening to U.S. interests in such a scenario would be the impact on the dollar; for Saddam Hussein might have preferred to denominate his capital in marks or yen. As the world's biggest debtor, with its debt denominated in dollars, the U.S. economy would clearly be vulnerable if a significant proportion of Middle East oil revenues were switched to another currency. For the United States to concede such political power to Saddam was unthinkable. (Gowan 1999: 159)

Economic Hit Man author John Perkins wrote:

> A decision by OPEC to substitute the euro for the dollar as its standard currency would shake the empire to its very foundations. If that were to happen, and if one or two creditors were to demand that we repay our debts in euros, the impact would be enormous. (Perkins 2004: 250–251)

Europe itself began to enthusiastically encourage the rest of the world to switch to the euro shortly after Iraq's decision. In June 2001, the European Parliament passed a resolution calling on 'the European Union, in dialogue with the OPEC and non OPEC countries, to prepare the way for payment of oil in euros' (European Parliament 2001). A month earlier, there were media reports that 'EU leaders [have] made an audacious bid to lure Russia away from its reliance on the greenback, calling on Moscow to start accepting euros instead of dollars for its exports, dangling the attractive carrot of a boom in investment and trade' (Newbold 2001). Russia is one of the world's largest oil exporters.

Youssef Ibrahim, a member of the US Council on Foreign Relations, told CNN in February 2003 that 'The Saudis are holding the line on oil prices in OPEC and should they, for example, go along with the rest of the OPEC people in demanding that oil be priced in euros, that would deal a very heavy blow to the American economy' (Islam 2003). The next month, the US invaded Iraq.

In June 2003, the US military occupation moved back to accepting only dollars for Iraq's oil, and eliminated the acceptance of euros. It did so despite the fact that the euro was valued 13% higher than the dollar, and thus directly reduced the revenue value of Iraq's oil sales (Hoyos and Morrison 2003).

Inherent in the George W. Bush Administration's 2002 National Security Strategy was that no rival to the US be allowed to rise in the post-Cold War geopolitical world. Russia, one of the few nations with the potential to rival US power, is heavily dependent on its oil-producing revenue. By invading Iraq, the US gained de facto control over Iraq's oil production, and ultimately over the global oil market; a cut in the oil price via Iraq in combination with Saudi Arabia would mean a cut in Russia's own hegemony, and more importantly, a direct impediment to its ability to economically rival the US.

An example of the US utilising its petrodollar imperialism to great geopolitical effect was its Cold War diplomacy with the Soviet Union. Energy analysts Edward Morse and James Richard argue that it was Saudi collusion with the US for geopolitical gain that set the groundwork for the debt-ridden collapse of the Soviet economy. In the mid-1980s, as the Soviet oil industry was attempting to expand, Saudi Arabia used its spare capacity to drive down the global price of oil to $10 a barrel, a drop of over 50%:

> The aforementioned Saudi-engineered price collapse of 1985–86 led to the implosion of the Soviet oil industry – which, in turn, hastened the Soviet Union's demise ... Saudi spare capacity is the energy equivalent of nuclear weapons ... It is also the centrepiece of the U.S.–Saudi relationship. The United States relies on that capacity as the cornerstone of its oil policy. (Morse and Richard 2002: 20)

Alternatively, China and Europe are both dependent on oil imports. Raising the price of oil would have similar deleterious impacts on these and/or any other countries dependent on oil imports, which the US did not hesitate to do when Nixon manipulated the OPEC oil crisis. Control of world oil prices via control of the world's currency means in large part control over the economies of Europe, China, Russia, and any other present or future rivals to US hegemony.

As military analyst Stan Goff puts it, 'Oil is not a normal commodity. No other commodity has five U.S. navy battle groups patrolling the sea lanes to secure it' (Goff 2004).

Contemporary Issues

As of 2014, the US faces new challenges to retain its petrodollar imperialism. A key factor to the success of the petrodollar regime has been that much of the world until recently has been dependent on the US for its security. Japan, South Korea, Australia, New Zealand, and Western Europe are all in the US post-Second World War security orbit, as are key Arab oil-producing states, most crucially Saudi Arabia and now Iraq. It certainly made, and continues to make, some sense for these countries to adhere to the dollar's primacy as the dominant trade currency in return for US protection.

However, key oil producers Venezuela, Iran, and Russia are most decidedly not US allies. Nor is China, the world's leading manufacturer. And with the rise of the BRICs (Brazil and India joining Russia and China) as powerful international economies, US economic leadership is no longer dominant.

And in response to the global financial crisis, caused by the US sub-prime mortgage crisis and housing-market bubble collapse, the Federal Reserve's response has been the controversial policy of Quantitative Easing (QE). QE is the process of expanding the number of dollars in circulation, while keeping interest rates at near zero levels to encourage borrowing and to promote economic growth. This in turn has meant much lower returns for US Treasury bills and other interest-bearing instruments, and subsequently lower returns for other countries' dollar reserves invested in those Treasury bills (Eichengreen 2012: 180). Between the outlays to save the 'too big to fail' banks, profligate military spending on the invasions of Iraq and Afghanistan and the War on Terror, US debt increased by $10 trillion in just 10 years, and went from 36% of GDP in 2001 to 82% in 2011 (Hung 2013).

Relying on the rest of the world to simply buy up the dollars it prints to cover its increased spending would appear to be catching up on the United States. Many are now suggesting that what was unthinkable a few years ago is now inevitable. In 2009, French president Nicolas Sarkozy said 'Today, we have a multipolar world, and the system must be multi-monetary. In the world as it is now, there can't be submission to what a single currency dictates' (Vinocur 2009). A 2011 World Bank report predicted that the dollar would be abandoned as the world's single currency before 2025 (World Bank 2011). The same year, Russian prime minister Vladimir Putin said of Americans: 'They are living like parasites off the global economy and their monopoly of the dollar' (Tsvetkova 2011).

At an international meeting of the BRICS, Brazil, Russia, India, China and South Africa openly declared that they want the dollar's dominance to end:

> Recognizing that the international financial crisis has exposed the inadequacies and deficiencies of the existing international monetary and financial system, we support the reform and the improvement of the international monetary system, with a broad-based international reserve currency system providing stability and certainty. (Sanya Declaration 2011)

In October 2009, long-term Middle East correspondent Robert Fisk of Britain's *Independent* newspaper broke the story that Gulf oil-producing countries, along with China, Russia, Japan and France, were in high-level secret discussions to launch a new system to replace the dollar as the de facto currency for global oil sales by 2018. The dollar would be replaced by a basket of different currencies, including a new currency for the Gulf Co-operation Council countries of Saudi Arabia, Kuwait, the United Arab Emirates, Oman, Qatar, and Bahrain. Other currencies would include the euro, the Chinese yuan, and Japanese yen. Gold would also be included in the mix (Fisk 2009).

China was cited as one of the most enthusiastic participants in the meetings. It has developed a somewhat mutually dependent relationship with the US; China buys American debt in the form of US government securities ($1.27 trillion as of February 2014, according to the US Treasury).

In return, the US consumes an enormous amount of Chinese products. This arrangement has been relatively stable as long as the US economy has continued to buy Chinese goods, and as long as US government securities have provided a decent rate of return.

However, Europe has now surpassed the US as China's principle export market, and thanks to QE, the rate of return on its trillion-dollar holdings is anaemic. However, any sizeable unloading of its dollar holdings would result in a collapse of the dollar's value, and a significant loss of its dollar assets.

China has a multitude of other reasons to be unhappy with the dollar as global currency hegemon. With the increase of dollars in international circulation due to QE and the resulting depreciation of the dollar, Chinese exports have become more expensive. It has also resulted in inflation, as China has had to print more of its own currency to keep up with the increased supply of dollars. While the US has done this for a variety of reasons, at least one of them has been to make US exports cheaper and thus more attractive in order to help end the self-imposed Global Financial Crisis, at least for itself (Eichengreen 2012: 135).

With the Middle East importing a vast amount of goods from China, as does the rest of the world, these dollars are then exchanged for Chinese yuan in order to buy Chinese goods. If China could buy oil in yuan, the Middle East countries could then buy Chinese goods with the yuan they would be holding in reserve from oil sales.

Proponents of petrodollar imperialism point to Iran as another example of the US using its foreign policy and military to protect its dollar dominance. Ostensibly, US-led sanctions against Iran have been to address its nuclear aspirations. But Iran in recent years has also successfully and directly challenged the US dollar as the exclusive global currency for all oil transactions, with the direct assistance of Russia, China, and others.

It began in 2005, when Iran announced it would form its own International Oil Bourse (IOB), the first phase of which opened in 2008. The IOB is an international exchange that allows international oil, gas, and petroleum products to be traded using a basket of currencies other than the US dollar. Then in November 2007, at a major OPEC meeting, Iran's president Mahmoud Ahmadinejad called for a 'credible and good currency to take over US dollar's role and to serve oil trades' (China Daily 2007). He also called the dollar 'a worthless piece of paper' (BBC News 2007). The following month, Iran (consistently ranked as either the third or fourth biggest oil producer in the world) announced that it had requested all payments for its oil be made in currencies other than dollars (Reuters 2007).

The latest round of US sanctions target countries that do business with Iran's Central Bank, which, combined with the US and EU oil embargoes, should in theory shut down Iran's ability to export oil and thus force it to abandon its nuclear programme by crippling its economy. But instead, Iran is successfully negotiating oil sales by accepting gold, individual national currencies like China's yuan, and direct bartering involving China, India, and Russia, among others (Doran 2012).

By accepting and encouraging countries to pay for its oil in currencies other than the US dollar, Iran has deliberately taken the same action that, according to *Petrodollar Warfare* (Clark 2005), led directly to the US invasion of Iraq. Like Iraq pre-invasion, Iran is not a member of the World Trade Organisation, has not had any dealings with the IMF since 1984, and does not have any debt with it or the World Bank. Like Iraq before it, the US and its oil companies are cut out of any future oil development in Iran. Like a post-sanctions Iraq, Iran has the potential to be the dominant power in the region and to provide development assistance on a vastly different model to that imposed by the WTO (World Trade Organization), World Bank, and IMF.

For now, the dollar remains dominant as the de facto global currency. However, the ascendancy of the euro and eventual internationalisation of the Chinese yuan, the rise of non traditional allies like China and Russia in the global economy, and the increasingly obvious decrease of America's global economic domination are all factors in predicting the dollar's eventual fall.

Definition

The history of Philippines as a colony and neo-colony can be divided into three parts –Spanish domination of the archipelago from 1565 to 1898, the annexation of the islands by the USA following the Spanish-American War of 1898 and its pacification from 1899 to 1935, when it became a Commonweath up to 1941, and the Japanese occupation of major regions of the country from 1942 to 1945. In 1946, the Philippines was granted nominal independence but not full sovereignty, and recent bilateral agreements such as the Visiting Forces Agreement (VFA) and the Enhanced Defense Cooperation Agreement (EDCA) have reconfirmed the status of the Philippines as a neocolony of the USA.

The history of the Philippines as a colony and neo-colony can be divided into three parts. The first designates 300 years of Spanish domination of the archipelago from 1565 to 1898 after the subjugation of tribal resistance in the main island of Luzon. The second includes about four decades involving the annexation of the islands by the USA following the Spanish-American War of 1898 and its pacification from 1899 to 1935, when it became a Commonwealth up to 1941. The ascendancy of US monopoly capital and finance at the beginning of the twentieth century replaced that of Spanish merchant capital and its moribund feudal arrangements (Magdoff 1982).

From 1942 to 1945, the Japanese militarily occupied the major regions of the country but left local governance to a "puppet" regime of elite natives. The return of US forces destroyed the Japanese authority and restored the status quo ante bellum.

In 1946, the Philippines was granted nominal independence but not full sovereignty, given the presence of US military bases and effective control of key political, military, and economic institutions by Washington. With recent bilateral agreements such as the Visiting Forces Agreement (VFA) and the Enhanced Defense Cooperation Agreement (EDCA) to buttress military and political dependency, the Philippines's status as a neocolony of the USA has been reconfirmed.

Revisiting Spanish Hegemony

The Philippines came under the formal political authority of Spain in the time of European rivalry over control of trade with Asia and the Americas in the fifteenth and sixteenth centuries. Following Ferdinand Magellan's discovery of the islands in Southeast Asia in 1521, Miguel Lopez de Legaspi claimed the archipelago (named the "Philippines," after King Philip II of Spain) for Spain in 1565. Lacking any cohesive unity or common loyalties, the indigenous tribes based on subsistence agriculture fell victim to the Spanish strategy of "divide and rule" and its use of superior weaponry for pillage, plunder, and killing (Veneracion 1987).

Given the distance from Spain, the islands were ruled from Mexico approximately

10,000 miles away. Few lay Spaniards settled in the Philippines. The pagan natives were Christianized by missionaries of the religious orders (this had been the rationale given by the Spanish monarchy to the Pope for taking power) so the Roman Catholic Church virtually ruled territories that yielded foodstuffs, human labor, and timber needed for the galleon trade. This lucrative exchange of Chinese porcelain, Indian textiles, etc., for Mexican gold and silver required the Philippines as a transshipment point between Mexico and China.

The profit gained from the galleon trade offered the main reason for subsidizing the "civilizing mission." The Church's evangelical apparatus of catechism and sermons was mobilized to justify appropriation of land and other natural resources extracted via heavy taxation, enforced labor, and assorted tributes. This missionary salvific discourse portrayed native resistance to Church abuses and government impositions as pagan wickedness, not a legitimate defense against violence (Eadie 2005). Coopting the village chiefs, the missionaries and civil officials reinforced the patron-client system of asymmetrical harmony. Cultural ties of reciprocity and indebtedness to the local leaders were manipulated to ensure the regular centralized routine of the accumulation process.

The lack of adequate civilian personnel to maintain ecclesiastical and bureaucratic discipline compelled the state to develop a local agency, the *principalia* (principal personages), to manage the procedures of taxation, sexual/domestic conduct, civic projects, security, and indoctrination to reproduce the feudal-tributary social relations while producing food, shelter, clothing, and other means of survival. This also explains the theocratic dominance of the friars in mediating between the mercantilist state and the natives in the *cabeseras* (geopolitical town complex) which broke apart the kinship or *datu-sacop* system of the preconquest polity.

Colonial discipline of the native subjects involved coercive and ideological mechanisms to enforce extraction of goods/services for use and for exchange. Precapitalist forms and feudal instrumentalities dovetailed to constitute the political economy of the Spanish possession. Apart from the local chiefs and their extended families and retainers, the natives were thus reduced to serfs or even to virtual slavery. This excluded the Moros or Muslims of the southern islands of Mindanao and Sulu who successfully resisted Spanish military and religious incursions from the time the Muslim chiefs Soliman and Lakandula were subdued in 1572–1574.

Despite reformist measures introduced in the mid-nineteenth century, Spain never developed the potential for self-sufficient agriculture and sustainable industries. The archaic state's practice of imposing bonded labor for infrastructure projects, as well as the excesses of the friars, led to over 200 revolts of peasants and workers, from Malong's revolt in Pangasinan (1660–1661) to the numerous revolts during and after the British occupation of Manila in 1762–1764 (Constantino 1975, pp. 112–114).

Crisis of the Mercantilist Dispensation

With the termination of the galleon trade in 1813 and the abolition of government monopolies of tobacco and other export crops, the metropolitan city of Manila was opened to foreign trade in 1835. Liberal ideas entered the islands, a consequence of the exposure of Spain to Enlightenment philosophy before and after the Napoleonic wars (1808–1814) and the South American wars of independence. Conflict between the absolutist monarchy and the forces of liberalism led to the republican interlude (from 1868 onward) and the appointment of Carlos Maria de la Torre, a prominent liberal (Zafra 1967, pp. 157–163). De la Torre exempted the Filipino workers in the Cavite arsenal from tribute and coerced labor. They subsequently mutinied when his successor, the conservative Rafael de Izquierdo, restored the status quo. The Cavite revolt of 1872 and the execution of the three secular priests (Burgos, Gomez, and Zamora) signaled the resurgence of hitherto inchoate dissidence among urban intelligentsia and guilds in the islands.

Meanwhile, capital accumulation via commercial agriculture and export trade passed into the

hands of Anglo-American merchant houses. To these were attached mestizo families, owners of sugar plantations and *hacenderos* (owners of haciendas or land grants from the Crown) of other cash crops (rice, hemp, tobacco, and coconuts). An *ilustrado* (enlightened) stratum of these families emerged in the 1870s and 1880s; foremost were the "propagandists" (Marcelo del Pilar, Graciano Lopez Jaena, Jose Rizal, Isabelo de los Reyes, etc.) who advocated peaceful reforms and representation in the Spanish Cortes (De la Costa 1965). These aspirations were all denied and their advocates punished by death, imprisonment, or exile.

Parallel to that assimilationist movement existed a separatist movement of the peasantry and mutual aid cooperatives of workers and artisans inspired by millenarian agitations and the secularist movement among Filipino priests against the arrogant friars. This was led by Andres Bonifacio and the secret organization, the *Katipunan* (Association of Sons of the People), inspired by freemasonry and the delayed impact of the ideas of the French and American Revolutions. Earlier insurrections, particularly instigated by indigenous cults and seditious anticlerical groups of uprooted tenant-farmers, converged in the 1896 revolution that led to the establishment of the first Philippine Republic after feuds between the collaborationist elite factions and the grassroots radical-democratic peasant-worker revealed basic contradictions among classes. This explosion of emancipatory desire by the disenfranchised rural folk was undeterred by sustained Catholic proselytizing and the terrorist measures of desperate Spanish governor-generals. The decay of Spanish colonial domination could not be reversed by the end of the nineteenth century.

The Nightmare of Spanish Colonization

The Spanish destruction of the self-sufficient barenganic communities by taxation and forced labor (*polos y servicios*) disrupted the village economy of kinship-based clans. Population was reduced, farm lands lay wasted, including

whatever trade and industry flourished. The Spanish historian Antonio de Morga lamented that due to the despotic backward policies, the natives abandoned "their farming, poultry and stock-raising, cotton growing and weaving of blankets" (Agoncillo and Guerrero 1970, p. 104). From the sixteenth to the nineteenth century, Spain exploited the natives to support the galleon trade that enriched the friars and local bureaucrats, the Chinese traders, and native mestizo families.

Whatever changes were carried out in the nineteenth century did not significantly improve the conditions of the majority since the specialization in export crops (controlled by Anglo-American agents) prevented the growth of a diversified economy. The nascent capitalist sector benefited only a few propertied families and foreign merchants. In terms of Christianization, very few Filipinos really understood Catholic doctrine, hence, the mixture of miracles, idolatry, veneration of icons and images, superstition, and rudimentary Catholic rituals that constitute the belief-system of ordinary Christian Filipinos today.

In general, the cultural development of the country reflected the bankruptcy of Spanish political and economic policies. It reflected the decay of the metropolitan order in a grotesque caricatured form. Spanish was not made the lingua franca of the colony; hence, a bizarre enthnolinguistic multiplicity continues to distort Filipino efforts at national self-identification. Hispanization survives only in certain customs and habits (fiestas, family rituals, etc.). The historian John Phelan observes that "although partially Hispanized, the Filipinos never lost that Malaysian stratum which to this day remains the foundation of their culture" (1959, p. 26). Spanish colonialism, in short, ruined the indigenous life-forms and the supporting economy it encountered, while enriching a few oligarchic sectors and intensifying its own paralysis and decadence.

The American historian Nicholas Cushner concludes his account with the belief that Spain's "more subtle influence on attitudes and social conventions remains part of the fabric of Philippine society" (1971, p. 229). However, profound Americanization of the collective Filipino psyche from 1899 to the present may have

pronounced the final demise of this influence today despite superficial vestiges now extravagantly commodified for tourist consumption.

The US Conquest

President William McKinley's proclamation of the US "civilizing mission," also known as "Benevolent Assimilation," emerged as part of global interimperialist rivalry in the age of monopoly-finance capitalism. US corporate industries and banks needed a market for finished goods and sources of raw materials as well as business for exporting capital. A guaranteed market for commerce and investments was an imperative for competitive capital accumulation. Maritime supremacy was needed to facilitate trade with China and South America and regulation over the US sphere of influence in those hemispheres.

The Philippine conjuncture then was unique because of the appearance of a nascent Filipino nationality in the stage of world history. When the Spaniards ceded the islands to the USA in 1898, the Filipinos had already defeated the Spaniards everywhere except the fort city of Manila. The army of the first Philippine Republic (proclaimed in June 1899) fought the US invaders from 1899 to July 1902. Apart from guerrilla resistance led by peasant-based leaders, the Moros continued to resist until 1913 (Tan 2002).

Given the advanced mode of industrial production and superior technology and human resources, the USA demolished the revolutionary forces led by Emilio Aguinaldo. It was the first bloody war of imperial subjugation that opened the twentieth century. From positional to mobile tactics to guerrilla warfare, the Filipinos suffered enormous casualties. Frustrated by the popular support for the resisters, the USA engaged in genocidal destruction of villages and killing of civilian noncombatants. Torture, hamletting, mass detention in concentration camps, and other savage reprisals led to the death of 100,000 people in Batangas province in one campaign (Fast 1973, p. 75). General Franklin Bell estimated 600,000 deaths in the island of Luzon

alone. These, added to the other "depopulation" tactics in Samar and Panay where fierce resistance occurred, resulted in over a million deaths (Francisco 1987, p. 19). On the victor's side, over $300 million was spent, 4,234 died, 2,818 were wounded, and hundreds of soldiers returned home to die of service-related malaria, dysentery, venereal disease, etc. (Ocampo 1998, p. 249).

US monopoly capital distinguished itself from Old-style colonialism by its systematic planning, its management of time-space coordinates for limitless capital accumulation. Even before the ferocious pacification campaigns were launched, the USA already drew schemes for long-term exploitation of the islands. Geological explorations and anthropological surveys were conducted in advance to discover sources of raw materials and manpower. Compilations of immense data on history, ethnolinguistic groups, flora and fauna, etc. provided knowledge for the succeeding colonial administrators in establishing a centralized bureaucracy, civil service, and local governments. Unlike Spanish evangelism, the US colonial machinery was geared to using the country for the thorough exploitation of the newly acquired territory, envisaging the eventual expansion of multinational corporations and ultimate global hegemony.

Knowledge Production for Profit

One example of how knowledge production functioned to advance imperial hegemony may be found in the US handling of the "Moro problem." After thorough research and studies of the Moro people's history, customs, and values, the USA negotiated with the Sulu sultan and his datus for acceptance of US sovereignty in exchange for preserving the sultanate's right to collect taxes and sell local products. A monthly salary of Mexican dollars for the sultan was also included in the Bates Treaty signed on 20 August 1899 (Agoncillo and Guerrero (1970, pp. 255–256). This neutralized the effective opposition of some Moro elites. But it did not prevent Generals Wood and Pershing, a few years later, inflicting a scorched-earth retaliation against sporadic

intransigence, resulting in the massacre of thousands of Moro men, women, and children in the Battles of Bud Dajo (9 March 1906) and Bud Bagsak (11 June 1913) (Tan 2010, p. 130).

McKinley's policy of "Benevolent Assimilation," translated into civil governor William Howard Taft's slogan of "the Philippines for Filipinos," legitimized the physical occupation of the islands as a preparation of the colonized for eventual self-rule. While brute force was used to destroy organized resistance by the Philippine Republic's army, the USA deployed three nonviolent instruments of subjugation.

The colonial program was both traditional and innovative. First, by coopting the *ilustrado* mestizo class (the proprietors of commercial land and the compradors), by offering them positions in local municipal boards, the military, and the civil service, the USA drastically divided the leadership of the revolutionary forces. By promising democracy and gradual independence, the USA won the allegiance of this educated minority who had fought Spanish absolutism. Aguinaldo himself swore allegiance to the USA a month after his capture, followed by his capitulationist generals and advisers.

Second, by imposing a large-scale public education program to train lower-echelon personnel for a bureaucracy headed by US administrators, the USA answered the grievances of the peasantry, artisans, and workers against the monopolistic, hierarchical practice of the Spanish-dominated Catholic Church. As a pedagogical tool, the learning of English facilitated wider communication among widely scattered communities, transmitting bourgeois values and serving as the key to obtaining privileges and opportunities in careers and jobs. The massive dissemination of US cultural products (books and magazines, music, films, sports, theatre, etc.) reinforced the colonial mindset of the *indio* masses that continues to this day. It included the *pensionado* system of government-funded scholarships, the forerunner of fellowships funded by Fulbright, the Rockefeller and Ford foundations, and other privately endowed exchanges promoting the positive side of US "compadre" or philanthropic colonialism.

Third, by propagating through schools and mass media the ideals of liberty, brotherhood, and meritocracy, the USA cultivated among the masses the illusion of equal participation in government via elections, social-welfare programs, and token land reform. This synchronized with the democratic ideals expressed by the nationalist propagandists Rizal, Mabini, and others, ideals already embodied in the republican constitution, thus gaining a measure of consent. With the final actualization of these three modes of fashioning the colonial subject of US monopoly capital, the apparatus of the colonial state could now be safely transferred to the mestizo elite and its clientele.

One symptomatic item of evidence for US-style pedagogical strategy during the war is the incidence of soldier-teachers and hundreds of civilian volunteers from the USA who fanned out across the islands. Public schools were opened everywhere. The University of the Philippines (established in 1908) and the Bureau of Education spearheaded the training of "Americanized" natives for the professions and the civil service. By 1907, the USA had established the Philippine Legislature, composed mainly of mestizo elites and token "nationalist" veterans. By 1916, the colonial bureaucracy was in the hands of the comprador and land-owning elite, with the US governor general exercising veto power.

The self-proclaimed nationalist leaders Manuel Quezon and Sergio Osmena took turns sublimating the nationalist aspirations of the people by leading missions to Washington delivering pleas for immediate independence. This was a shrewd maneuvre to calm down the turbulent peasant insurrections in the 1920s and 1930s, culminating in the Sakdalista insurrections from 1930 to 1935. The Philippine Commonwealth, formed in 1935 with the passage of the Tydings-McDuffie Law, marked the advent of US neocolonial retrenchment.

Crafting a Neocolonial Strategy

After the hasty proclamation of the end of the Philippine-American War in 1902, the USA began constructing its hegemony via popular

consensus. Schooling, civil service, and bureaucracy served as ideological apparatuses to accomplish that aim. Since the USA, unlike Spain, did not claim to save the souls of savage pagans, its "civilizing mission" inhered in the tutelage of the natives for a market-centered democratic polity (insuring free trade and free labor) suited to the needs of finance-monopoly capitalism.

Even before armed hostilities ceased, President McKinley formed a civil government to replace the military officials who managed pacification. In July 1902, the US Congress passed the first Philippine Organic Act establishing the Philippine legislature as provided for by the 1916 Jones Law which promised eventual independence. But it was the 1909 Payne-Aldrich Tariff Act that guaranteed its export-oriented agricultural economy even after formal independence in 1946. It tied the client Filipino sugar landlords and compradors, together with their political representatives, to serve US imperial goals. The Act eliminated the tariff on sugar and created a captive market for US products. However, not much foreign investment came in because earlier legislation had limited the size of land holdings, thus preventing US attempts to initiate plantation production of cash crops. This resulted in the conflict between the US sugar beet industry and US investors in Cuban sugar that led to demands for Philippine independence to eliminate US preference for Philippine sugar.

Beginning in 1924, the Filipino oligarchs had to maneuvre and negotiate the terms of independence to insure the preservation of their wealth and privileges. In 1934, the Tydings-McDuffie Act was passed restricting the free entry of Philippine sugar while providing for the establishment of the Philippine Commonwealth, an interim formation which served as the blueprint for the postwar neocolony. From 1935 to 1941, the Commonwealth and its American stewards faced growing unrest from a politicized peasantry and impoverished urban workers not fully disciplined by the client-patron pattern of political domination.

Class war resurfaced with the 1935 Sakdalista insurrection on the eve of a general referendum on the ratification of the Philippine Constitution. This was a symptom of the failure of US colonial policies in eradicating the fundamental problem of land ownership and feudal practices. In 1903, 81% of all land holdings were cultivated directly by their owners; by 1938, the figure had declined to 49%, with the polarization increasing in the postwar decade when, by the 1950s, two-thirds of the population was landless, working as sharecroppers (Fast 1973, p. 76). In short, US colonialism thrived on the social and political exploitation of the countryside where the majority of Filipinos lived, thus nourishing the source of antiUS imperialist insurgency from that time to the present (for more data on structural inequality, see Canlas et al. 1988).

Interlude: The Japanese Occupation

Japan easily occupied the Philippines in 1942 after the defeat of General Douglas MacArthur's forces of Americans and Filipinos in Bataan and Corregidor. Historians now agree that MacArthur's incompetence in failing to prepare for the invasion explains the most humiliating defeat for the USA on record (Agoncillo and Guerrero 1970; Rutherford 1971, p. 155). Japan thus became the third imperial power to subjugate the Philippines in less than half a century. But its mode of subjugating the country in three and a half years of occupation demonstrates significant features of the pattern already manifested in the way the USA took over control from the Spanish colonizers.

Since the Second World War was basically a rivalry between two industrial powers, the role of the Philippines continued to be geopolitical (as a military base) and economic (a source of raw materials and manpower). Japan needed vital raw materials such as copper and food for its war effort. Just like the USA, Japan carried out methodical reconnaissance of the cultural and sociopolitical condition of the Philippines many years before Pearl Harbor. In the 1930s and 1940s, Japanese military spies posing as workers worked in the construction of roads and bridges to Baguio City, the summer capital of the US administration. They also carried out social investigation of the

political loyalties of the mestizo elite as well as the mass organizations opposed to US rule. They succeeded in gaining the support of General Artemio Ricarte, a respected official of the Aguinaldo Republic, and of Benigno Ramos, the intellectual leader of the Sakdalista Party, as well as nationalist politicians such as Jose P. Laurel, Claro Recto, and others, who served in the puppet government of the Japanese-sponsored Republic.

Liberating Asians for Japan's Empire

The ideological cover for Japanese occupation was the scheme of the "Greater East Asia Co-Prosperity Sphere." The Philippines would be a member of this grand union of Asian nations all united in emancipating themselves from Western domination, and (in the case of the Philippines) from "the oppression of the United States" (Veneracion 1987, p. 69). Japan echoed Taft's slogan of "Philippines for the Filipinos," and encouraged the use of the vernacular and other indigenous cultural forms of expression.

Although aided by local sympathizers of Spain's fascism (such as the Catholic Church and mestizo compradors), the puppet Republic confronted the underground resistance of the combined forces of the guerrillas of the USAFFE (United States Armed Forces of the Far East) and the far more effective Communist-led Huks (acronym for People's Army Against the Japanese). The Huk guerrilla army emerged from the peasantry's experience of dispossession and recalcitrance during the first three decades of US rule. They opposed the Japanese confiscation of rice harvests, administered local governments which distributed land and food, and punished collaborators. When MacArthur returned in 1944–1945, however, despite their substantial help in crippling the Japanese defense and liberating large areas of the country, the Huks were disarmed, arrested, and even massacred (Pomeroy 1992).

The war was the most horrendous experience for the Filipinos. Aside from Manila being entirely destroyed by US bombing and Japanese atrocities, the country suffered over a million deaths, second to the number of casualties during the Philippine-American War. Some 50% of Filipino prisoners died while the number of civilians killed in the capital city of Manila exceeded those killed by the Japanese in Nanking, China. If the USA had not given priority to the war in Europe, the Philippines would have been freed from the Japanese much earlier. The people were told to wait for US relief, channeling all their hopes in the promise of MacArthur to redeem them from suffering. The brutality experienced by Filipinos from Japanese military reprisals, helped by long years of colonial education and tutelage, allowed the majority to welcome MacArthur as "the liberator." It also tended to glamourize the subordinate position of Filipinos as part of "US–Philippines" special relations. MacArthur immediately promoted the representatives of the prewar oligarchy to crucial positions, endorsing Manuel Roxas, a former collaborator, as president and installing proUS bureaucrats and military personnel in charge of the state apparatuses.

Colonialism Refurbished

Under the Tydings-McDuffie Law which created the Philippine Commonwealth, the war-devastated Philippines was granted formal independence. But certain conditions defined the limits of nominal sovereignty. The first condition required the Philippine Congress to accept the terms of the 1946 Philippine Trade Act, which provided some rehabilitation money to repair the war-damaged economy. More crucially, the Act required an amendment to the Philippine Constitution that gave US citizens equal rights in the exploitation of natural resources and ownership of public utilities and other businesses.

In effect, the colonizers retained their old privileged status. What was more decisive was the revival of the oligarchy's sugar industry via tariff allowances and quotas, the abrogation of control over import tariffs on US goods, prohibition of interference with foreign exchange (pegging the local currency to the dollar), and unlimited remittance of profits for US corporations. Free trade guaranteed the status of the former possession as a market for finished

commodities and investments as well as a source of cheap agricultural products and raw materials. The Act was rammed through Congress by expelling left-wing legislators in line with the CIA-directed military campaign against the Huks (Woddis 1967, pp. 38–40).

The second condition was the approval of the 1947 US-Philippines Treaty of General Relations. This empowered the USA to exercise supreme authority over extensive military bases. It also guaranteed the property rights of US corporations and citizens, thus nullifying the sovereignty of the new republic. This was followed by the 1947 Military Bases Agreement, which guaranteed the US occupation of extensive military bases for 99 years. This included two major facilities (Clark Air Base and Subic Naval Base), used as strategic springboards for intervention in Asia and the Middle East during the Korean War, Vietnam War, and the Iraq Wars. The agreement also prohibited the Philippines from granting extraterritorial rights to any other country and placed no restrictions on the uses to which the bases could be harnessed, nor the types of weapons that could be deployed to them (Labor Research Association 1958).

To reinforce its political and military ascendancy, the USA also imposed the 1947 US-Philippines Military Assistance Pact to provide military assistance. Together with this, a US military advisory group (JUSMAG) was assigned to the Philippine armed forces that would exercise direct control by supervising staff planning, intelligence personnel training, and logistics. All military hardware and financial backing must be cleared through JUSMAG. Meanwhile, the US AID Public Safety Division managed the tutelage of local police agencies. US-supplied weapons, training, and logistics were immediately used in the counter-insurgency campaign against the Huks in the early 1950s, and later on to support the parasitic elite and Marcos's authoritarian regime in the 1960s, 1970s, and 1980s.

In a revealing testimony to the US Senate Foreign Relations Committee in 1969, Lt General Robert Warren clarified the role of the US military in the Philippines: "To provide advice and assistance to the Armed Forces of the Philippines in the form of training material and services as necessary to assure protection of US interests in the Philippines and to promote US foreign policy objectives in the area" (US Senate 1969, p. 242).

In 1954, the terms of free trade that worsened Philippine dependency were modified in the 1954 Laurel-Langley Trade Agreement. This extended parity rights to Americans for all kinds of enterprises. Tariff rules were readjusted, thus shifting US leverage to direct private investments into manufacturing instead of raw material production. Due to import controls imposed by the Philippines, the USA established assembly and packaging plants to produce consumer goods, thus competing with local industries. This was the refinement of the elaborate apparatus of the multinational or transnational corporations that would dominate post-Second World War international trade. Meanwhile, the Philippine economy continued to rely on the USA for selling raw materials and buying more expensive technology. In 1970, the USA controlled 80% of foreign investments in the country, approximately one-third of all the total equity capital of the 900 largest corporations. This represented 60% of US investments in Southeast Asia at that time (Bayani 1976, p. 18).

Crisis of the Neocolonial Order

At the height of the Cold War, with the USA bogged down in the Indochina war, the Philippines underwent severe economic and social blockages that destabilized the Marcos regime, an instrument of US Cold War strategy but an ironic comment on the role of the Philippines as a traditional showcase for democracy and freedom in Asia.

Marcos dispatched 2,000 troops to Vietnam at the request of Washington. But his economic base had been deteriorating since he won the presidency in the 1960s. The intense foreign stranglehold of the economy had led to an unchecked flow of capital, acute inflation, devaluation, and the rise of external debt. Exchange control was lifted in 1962, leading to capital outflow: repatriation of profits exceeded overseas investment. The overdependence on basic exports (lumber, sugar,

P

copper, coconuts, and other extracted products) of low value relative to imported finished goods led to a trade deficit of $302 million in 1969 (Fast 1973, p. 89). In addition, the failure of the "Green Revolution" and the alleged "miracle rice" varieties (developed by the Rockefeller-funded International Rice Research Institute) aggravated the chronic shortage of rice as staple food, renewing the specter of famine and unrest.

Meanwhile, the social contradictions between the oligarchic state and the majority of pauperized peasants sharpened. Although the Huks (renamed People's Army of Liberation) were violently suppressed by the CIA-backed Magsaysay regime in the 1950s, they enjoyed popular support in the extremely polarized countryside. Crippled by the arrest of its leaders in 1950, the Huks evolved into the New People's Army (NPA) when the Communist Party was reorganized in 1969 by Maoist partisans who matured during the resurgence of the nationalist, anti-imperialist movement evinced in massive student demonstrations, peasant and worker strikes, and agitation among professionals such as teachers, journalists, lay and religious workers, women, urban poor, and so on.

One of Marcos's justifications for declaring martial law in 1972 was the threat of a communist takeover. In actuality, it was an outgrowth of Cold War geopolitics and a US attempt to reassert its hegemony in Asia after its Vietnam debacle. Increased US military and political support for the Marcos dictatorship was insured when he guaranteed US business 100% profit remittance as well as opportunities to exploit the country's natural resources, and also the right to engage in banking, shipping, domestic fishing, and so on (Javata-De Dios et al. 1988). Later investigations revealed that the bulk of US aid ended up in the foreign bank accounts of the Marcos family and their sycophantic cronies (Bonner 1987).

Total US military aid for the Marcos regime exceeded all that was given to Africa or to Brazil, Uruguay, Argentina, or Chile. Napalm and fragmentation bombs, among others, were supplied through JUSMAG to be used against NPA and Moro insurgents in Mindanao fighting the dictatorship. US AID officials trained police in advanced techniques of riot control, interrogation,

and torture tactics applied to political prisoners and detained suspects.

US "Special Forces" were also directly involved in counter-insurgency operations disguised as civic action activities, operations which are still maintained under the terms of the VFA, and more recently, under those of EDCA. These two agreements have virtually legitimized the return of US troops despite the dismantling of all US bases in 1992. One can conclude that "US imperialism, with its economic and military stake in the Philippines, is the instigator and mastermind of the Marcos fascist dictatorship" (Bayani 1976, p. 38). The USA continues to mastermind the human-rights violations, extrajudicial killings, and torture of the succeeding administrations, from those of Corazon Aquino and Fidel Ramos to Joseph Estrada, Gloria Macapagal-Arroyo, and Benigno Aquino III.

Aftermath of the 1986 February Revolution

President Corazon Aquino's regime (1986–1990) was marked by the 1987 massacre of 18 farmers in a peaceful demonstration and by numerous human rights violations through hamletting, "salvaging" (extra-judicial killings), torture, etc. (Maglipon 1987). Both Aquino and her successor General Fidel Ramos had the approval of Washington in maintaining a stable market for business and US geopolitical maneuvres in the Middle East. After Ramos, both President Joseph Estrada and President Gloria Macapagal-Arroyo pursued the "Washington Consensus" of abiding by the structural conditionalities of the World Bank International Monetary Fund in its neoliberal program of deregulation, privatization, and dismantling of any large-scale social-service programs for the impoverished and marginalized majority of citizens (Eadie 2005; San Juan 2008). All land-reform programs initiated since 1946 have failed to resolve the age-old problem of landless farmers and iniquitous semifeudal relations between landlords and rural workers (Putzel 1992).

In 1992, the Philippine Senate voted to dismantle the US military bases but did not touch

the other Agreements that maintained US supervision of the military and police agencies. The end of the Cold War did not witness a decrease in US military intervention. In 2002, after the 9/11 Al Qaida attacks, the US State Department declared the Philippines to be the second front in the war against global terrorism (Tuazon et al. 2002) and so required special supervision and surveillance.

Secretary of State Powell categorized the Communist Party of the Philippines and the NPA as terrorist organizations (Fletcher 2013). While the major Moro groups, the Moro Islamic Liberation Front (MILF), and the Moro National Liberation Front (MNLF), were not stigmatized as terrorist, the US singled out the Abu Sayyaf splinter group as a reason for justifying the 1999 VFA and the 2002 Mutual Logistics Support Agreement that allowed the initial troop deployment of 600 Special Operations forces to assist the Philippine military in counter-insurgency operations. The killing of a Filipino transgender in October 2014 by US Marine Private Joseph Scott Pemberton called attention once again to the impunity of US personnel in numerous criminal cases. The VFA gives extraterritorial and extra-judicial rights to visiting US troops, an exceptional condition banned by the 1987 Philippine Constitution. Thus, the Philippines could not detain the suspected killer, undermining its national sovereignty and its system of justice (Ayroso 2014).

Meanwhile, the MILF is in the process of negotiating a peace agreement with President Aquino under the auspices of the US Institute of Peace and the Malaysian government, while the MNLF has fragmented into various camps since the 1996 accord with the government, a conclusion to the 1976 Tripoli Agreement between the MNLF and Marcos (Graf et al. 2009). The government's dialogue with the National Democratic Front of the Philippines remains frozen while the Aquino regime is plagued with corruption, disaster relief, energy shortages, and the stalemate with China over the Scarborough Shoal and Spratley Islands confrontation in which the US Navy and Air Force presence figures prominently (Heydarian 2013).

From Cold War to War on Terror

Since 2002, the joint annual military exercises called "Philippine-US Bilateral Exercises" have been held allegedly to give humanitarian assistance during natural disasters to victimized provinces. They also offer weapons, logistics, and other support to government campaigns to secure peace and order in war zones, or in vital metropolitan areas (as in the 2012 exercise around the National Capitol Region). Just like the Civic Action programs refined during the antiHuk drives of the 1950s, these exercises supplement violent repression with psywar and other unconventional techniques to win "hearts and minds," closely following the US *Government Counterinsurgency Guide* of 2009 and its associated field manuals.

President Arroyo's Oplan Bantay Laya and President Benigno Aquino's Oplan Bayanihan are updated versions of the counter-insurgency strategy and tactics applied by the USA in Vietnam, El Salvador, Iraq, Afghanistan, and elsewhere. They combine intensive military operations, intelligence, civic action or triad operations, conventional warfare methods, and counter-guerrilla tactics. The USA learned as much from its tutelage of its colonial subjects as Filipinos did through a cross-fertilization of security and espionage practices. The historian Alfred McCoy concludes his inventory of such practices with the remark: "Empire has been a reciprocal process, shaping state formation in Manila and Washington while moving both nations into a mutually implicated postcolonial world" (2009, p. 522).

The 1951 Mutual Defense Treaty continues to legitimize US "low intensity warfare," such as the sustained antiNPA drives during President Corazon Aquino's tenure (Bello 1989). During the Arroyo presidency, the USA maintained the official headquarters of the US-Philippine Joint Special Operations Task Force Philippines (JSOTF-P) inside the Camp Navarro of the Armed Forces of the Philippines's Western Mindanao Command in Zamboanga City, where Moro insurgents are active. Drones and other sophisticated equipments are handled by US Special

P

Forces against the Abu Sayyaf, now valorized as an Al Qaida offshoot, with linkages to other recent terrorist groups such as the Jemaah Islamiyah and the Islamic State (ISIS) in Syria.

To supplement JUSMAG, a new agency called the Defense Policy Board was created to handle issues of international terrorism, maritime safety, transnational crime, natural disasters, pandemic outbreaks, etc. Other "cooperative security locations" (as these facilities are euphemistically called) are found in Clark, Subic, Mactan International Airport, and in other clandestine areas (Klare 2005). It is in these areas occupied by US advisers and staff where torture, enforced disappearances, and extrajudicial killings occur. One recent case was that of US health worker Melissa Roxas, who was kidnapped and tortured by military agents in 2009. Documenting the accelerated kidnappings and extrajudicial murders of activists already publicized by Amnesty International and UN rapporteurs such as Philip Alston, the Filipino group KARAPATAN noted the 1,111% increase of military assistance to the Arroyo regime beginning in 2001 when the first Balikatan exercise was held (Lefebvre 2010). This aid continues indiscriminately with horrendous consequences.

Provisional Coda

In March 2007, the Permanent People's Tribunal based in Europe heard witnesses about government abuses and judged Presidents Bush and Arroyo guilty of crimes against humanity (San Juan 2007: Appendix C). The verdict reviews the US imposition of virtual colonial status on the Philippines via numerous military and security agreements that have ensured domination over the economy, state apparatus, and internal security.

Under the guise of the global "War on Terror" against extremists, the USA continues to deploy and station thousands of troops, at any one time, in the Philippines. They participate in combat operations against local insurgents, a gross violation of Philippine sovereignty and territorial integrity. The Tribunal observed that "because of its strategic location, the Philippines is vital for the US projection of military force in East Asia and as far

away as the Middle East," serving as transit points and refueling stations in its wars of aggression against the people of Afghanistan and Iraq, as well as the people of the Philippines. President Bush was an accomplice of President Arroyo in the systematic violation of the rights of the Filipino people, which were also crimes against humanity. For these, US imperialism was indicted as an international scourge.

From the sixteenth century to the present, imperialism (whether in the mode of Spanish Old style colonialism, Japanese militarism, or US tutelage in modernization/developmentalism) represents one of the worst manifestations of an oppressive system of exploitation of people that have been outlawed by the United Nations Charter and its Declaration of Human Rights. Nonetheless, it persists today in the Philippines where a people's national-democratic, socialist-oriented revolution, with a long and durable tradition, thrives in a collective project to eradicate this historic legacy (San Juan 2008). The history of the Philippines may be read as one long chronicle of the people's struggle against colonialism and imperialism for the sake of affirming human dignity and universal justice.

Philosophy and Imperialism

Dan Wood
Villanova University, Villanova, PA, USA

The present entry offers a very brief introduction into just a few of the numerous, complex relations between imperialism and philosophy. The piece does not seek to resolve the issues presented. Much less does it pretend to comprehensiveness. Two interrelated questions motivate the expositions to follow: In what ways has imperialism impacted or influenced philosophy? And, conversely, how has philosophy influenced, addressed, and/or confronted imperialism? To begin, some central concepts will be fleshed out. The second section then presents a number of episodes in which accordant relations have been obtained between imperialism and philosophy. The next section then explores a number of overtly anti-imperialist philosophies.

Definition

The definitions to follow do not aspire to grasp the essences of things in themselves. They are rather delineations meant to be broad enough not to be unnecessarily exclusionary and narrow enough to

pinpoint real areas of convergence between imperialism and philosophy.

"Imperialism" amounts to the totality of an empire's concrete and abstract orientations toward groups considered to be "other" than the said empire, whereby the continual extraction of value, resources, land, and people through theft or systematically unequal exchange plays a central role in the empire's maintenance and further aggrandizement of power and order. For present purposes, and since they are often used interchangeably in contemporary theory, "imperialism" and "colonialism" will not be rigidly distinguished from one another here. An "empire" is a large, multiethnic or multinational political body with a complex internal division of labor that governs territories or political entities originally outside of its sphere of control via combinations of direct and indirect rule (Howe 2002, pp. 13–15, 30). There are many important differences that distinguish one empire from another. The empires of Maurya in the fourth century (BCE), of the Tawantinsuyu in the fifteenth century, and of the French in the nineteenth century were vastly different from each other. But empires also betray certain constant features or family resemblances, only a few of which will be noted for present purposes. How these and related constants ultimately affect one another and which prove to be most important for explaining the workings of empires are issues that ultimately exceed the scope of this piece.

Despite emerging in varying geographical regions over the course of time, empires have shared a number of family resemblances with one another. For example, they use violence, persuasion, and intrigue for their various ventures. Such plans typically include wars of aggression, territorial expansion, the subjugation of foreign populations, and the establishment of durable forms of economic extraction – whether through tribute, theft, or the creation of new markets. The occasional de facto or de jure anomaly notwithstanding, men hold the highest and vast majority of positions of power and authority over imperial life, i.e., empires are and have been androcratic. One exponent of the existence and affairs of such gendered hierarchies is "imperial ideology."

"Imperial ideology" signifies the idealist obfuscation or inversion of the actual bearing of historical-material processes on the construction of ideas in a way that allows imperial ruling classes to reinforce their own, universal ideas as the sole legitimate ones (Marx 1978, pp. 154, 172–174). The reigning ideology of an empire ensures, motivates, and justifies its day-to-day operations. Ideology makes people march (*fait marcher*), in the multiple senses of making them fall in line, work, and function, as well as in the sense of deluding them (Althusser 2014, pp. 42n27, 180–81). Artwork, stories, ceremonies, grand architectural projects, and official myths constitute but a few of the more common conduits of imperial ideology. To these things which often act as cultural bearers of imperial interests, one can also add "philosophy."

"Philosophy," a term whose ancient Greek roots mean the "love of wisdom," refers to an oriented system of ideas, values, and practices by means of which an individual or group seeks and proposes answers to fundamental questions, such as those concerning reality, logic, beauty, goodness, knowledge, the self, the gods, and the meaning of life – questions whose elusiveness often rivals their perceived, perennial importance. One often associates philosophy with ideas, particularly with *big* ideas. But philosophical ideas, concepts, and theories emerge, transform, and are transmitted through concomitant *practices*. Social and cultural practices comprise a key aspect of really existing philosophy, whether in regard to the adoption of Jain ascetic habits (Laidlaw 1995), the memorization and recitation of syllogistic poems in Medieval European universities (Kneale 1962, p. 232), or the participation in contemporary dissertation rituals. In seeking the best ways to address fundamental questions, philosophers and philosophical traditions prioritize some concerns, methods, forms of life, and styles of presentation over others. In this way, a particular philosophy *orients* itself in one way rather than another. Finally, the ideas, values, and practices that comprise an instance of philosophy relate to and impinge upon one another, such that the elements of a philosophy make up an organized *system* as opposed to a mere cluster or heap.

Philosophies have histories. And even if a good deal of philosophers over time have tried to think that which is pure, eternal, and immutable, nonetheless these endeavors cannot be clearly and distinctly separated from messy, fluctuating, and worldly matters – including imperial states of affairs. Imperialism is also a historical phenomenon. There were times prior to any empires and empires rise and fall. But insofar as the ventures and bureaucratic affairs of an empire involve operative presuppositions about beauty, justice, the gods, the meaning of life, knowledge, and so forth, they too do not exist in isolation from philosophy. So, to begin, one can reasonably propose that *imperialism and philosophy bear upon one another*. Imperialism and philosophy can be thought of as "bearing upon" one another in at least two senses. On the one hand, the phrasal verb "to bear upon" can be understood in the sense of "being relevant to," as new evidence can be said to bear upon a court case. On the other hand, "to bear upon" connotes a stronger sense of "influencing" or "pressing downward on," as when a heavy weight bears upon one's shoulders. The following sections explore cases in which, at the very least, philosophy and imperialism have proven to be relevant to one another and, in a number of instances, do in fact seem to have exerted pressure on and influenced each other.

Imperialism and Philosophy: Accordant Relations

Imperialism and philosophy have maintained certain consonant relations with one another over the course of history. Where philosophy's history begins and what types of thinking one deems worthy of consideration as philosophical are themselves philosophical matters of no little importance. If one prioritizes the meaning of philosophy's etymology over the term's origins, then an examination of the relation of the love of wisdom to imperialism will not only need to extend to places and times long before archaic and classical Greece but must also include empires that emerged independently of any initial Hellenistic influence. Various forms of didactic

and wisdom literature circulated within ancient imperial contexts. Consider, for example, the maxims of Ptah-Hotep, who was reported to have served under King Izezi of the Fifth Dynasty of ancient Egypt (c. 2450 BCE). "The Instruction of Vizier Ptah-Hotep" consists of a collection of wise sayings to be passed down to his son and designated successor. The text provides a glimpse into what would have been considered the best advice for the development of habits needed to assist one in practical, moral, and political matters from an upper-class Egyptian point of view (2011, pp. 343–346). Papyri versions of the text were copied and emended in the Egyptian Empire (New Kingdom) during the Bronze Age, attesting to the perceived salience of the maxims (Simpson 2003, pp. 129–130).

Traditions of the pursuit of wisdom can also be observed within imperial contexts without initial influence from ancient Mediterranean or Near Eastern empires. For instance, in the Aztec Empire (the Triple Alliance) of pre-Colombian Mesoamerica, there arose "a remarkable intellectual tradition, one that like the Greeks began with the questions of lyric poets and then went on to distinct schools of inquiry associated with elite academies" (Mann 2011, p. 131; see also Dussel 1995, pp. 50–57). The philosophers of the Aztec Empire, the *tlamatinime*, were thinkers and teachers whose lives were to set a moral example. They sought and reflected upon the Nahuatl concept *neltilizli tzintlitzli*, which roughly translates as "fundamental truth, true basic principle." While the world was thought to be in a permanent state of flux, truth in the sense of *neltilizli tzintlitzli* was understood to exist beyond transitory finitude. This perceived separation provoked the question of how fundamental truth could relate to constant change. One individual who dwelt upon such questions was Ayocuan Cuetzpaltzin. Cuetzpaltzin, son of the Chichmec Prince Cuetzpaltzin the Elder, was the reported ruler of Tecamachalco (1420–1441 CE), a city-state that would become incorporated as part of the tributary province of Tepeacac by the Aztec Triple Alliance in line with the latter's primary economic strategy (Berdan et al. 1996, pp. 133–135; Berdan and Anawalt 1997, p. 99). Cuetzpaltzin continued

to affiliate with princes after Tepeacac's subsumption (León-Portilla 1966, p. 14), and the economic benefits befalling a man of such status may have provided him with more leisure time to consider philosophical matters. Among other things, the poet-philosopher speculated about whether or not friends would be reunited in the afterlife, "Earth is the region of the fleeting moment. / Is it also thus in the Place/Where in Some Way One Lives?" Although he laments the emptiness and futility of finitude, Cuetzpaltzin also seems to suggest that through artistic creation, one might approach the real, and he calls for the enjoyment of friendship, flowers, and song while alive in the face of existential uncertainties (León-Portilla 1992, pp. 214–221; Mann 2011, pp. 137–139).

If one prefers to understand the etymology of the term "philosophy" more narrowly, designating a new form of thinking that emerges specifically in archaic and classical Greece, here too philosophy's relation to imperialism should not be passed over in silence. By the beginning of the early eighth century BCE, expanding Greek city-states had begun to colonize territories overseas, eventually covering parts of what are today France, Spain, Syria, North Africa, Italy, and Turkey (Cline and Graham 2011, p. 112). And during the next two centuries, slave trade routes would begin to make non-Greek slaves ("barbarians") much more accessible (Cartledge 2002, p. 162). But it was not until the formation of the Delian League in 477 and its successfully organized resistance against the expansionist efforts of the Achaemenid Persian Empire that the Athenian Empire truly rose to power. The Athenians' "lead in resistance to the Persian Empire was a vital ingredient in their own short-lived bid at imperialism...An empire resister became an empire itself" (Cline and Graham 2011, p. 126). By this point, Athens along with its colonies and cleruchies did not only happen to have slaves, but its economy fundamentally depended upon the labor of slaves, the great majority of whom were of foreign origin. Athens was a slave society (Cartledge 2002, p. 159; Hall 1989, p. 2; Kyrtatas 2002, p. 146). Those of the *demos* who were able to exercise democratic power were male, autochthonous (or sometimes naturalized) citizens who

made up about 16% of the population, whereas actual assembly attendance proved closer to about 2.4% of the population (Black 2009, p. 141).

Athenian imperialism's bearing upon Greek philosophy can be found in a variety of different texts. One particularly elucidating example can be found in the work of Alexander the Great's tutor: Aristotle (384–322 BCE). In a foundational section of the *Politics* that foreshadows his subsequent theory of natural slavery, Aristotle writes:

> Now in these matters as elsewhere it is by looking at how things develop naturally from the beginning that one may best study them. First, then, there must of necessity be a conjoining of persons who cannot exist without one another: on the one hand, male and female, for the sake of reproduction (which occurs not from intentional choice but—as is also the case with the other animals and plants—from a natural striving to leave behind another that is like oneself); on the other, the naturally ruling and ruled, on account of preservation. For that which can foresee with the mind is the naturally ruling and naturally mastering element, while that which can do these things with the body is the naturally ruled and slave; hence the same thing is advantageous for the master and slave. Now the female is distinguished by nature from the slave. For nature makes nothing in an economizing spirit, as smiths make the Delphic knife, but one thing with a view to one thing; and each instrument would perform most finely if it served one task rather than many. The barbarians, though, have the same arrangement for female and slave. The reason for this is that they have no naturally ruling element; with them, the community of man and woman is that of female slave and male slave. This is why the poets say "it is fitting for Greeks to rule barbarians"—the assumption being that barbarian and slave are by nature the same thing. (2001b, I.2 1252a24-1252b8)

This passage exemplifies imperial ideology to the extent that it inverts the life processes of Athens: nature is socialized, and social relations are naturalized in a way consonant with the aims of the ruling classes. Greece has often been seen as the birthplace for providing rational and natural explanations of things as opposed to merely theological ones (Cline and Graham 2011, p. 104; Ede and Cormack 2012, pp. 1–27; Marietta Jr. 1998, p. 4; Windleband 1956, pp. 34–36). In the text at hand, no deities or divine rulers are called upon for imperialist ends, as did Naram-Sin with Ishtar in Akkad and Constantine with Jesus in Rome (Cline and Graham 2011, p. 17; Irvin and

Sunquist 2006, pp. 160–65). Nonetheless, no sooner does "nature" in the above quotation displace the imperial gods as legitimate forms of explanation than it becomes socialized in an ambiguously poetic fashion. Aristotle describes nature as having the creative power and foresight of a highly skilled craftsman, an image reminiscent of Plato's demiurge in the *Timaeus*. This craftsman makes types of individuals who have specific purposes in relation to one another (cf. 2001a, *Phys.* II.8 198b18–199b33). Whether or not certain types of individuals organize themselves in accordance with their natural ends does not alter their more primordial relation to the "craftsman" of said interrelated ends. In this way, and however metaphorically, the idea of "nature" acts as a social agent who creates and establishes a normative hierarchy between types of human being.

Aristotle notes three different types of relations of dependency that nature distinguishes and establishes: woman-to-man, slave-to-master, and barbarian-to-Greek. Women, slaves, and barbarians make up those categories of individuals fit to be naturally ruled. The idea of the "body" mediates these groups with the imperial status quo. The reproductive body ensures the continual supply of Athenian citizens, the absolutely instrumentalized body upholds the slave economy, and the ethnically other body contrasts with and delimits the uniqueness of Greek self-identity (cf. Hall 1989). Such a characterization served the interests of and would have found favor with the upper-class men of the Lyceum (Millett 2007, p. 193) as well as those of the Assembly. By describing women, slaves, and barbarians as lacking the full capacity for deliberation (2001b, *Pol.* I.13 1260a9-15), Aristotle – Greek, philosopher, man, and slave owner – positions himself in the best place to convene with the excellent craftsman that is nature. So, the political-philosophical paragraph above serves as little more than an ideological justification for Athenian imperialism.

Ancient philosophy has not only defended existing imperial orders but has also sought to create them. The current of thought referred to as "Legalism" in ancient China serves as a good

example of how philosophical programs have pursued and obtained such objectives. In Hucker's catchy formulation, "If Confucianism is a doctrine of 'ought-ness' and Taoism a doctrine of 'such-ness,' then Legalism is a doctrine of 'must-ness'" (1975, p. 92). The word "Legalism" (*fa jia*) gathers together a set of related currents in ancient Chinese philosophy, although the term can prove misleading if taken too simplistically (Pines 2017, p. 1; Zhao 2015, p. 179). The "*fa*" of "*fa jia*" has multiple senses in addition to that of law, at times connoting a model, standard, method, normative rules, or technique (Schwartz 1985, pp. 321–23). During the Spring and Autumn period in the Zhou realm (770–453 BCE), there ensued widespread political turmoil and disintegration. Chaos and violent warfare fragmented Eastern Zhou, which had become "entangled in a web of debilitating struggles among rival polities, between powerful nobles and the lords within each polity, as well as among aristocratic lineages and among rival branches within major lineages" (Pines 2017, p. 5). Such political factiousness would ascend to even bloodier heights in the Eastern Zhou between 419 and 221 BCE during the Age of Total War, at which point territorial expansion became the central purpose of warfare (Zhao 2015, p. 222). Legalism emerged during the fourth and third centuries in response to the era's political calamitousness. Legalism's overarching goal consisted in creating a "rich state and powerful army" (*fu guo qiang bing*) that would unite "All-under-Heaven" (Pines 2017, pp. 5–6). But the current of thought did not amount to idle speculation detached from everyday affairs of state. Indeed, the overall "synergy between the states' war efforts and the Legalist reforms strengthened state power and defined the Age of Total War" (Zhao 2015, p. 187). While there were many different factors that led to the emergence of the Qin Empire in 221 BCE, such as increased urbanization, new commercial relations, and technological developments, the extent to which Legalist philosophical ideas and practices came to bear upon imperial policy deserves to be foregrounded.

One of the earliest philosophers identified as part of the Legalist tradition was Shang Yang or

P

Lord Shang (390–338 BCE). Shang Yang was an incredibly ambitious aristocrat from the small state of Wei, where he studied with Li Kui, the man who orchestrated the Wei Legalist reform. As a political actor, advisor, and major reformer, Shang Yang would later assist in the rise of the Qin Empire (Pines 2017, p. 3; Schwartz 1985, p. 331; Zhao 2015, p. 195). Shang Yang is best remembered for the eponymous *Book of Lord Shang* in which he (and most likely his later disciples) set forth the brutal policies considered necessary for statecraft. A notorious passage reads: "When the people are weak, the state is strong; hence the state that possesses the Way strives to weaken the people" (Pines 2017, p. 9). In contrast to Confucius and Aristotle, Legalist philosophers like Shang Yang were unconcerned with moral character and the cultivation of virtues, and they considered the purported importance of individual and spiritual-moral agency for politics as illusory (Schwartz 1985, pp. 325, 335, & 346). Shang Yang thought of agriculture and warfare as the most important bases of the best state, both of which required the implementation of draconian laws and punishments (even for petty crimes) accompanied by positive incentives.

Shang Yang's views were further developed by Han Fei (d. 233 BCE), "a scion of the ruling family from the state of Hán" (Pines 2017, p. 4). Han Fei emphasized the importance of developing a strong bureaucracy to mediate the absolute powers of the ruler, and he argued that the advancement of individuals within the state bureaucracy should be merit-based. While agreeing with Shang Yang on the state's need for draconian penal laws, he also thought that such laws served the people's best interests in the long run. Even if they did not recognize this, they could eventually come to love the law (Schwartz 1985, p. 323). The philosopher held that the sovereign needed to enshroud himself in mythology, offering the following metaphor: "a flying dragon only looked majestic in the sky against the clouds; without clouds, the flying dragon would resemble a worm" (Zhao 2015, p. 186). Han Fei would eventually gain access to the First Emperor, whom the former considered to be the ideal ruler. However, the Emperor's suspicion of Han Fei would later

lead to the philosopher's execution, possibly because the sovereign followed Han Fei's advice too closely (Feizi 2003, pp. 85–90; Schwartz 1985, p. 345).

Among other early-modern European candidates for investigation (Ince 2018; Jahn 2005; Muthu 2012; Smith 2015), the work of English philosopher Francis Bacon (1561–1626) provides another telling example of the ways in which imperialism has borne upon philosophy. Like Shang Yang and Han Fei, Bacon did not pursue philosophy to the exclusion of political life. He served as Lord Chancellor under James I and was an active member of the Commons during the initial emergence of the British Empire (Klein 2016, p. 1). During his lifetime, mercantile capital had begun to generate substantial competition between rival European powers (Wallerstein 2011). Along with the Dutch and the French, England in the sixteenth and seventeenth centuries tried to curb Spanish imperialism through state-sanctioned privateering, smuggling, and raiding in the Americas (Streets-Salter and Getz 2016, pp. 114–117). To these forms of extraction were added the conquest and establishment of overseas settler colonies and plantation systems in the early seventeenth century. The ensuing regular encounters between British forces and indigenous groups resulted in the marginalization and decimation of the latter, most notably in the burgeoning Atlantic slave trade, the first voyage of which set sail from England the year after Bacon's birth (Williams 1994, p. 30). Already by the middle of the seventeenth century, over one million slaves had been imported into Anglo-America (Lange 2009, p. 22).

A number of Bacon's texts exhibit imperialist predilections. For instance, in *Of Plantations* the philosopher speaks of colonies as "heroical works," and he appropriates the Emperor Charles V's expansionist motto *plus ultra* (further yet) for his natural philosophical schemes (Jowitt 2002, pp. 130–133). But such leanings also find expression in Bacon's dreams of uniting empire and science in houses of learning. Both imperial political bodies as well as philosophers have been concerned with the reach and future preservation of their ways of life and thought. Both have,

accordingly, founded institutions where the teaching and learning of said ways of life and thought could take place. A brief allusion to the relation of Aristotle's Lyceum to the imperial economic and ideological forces in classical Athens was already noted. To such an institution, one could also add the large-scale mandatory educational system for every male in the Aztec Triple Alliance or Oxford University in the nineteenth century (Mann 2011, p. 137; Pietsch 2013). Bacon's vision of the ideal natural-philosophical institution, which would later be taken as a model by "mid-century republicans and the monarchist founders of the Royal Society," likewise unites the ends of philosophy with those of empire (Colclough 2002, p. 61).

In his utopian novella, *New Atlantis*, Bacon portrays a ship of Spanish sailors who come across an island (called "Bensalem") west of Peru in 1612. The crew learn from Bensalem's governor that one night the canonical and non-canonical works of the Bible (even those which had not yet been written) came to the island amid a bright pillar of light (1980, p. 48). That is, the ideas considered to be most important on the island literally descended "from heaven to earth" (Marx 1978, p. 154). On the island, there exists the ideal institution of scientific learning, Salomon's House, whose workings reflect Bacon's belief that ideas should be controlled by the elite (Ede and Cormack 2012, p. 131). The House's central purpose of investigating the "Causes, and secret motions of things" operates inseparably from the "enlarging of the bounds of Human Empire, to the effecting of all things possible" (1980, p. 70). Well on its way to such an ideal, Salomon's House excels in the acquisition and production of unrivaled forms of knowledge, medicine, and technology.

New Atlantis has been read, most convincingly, as Bacon's criticism of James I's underestimation of the importance of using empirical research for England's greater international-political empowerment (Jowitt 2002, pp. 141–143). The elements of patriarchy and racism both inside and outside of Salomon's House suggest that the expansion of the bounds of "Human Empire," even in a utopian setting, would not do away with the hierarchical subordination of some types of human being to

others. Bacon often describes the investigation of nature in gendered and sexualized terms or through analogies involving heterosexual marriage, a motif which continues in *New Atlantis* (Aughterson 2002, p. 156; Godfrey-Smith 2003, pp. 138–139). Bensalem in general and Salomon's House in particular are both governed exclusively by men, and different rituals serve to entrench patriarchal rule. Bacon depicts the greatest achievement attainable by a woman as being the bearer of a long lineage of men, for which she can be seated in a lofted chair during the celebration of the family, but where she must nevertheless remain concealed, able to see through a window but not be seen (1980, pp. 59–61). Negative stereotypes also continue to circulate freely within the philosopher's utopia. For example, mention is made of "a little foul ugly Æthiop," and terms of disparagement are marshalled to distinguish some of Bensalem's policies from those of the Orient: "It is true, the like law against the admission of strangers without licence is an ancient law in the kingdom of China, and yet continued in use. But there it is a poor thing; and hath made them a curious, ignorant, fearful, foolish nation" (1980, pp. 65, 55).

The imperialist moments in Bacon's philosophy pale in comparison to those found in the work of Friedrich Nietzsche (1844–1900). Nietzsche wrote all of his major works during the era of the German Empire, a period whose social, cultural, and political realities would both influence him and provoke his contrarian ire. His works are marked by an unapologetic frankness, which allows him to pursue dangerous and bold ideas without reserve. Such daring leads Nietzsche to quite a few remarkable ideas, criticisms, and observations. But the bluntness of his approach also results in paroxysms of prejudice that often contradict one another. At times imperialist dimensions of his thought occur somewhat subtly, at other moments becoming more conspicuous. In *Human, All Too Human* (1878), Nietzsche contrasts the old European notions of the wild, nasty tropics with temperate Europe (Blaut 1993, pp. 69–94). In §236, he argues that "cultural eras correspond to various climactic belts," the past giving the impression of a tropical climate:

"Violent contrasts; abrupt alternation of day and night; heat and magnificent colors; reverence for everything sudden, mysterious, frightful; rapid onset of oncoming storms; everywhere the wasteful overflowing of nature's horns of plenty" (1996). He contrasts these stereotypical images of primitive life with "our" culture, in which the climate is light, temperate, and pure. Nietzsche then briefly concedes that perhaps Germany/Europe's cultural progress has not led to advances in art and metaphysics. He then concludes, however, that, "for us, the very *existence* of the temperate cultural zone counts as progress." Here Nietzsche does not advance detailed arguments for the rational superiority of Germans/Europeans over inhabitants of the tropics, as did so many other colonialist thinkers. Instead, he finds that he is able to infer the temporal notion of progress simply from the spatial notion of contrasting geographical zones. The thought that non-European peoples were models of the past of Europeans was a widespread element of modern imperial ideology. Such ideological echoes reverberate in §236 of *Human, All Too Human* not only in terms of content but also insofar as Nietzsche's conclusion is asserted as self-evident, despite rhetorically entertaining hypothetical counterpoints.

Yet while the Nietzsche of *Human, All Too Human* may have considered Europe as comparatively progressive vis-à-vis the tropics, he would eventually come to see the nations of Europe as decadent and in a state of decline. The philosopher lambasts the schemes of Bismarck, whose "volteface in the mid-1880s on the question of Africa had not only furnished Germany with a colonial empire of her own, but also provoked Nietzsche's attacks on the petty ambitions and nationalistic myopia of the Reich" (Conway 2002, p. 175; Nietzsche 2001: §377). But Nietzsche did not criticize the competing nationalisms of Europe for moral or anti-imperialist reasons, but rather because Europe's imperialisms were proving defective precisely insofar as they produced enfeebling divisions among Europeans. In a reflection from 1885, Nietzsche claims that individual nations like England, Holland, and Germany will not, by themselves, be able to maintain their colonies, and he concludes that a

certain European unification proves necessary for the conquest of non-Europeans (Holub 1998, pp. 44–45). The conquests of Napoleon serve as one model for such future unification, while the past glories of the Roman Empire serve as another. If Nietzsche had once found in tropical zones the past of Europe's progress, he now saw "in the Roman Empire the promise of Europe's future" (Conway 2002, pp. 175–176). To overcome its present decadence and pessimism, Europe would need to cultivate new values and individuals. In *The Gay Science* (1882), published 2 years prior to the Berlin Conference, Nietzsche calls for the discovery of such values by means of mercantile metaphors, "[A] new justice is needed! And a new motto! And new philosophers! The moral earth, too, is round! The moral earth, too, has its antipodes! The antipodes, too, have their right to exist! There is another world to discover—and more than one! On to the ships, you philosophers!" (§289). Whereas "Merchants of Light" from the House of Salomon would need to occasionally set sail in order to discover new knowledge that would enlarge the bounds of Human Empire (Bacon 1980, p. 79), "good Europeans" would need to set sail to discover new values to enlarge the bounds of Nietzsche's "comprehensive, integrated program of pan-European acculturation" (Conway 2002, p. 177).

Imperial ideology continues to affect and hold sway over various aspects of contemporary philosophy (Wood 2014a, 2016). However, imperialism does not only bear upon philosophy's textual content. As noted previously, institutions of learning play an important role in bolstering an empire's practices and ideologies. For instance, contemporary universities in the United States in many respects depend upon and reinforce US imperialism. And insofar as philosophy functions as one discipline among others within such universities, it too maintains a variety of complex relations with imperial flows of capital and concepts both nationally and internationally. While the Red Scare played a heavy-handed role in shaping philosophers, textbooks, and philosophy as a discipline in the 1940s and 1950s (McCumber 2001), one can also find overtly imperialist motifs within current day-to-day departmental politics.

Consider, for example, the civil case brought against the Regents of the University of California and world-renowned philosopher John Searle, recipient of the National Humanities Medal awarded by George W. Bush in 2004 (Vattimo and Zabala 2011, p. 11). In March 2017, Searle's teaching and research assistant, Joanna Ong, filed a civil lawsuit against him and the Regents, the vast majority of whom are men. The complaint alleges that the philosopher had repeatedly sexually assaulted her both verbally and physically and that upon refusing his advances, her pay was cut by half, after which she was dismissed without cause. According to Ong's complaint:

> During Ong's employment, Searle continued to make inappropriate comments and engage in lewd conduct around her. While they were engaged in work, Searle would occasionally ask Ong to log into a "Sugar Baby, Sugar Daddy" website for him, which she refused to do. Searle also would speak to Ong in a sexual manner. On one occasion, when Ong brought up the topic of American Imperialism as a discussion topic, Searle responded, "American Imperialism! Oh boy, that sounds great honey! Let's go to bed and do that right now!" ("Complaint for Damages & Demand for Jury Trial", Paragraph 23)

In the case at hand, the constants of imperial ideology noted throughout this section present themselves once again. The civil case involves the alleged abuse of power by a white man in a prestigious US university to emotionally, sexually, and economically exploit an Asian-American woman. As a harbinger of sexual conquest, the euphemism "American Imperialism" here reveals the patriarchal dimension of imperial ideology. At the very least, Ong v. the Regents of the University of California makes clear that really existing philosophy is not immune to conflicts in which imperialism arises as an explicit area of contention across lines of class, race, and gender.

Imperialism and Philosophy: Discordant Relations

The previous section examined cases in which imperialism and philosophy have promoted one another's preservation and advancement. The present section turns to just a few of the cases in which the ideas, values, and practices of a particular philosophy and of a particular empire have not fostered each other's empowerment but rather have been at odds with one another. Before proceeding to these analyses, however, two caveats are in order. First, it should be noted that a number of unique historical and material problems beset anti-imperialist philosophies. If one understands the concepts of imperialism and philosophy broadly, it seems likely that a large number of traditions dedicated to the pursuit of wisdom, some of whose particular ideas, values, and practices were antithetical to imperialism, have not been preserved. Whereas empires have employed scholars and scribes to debate and record ideas, many small-scale societies within and on the edges of empires have lacked the time, resources, and technologies to physically record their ideas and arguments. While thinking philosophically, as Socrates knew, does not require writing, writing down philosophical ideas does allow for the future access to those ideas in a way that usually surpasses the capacities of oral transmission. Such issues of preservation are multiplied to the extent that an empire actively benefits either from ignoring anti-imperialist arguments altogether or from excluding such positions as not being properly philosophical in the first place. For example, it is not insignificant that, although Aristotle treats arguments against the idea of natural slavery in his *Politics* (1253b15-23), the theorists of such ideas nevertheless remain wholly anonymous (cf. Cambiano 1987). Likewise, in modern contexts, anti-imperialist philosophies are effectively kept at the margins when one configures the history of philosophy in accordance with *translatio imperii* models, i.e., when history itself becomes equated with the history of the succession of empires.

The second caveat is that there are cases in which a philosopher's oeuvre cannot be considered simply "for" or "against" imperialism. Imperialism and philosophy have borne upon one another in such a way that on some occasions a thinker seems to be averse to imperialism, while at others said philosopher remains mired in an empire's practical, institutional, and ideological trappings. The philosophy of Immanuel Kant

(1724–1804) serves as an excellent example of this ambivalence.

Taken as a whole, Kant's philosophy exhibits both quintessentially imperialist and resolutely anti-imperialist arguments. Prior to the mid-1790s, his philosophy describes the life of the colonized from a perspective in favor of imperialist ideas, values, and practices (Kleingeld 2014). For example, in his essay "Of National Characters" from 1748, Kant considers "Negroes" as naturally inferior to whites (Muthu 2003, p. 183). Portions of his later Doenhoff Lectures on Physical Geography (1782) sound like a "how-to" guide for aspiring imperialists: "The Mandinka are the very most desirable among all Negroes up to the Gambia river, because they are the most hardworking ones. These are the ones that one prefers to seek for slaves, because these can tolerate labour in the greatest heat that no human being [*Mensch*] can endure." Such anthropological claims provided a foundation for the philosopher's later defense of colonialist and nonwhite slavery in his article from 1788, "On the use of teleological principles in philosophy." In his Dohna Lectures on Physical Geography, Kant would continue to adhere to imperialist notions, stating that "Negroes" were created for the difficult labor of slavery intolerable to others (Kleingeld 2014, pp. 47–51). Like that of Aristotle, Kant's hierarchy of relations of subordination purports to model both a factual and a normative order and does so through the notion of "creation." For Kant, the capacities available to a certain type of individual determine the avenues that said type of individual can and should (be made to) follow. Yet, unlike Aristotle's hierarchy of social relations, Kant's schema is mediated by the distinctively modern notion of race, to which he contributed significant theoretical efforts. The racial hierarchy to appear in his anthropology lectures placed Native Americans on the bottom, "Negroes" above them, and Asians on the rung above them. As the only non-deficient race, whites sat atop Kant's racial pyramid (Kleingeld 2014, p. 47; McCarthy 2009, pp. 50–51).

In his later ethical and political works, however, Kant not only begins to abandon his apology of imperialism but sets forth critical arguments against imperialism. He now begins to see colonialism's self-ordained civilizing mission as "specious" and thinks that European states' application of "all their resources to vain and violent schemes of expansion" in part contributes to Europe's moral immaturity (Muthu 2003, pp. 198, 209). Kant's later work undergoes a number of transformations. First, he begins to challenge common Eurocentric biases. In *Perpetual Peace* (1795), in what could be read as a reversal of the aforementioned position of the governor of Bensalem, Kant argues that China and Japan were morally and politically right to place restrictions of contact and entrance on their European "guests," who had not only proven themselves to be violent, treacherous, and oppressive but also to be economically unstable (1991b, pp. 106–107). Similarly, in *The Metaphysics of Morals* (1797), one finds a criticism of the illegitimacy of Greek xenophobia, in which "they evinced no goodwill towards *extranei* [outsiders], but included them all, rather, *sub voce hostes = barbari* [under the name of enemies, or barbarians]" (Muthu 2003, pp. 153–154). Secondly, against *res nullius* doctrines through which the theft of indigenous peoples' lands was legally sanctioned (Muthu 2003, p. 187), Kant develops a concept of cosmopolitan right. To accomplish this, Kant argues in §62 of *The Metaphysics of Morals* that the definite, spherical nature of the planet, the "*globus terraqueus*" on which all people live, makes all nations original members of a community of the land. All peoples make up a "community of reciprocal action (*commercium*)," in which each has the right to peaceably interact or deny interaction with the others. Kant highlights the function of the ocean in providing an avenue and incentive for international commerce but also notes that attempts at settlement often carry "evil and violence" in their wake. If for Nietzsche the roundness of the earth serves as a perfect image for the world's *lack* of any objective moral and political foundations, for Kant the spherical definiteness of the *globus terraqueus* serves as the historical condition from which one can derive the concept of cosmopolitan right. The moral and political concept of "cosmopolitan right" constitutes an attempt to articulate an international order that

annuls the violent instabilities wrought by imperialists and political revolutionaries alike. Lastly, Kant breaks from other social contract theorists by not placing Amerindians, South Pacific Islanders, or any non-European peoples within the state of nature (Muthu 2003, p. 201).

Kant was by no means the first philosopher to forward arguments of an anti-imperialist nature. The ancient Chinese philosopher Mo Zi and his followers, the Mohists, also held a variety of anti-imperialist views. Mo Zi lived throughout the last three quarters of the fifth century and likely into the fourth century BCE during the Warring States period. Like the later Legalists, he was concerned to influence rulers so that they would implement the correct forms of government. Unlike the Legalists, however, the philosophy collected in *The Book of Master Mo* (or, the *Mozi*) contests traditional imperialist interests and schemes on political, practical, historical, and ethical grounds. For example, the *Mozi* provides multiple arguments against engaging in offensive war and sets out specific, detailed tactics concerning the military defense of a city at least six centuries prior to the composition of Augustine's *City of God*. Insofar as expansionary wars of aggression have made up a central constant of imperial strategy over the course of history, the *Mozi*'s political arguments against offensive warfare are correctly characterized as "essentially anti-imperialist" in nature (Johnston 2013: xviii). The *Mozi*'s first argument against offensive warfare proceeds as follows: One says that stealing a plum or a peach is wrong, because it benefits the thief and harms the one robbed, and the government punishes the thief. To steal hogs, chickens, and pigs is worse still, and stealing a horse is even worse. Likewise, when one kills an innocent man, this action is said to lack *ren* (love, kindness, humaneness, and benevolence) and *yi* (right action, righteousness, duty, justice). So, to kill an innocent man and steal his garments, sword, and spear are worse than the aforementioned actions taken individually. To attack a foreign city involves killing and stealing to an immensely greater degree than all of these cases. And yet, officers and noble men call such courses of action *ren* and *yi*. By doing so, such officials gravely err in thought and action (Mo Zi 2013, pp. 91–92).

The *Mozi* also furnishes practical and historical arguments against offensive warfare. First, offensive warfare proves enormously costly in a number of senses. Troops mobilized in the summer suffer from excessive heat and during the winter from excessive cold. "If they go forth in spring, it disrupts the people's planting and sowing and the cultivation of trees, and if they go forth in autumn, it disrupts the people's reaping and storing" (2013, p. 94). Offensive warfare requires spears, lances, arrows, flags, tents, banners, and food supplies – a large portion of which will be destroyed, broken, or lost. Moreover, many soldiers are often killed, and sometimes entire armies are decimated, especially when attacking cities with thick walls. And ultimately, to waste lives and resources amounts to contradicting "the basic interests of the state" (2013, p. 95). Secondly, even strong, aggressive states inadvertently sow disorder in a way that eventually leads to their own demise. The *Mozi* examines the case of Helü of Wu, who trained his troops for 7 years to wear armor and carry weapons over vast tracts of terrain before needing to rest. Helü's forces successfully took control of Chu, and his son Fu Chai inflicted crushing defeats on the people of Qi. Fu Chai, however, "boasted about his achievements and flaunted his own brilliance but neglected to train [his troops]." As his people labored to construct a large tower, Fu Chai failed to satisfy their disaffection and weariness. Seeing this, the King of Yue assembled his forces to take revenge, and the state of Wu was lost (2013, p. 97). Such a case exemplifies Mo Zi's belief that, whether at the level of individuals or of the state, hatred only breeds more hatred and disorder. And the *Mozi* argues that like the laborers of Wu, "The world is as tired of the prolonged period of attacking and reducing as a young boy who has played at being horse" (2013, p. 105).

Mohist objections to offensive warfare follow from basic Mohist ethical ideas. Put bluntly: "to favour injuring and destroying the ten thousand people of the world. How is this not perverse?" (Mo Zi 2013, p. 102). Since empires must motivate armies to conquer and exploit ethnically and/or nationally diverse populations, imperial ideology entails the denigration of such peoples and the

P

promotion of love for imperial in-groups. Insofar as the *Mozi*'s principles concerning universal love seek to do away with such discrimination and partiality, such moral principles count as anti-imperialist in nature. According to the *Mozi*, mutual hatred and lack of mutual love give rise to general disorder, which plagues relations between individuals and states (2013, pp. 73–24, 81). To correct such disharmony, Mo Zi advocates *ren* and *yi*. He also argues that individuals and rulers should implement *jian ai*, which is "an extension of the love one has for oneself or one's parents to a universal loving kindness directed at all mankind without partiality or gradations" (Johnston 2013: xxxvii). Universal love without discrimination constitutes a core element of Mohist morality.

The *Mozi* provides positive ethical arguments and entertains counterarguments. The text notes that "attacking cities, fighting on the battlefield and sacrificing oneself for fame are all things that the ordinary people of the world find difficult." People nevertheless take on these endeavors because the ruler advocates them. Compared to such things, loving another is relatively easy. But because rulers do not advocate for mutual, universal love and prohibit hatred, disorder between individuals and states continues (Mo Zi 2013, p. 78). The *Mozi* also gives voice to prototypical counterarguments of officers and noble men. The latter argue that it would be good if universal love were possible; however, "this is something that cannot be done. It is comparable to lifting up Mount Tai and jumping over the Yellow River and the Qi Waters with it" (2013, p. 79). In reply, the *Mozi* argues, first, that the example relies on a disanalogy. Lifting mountains is physically impossible, whereas loving without partiality can and does occur. A subsequent argument runs as follows: If an officer were to be dispatched to a distant place, his return wholly unknown, would he be likely to entrust the well-being of his house, wife, children, and parents to someone who lived according to mutual, universal love, or to someone who only loved partially (e.g., loving himself or his family more than those left to his care)? The *Mozi* argues that people would choose to leave their house, wife, children, and parents in the care of someone who loves universally and that they would be right to do so. Even were such people to condemn universal, impartial love, their actions would contradict their words (2013, p. 84).

The Legalist *Hanfeizi* contains a claim which describes Mo Zi's arguments as lacking in eloquence because Master Mo did not want literary style to overpower the utility of his sayings (Johnston 2013, xxv). Such an approach contrasts markedly with the explosive rhetoric that characterizes the anti-colonialist work of Frantz Fanon (1925–1961). Fanon was a student of Aimé Cesaire in Martinique and would later receive formal education as a psychiatrist in Lyon, where he would attend the lectures of Maurice Merleau-Ponty. Unlike Merleau-Ponty, however, Fanon's political thought proffered ruthless critiques of French capitalism and colonialism (Wood 2013). Such criticisms would continue to develop and evolve while Fanon began to work in Blida-Joinville, Algeria, after having finished his training in psychiatry. Algiers had been conquered by the French in 1830, and Algeria remained a French colony while Fanon lived and worked there. By November 1954, after numerous different nationalist parties had failed to gain significant freedoms for the people of Algeria (Horne 2006), the Front de Libération Nationale (FLN) initiated Algeria's revolution for independence, which it would gain in 1962. Fanon worked with the FLN, training Algerian soldiers to withstand torture and serving as the FLN's diplomat to Ghana, liberated from Great Britain under the leadership of the philosopher Kwame Nkrumah. The era of African decolonization was now in full swing, during which time the practical and theoretical struggles of African peoples often found support in the anti-imperialist theories of Marx, Lenin, and Mao (see Cabral 2016; Cooley 1965; Friedland et al. 1964; Lenin 1939; Nkrumah 1970; Robinson 1983; Wood 2014b). A turn-of-phrase of Amílcar Cabral, the revolutionary leader for the independence of Guinea-Bissau and Cape Verde, perhaps best captures the period's liberatory philosophical vision: "If it is true, as Plato the insuperable sage says, that necessity is the mother of our *engenhos* [inventiveness], no people—above all the Cape Verdean people—has the right

and the duty to find the '*engenhos*' [mills] indispensable for the fulfilment of their necessities" (1988, p. 61).

Fanon makes a number of important advances in anti-imperialist philosophy. Although a psychiatrist by profession, he perceived his own work as tied to philosophy, characterizing the latter as the "the risk that the spirit takes to assume its dignity" (1951, p. 168). His work often deals with existentialist and phenomenological topics, highlighting the way in which colonization brings an entire civilizational complex to bear upon another society. He also uses the language of ontology throughout *Black Skin, White Masks* and describes the analyses in his accepted dissertation as ontological (Renault 2011, p. 67). One area in which Fanon contributes to theorizing and resisting empire can be found in his discussions of truth and knowledge (Wood 2017b). Throughout his intellectual and political career, Fanon found himself confronted with various theories and diagnoses of the human mind in which colonialist biases played a defining role. For example, he addresses Octave Mannoni's theory of the so-called dependency complex of the colonized in *Black Skin, White Masks*. Mannoni takes up and develops the longstanding imperial belief that some people are better fit to be ruled than others (as one finds in Aristotle) and naturalizes this belief with the help of a racial hierarchy in which whites reign supreme (as one finds in Kant). Fanon acknowledges that Mannoni grasps some of colonial-psychological realities to which he attends but argues that Mannoni nevertheless fails to comprehend the social and political causes of such realities. Due to his immersion in imperial ideology, Mannoni's scientific efforts fall short of understanding the specific historical ways in which it is "*the racist who creates the inferiorized*" (Fanon 1952, p. 73). Fanon offers similar criticisms of publications affiliated with the Algiers School of psychiatry, which formed part of a long history of French dominance in the Maghreb (Fanon 2002; Keller 2007). Even medical objectivity, as Fanon argues in "Medicine and Colonialism," becomes vitiated by the general lie of the colonial situation (1965, p. 128).

Fanon also advances the knowledge of how race functions within the colonial world. *Black Skin, White Masks* analyzes the relation of blackness to language, sexuality, dreams, lived experience, psychopathology, and the search for recognition. In each case, Fanon explores the various psychological patterns that arise in contexts determined by antiblack racism. For example, racial hierarchies that structure the colonial world express themselves linguistically. The priest who uses pidgin to speak to a black individual effectively says: "You, stay where you are" (1952, p. 17). The Antillean who wants to speak the French of the metropole, on the other hand, seeks "the subtleties and rarities of the language—a way of proving to himself that he is culturally adequate" (1952, p. 17). From his early work onward, Fanon demonstrates how, in essence and in so many intricate ways, colonialism and the unjustifiable notion of white supremacism overtly and subtly buttress one another.

According to Fanon, the predominance of white supremacism provokes certain regular reactions among the colonized. The regularity of said reactions cannot be explained, however, due to racial differences understood through natural, biological, or vast, transcultural categories. Instead, to understand the different affective complexes peculiar to the colonial situation, corporeal and mental states must be thoroughly contextualized historically, culturally, and politically. A concise example of this method can be found in "West Indians and Africans." In this piece, Fanon examines the relations between West Indians and Africans in Martinique before and after World War II. According to Fanon, before 1939, West Indians in Martinique lived and thought largely in accordance with French imperial ideology, being sure to distinguish themselves from those on the lower rungs of the racial hierarchy (e.g., Africans and Guadeloupeans) while aspiring to the benefits promised to those of the upper echelons (viz., white Parisians). "In 1939 no West Indian in the West Indies proclaimed himself to be a Negro" (1967, pp. 18–21). But Césaire's proclamations about the beauty of blackness, the defeat of France by the Germans, and the subsequent stationing of 10,000 French soldiers in Martinique began to

P

effect a change in West Indian (self-)perception. These factors and the need to defend oneself against racism played a role in the development of the notion of Negritude, through which the West Indian began to romanticize, idealize, and seek out "Africa the hard and the beautiful, Africa exploding with anger, tumultuous bustle, splash, Africa land of truth." Here, the stereotypical notion of the wild, pulsating tropics found in Nietzsche's writings reemerges in the West Indies, albeit motivated by and directed toward different ends. Fanon concludes, however, that these metaphysical experiences of the West Indian have only led out of "the great white error" and into "the great black mirage" (1967, pp. 26–27). True liberation and disalienation, for Fanon, will require overcoming both limitations. Fanon's analyses of racialized perceptions, whether those of the average colonized subject or of the colonialist psychiatrist, critically deconstruct the intricate movements of imperial ideology on both sides of the colonizer-colonized divide. In this way, Fanonian theory marks an important moment in the contestation of empire.

Anticolonial struggles are not peculiar to twentieth-century Africa alone. Resistance to imperialism and colonialism has taken on many different forms and has adopted varying strategies throughout the world. But whether and how imperialism or empire still operate in the contemporary world remains an issue with which philosophers and activists continue to wrestle (Castro-Gómez 2010; Harvey 2013; Negri and Hardt 2000; Smith 2016). The work of activist and philosopher Vandana Shiva comprises one of many examples in which colonialism and imperialism are understood to affect and bear upon contemporary international relations. Shiva was originally trained in physics and wrote her dissertation in the philosophy of quantum theory (Shiva 2014). In 1984, at the time of the Bhopal disaster in India, she turned to the investigation of the Green Revolution, the chemical-based agricultural model foisted upon the Global South in the 1960s through pressure from the US government and the World Bank (Shiva 2016b: xv–xvi). For Shiva, the Green Revolution and industrial agriculture in general form but the newest link in the chain connecting three

phases of globalization: classical European colonization, the postcolonial era in which the West has imposed its idea of "development," and the contemporary period of the so-called free trade (Shiva 2016a, pp. 103–104). While they have by no means wholly disappeared, the shapes that imperialism and colonialism now assume have transformed in important ways. Shiva argues that classical-modern jurisprudential notions, such as that of *terra nullius*, through which Europeans justified the acquisition of indigenous peoples' lands, have been replaced by the operative idea of *bio nullius*, through which the interiorities of women, plants, animals, and life itself become targets for conquest and possession. Declarations such as Papal bulls have been replaced by the General Agreement on Tariffs and Trade. And whereas the Catholic hierarchy and monarchs provided institutional and ideological support for colonization in the period of mercantile capitalism, multinational corporations drive contemporary imperialism (2016a). Finally, as with past forms of colonialism, contemporary biocolonialism harms women to a disproportionately greater degree than men. Shiva argues that views of nature continue to be coded in the gendered and normative categories that one finds, for example, in the works of Aristotle and Bacon. Women and the earth are construed as linked by virtue of a putative passivity, being merely reproductive, whereas men are seen and treated as engaged in genuinely intellectual creativity. And just as Bacon's imaginative vision for an ideal institution of scientific learning and production relied upon and reinforced gendered and racial hierarchies, so too, Shiva argues, do contemporary patriarchal assumptions structure many of the social, political, environmental, and economic dimensions of contemporary imperialism.

The *Mozi* criticized the logical inconsistencies of noble men out of concern for present and future agricultural prosperity; so too does the work of Shiva in the twenty-first century. One of the central concepts that Shiva develops to grasp and criticize the imperialist dimensions of the industrial-agricultural complex is that of "biopiracy." Biopiracy amounts to the theft of parts of or types of living beings. Patents and trade-related

intellectual property rights serve as the legal mechanisms through which living beings are now acquired as the property of an individual or corporation, thereby criminalizing the subsequent unauthorized use of these living beings. Patents on genetically modified organisms (GMOs), such as cotton and corn, allow corporations to charge technology fees, sell their own chemical inputs made to accompany their GMOs, and prohibit farmers from engaging in sustainable practices, such as saving seeds. This drive toward monopolization fosters the spread of monocultures, radically undermining the nutritional and safety benefits of living and eating in a world where local farming and biodiversity predominate. Biopiratic relations reproduce and intensify global asymmetries between the North and South and between men and women in ways consonant with the history of imperialist strategies (Mgbeoji 2006; Robinson 2010; Shiva 2016a; Whitt 2009). As one ideological defense mechanism among others, corporations privatize the benefits and socialize the harms of GMOs by means of double standards. For example, when a GMO variety leads to an increase in profits, corporations often consider said variety as safe and as its own, novel creation. But when issues of biosafety are brought to the fore, the same GMO varieties are suddenly considered to be simply "natural" entities (Shiva 2016a, p. 22). For Shiva, such double standards constitute an affront to global environmental justice no less than a breach of the law of noncontradiction.

As a philosopher, Shiva highlights that biopiratic ideas, practices, and values rest upon presuppositions of a philosophical nature. For example, she argues that multinational corporations inadequately understand the concept of "creativity." Scientific creativity includes but does not reduce to the ways in which universities and corporate labs genetically alter living beings. She adds that living organisms are likewise creative (evolving, regenerating, and adapting to new circumstances), as are indigenous communities, who have cultivated and selected for desirable plant varieties over thousands of years (Shiva 2016a, p. 9). Narrowed views concerning the inherent creativity of all living systems mesh well with

certain forms of reductionism in biology. The reduction of all other species to mere instruments to be used by the human species and the reduction of the behavior of all organisms to genes falsely separates humans from the natural world and promotes the colonization of diverse forms of knowledge (Shiva 2016a, pp. 24–25; Wood 2017a). Questions of creativity, like those concerning life, nature, logic, justice, right, and competent authority, are philosophical matters, and Shiva articulates and organizes such concepts toward anti-imperialist ends.

Just as imperialist philosophy comprises not only various ideas but also a number of values and practices, so too does anti-imperialist philosophy. The values and ideas to which Shiva has given voice have led to the cultivation of a variety of institutions and practices resistant to imperialism. For example, in 1987, Shiva started Navdanya, an NGO founded to protect seed diversity and "farmers' rights to save, breed, and exchange seed freely." Navdanya has established more than 100 seed banks that allow farmers to save and share seeds in sustainable ways (Shiva 2016b, pp. 80–81). In 1999, Shiva sued Monsanto, "which accounts for 94 percent of the world's genetically modified organisms" (Shiva 2007, 2014). She has also helped advise governments and draft laws concerning the environment. In the Gandhian tradition of non-violent resistance by means of *satyagraha*, or "truth force," Navdanya has organized a grassroots campaign of Seed Satyagraha with farmers and scientists around the world in resistance to the corporate commodification of seeds. Such political and organizational efforts challenge the dominance of contemporary imperialist practices, values, and ideas.

Conclusion

The present entry has explored a few of the ways in which imperialism and philosophy have borne upon one another. Varying vignettes have been considered to highlight different ways in which accordant and discordant relations have obtained between imperialism and philosophy. Many more

P

cases might have been examined. For instance, one might investigate the ways in which stoicism and Roman imperialism impacted one another, the relation of Heidegger's thought to his Nazism, or the diverse history of Marxist anti-imperialist philosophy (Brewer 1990; Mariátegui 2009; Noonan 2017; Robinson 1983; Rose 1995; Young 1997; Smethurst 1953; Wolfson 2018). To the extent that they can be separated conceptually, imperialism and philosophy have proven at least relevant to one another and in some instances have impacted and influenced one another in nontrivial ways.

Poland and the Political Economy of Foreign Intervention (1918 to Present): From White to Red and White Again

Anthony Gronowicz
Borough of Manhattan Community College, City University of New York, New York, NY, USA

On November 11, 1918, Poland rose as an independent nation, a phoenix from the ashes of occupation and war, 123 years after its Austro-Hungarian, German, and Russian imperialist partition. The Allies allowed Germany to retain the eastern Polish territories. During World War I, Josef Pilsudski's Polish Legions had fought alongside Austria-Hungary against Russia. Pilsudski conceived of a federated state comprised of Poles, Lithuanians, and Ukrainians, a throwback to the 1569 Union of Lublin when Poland and Lithuania shared the same monarch. Poland's national liberation allowed it to become enmeshed in the imperialist schemes of Berlin, Washington, London, and Paris that would sacrifice it on the altar of their respective empires. An independent Polish foreign policy was doomed because Poland is flanked by Germany and Russia and remains subordinate to foreign capital thanks to decades of occupation; even though recently, attempts have been made to exercise financial independence.

Josef Pilsudksi: Apostle of Polish Nationalism and Imperialism

When World War I began, Pilsudski, the son of an impoverished nobleman, presented his strategic plan: "The problem of the independence of Poland will be definitely solved only if Russia is beaten by Austria-Hungary and Germany, and Germany vanquished by France, Great Britain and the United States; it is our duty to bring that about." Pilsudski and his successor Colonel Josef Beck never deviated from this course. This unrealistic foreign policy culminated in unmitigated catastrophe for the Polish people during World War II.

When the Czar abdicated on March 15, 1917, ending 300 consecutive years of Romanov family rule, Pilsudski withdrew his support for the Central Powers of Germany, Austria-Hungary, the Ottoman Empire, and Bulgaria. In July, Pilsudski ordered his Polish soldiers to stop swearing allegiance to the Central Powers. The Germans imprisoned him and folded his soldiers into the Austro-Hungarian Army.

Vladimir Lenin had arrived in Petrograd on April 17 from Swiss exile in a sealed German train to lead the Bolshevik Revolution that November. It was a revolution that would alter the course of history because Lenin's work inspired Mao Zedong to lead China to communist independence in 1949.

On March 3, 1918, the Brest-Litovsk Treaty ended Russia's participation in World War I, and the two-thirds of all German forces that were directed against Russia could now be redeployed to storm the trenches and conquer France. On November 1, Polish armed resistance challenged the Ukrainian seizure of Lwow with its majority Polish population. On the 1-year anniversary of the Russian Revolution, Lublin established a Polish Republic. Though it lasted only 5 days, its radical program included an 8-h work day, nationalization of the forests, and the secret ballot for all adult men and women to choose a Seym based upon proportional representation.

On November 8, the Germans sensing a potential ally in Pilsudski who feared the spread of Bolshevik fervor released him from prison and sent him in a private train to Warsaw where Pilsudski was greeted as a national hero. The next day, the German monarchy abdicated.

On Armistice Day, the Regency Council, created 2 months earlier by Imperial Germany and Austro-Hungary, appointed Pilsudski Commander in Chief of Polish forces. He was entrusted with the creation of a national

government. It would briefly unite various military units and provisional governments under a predominantly socialist banner that mandated an 8-h day, free education and women's suffrage. He negotiated the removal of almost a half million German troops from Polish soil (Black 2001).

Pilsudski reacted to his appointment with these words: "Comrades, I took the red trolley of socialism to the stop called Independence, and that's where I got off. You may keep on to the final stop if you wish, but from now on let's address each other as 'Mister'." He turned to organizing an army comprised of veterans of the Austrian, German, and Russian armies. On December 16, the Social Democracy of the Kingdom of Poland and Lithuania (SDKPil) and the Polish Socialist Party's (PPS) left wing united to form the Communist Workers Party of Poland (CWPP).

John Dewey Eyes Poland as a Potential US Imperialist Target

To plan for a possible loss of political control of Polish Americans, Bureau of Intelligence (BI) head, General Marlborough Churchill, tapped John Dewey, the philosopher of US public education, to covertly collect information on American Poles. In his secret report, Dewey stressed

the great industrial importance of Polish labor in this country . . . a shortage of labor after the war and . . . already a movement under foot (which should be carefully looked into) to stimulate the return of Poles and others of foreign birth in Southeastern Europe to their native lands. . . . Poles from this time on might be encouraged to join a Polish Army under direct American control. . . [Socialist-minded Poles would] deprive the government of the most active aid which the leaders of this group are capable of giving the Government. . .while this group is a minority of the organized Poles, it possesses the ablest Poles in this country, is stronger with the organized and more skilled Polish workers than the conservative faction . . . large numbers of Poles who are not nominally affiliated with it are sympathetic toward it – namely, those Poles who, without having broken from the church, are opposed to the activity of priests in politics. (Dewey 1918, 2, 28, 74–77)

Dewey proposed creating an American Commission on Polish Affairs comprised of "Poles . . .

really loyal to the cause of America and the Allies . . . relieved of the technical status of enemy aliens. . . . in contact with all organized Polish groups abroad, including Poland, and thereby also make clear the active and directive influence of the United States in the Polish problem, quieting German and Austrian propaganda and keeping the Poles in Poland faithful to the cause of the Allies" (Dewey 1918, 79). He concludes ". . . the United States is the one country therefore which would unqualifiedly win and retain the confidence of the Poles in Europe" (Dewey 1918, 80).

Twenty-one years after Dewey submitted his report to the head of US military intelligence, the United States, Britain, and France did nothing materially to stop Germany from destroying Poland.

Poland Challenges Czechoslovakia and Soviet Russia

After World War I in the Prussian-controlled sector that had not been devastated by the war and where agriculture flourished, the Bolshevik Revolution inspired the formation of Polish-German Councils of Workers and Soldiers Delegates. They established a People's Supreme Council to rule the nation. On December 27, 1918, fighting with German troops in Poznan spurred the liberation of the entire Poznan province. The Allies compelled both sides to conclude a cease fire. "The liberated districts retained to some extent a distinction between themselves and the government in Warsaw and even set up a tariff barrier against the Kingdom in order to maintain their higher standard of living, especially in foodstuffs and to safeguard themselves against revolutionary upheavals" (Wereszycki 1968, 641–642).

On the night of January 4, 1919, a capitalist-landlord coup against the 3-month-old socialist-peasant government of Jedrzej Moraczewski failed. Moraczewski was the first prime minister of the Second Polish Republic. Ten days later, Paderewski's bourgeois cabinet took Moraczewski's place. January 26 elections to the Seym held in those parts of Poland under Polish control resulted in the Right and Center each

garnering 35% of the seats, while the Left received 26%. The Communists boycotted the vote.

Unity was enhanced on nationalist principles when 3 days earlier, a 7-day battle erupted between Poland and Czechoslovakia over the area known as Zaolzie near southwestern Poland. Though an International Commission granted the territory to the Czechs, Poland took revenge in 1938 when it annexed Teschen, much to the delight of the Germans who had just annexed the Sudetenland. The next year the Germans violently settled the question of the entire region in their own favor.

On April 21, 1920, the Treaty of Warsaw, an alliance against Bolshevik Russia, was signed between the second Polish Republic, led by Pilsudski, and Symon Petliura, the Ukrainian Supreme Commander of the Ukrainian National Republic. Four days later, Poland attacked Soviet Russia and occupied Zhytomyr. Pyotr Wrangel, the anti-Bolshevik Commander in Chief of the Crimean White Army, launched an offensive coordinated with Petliura whose forces slaughtered tens of thousands of Jews in the short-lived Ukrainian Republic (1918–1921).

On May 7, Polish troops attacked Kiev, then part of the Soviet Ukraine. The Red Army repulsed Pilsudki's forces and sent them to the gates of Warsaw, while the Ukrainian Directorate fled to Western Europe. The ensuing Battle of Warsaw (August 13–August 20) ended with the defeat of General Mikhail Tukhachevsky's Red Army. On November 20, Petliura visited Warsaw to announce that the Ukrainian Directorate would dissolve. On March 18, 1921, Poland, Soviet Russia, and the Soviet Ukraine signed the Treaty of Riga that relocated the new border to east of the Curzon Line along ethnic divides. Four years later, the CWPP became the Communist Party of Poland.

British Imperialism Undermines International Worker Solidarity Through the Promethean League

In 1925, MI6 covertly established the Promethean League whose purpose was to dismember the

Soviet Union. The Ukrainian Roma Smal-Stocky officially headed the league, which created "governments in exile" that claimed to represent minority nationalities in the Soviet Union and weaken the international worker cooperation that Bolshevism inspired (Dorril 2000, 185). The league's template came from the Austro-Japanese Count Coudenhove-Kalergi whose pioneering notion of a United States of Europe demeaned the role of Eastern Europe (Dorril 2000, 186).

Pilsudski's Coup d'etat

In 1926, Pilsudski staged a coup d'etat. Four years later, through his Minister of Internal Security, Felicjan Slawoj Skladkowski, he ordered the summary arrests of opposition party leaders, including the former prime minister Wincenty Witos, Christian Democrat Wojciech Korfanty, and most of the leaders of the Centrolew alliance comprised of the Polish Socialist Party, Polish People's Party "Piast," and Polish People's Party "Wyzwolenie." They were found guilty of plotting an anti-government coup. After their appeals were turned down, the men were given the choice of imprisonment or emigration. Half chose imprisonment for 5 years in the Brest Fortress. Poland was spending more than half of its budget on the military (Fischer 1930, 816).

During the 1930s, Germany contested Poland's claim that the Thyssen-affiliated Consolidated Silesian Steel Corporation (CSSC) that controlled 45% of Poland's steel production pays its back taxes. To squelch this effort, Prescott Bush and Averell Harriman, members of the undergraduate Yale University senior secret society, Skull and Bones, founded through opium trade money, hired John Foster Dulles, partner in the law firm of Sullivan & Cromwell, to represent them. Once Poland fell, Hitler built the Auschwitz death camp close to Thyssen's steel works. The camp supplied communist, Gypsy, and Jewish slave labor to 30 different companies, including CSSC. Thyssen sold this company to the New York-based Union Banking System (UBC) controlled by the Democrat Harriman and the Republican Bush who ran the slave-labor end of the business. IBM provided logistical

and technical support and implemented the tattoo classification system for German extermination camps built on Polish soil.

On July 25, 1932, the Soviet-Polish Non-Aggression Pact was signed.

On March 8, 1933, Pilsudski increased Polish military forces to 200 men in Danzig's harbor at the Westerplatte peninsula, a violation of the 1921 League of Nations stipulation that the Polish military presence there could not exceed 88 men. With the promise of French military aid, at noon on March 17, the Poles were to occupy the customs house. France agreed to invade the Ruhr by March 20 if Germany militarily challenged Poland. London and Berlin learned of this provocation on March 15. To stymie the French-Polish plot, British Prime Minister Ramsay MacDonald and his Foreign Minister, Sir John Simon, strongly protested to France, stating that Britain would not honor the Locarno Treaties if France proceeded. The treaties were reviled in Poland when signed in 1925 because as Great Britain insisted, no firm boundaries on the German-Polish border were established. On the 16th, the French scuttled their planned trip to Warsaw, while MacDonald flew to Rome to confer with Mussolini whom the British had covertly funded during World War I to keep Italy in the war (Sohn-Rethel 1978, 112).

MacDonald's aim was to resuscitate Mussolini's "Four-Power Pact" between Britain, Germany, France, and Italy, as a counter to any Franco-Soviet Pact. Seeing that they had been abandoned by France, Poland re-established diplomatic contact with Germany on May 4 and removed its additional troops from Westerplatte where Germany would begin World War II. On November 15, 1933, Germany and Poland announced the Neurath-Lipski Declaration of Amity, followed by a non-aggression pact signed on January 26, 1934 (Sohn-Rethel 1978, 113).

From the early 1930s, the Polish government and the French secret service financed strife in Belorussia and the Ukraine (Dorril 2000, 186). Though Pilsudski and Beck dreamed of Poland becoming a great power again through the Intermarium Plan, they forgot that had only been possible when Germany was comprised of warring Catholic and Protestant provinces. Once Germany unified through the 1870–1871 Franco-Prussian War, Poland became too small to be a great power and too large to be Czechoslovakia, to paraphrase Yale historian Piotr Wandycz. The Intermarium Plan originated with a former Tsarist general who had proposed a federation of Central and Eastern European states to overthrow the USSR. MI6 biographer Stephen Dorril noted that Intermarium members "shared many of the characteristics and anti-Semitism of the clerical-fascists" (Dorril 2000, 166).

Pilsudski opposed French Foreign Minister Louis Barthou's proposed Eastern Pact that would bring France, the Soviet Union, Poland, Czechoslovakia, Finland, Estonia, Latvia, and Lithuania into an anti-German alliance. Poland objected to the participation of Czechoslovakia.

On June 14, 1934, the USSR invited all interested states to participate in the Eastern Pact. Estonia and Latvia insisted that Germany and Poland be included. Britain made its support conditional on Germany's inclusion, consistent with Hitler's master plan outlined in *Mein Kampf*. Nonetheless, France and the Soviet Union acceded to the British demand.

Poland was not interested. The day after Barthou's proposal, German ambassador to Poland Hans-Adolf von Moltke, Nazi Propaganda Minister Joseph Goebbels, Pilsudski, and Beck met in Warsaw to plot their oppositional tactics to the Eastern Pact. On July 2 Czechoslovakia, on July 29 Latvia and Estonia, and on August 3 Lithuania declared their support. Finland took no position. Latvia and Estonia added German and Polish adherence as a further stipulation.

On September 11, Hitler's cabinet, followed on September 27 by the Polish government, nixed the Eastern Pact. The coup de grace was administered in Marseille on October 9 when the pro-Nazi Ustase Croatian Vlado Chernozemski assassinated both Barthou and the King of Yugoslavia. The Eastern Pact was dead.

While France no longer seriously tried to oppose Hitler, Poland moved closer to Nazi Germany. In 1936, 300 Polish officers attended a Promethean Congress in Warsaw, while German Military Intelligence developed strong ties with dissident nationalists in Poland (Dorril 2000, 187). On February 29, 1936, the Primate of Poland, Cardinal (1926–1948) August Hlond,

issued a 5600-word pastoral letter in which he intoned, "So long as Jews remain Jews, a Jewish problem will continue to exist … It is a fact that Jews are waging war against the Catholic church, that they are steeped in free-thinking, and constitute the vanguard of atheism, the Bolshevik movement, and revolutionary activity. It is a fact that Jews have a corruptive influence on morals and that their publishing houses are spreading pornography. It is true that Jews are perpetrating fraud, practicing usury, and dealing in prostitution. It is true that, from a religious and ethical point of view, Jewish youth are having a negative influence on the Catholic youth in our schools."

After the war, the Church continued to blame the victims. In response to the Kielce pogrom of July 4, 1946, Hlond, who had fled Poland for France and allied himself with London Poles, excoriated Jewish bureaucrats who served the Communist government. Adam Sapieha, who served in Poland under the German occupation and became a cardinal in 1946, stated that Jews brought the pogrom upon themselves.

From 1935 on, priests had been used to infiltrate the Soviet Union through its eastern border with Poland. They utilized routes created and tested by *Catholic Action* that was created by future pope, Pius XII. "This group maintained outposts on the Polish-Russian border where Jesuits were trained as Greek Orthodox priests and smuggled individually into Russia, mainly into the Ukraine, there to spread religious and counterrevolutionary propaganda" (Sohn-Rethel 1978, 106).

On September 17, 1939, in response to Germany's September 1 invasion of Poland that began with an attack on Westerplatte, the USSR unilaterally abrogated the 1932 Soviet-Polish Non-Aggression Pact treaty so that it could occupy that part of Poland roughly east of the British-drawn Curzon Line as a buffer against any further German incursion eastward.

Germany's Aim Is to Liquidate the Polish Nation with British Acquiescence

Hitler had correctly assessed that Great Britain and France would do nothing more than just "declare" war. On March 15, 1939, when Hitler supported

Hungary's conquest of Ruthenia, London and Paris realized that Germany might move west (Leibovitz and Finkel 1997, 225) before targeting the Soviet Union whose military might in the 1930s had grown astonishingly fast under Stalin's *Five-Year Plans*. The day after Hungary occupied Ruthenia, Prime Minister Neville Chamberlain reaffirmed the British policy of nonintervention in Spain where MI6 had supplied the plane that flew Franco out of Tenerife to Tangier and Seville in July 1936 (Dorril 2000, 430).

British high military command confidante, Captain Liddell Hart, wrote after the war, "Since World War II, when the practical absurdity of the Polish guarantee has come to be better appreciated than it was at the time, it is commonly excused, or justified, by the argument that it marked the point at which the British government declared: 'We were blind, but now we see.' I have too many recollections, and records, of discussions during this period to be able to accept the view that this sudden change of policy was due to a sudden awakening to the danger or to moral issues. In Government circles I had long listened to calculated arguments for allowing Germany to expand eastward, for evading our obligations under the League covenant and for having other countries to bear the brunt of an early stand against aggression" (Hart 1965, vol. 2, 221).

Hitler did not want Germany to fight a two-front war as it had done in World War I and so signed the German-Soviet Non-Aggression Pact to secure his Western European rear with the 1940 conquest of Western Europe with the obvious exception of Britain, after which he would invade the Soviet Union with more than two-thirds of his armed forces.

The German leader had written in *Mein Kampf* that so long as Germany moved east to conquer Slavic lands, he could count on England's tacit approval (Hitler 1943, 139–140). Their mutual desire to crush Bolshevism made them natural allies on the world stage. After all, by World War I British imperialism had acquired the largest empire in history, ranging from Ireland to India to the detriment of both occupied nations.

At the Nuremberg trials, German military commander Alfred Jodl revealed "If we did not collapse in the year 1939 that was due only to the fact

that during the Polish campaign, the approximately 110 French and British divisions in the West were held completely inactive against the 23 German divisions. General Siegfried Westphal corroborated this point by noting that if the French had attacked in force in September 1939 the German army "could only have held out for one or two weeks."

Poland would be sacrificed to the Anglo-American imperialist goal of having Germany and the USSR fight to death so that Washington and London could come in and pick up the pieces as they tried to do in their joint invasion of Russia in 1919 and the planned partition of southern Russia that London and Paris had engineered just 1 month after the Bolshevik Revolution (Gronowicz 350). Poland would be sacrificed to anticommunist imperialism (Leibovitz and Finkel 1997, 234, 254) and subsequently to anti-Russian imperialism consistent with Washington's desire to rule the world as set forth in the Pentagon's June 2000 Doctrine of Full-Spectrum Dominance.

In his diary, Chief of the Army Command General Franz Halder noted that Hitler addressed his key generals on the need for "the Destruction of Poland ... The aim is elimination of living forces, not the arrival of a certain line. Even if the war should break out in the west, the destruction of Poland shall be the primary objective ... Have no pity. Brutal attitude. Eighty million people [Germans] shall get what is their right. Their existence has to be secured. The strongest has the right. Greatest severity."

Katyn

After the crucial Red Army victory at Stalingrad (August 20–January 31, 1943) that changed the course of history and produced the greatest loss of life on both sides in any battle ever, Germany mounted a false flag operation designed to split the Anglo-American-Soviet alliance. On April 13, Berlin released the *Amtliches Material*, which claimed that near the Katyn forest, Nazi troops had uncovered thousands of Polish officers shot by the Soviets and buried in April–May 1940. Three days later, Moscow responded, "The German-Fascist reports on this subject leave no doubt as to the tragic fate of the former Polish POWs who in 1941 were engaged in construction work in areas west of Smolensk and who, along with many Soviet people, residents of the Smolensk region, fell into the hands of the German-Fascist hangmen in the summer of 1941, after the withdrawal of Soviet troops from the Smolensk area." Berlin claimed that none of the items found on the Katyn corpses was dated after April 1940, but admitted that the spent shells were German in origin. Nazi propaganda Chief Joseph Goebbels wrote in his diary, "Unfortunately German munitions were found in the graves of Katyn ... it is essential that this incident be kept top secret. If it were to come to the knowledge of the enemy the whole Katyn affair would have to be dropped" (*Goebbels* 1948, 354). Professor Grover Furr pointed out, "Goebbels was correct. The use of German ammunition and only German ammunition at Katyn is *prima facie* evidence of German guilt" (Furr 2018, 42).

Once Germans had been expelled from the Katyn forest in September 1943, the Soviet Burdenko Commission investigated the massacres and determined that the Germans had committed the mass murders of Polish POWs after the Battle of Stalingrad in order "to set the Russians and Poles at loggerheads." During its forensic investigation, Kathleen Harriman went to Katyn with her father Averell. Her letter to Sister Mary and to Pamela Churchill reveals that "every Pole had been shot through the back of the head with a single bullet. Some of the bodies had their hands tied behind their backs, all of which is typically German ... Though the Germans ripped open the Poles' pockets, they'd missed some written documents. While I was watching, they found one letter dated the summer of '41, which is damned good evidence." Her report to the 1951 US House of Representatives Madden Commission cited "an unmailed postcard dated June 20, 1941" (Furr 2018, 186–187).

Furr reasoned, "The Polish POWS whose bodies were buried at Katyn were presumed to have been in the Soviet POW camp at Kozel'sk, near Smolensk. But many POWs listed among the bodies which the Germans claimed they exhumed

at Katyn had in fact been in the Starobel'sk or Ostashkov POW camps. The Germans did not remove these names... the Germans would never have 'faked' – invented – these names. Today both sides recognize that their presence at Katyn undermines the 'official' Soviets-did-it-case" (Furr 2018, 31).

In 1992, Russian President Boris Yeltsin released a third report, "Closed Packet No. 1," that blamed the NKVD. One document was forged "in a clumsy manner but for some reason not discarded. There is no plausible alternative explanation for it except that it was part of a broader forgery job" (Furr 2018, 32). Three years later, Iurii Mukhin published *The Katyn Mystery* in which he demonstrated how the "smoking gun" documents of "Closed Packet No. 1" were fabrications (Furr 2018, 67–73).

In 2008, in an article supporting Burdenko, Andrei Pamiatnykh wrote:

> "Outsiders" at Katyn are very important for supporters of the Stalin version of the responsibility of the Germans for the crime of Katyn. Their presence would mean that at Katyn were buried not only prisoners from the Kozel'sk camp, but also prisoners of other camps, and that would mean that doubts about the results of the German investigation of 1943 and the Soviet-Russian investigations 1990–2004 are creeping in. According to the results [of these investigations] prisoners of Kozel'sk were shot and were buried at Katyn, and prisoners of Starobel'sk and Ostashkov, according to the results of the Soviet-Russian investigation, were buried at Kharkov and Mednoe respectively. Here is what Vladislav Shved and Sergei Strygin, proponents of the Stalin version, write in their main article on Katyn: "But in the Katyn graves there were also found the corpses of Poles who had been held in the Starobel'sk and Ostashkov camps. These Poles could have arrived in Smolensk oblast' from Khar'-kov and Kalinin only if in 1940 they were transported to the camps of special designation near Smolensk. In that case only the Germans could have shot them.

Moreover, aided by his fluency in French, German, and Russian, as well as a reading knowledge of Czech, Polish, and Ukrainian, Furr demonstrated how "some of the prisoners whose bodies were found at Katyn lived until late 1940 and into 1941" (Furr 2018, 57, 179, 182). Soviet partisans testified that Germans had dug up bodies from the Smolensk civilian cemetery and bodies of Red Army officers and men killed during the defense of Smolensk against the German invasion and transported them to Katyn (Furr 2018, 129–136, 184).

Importantly, Furr stressed that "... a large percentage of the bodies in the mass graves are of children. There has never been any evidence that the Soviets executed children. There is a great deal of evidence that the Germans did. ..." (Furr 2018, 82).

Furr cited the research done since 2010 by Professor Valentin Sakharov of Moscow State University. A crucial finding is that after the Germans captured Lwow in June 1941, they renamed it Lemberg. According to the "official" version and the German Report (AM), the Katyn massacres took place in April and May 1940, yet documents found in the mass graves had "Lemberg" on them (Furr 2018, 118).

In 2011, forensic archaeologists issued a report on excavations at the mass murder site in Volodymr-Volyns'kiy, Ukraine. They found badges of two Polish POWs in a mass grave in Western Ukraine that the German and closed packet version claimed were shipped to Kalinin (now Tver'), Russia, where the doomed prisoners were executed and buried at Mednoe. No one questioned why they were at Volodymr-Volyns'kiy. After this crucial discrepancy was uncovered, the excavation was quickly filled in so that the killings could continue to be falsely attributed to the NKVD, consistent with the ideological imperative of postcommunist Poland. Between 96% and 98% of the shell casings found at VV were German made and dated 1941. The graves themselves displayed the mark of the *Einsatzkommando*, the so-called Sardinenpackung where doomed men lay down in rows on top of those already killed to become the next victims. At this site, German troops, aided by Ukrainian nationalist auxiliaries, shot many Soviet citizens and Jews soon after their June 1941 invasion (Furr 2018, 32). Furr concluded, "Both the Germans and the Polish Government-In-Exile were interested only in a conclusion that indicted the Soviets" (Furr 2018, 247). On February 14, 1942, the Polish Underground Army was formed to combat foreign presence on its soil. At 400,000 men and women, it was one of the three largest resistance movements in World War II Europe.

On July 4, 1943, General Wladyslaw Sikorski, the head of the Polish government-in-exile, died in a plane crash. Stalin had embraced Sikorski's plan for a rapprochement with the Soviet Union to reconstitute a new Polish state at Germany's expense. The proposal made sense to save Polish lives as neither Churchill nor Roosevelt wanted to go to war over Poland when Western Europe's liberation was still on the horizon (Dorril 2000, 251).

The Warsaw Rising of 1944

By the summer of 1944, the London Poles despaired as Soviet troops swept into Poland in pursuit of retreating German forces. On July 31, 1944, Marshal Konstantin Rokossovsky's first Belorussian Front reached the outskirts of Praga, the Warsaw neighborhood on the east bank of the Vistula River that separated it from Warsaw proper. The next day, the self-exiled London Poles ordered Polish Underground Army General Tadeusz Bor-Komarowski to stage an uprising in Warsaw. The Germans then did to most of Warsaw what they had done to the Jewish ghetto the year before when 13,000 Polish Jews died at the hands of the Germans in the heroic Warsaw Ghetto Uprising under the command of the Jewish communist, Mordechai Anielewicz.

This time, 300,000 Poles died (Werth 1964, 870). General Klaus von Tippelskirch who commanded several German armies in the vicinity wrote in his diary: *The Warsaw Rising started on August 1, at a time when the strength of the Russian blow had exhausted itself* (Werth 1964, 875).

Eight days before the uprising, the Red Army had liberated Lublin. In Chelm, on July 22, a published manifesto announced the formation of the Polish National Liberation Committee, nominated by the *Krajowa Rada Narodowa*, a parliament-like political body created in German-occupied Warsaw. The liberation committee comprised "representatives of the Peasant Party and other democratic elements inside Poland." The manifesto denounced the London emigres as a "usurper" government that had adopted the "fascist" constitution of 1935. The manifesto drafters recognized the 1921 "democratic" constitution until the Constituent Assembly met to draft a new constitution.

On August 26 in Lublin, BBC Russian correspondent Alexander Werth interviewed Rokossovsky for his classic work, *Russia at War*. Rokossovsky recounted, "After several weeks' heavy fighting in Belorussia and eastern Poland we finally reached the outskirts of Praga about the 1st of August. The Germans … threw in four armored divisions, and we were driven back [sixty-five miles] … "If the Germans had not thrown in all that armor, we could have taken Warsaw, though not in a frontal attack; but it was never more than a 50–50 chance. …The insurgents started it [the rising] …without consulting us. … An armed insurrection in a place like Warsaw could only have succeeded if it had been carefully coordinated with the Red Army…The Warsaw insurgents are badly armed, and the rising would have made sense only if we were already on the point of *entering Warsaw*. That point had not been reached at any stage … We couldn't have got Warsaw before the middle of August … we shall try to capture both Praga and Warsaw, but it won't be easy. …the Germans are doing their damnedest to reduce them [the bridgeheads south of Warsaw]. We're having much difficulty in holding them, and we are losing a lot of men… we have fought non-stop for over two months now. We've liberated the whole of Belorussia and nearly one fourth of Poland; but even the Red Army gets tired after a while. Our casualties have been very heavy. … [With respect to air drops] it isn't much good. They are holding only isolated spots in Warsaw, and most of the stuff will fall into German hands. …this high altitude dropping of supplies on Warsaw by Western planes serves practically no purpose at all. …*We* [the Red Army] are responsible for the conduct of the war in Poland, *we* are the force that will liberate the whole of Poland within the next few months … the political stunt [of the London Poles] is going to cost Poland hundreds of thousands of lives. It is an appalling tragedy, and they are now trying to put the blame on us. It makes me pretty sick when I think of the many thousands of men we have already lost in our fight for the liberation of Poland. And do you think that we

would not have taken Warsaw if we had been able to do it? The whole idea that we are in any sense afraid of the AK is too idiotically absurd" (Werth 1964, 876–878). No evidence has yet surfaced that would refute Rokossovsky's assessment.

To seize the initiative from the Red Army, on July 25, London Pole military leader Bor-Komarowski had given the order to stage an uprising on August 1 (Werth 1964, 879). This desperate move came *after* the Red Army tried on July 25 to cross the Vistula but were repelled by superior German forces.

This crucial point is corroborated by the German general charged with beating back the Red Army advance. General Heinz Guderian wrote, "... an attempt by the Russians ... to cross the Vistula at Deblin on July 25 failed, with the loss of thirty tanks ... We Germans had the impression that *it was our defense which halted the enemy rather than a Russian desire to sabotage the Warsaw uprising*. ... On August 2 the 1st Polish Army ... attacked across the Vistula with three divisions in the Pulawa-Deblin sector. It suffered heavy casualties, but secured a bridge-head ... At Magnuszew a second bridgehead was established. The forces that crossed here were *ordered to advance along the road running parallel to the Vistula to Warsaw, but they were stopped at the Pilica*. ... The German 9th Army had the impression, on August 8, *that the Russian attempt to seize Warsaw by a coup de main had been defeated by our defense, despite the Polish uprising, and that the latter had, from the enemy's point of view, been begun too soon*" (Werth 1964, 881–882). All told, the USSR lost a million lives liberating Poland, while Germany murdered 3 million Polish Catholics and 3 million Polish Jews.

Resuscitating Intermarium

In late 1944, Polish Second Army Corps officers in Italy strove to resuscitate Intermarium (Dorril 2000, 170) through Polish foreign minister in exile, Count August Zaleski, who led a London study group funded by MI6 and the self-exiled London Poles. Though Poles wielded some influence, "the top echelon of Intermarium became

increasingly dominated by ex-fascist leaders and known collaborators ... a core of Croatian Ustase, Slovakian Hlinka Guard and Hungarian Arrow Cross members and a sprinkling of extremist Poles" that included Kazimierz Papee, Poland's ambassador to the Vatican from 1939 (Dorril 2000, 171) to 1958 when dismissed by Pope (1958–1963) John XXIII who recognized the People's Republic of Poland as the legitimate government of the Polish people.

Poland's Western Borders Restored

The Baltic port city of Gdansk was returned to Poland after the World War II defeat of Germany. Polish borders were then shifted from east to west to correspond to the western Oder-Nisa river boundaries of the original Polish nation when Gdansk was founded in the tenth century by Mieszko I, the first Piast dynasty ruler. The eastern boundary became the Curzon Line. It had been drawn by the British Foreign Secretary Lord George Curzon after World War I to mark the boundary between the Second Polish Republic and the Soviet Union, and only became recognized after World War II. As historian-poet Antoni Gronowicz pointed out, "In this way, Poland became united geographically and ethnologically and was in a measure repaid for her losses" (Gronowicz 1951, 10). For much of Gdansk's history, it had been occupied primarily by Germans with the city mainly called Danzig until World War I led to the creation of the Free City of Danzig under League of Nations supervision. After World War II, as Poles moved into Gdansk and Germans left, the construction of the Lenin shipyards became the highpoint of Gdansk's rebuilding.

Soviet-Sponsored People's Republic of Poland Replaces Self-Exiled London Poles

On July 22, 1944, a Soviet-sponsored Lublin government took over from the self-exiled London Poles. A British treasury loan supplemented by

P

funds from MI6 kept the London "government-in-exile" and its "Home Army" afloat until Great Britain and the United States finally recognized the procommunist Polish government in July 1945 (Dorril 2000, 206, 253). The Polish Home Army then resorted to terrorist attacks against communist Poles and pogroms against the surviving Jewish population.

By the end of 1945, both Soviet and US intelligence agencies were aware that the Promethean League was an MI6 operation "to re-arm Ukrainian neo-Nazis under the cover of [Protestant-Evangelical] General Anders' Polish Army" (Dorril 2000, 206). Under London's direction, Anders's army sacrificed themselves in numerous battles outside of Poland, most famously at the 1944 Battle of Monte Cassino when the Polish army suffered 1000 dead and 3000 wounded.

London continued to nourish the dreams of self-exiled Poles to lead an "East European Federation." Financing would be through a British Treasury loan to be repaid by the postwar Polish government. After London and Washington recognized the People's Republic of Poland, MI6 continued to prop up this enterprise through various front groups (Dorril 2000, 206). In 1947, the Promethean League and Intermarium were folded into the Anti-Bolshevik League for the Liberation of Nations (ALONS) (Dorril 2000, 213) and Smal-Stocky emigrated to the United States for a tenured position at the Catholic Marquette University.

MI6's covert activity was multipronged. One network was run by Captain Michael Sullivan who disguised himself as the head of a British relief agency. During 1945, Sullivan helped "incite Anti-Semitic demonstrations" and "psychological warfare operations, resulting in bread riots." Many of his secret agents were arrested by the NKVD and put on trial (Dorril 2000, 256).

Special action units of the extreme nationalist National Military Union (Narodowy Zwiazek Wojskowy – NZW) conducted "pacification raids" against pro-government villages, while the well-organized Ukrainian nationalist UPA underground army threatened the south-east border. Civil war loomed as guerrilla groups roamed the countryside (Dorril 2000, 257), while MI6 agents sent into Poland were routinely arrested or executed (Dorril 2000, 262).

Those Armia Krajowa (AK) Polish underground fighters, who believed that continuing armed struggle was counterproductive (Dorril 2000, 257) and accommodation with Moscow essential, created a new military organization, Freedom and Independence (Wolnosc i Niepodlegtnosc – WiN), on September 2, 1945. That winter, the Soviets greatly reduced their troops on Polish soil. By mid-1947, the Polish Security Service, Urzad Bezpieczenstwa (the UB or Bezpieka), had thoroughly penetrated WiN. They captured the WiN leader, Stefan Sienko, who agreed to cooperate with the UB as a double agent. The entire WiN Home Organization network had become an elaborate deception operation orchestrated by the Soviet Ministry of State Security (MGB 1946–1953) (Dorril 2000, 265). Information reaching MI6 from Warsaw was Soviet disinformation.

Meanwhile, CIA determined to infiltrate US labor unions and employ them abroad to undermine communist worker appeal. The CIA-funded International Confederation of Free Trade Unions (ICFTU), established in London in 1949 and comprised of non-communist unions, actively subverted civil society in Poland (Peck 1978, 228, 231).

Solidarnosc Created

In 1970, worker protests of government policies were organized, and the devout Catholic antiabortion homophobic Lech Walesa assumed leadership. On August 14, 1980, a rise in food prices provoked a strike at the Lenin shipyard in Gdansk. This strike inspired other work actions. On the 31st, the government granted these shipyard workers the right to strike and to form an independent trade union. The Strike Coordinating Committee legalized itself as the National Coordinating Committee of the Solidarnosc (Solidarity) Free Trade Union. Walesa was chosen to be chairman of the Committee. At its peak in September 1981, its 10 million members amounted to almost one-third of the population and one-third of the working class.

To stoke further resentment, during the Polish political crisis of 1980–1981, CIA planted "fake news" that the Soviet Union would invade Poland. No evidence has been found in KGB files to substantiate this tale. Rather, CIA through various US-based entities provided major funding to Solidarity, the main opposition group, to destabilize Polish socialism (*Polish-American Journal* 1993). The AFL-CIO raised $300,000 from its union members that was used to provide material and cash directly to Solidarity. On top of this interference into the internal affairs of a sovereign state, the US Congress authorized the National Endowment for Democracy to allocate $10 million to Solidarity. Journalist Carl Bernstein reported that "Tons of equipment – fax machines (the first in Poland), printing presses, transmitters, telephones, shortwave radios, video cameras, photocopiers, telex machines, computers, word processors – were smuggled into Poland via channel established by priests and American agents of the AFL-CIO and European labor movements. Money for the banned union came from CIA funds, the National Endowment for Democracy, secret accounts in the Vatican and Western trade unions" (Bernstein 2001).

On March 10, 1981, Walesa met General Wojciech Jaruselski for the first time. At that meeting, Walesa assessed the regime, "It's not the case that the name of socialism is bad. Only some people spoiled the name of socialism." Jaruselski reminded him that the Warsaw Pact would be holding war games from March 16 to 25, and it would be wise if he maintained social order and forgo any anti-Soviet rhetoric, since Solidarity was receiving substantial funding from western capitalist nations.

The Attempted Assassination of the Only Polish Pope in Vatican History

On May 13, 1981, Mehmet Ali Agca, a member of the far-right Turkish Grey Wolves, seriously wounded Pope (1978–2005) John Paul II in an assassination attempt that occurred 15 days before the Pope's mentor, Cardinal (1946–1981) Stefan Wyszynski, succumbed to stomach cancer, and

14 months before the *Solidarity*-financing Vatican Bank declared bankruptcy.

CIA enlisted the *New York Times* in one of its most successful disinformation projects, the so-called Bulgarian connection. CIA wanted the world to think that the Soviet Union through their Bulgarian surrogates had masterminded the assassination plot, thereby fomenting Polish unrest against the Soviet Union that it was hoped would result in a Soviet invasion. Since the Soviets were embroiled in Afghanistan, CIA hoped for a two-front war, in a continuation of the military pincer that Washington promoted in the 1930s between Japan in the east and Germany in the west (Gronowicz 2017, 357–358).

In full-column full-page stories, the *New York Times* published a detailed, false account of how the KGB working through the Bulgarian government had choreographed the attempted assassination of the only Polish pope in Vatican history. The author of this ambitious canard was CIA-funded journalist Claire Sterling. Sterling's obituary described "The Bulgarian Connection" as "one of the most successful cases – certainly the most publicized – of disinformation carried out by a Western intelligence agency since the Second World War" (Achtner 1996). Twenty-one years afterward, Pope John Paul II journeyed to Bulgaria to state unequivocally, "I never believed in the so-called Bulgarian connection" (*New York Times*, May 27, 2002).

Washington prosecuted Antoni Gronowicz for publishing the first biography of this pope. Gronowicz wrote how John Paul II related to him that CIA could have prevented the assassination attempt. In 1984, to compel Gronowicz to reveal his sources, the government convened a grand jury – a secret tribunal unique to the United States among English-speaking nations – to interrogate him. Gronowicz's federal case represented the first time in US history that an author other than a journalist was subjected to a government inquisition to ascertain his sources (Editorial 1984).

The Author's Guild, the Author's League, the Dramatists' Guild, the American Civil Liberties' Union, and two of the top US civil liberties' scholars, Burton Caine and Thomas Emerson,

protested this violation of free speech (Brief *Amicus Curiae* of the Authors League of America, Inc. in Support of the *Petition to the Supreme Court of the United States, October Term, 1985, In Re Grand Jury matter Antoni Gronowicz v. United States of America*). American authors Norman Mailer, Arthur Miller, William Styron, and Kurt Vonnegut wrote a joint protest letter.

As the case wended its way to the Supreme Court, Gronowicz died of a heart attack. Judge Dolores Korman Sloviter of the Third Circuit US Court of Appeals, who later became its Chief Judge (1991–1998), compared Gronowicz's tribulations to those of Galileo. In her opinion, she wrote, "Searching somewhat deeper into history, one could add Charles Darwin's *Origin of Species* and the works of Galileo, all were seen in their time as threatening the views of the orthodoxy."

Lech Walesa's Political Odyssey

The attempted assassination of the only Polish pope and CIA's attempt to pin it on the Soviets contributed to the decision of General Jaruselski to declare martial law on December 13, 1981. The armed forces remained loyal to the government and protests over the next year killed almost a hundred Poles. Walesa and other strike leaders were imprisoned. After Solidarity was outlawed on October 8, 1982, Walesa was released on November 14. Martial law was lifted on July 22. Jaruselski served as Poland's first president until 1990 when Lech Walesa succeeded him.

After Walesa became President, the Balcerowicz Plan introduced privatization and a transition to a free-market economy (Kureth 2014). Walesa successfully negotiated the withdrawal of Soviet troops from Poland and a reduction of foreign debt. He supported Poland's entry into NATO and the European Union. He narrowly lost the 1995 presidential election to Aleksander Kwasniewski who represented a resurgent Democratic Left Alliance that contained communist members. Walesa then went on a round-the-world lecture tour and made a lot of money,

consistent with his first Man of the Year award that came in 1980 from the *Financial Times*, followed by numerous others, including the *Saudi Gazette* (1989), and in 1983 the Nobel Prize for Peace, and by 45 honorary degrees that included Harvard University and the Sorbonne.

When Walesa ran again for the presidency in 2000, he received 1% of the vote, while Kwasniewski was reelected with 54%. At this point in time, Gdansk, the birthplace of Solidarity, was confronting poverty and unemployment as most of the ship building industry had closed. In 2006, Walesa quit Solidarity because the union supported the now ruling right-wing Law and Justice party run by the twins, Lech and Jaroslaw Kaczynski, who occupied the posts of president and prime minister, respectively. During the 2008 economic crisis, Poland was the only European country that continued to show economic growth.

In 2017, persistent rumors that Walesa had been working for the Polish Communist Security Service from the time of the 1970 worker protests took on a new life when papers were seized from the home of a recently deceased former interior minister, General Czeslaw Kiszczak. They included a verified handwritten note dated December 21, 1970, in which Walesa promised that he would work for the secret police in return for not being imprisoned. He swore never to disclose his collaboration – "not even to his family." His reports on fellow workers in the 279-page dossier were signed with the code name, Bolek (Koper 2017).

Poland Joins NATO

On March 12, 1999, Poland, the Czech Republic, and Hungary joined NATO. The encirclement of Russia on its western front had taken a leap forward. Washington then triggered a new arms race with Russia by insisting on stationing missiles in Poland and the Czech Republic. Russian Federation President Vladimir Putin reacted, "It wasn't us who initiated a new round of the arms race . . . We have signed and ratified the CFE [the Treaty on Conventional Armed Forces in Europe, which

limits WMDs] and are fully implementing it. We have pulled out all our heavy weapons from the European part of Russia to (locations) behind the Ural Mountains and cut our military by 300,000 men. ... Either you ratify the treaty and start observing it, or we will opt out of it. ...It's dangerous and harmful. Norms of the international law were replaced with political expediency. We view it as *diktat* and imperialism" (Isachenkov 2007). In 2007, news surfaced that from 2003 to 2005, CIA "ran" secret prisons in Poland, Romania, and Mauritania, where kidnapped suspects from other nations were tortured (Ganley 2007).

On the heels of becoming European Council President (2014–present), Poland's Donald Tusk strenuously campaigned for cancelation of Nord Stream 2, the gas pipeline from Russia to Germany under the Baltic Sea that would help implement a peaceful strategic trade partnership between Germany and Russia. Tusk took his cue from the Polish Foreign Minister (2007–2014) Radoslaw Sikorski who likened the pipeline to "the Nazi-Soviet Pact" (Beunderman 2006). His wife, Washington, D.C.-born journalist, Anne Applebaum, who sits on the board of the CIA-run National Endowment for Democracy, came up with the shortest explanation for the World War II: "Stalin started the war" (Radio Free Europe/Radio Liberty 2013).

With Germany already receiving 35% of its gas from Russia (Keating 2018), on August 18, 2018, Russian President Putin and German Chancellor Angela Merkel met to implement the project. Once again, ultranationalist Poles have deluded themselves into thinking that they can successfully challenge Germany and Russia. Thanks to China's Belt and Road Initiative and Russia's energy supplies and missile defense, Germany is positioned to aid in the peaceful unification of the giant Eurasian land mass as the principal player in Western Europe, while Poland has stubbornly refused to serve as its Eastern Europe equivalent.

As evidence of this growing nationalist economic tendency and in contrast to the 1990s when "an orderly transfer of the banking sector to private owners, especially international banking groups, was a key part of the success of Poland's transition ... the government silently renationalizes large swaths of the banking industry. ... In the autumn of 2015, the state-owned insurance company PZU acquired a substantial stake in Alior Bank, Poland's most successful entrepreneurial lender. ... UniCredit, the Italian banking giant, completed the sale of its controlling stake in Bank Pekao, Poland's second-large bank, to PSU and the Polish Development Fund for a total of 10.6 bn zlotys (2.5 bn L). UniCredit's investment in Pekao was the biggest equity stake held by an international bank in a Polish bank" (Rohac 2017).

On November 11, 2017, the 99th anniversary of Polish independence, the Polish government hosted a gathering of 60,000 pro-Nazi demonstrators from across Europe. It was part of Poland's ultranationalist government's plan to resuscitate Intermarium (Korybko 2017). On the centennial, 200,000 marched, many of them fascists, led by Polish President Andrzej Duda who did not repudiate this clerical-fascist support. A tragic consequence of this promotion of intolerance came on January 13, 2019. Pawel Adamowicz, the mayor of Gdansk, was assassinated. In the words of the *New York Times* editorial board, his killing "was a consequence of the hatred and malice that have spread through Poland under the ultraconservative, nationalist and increasingly authoritarian Law and Justice Party. ... [that] has actively curtailed the independence of the judiciary and the news media to promote its rightwing, anti-European Union, anti-immigrant agenda (Editorial Board 2019; New York Times, January 22, 2019)."

In February 2019, Poland hosted an anti-Iran conference that provided a platform for the Trump administration to rally support for its position on withdrawing from the Iran nuclear agreement, a position that the EU, Germany, and France opposed. The conference failed in its mission, but once again, as in 1936 when it drew close to Germany, Poland is skirting national disaster because it would be directly in the line of fire in another world war. Its stance is consistent with having hosted the most important black site for torturing terror suspects during the run-up to the Iraq War.

Synonyms

Anti-imperialism; Hollywood; Political cinema; Propaganda; Third cinema; Third world

Definition

The imperialism/anti-imperialism dichotomy offers one way to categorise political films. These encompass a wide range of contexts, practices, and genres; they cover cinematic traditions produced in Europe, Latin and Central America, Africa, and Asia, and include industrial, commercial, independent, and governmental films. In the early decades of the twentieth century, cinema was often called upon to propagate colonial propaganda, and this relationship between cinema and empire has remained central to Hollywood and British film industries up to the present day.

This essay argues that the politics of anti-imperialism in cinema have been plural, multi-directional, and have even at times presented conflicting ideologies, particularly insofar as Third Cinema failed to account for the direct impact of imperialism on women's conditions. This essay seeks to move beyond the traditional binary imperialism/anti-imperialism and suggests ethical connections between ongoing redefinitions of anti-imperialist cinemas and critical reassessments of cosmopolitanism. A short, selective filmography is included at the conclusion for more specific examples of the geographical and thematic range of films denouncing various forms of imperialism.

'All films are political, but films are not political in the same way', Mike Wayne states in the opening lines of his 2001 book *Political Film: The Dialectics of Third Cinema*. The imperialism/anti-imperialism dichotomy offers one way to categorise political films. These encompass a wide range of contexts, practices, and genres; they cover cinematic traditions produced in Europe, Latin and Central America, Africa, and Asia, and include industrial, commercial, independent, and governmental films. For French scholar and film curator Nicole Brenez, 'a politically committed filmmaker is first of all someone who thinks of collective history, thus someone who thinks in terms of the future that he wishes to call forth, and who sows the seeds of justice in the form of images knowing that, at best, they will grow later' (Brenez 2012).

In the early decades of the twentieth century, cinema was often called upon to propagate colonial propaganda; according to James Chapman and Nicholas J. Cull, authors of *Projecting Empire: Imperialism and Popular Cinema* (2009), this relationship between cinema and empire did not stop in the 1930s and has remained central to Hollywood and British film industries from the 1930s onwards to the present day. Accounts of early cinematic critiques of British and Japanese imperialism have been documented in Hollywood, Indian, and Chinese films in the 1930s, yet, the eruption of anti-imperialist struggles and the formulation of clear political strategies by filmmakers are more commonly

connected to the 1950s and 1960s. In fact, the period saw the convergence and intensification of two discourses: anti-colonialism, fuelled by the decolonisation wars opposing Britain and France against their respective South-East Asian and African colonies; and anti-imperialism, spurred by growing discontent across Central and South America with encroaching US economic and diplomatic policies. More recently, with the general acceptance of globalisation as the new dominant paradigm, concerns about cultural homogenisation, transnational corporate monopoly, and global inequalities, the strict antagonisms of the past are being replaced by intersecting and overlapping geographies. Needless to say that politics of anti-imperialism in cinema have been plural, multidirectional, and have even at times conduced to conflicting ideologies. The most blatant example of such conflicts concerns the inability of Third Cinema to account for the direct impact of imperialism on women's conditions. For practical reasons of length, this essay cannot cover everything. The selective overview offered here seeks to move beyond the traditional binary imperialism/anti-imperialism and to suggest ethical connections between ongoing redefinitions of anti-imperialist cinemas and critical reassessments of cosmopolitanism. A short, selective filmography is included at the end for more specific examples of the geographical and thematic range of films denouncing various forms of imperialism.

In the history of political cinema, the long 1960s (meaning the period that starts in the mid-1950s and ends in the early 1970s) are remembered as the golden age of revolutionary militant filmmaking. In contrast to the instrumentalisation of film by colonial and fascist propaganda campaigns during the first half of the twentieth century, post-war times marked a leftist re-signification of political cinema. The term then became synonymous with a critical practice indicting bourgeois social values, colonial oppression, military and economic imperialism, and free-market capitalism. Wars of independence in Africa and South-East Asia were bringing European colonialism to its knees; popular revolutions were rattling South America, causing

serious political and social turmoil worldwide. In Europe and the US, mass protests were calling for the end of colonial wars in Vietnam and Algeria, demanding greater social freedom, denouncing cultural elitism, and advocating for gender, racial, and sexual equality. Cinema played a major role in giving visibility to those movements, but most importantly, debates initiated in the early 1920s by Soviet cinema about the ideological nature of cinema as a medium, as an industry, and as a sociocultural praxis resumed, most notably in Latin America.

Following the first jolts of the Cuban revolution and the victory of Fidel Castro in 1959, Argentina, Chile, and Brazil became stages for violent popular revolts against the newly instituted military governments. Numerous filmmakers sided with the people. Several manifestoes – Glauber Rocha, 'Aesthetic of Hunger' (Brazil, 1965), Fernando Solanas and Octavio Getino 'Towards a Third Cinema' (Argentina, 1969), and Julio García Espinosa 'For an Imperfect Cinema' (1969) – defined the aesthetic and economic principles of a new, revolutionary cinema. Third Cinema would achieve what the Second Cinema of the European New Waves could not complete; that is, exist outside of the System and develop aesthetic and industrial alternatives to the passive consumerism and alluring visual escapism of First Cinema. While Second Cinema was seen as an attempt to awaken the spectator from First Cinema's glossy superficiality, the proponents of Third Cinema deplored the financial and industrial entrapment of their European counterparts and the ineluctable assimilation of their films within the international film industry. This certainly rings true today when we consider the role festivals, awards ceremonies, and critics play in the international legitimation and reproduction of art cinemas.

Third Cinema sought not only to document the process of decolonisation, independence, and access to self-sovereignty on the screen, but it also, first and foremost, endeavoured to 'decolonise the mind' of the spectator, taking after Frantz Fanon's seminal analysis of colonisation *The Wretched of the Earth* (1961). This meant working outside and against the structures of

production, exhibition, and reproduction that, in their mind, precluded cinema from being an effective medium of political consciousness. In Brazil and Cuba, Glauber Rocha and Julio García Espinosa turned the chronic under-development of their countries into counter-aesthetics and political interventions: hunger and imperfection were upheld as the antidote to the commercial entertainment promoted by Hollywood. The question of funding quickly posed itself. For Mike Wayne, state funding was admittedly 'a problematic necessity' for Third Cinema (Wayne 2001: 79). David M.J. Wood adds that, in spite of their initial reluctance to accept state sponsorship, regional film archives, private and public, ended up playing a central role in the diffusion of the films and 'the language of anti-imperialism', providing filmmakers with decentred spaces from where they could pursue their efforts to 'move from existing bourgeois towards new proletarian modes of film spectatorship' (Wood 2010: 167). French militant filmmaker Luc Moullet, who shared similar political values and was an active proponent of cinemas of transnational social consciousness, mocks such financial quandaries and his own artistic hypocrisy in his anti-imperialist documentary *Genesis of a Meal* (1978).

The long-lasting influence of Latin American Third Cinema on European militant filmmaking and on post-colonial cinemas alike lies in the unique and far-sighted historical compression its political agenda evidenced. The movement targeted all at once European colonialism, US imperialism, and, to some anachronistic extent, the transnational mechanisms of globalisation. Furthermore, it provided a structure for transnational solidarities across three continents, supporting the Tricontinental Revolution called forth in the late 1960s by intellectuals and political figures such as Che Guevara and Frantz Fanon. Although Third Cinema was very much the product of specific local and national conditions, Solanas and Getino's 1969 manifesto, premised the success of the social revolution on the intertwining of both scales:

> Testimony about a national reality can be an inestimable means of dialogue and knowledge on a global scale. No internationalist form of struggle can be carried out successfully without a mutual exchange of experiences between peoples, if peoples cannot manage to break out of the Balkanization which imperialism strives to maintain. (Solanas and Getino 1997/1969: 46)

In Africa, Mohammed Lakhdar-Hamina's *The Winds of the Aures* (1967) and Ahmed Rachedi's *Chronicle of the Years of Fire* (1975) epitomise the violence of early Algerian cinema, and the interweaving of war and nation building. Further south, in sub-Saharan Francophone Africa, early anti-colonial and post-colonial cinemas focused more extensively on how persistent economic dependency precluded the development of local economies and affected the capacity of filmmakers, in particular, to lay the foundations of African cinema on their own terms. When film had to be shipped and processed in France, the very possibility of an African cinema was compromised. In the early years of this enterprise, the persisting economic dependency upon France was nonetheless counterweighted by the creative influence of Soviet cinema. Several young filmmakers received scholarships to study film making in Moscow, including Ousmane Sembène, Souleymane Cissé, and Abderrhamane Sissako. Post-colonial Francophone African cinemas were very much the product of this tri-headed cultural and ideological root – African cultural traditions and experiences, French (neo-)colonialism, and a Soviet-inspired dialectical approach to cinema. Throughout the 1970s and 1980s, African filmmakers strove to undo past European narratives and images about their continent and their people, and their films developed, as in Latin America, a national and continental political language that could expose and expel what Sembène described as 'all the things [they] ha[d] inherited from the colonial and neo-colonial systems (qtd. in Pfaff 1984: 11)' (Pfaff 2004: 2). In recent years, post-colonial emphasis on national sovereignty and African cultural integrity has intersected with anxieties about unbounded economic and cultural pressures exerted by globalisation.

Since the 1990s, the principles laid out by Third Cinema have bifurcated: documentary, small, and new media continue to circumvent

media conglomerates, financial monopoly, and alternative platforms of distribution whenever possible, while feature-length fiction cinema has produced sophisticated geopolitical allegories engaging the filmmaker's position in a world governed by colonialist, imperialist, and globalist impulses (Jameson 1991; Stam 2003). Brazilian cinema, for instance, has found in 'garbage' a symbolic:

> point of convergence [...for the] three themes of hybridity, multiplicity and the redemption of detritus. [...it] captured the sense of marginality, of being condemned to survive within scarcity, of being the dumping ground for transnational capitalism, of being obliged to recycle the materials of the dominant culture. (Stam 2003: 40–41)

African cinema, in comparison, has privileged the metaphor of crossroads in its negotiations of unresolved 'postcolonial asymmetry' (Akinwumi 2011: 9). In *Moolaadé* (Sembène 2005), transactions of all kinds (economic, social, sexual and political) continuously draw the characters to the centre of the village; the dramatic junction of several destinies, the place 'is the point where journeys begin [...] and the place to which the traveler may return' (Akinwumi 2011: 10). In *Bamako* (2006), Abderrahmane Sissako enacts the impossible intersection of everyday West African life (the conditions of underdevelopment in the global South) and the global Empire: the International Monetary Fund, the World Bank, the World Trade Organisation, and European neo-colonialism.

Colonialism and globalisation are often seen as equally oppressive and exploitative states that enforce economic dependency and cultural hierarchies between hegemonic powers (Europe, the US, Japan, China, and transnational financial corporate institutions) and the global South, formerly referred to as the Third World (Central and South America, Africa, South-East Asia). The amorphous quality of the global Empire has increasingly blurred boundaries between First, Second, and Third Cinemas. Frank Ukadike notes in several analyses of the transformation of Anglophone African media industries from the 1980s onwards that the ability of Nollywood (the Nigerian commercial video industry), for instance, to

emancipate its production from 'extant distribution/exhibition systems' and to break traditional categories of spectatorship might seem in line with the goals of Third Cinema. The commitment of these videos to their actual social and ethical emancipation from First Cinema's commercial popular clichés is nevertheless questionable (Ukadike 2003: 140). Yet, the economic affirmation of India's Bollywood and Nigeria's Nollywood has been key in establishing industrial counterweights to Hollywood, disrupting traditional geographies of cultural production and consumption. Similarly, Hollywood itself has produced over time films denouncing the very hegemonic and imperialist nature of their own structures of production. Certainly the most recent to be worthy of consideration concerns critical accounts of James Cameron's *Avatar* (2009), one of the largest grossing US blockbusters of all times, that have positioned the film at the intersection of consensual US popular culture and anti-imperialist political charges. Yet, if the charge against imperialism is admittedly visible in Cameron's ecological plea and denunciation of military neo-liberalism, critics have nonetheless highlighted the film's inability to articulate a critique of imperialism that could be anything but Western centric (Alessio and Meredith 2012).

The persisting threat of assimilation of anti-imperialist films and practices by the System has only been enhanced by the wide availability of digital technologies from the 1990s onwards. The Internet and new technologies have admittedly opened the gates to seemingly independent, alternative channels of diffusion, reproduction, and (thanks to social media and funding platforms) more recently to production. However, they have also transformed political video making and film making from a fundamentally co-operative project into an individual endeavour. The collaborative dimension, which had been foregrounded in Third Cinema and in post-colonial African aspirations to build national cinemas, has thus shifted from production to reproduction and circulation. Michael Chanan's most recent work draws attention to the digital renewal of political cinema and video and the role new media might play in the twenty-first century. In his 2012 e-book, *Tales of a*

Video Blogger, Chanan chronicles several forms of 'citizen journalism' that preview the form and content of a Third Cinema 2.0. He describes how the production of agitational videos during the 2010 General Election in the UK and the use of mobile phone cameras during the Arab Springs, for instance, adapt and reinvent past experiments, such as the *cine piquetero* movement in Argentina in 2001, and indigenous videos in Mexico, Chile, and Brazil during the late 1980s. As Chanan points out though, imperialism and its critics are now even more closely intertwined as 'growing numbers of people are using the products of consumerism to try and combat the power of the same global corporate capitalism that sells them the instruments of digital social communication to begin with' (Chanan 2012: 36).

In their efforts to design an equal, fair and respectful 'conception of the world', anti-imperialist cinemas have always simultaneously engaged different geographical scales of experiences: the local, the national, and the global. Film praxis of anti-imperialism is best described as the endless re-opening of the viewer's relationship with the film, but most importantly, with the world that surrounds him or her. While these political cinemas have already triggered geopolitical shifts, they continue to be seen in oppositional terms vis-à-vis imperialism, a theoretical position that unfairly replicates the normative preeminence of exploitative impulses. Michael Chanan's new geographies of Third Cinema fold the margins and the interstices of the global Empire back into its centre; there, he hopes, they can redefine the terms of a collective politics of resistance appropriate to the increasingly interlaced experiences of the social outcasts of the North and the South (Chanan 1997). The programmatic commitment of anti-imperialist cinemas in Latin America, Africa, and South-East Asia evolved but never ceased to question the normativity of Western and American globalism. Yet, fixing these evolutions in the anti-imperialist struggles of the 1960s denies them the complexity of their contemporary responses to social, cultural, and technological transformations. Another geography is possible, and these cinemas have been relentless in uncovering the constant mutability of imperialism,

as a political, social, cultural, and economic system, and inviting us to envision a (utopian) alternative to the imperialist essence of modernity. In over half a century, political cinemas of anti-imperialism have shaped an alternative conception of the world. They have 'engag[ed] in practices of global justice confronting all systemic relations of subordination while [staying] committed to establishing projects of egalitarian and pluralist universalism', and in doing so, they have contributed to the critical redefinition of cosmopolitanism, the antithesis of imperialism (Kurusawa 2011: 290).

Synonyms

Economic cycles; Economic inequality; European union economic inequality; European union's core-periphery division; Geographical value transfer; Labour force exploitation; Marxian political economy; Unequal labour exchange

Definition/Description

The political economy of the European periphery furnishes empirical content to the thesis that the European integrational project locks its member countries into the relations of unequal labor exchange. Derived from cross-country economic inequality and facilitated through international trade, such a scenario allows the affluent member states to take economic advantage over their less developed and, in this sense, peripheral trading partners. Accordingly, this chapter provides an analytical framework explaining the existing imperialist design as an antithesis to the idealized European Social Project. It explains why European integration demands for ever-expanding geographical coverage and why the peripheral countries' benefits are conditional upon much larger benefits draw by the core. Contrarily, through the analysis of the entire economic cycle, this chapter proves an argument that economic losses generally remain a peripheral concern. This asymmetrical cross-country benefit distribution exhibits that the European integration is led by underlying economic forces which, instead of equality, solidarity, and cohesion, are structurally rooted in the cross-country dependence and geographical value transfer, both of which benefit the core.

Introduction

Throughout history, European soil has been the birthplace of various political and economic modes of social organization. Europe's frequently pioneering role in governing relationships between individuals and society has taken many forms, most of which have been led by military imperialism and resulted in historical misfortunes on a global scale. Numerous instances of trial and error brought about, from the aftermath of the Second World War, the European integration that hitherto proved successful in the provision of peace. Consequently, regardless of the fact that it does not represent geographical totality, the European Union (EU) presently dominates over the continental landscape whereas the Eurozone

dominates its economic sphere. On these grounds, political economy of European periphery analyzes the economics of European integration in order to investigate the extent to which the EU was successful in the abandonment of its long-standing imperialist legacy.

The foundation of the EU and even more so its common currency subset, the Eurozone, is based on the premise that the expansion of the single market inevitably enhances economic efficiency and increases the living standard of European peoples. This is evident from the 1986 Single European Act (European Commission 2012) which guarantees, in addition to freedom of establishment, free movement of persons, services, goods, and capital (Four Freedoms of the EU). From the theoretical standpoint, such rationale is centered around the concept of perfect competition anchored to perfect factor mobility and unobstructed trade (Bork 1993). The transnational implementation of established freedoms generates a territory liberated from regulatory obstacles which should enhance efficient use of resources and optimize economic welfare. This implicitly desirable ideal of perfect competition rests on the assumptions that the internal market should be comprised of numerous rational agents trading homogeneous commodities without the individual power over price levels, operating in an environment restrained from externalities and transaction costs with well-defined property rights and competition enhancing rule of law. This inherently implies tendential commodity-price, factor-price, and factor-efficiency equalization, as a consequence of the perfectly competitive setting which precludes the existence of the suboptimal market stakeholders.

Fulfillment of these conditions begets a single economic territory marked by efficient factor allocation, efficient firm size, efficiently distributed relations of production, and by matching supply and demand, i.e., marked by Pareto (1894) optimality where, given the current allocation of resources, advancement of any one individual can occur only by making another worse off. Effectively, society reaches a grand utility possibility frontier (Ferguson and Gould 1975) where no Pareto improvements are achievable and

economic welfare is maximized. From the economic viewpoint, this constitutes the theoretical backbone of the Eurozone internal market.

However, idealizing features of perfect competition omit the vital effects of imperfect competition, market failures, and distinct efficiencies among market participants. Hence, in line with Amin (2011), this study debunks the myths of perfect competition and a global-level playing field and provides arguments for the claim that imperfect competition is a key criterion driving a wedge between the core and periphery and segregating the European single economic territory. This argument is advanced through the exposition of the imperfect competition as a leading factor behind disequilibrium market prices, heterogenous levels of cross-country economic efficiency, and distinct structure of country-specific productive factor endowments, all of which are the root cause of the core-periphery cleavage. The acute issue of the European core-periphery division is investigated as a function of cross-country unequal recognition of the labor consumed. That being said, this study draws on the Marxian economic tradition and dependency theory to show that the un-equivalent labor recognition leads to value transfers (Emmanuel 1972) that set in motion the exploitative cross-country dynamics (e.g., Prebisch 1950; Singer 1950; Amin 1976; Bauer 2000).

This research displays an empirically validated theoretical account of the hypothesis that the Eurozone periphery joins the integration, expecting benefits they consider through the Pareto efficiency lens. Conversely, the core countries are taking into account the fact that the free market integrates the countries into the relations of the imperfect competition where they can employ economic power over their peripheral trading partners. Thus, the European international trade regime becomes a principle vessel that facilitates cross-country un-equivalent value transfer (Rubinić and Tajnikar 2019a, b). In such framework, based on the unequal exchange as a concealed cause of European economic inequalities, it is no surprise that the European core-periphery split receives considerable analytical attention in both the academic community and

public debates. This sheds new light on the process of the Eurozone's enlargement, which evidently enables the core to further establish its beneficiary status. Given that the core systemically derives unrequited positive value transfers from the periphery, the European integrational project must be analyzed as the continuation of imperialist dynamics (Cope 2019) in which the periphery economically gravitates, through conditions of subordination toward the European monetary system and its political institutional setting.

A Concise Evolution of the European Integrational Project

The EU is a transnational economic and political partnership of 28 sovereign countries conceptually founded on the thesis that fostering trade and interdependence among European nations translates into the synergic advancement of social welfare.

The birth of European integration can be tracked back to the 1951 European Coal and Steel Community and the 1957 European Economic Community, which brought together six founding member states: Belgium, France, Italy, Luxembourg, the Netherlands, and Germany. The European integrational project came into force in 1958 through the implementation of the Treaty Establishing the European Economic Community (1957). The so-called Treaty of Rome formed the constitutional basis of what is to become the EU. It proposed progressive eliminations of internal barriers to trade and establishment of the customs union which should be followed by the creation of the common market and later by the single market with the EU's Four Freedoms. Additionally, the Treaty advocated for the introduction of various international policies and the formation of the European Commission. The fundamental guidelines that were laid out reflect Hayek's (1948) vision of European interstate federalism which promotes the idea that the reduction of impediments to EU's Four Freedoms lead to the single market where "prices and wages would tend to reflect production costs and living conditions

across member states, avoiding arbitrary divergences imposed by the state authorities" (Lapavitsas 2019:14–15). In other words, it leads to a perfectly competitive environment in which all parties involved, as argued by the orthodox theory (e.g., Heckscher 1919; Ohlin 1933), draw benefits from international trade.

In the following decades, the European Community proved to be successful in achieving economic growth. This led to the 1973 integration of Denmark, Ireland, and the United Kingdom. Soon after, in 1981, Greece joined the partnership, while, 5 years later, the same path was followed by Portugal and Spain. These enlargements were incentivized by positive experience of previously integrated countries. They were primarily driven by capital demands for a larger markets (utilization of the economics of scale) promoted through the transnational economic and territorial cohesion. In contrast, considerably less integrational focus was placed on social cohesion through the foundation of EU structural funds.

A giant leap forward occurred in 1992 with the Maastricht Treaty (Treaty on European Union 1992). This Treaty introduced fundamental alterations to the existing cooperation through the establishment of the EU and set the groundwork for a common currency. As was planned, within the 1986 Single European Act (European Commission 2012), in 1993, the European single market became fully operational, whereas, in 1995, Austria, Finland, and Sweden became members.

In 1996 the Stability and Growth Pact facilitated an agreement to establish the Eurozone and introduced a deficit and debt criterion, designed to ensure countries' fiscal disciplinary coordination as a precondition for the admission to the common currency area. With the purpose of carrying out the vision of the monetary union, the European Central Bank was established in 1998. With the principal task of administering the common monetary policy and maintaining price stability within the forthcoming union, the European Central Bank, in 1999, enabled the launch of the EU currency (the Euro) and brought the Eurozone into existence.

Implemented in 1999, the Treaty of Amsterdam (1997), through substantial changes

regarding the capital-centered structure, amended the Treaty on European Union. This introduced the principle of social cohesion and reduction of regional development disparities, including the social policy on the list of the EU's legally binding priorities (Eißel 2014). The social inclusion and fight against poverty was further advanced in the Treaty of Lisbon (2007) and has therefore become a permanent supplement to the initial EU values.

The last in a series of vital developmental moments started in 2004 with the single biggest enlargement of the EU. With the admittance of ten new members (Cyprus, Czechia, Estonia, Hungary, Lithuania, Latvia, Malta, Poland, Slovakia, and Slovenia), the EU increased its member count by 40%. This expansion was continued in 2007 with Bulgaria and Romania, and in 2013 with Croatia. The introduction of countries with significantly different economic performance, as will be shown, have considerably altered the European setting and posed great challenges to the integrational unity and shared prosperity.

Followed by the enlargement, the EU has engaged in the organizational, institutional, and ideological expansion that resulted in the shared institutional setting comprised of a variety of formal institutions. Through a transnational regulatory framework disabling inner-country subsidies, sovereign involvement into countries' economic affairs was minimized.

This simplified outlook on the evolution of the European integrational scheme can be summarized through the confirmation that the EU is a sui generis international trade regime that, through international law, rejects the use of cross-country countermeasures and reciprocity mechanisms in the organization of the relationships between countries (Phelan 2012). Considering its magnitude, the EU must be investigated as an unprecedented transnational attempt to connect the competitive enhancement of market freedoms and economic well-being with shared values of cross-country solidarity and cohesion, social inclusion, promotion of equality, elimination of backwardness and poverty, combating all kinds of discrimination, and promoting outlook in which European peoples are seen as equals regardless of their national origin (Consolidated

P

version of the Treaty on the Functioning of the European Union 2012).

Conflict Between Integrational Values and Core-Periphery Inequality

Self-interest as the disposition of economic agents, unlike the state through which they materialize, seldom change. Hence, logic dictates that the antagonism between European shared values and the reality of core-periphery inequality must first acknowledge that the vast majority of the old member countries are former colonial and imperial powers. The historical account confirms that these countries not only violently appropriated capital through primitive accumulation (Harvey 2005) but also "...relied heavily on trade protection and subsidies, ignored patent laws and intellectual property rights, and generally championed free trade only when it was to their economic advantage" (Shaikh 2007: 60).

Therefore, as an international trade regime, the EU must be primarily considered as the neoliberal project (McNamara 1998; Lapavitsas 2019) centered on the proposition that the union of member countries integrated on the basis of maximization of their national self-interest can be transmuted, without the loss of common values, into the maximization of the joint integrational well-being. Such rationale relies on Ricardo's (2001) theory of comparative advantage which, interpreted in narrow terms, argues that international free trade brings, through specialization, benefits to all parties involved which would not be attainable in an autarky. However, like Pareto, Ricardo is not inherently concerned about potential distributional inequalities nor is he concerned with the trade's capability to determine national conditions of production and cross-country inequality, accordingly.

By considering the average gross domestic product per capita (World Bank 2017), as a proxy of the economic development, it can be concluded that the EU founding countries had more than 43,000 2011PPP\$, the countries admitted between 1973 and 1995 had more than 42,000 2011PPP\$, and the countries admitted after 2004 had little over 26,000 2011PPP\$. When the

analysis is extended to the number employed (Eurostat 2019) and capital stock (estimated through the Hardberger (1978) method), the founding countries report more than 520,000 2011PPP\$ capital per laborer, the countries admitted between 1973 and 1995 had more than 514,000 2011PPP\$ capital per laborer, whereas the post-2004 countries had barely over 317,000 2011PPP\$. As will be subsequently elaborated, a similar motion holds in the case of the majority of other economic indicators, thus proving that the evolutionary dynamics of the EU confirm Shaikh's argument and question the common values.

The trade surpluses and deficits within a single country cancel each other out (Marx 1971). The same may be the case with the commodity exchange among equals where, in accordance to comparative theory, all are expected to draw benefits. Consequently, by acknowledging the homogeneity of old member countries, one can fathom why the developing (pre-2004) EU was a progressive project. However, with the EU's enlargement, this cross-country equality disappeared. This has produced a setting in which affluent countries' comparative advantages, via international trade with less developed competitors, develop into the absolute advantage (e.g., Seretis and Tsaliki 2016; Tsaliki et al. 2017) that contradicts the EU founding principles.

Moreover, the EU did not only enlarge quantitatively but also qualitatively. The development of the common institutional settings, the commitment to continuous economic expansion, and the elimination of impediments to trade, as well as subsidies, have further exacerbated the state of affairs. This is best observed within the case of the Eurozone's monetary union, where the cross-county initial differences evolved into permanent inequality determinants. The latter occurred due to the loss of monetary sovereignty, the European Central Bank's mission to ensure nominal stability and to keep the inflation under control, and the Stability and Growth pact which, through the debt and deficit criteria, effectively disabled the countries' fiscal sovereignty (e.g., Lapavitsas et al. 2012; Stiglitz 2016).

The processes mentioned, with the lack of adequate transnational corrective mechanisms,

expose the limitation of the orthodox outlook, revealing that the EU is governed by the capital's imperatives and that the affluent countries have a vested interest in preserving cross-country inequality (Peet 1975). This violates the EU treaties, contradicts its shared values, and necessitates a fundamental shift toward the analytical approach that will allow the systematic investigation of the core-periphery division, i.e., it calls for the employment of the unequal labor exchange and dependency theories' frameworks which determine the international trade to be a concealed facilitator of the cross-country value transfer and core-periphery division.

Methodological Approach to European Cross-Country Unequal Value Transfer

Examination of the European trade inequalities departs from a theoretical model of Eurozone cross-country unequal labor exchange, formulated by Rubinić and Tajnikar (2019a). This model is a synthesis of the Marxist and heterodox traditions based on the innovative use of well-known linear models (e.g., Marx 1990; van Schaik 1976; Bródy 1970; Wolfstatter 1973; Newman 1962; Sraffa 1960; Morishima 1973). Accordingly, European cross-country inequalities stem from, among others, market disequilibria, distinct factor endowments, economic efficiency, and distinct rates of labor force exploitation, resulting in division between the affluent core and dependent periphery.

The model is based on the physical system of a productive economy, where the resultant physical surplus mirrors the net positive production of a given country. The useful property of this system is that it can adequately bypass the infamous deficiency of the Marx-based models, the transformation problem. The physical surplus can take the form of national income by multiplying its elements with prices. Alternatively, it can be expressed through the quantity of labor consumed in its production, as the new value (NV) created. To that end, the physical surplus is regarded as the understructure concurrently reflected in both the price and value systems. It suffices to mention that

first, in agreement with Choonara (2007) and Gibson (1980), all previous magnitudes can be measured as the sums of money value required to produce the physical surplus, and second, within the empirical part, the theoretical category of national income is measured as gross domestic product (GDP). The three-system disaggregation (physical, price, and value) makes it possible to investigate the degree of exploitation of labor power by capital (Marx 1990) and allows for comparison of a country's consumed labor within the production process with its market recognition within the national income.

This analytical framework employs a "fixed cake" understanding of the economy (Fine and Saad Filho 2016) in which the surplus is, via inner-country exploitation, divided between the capitalists and laborers. Given that within the contemporary capitalist mode of production, the international social relations are deeply rooted within the sphere of national production, this model can be transmuted to cross-country exploitative dynamics. On these foundations, the central question the developed model seeks to answer is: to what extent is the country's labor consumed, upon international exchange, recognized within the country's GDP?

Provided that the long-run equalization of factor remuneration is understood as the center of gravity, the model allows for the computation of the long-run equilibrium (production) prices of the factors of production and the corresponding, country-specific equilibrium national income (GDP_{pc}). Hence, the production prices consist of uniform wage and profit rates disincentivizing any reallocation of existing factor placement. In effect, the country's actual-to-equilibrium national income ratio points out the effect of the market (price) disequilibrium on the economic output of a given country. At this point it must be stated that, as argued by Marx (1991) and Amin (1976), a deviation between market and production prices begets the monopoly prices, which are captured by the effect of the market (price) disequilibrium.

The equilibrium national income can also be calculated based on the assumption that the countries share equivalent organic compositions of capital (capital-to-labor ratio). In that case, the

country's actual GDP would be proportional to the amount of labor consumed, i.e., to the new value created. Hence, variation between the new value created and the equilibrium national income reflects the influence of the organic composition of capital on the asymmetrical benefit distribution. This is what Emmanuel (1972) defines as the unequal exchange in a broad sense. The effect of the cross-country distinct capital composition mainly reflects through the country's profit incomes, actual national income, and national income per employee.

Analogously, by acknowledging the cross-country tendential equalization of the efficiency levels, the model makes it possible to calculate the country's national income which would be obtained if the country would achieve across-the-board-average levels of capital efficiency and labor productivity, denoted GDP_u. The deviation between the actual national income and the efficient equilibrium national income answers to what extent the economic efficiency effects the unequal labor exchange and country's economic performance.

Consequently, the existing disequilibrium prices, divergent organic compositions of capital, and divergent efficiencies are cross-country inequality determinants causing the country's GDP per employee to lag behind or exceed that of its trading partners. As an outcome, the emerging cross-country discrepancies are exhibited through a country's labor and capital incomes.

Since it is inferred that the physical surplus is merely a result of labor consumed in its production, within the model used, the country's national income can be expressed through the embodied labor. Assuming that all labor produces value (Harvie 2005) and is homogenous, by following the procedure formalized by Rubinić and Tajnikar (2019a), one can calculate the monetary magnitude of the new value created. Subsequently, the difference between the new value created and the actual national income identifies the combined effects of all inequality determinants and points out cross-country divergence in social recognition of the labor consumed within the country's production. This disparity is, in both perfectly competitive environment and the real-world setting of

imperfect competition, a confirmation of cross-country un-equivalent labor exchange. As a consequence, the cross-country un-equivalent labor exchange channels the outcomes of these complex transnational relations on the inner-country dynamics, through the price levels. The prices at which the cross-country commodity exchange realizes affect the prices of inner-country commodity exchange and are setting unequal market prices for identical quantities of labor consumed. Therefore, it can be concluded that the European trade inequalities are based on unequal cross-country commodity exchange, regarding the quantities of embodied labor.

To summarize, European cross-country inequality is the outcome of a disproportional conversion of the country's consumed labor into socially recognized labor. This disproportionality is a direct measure of the cross-country exploitation. In this way, the developed model connects the exploitation rate with the unequal labor exchange and cross-country inequality. Ultimately, the employment of this concept allows for the European core-periphery distinction and reveals its exploitative nature, driven by inequality determinants and their effects: labor incomes, profit incomes, and labor force exploitation.

Eurozone Core-Periphery Classification

A broad consensus in academic literature (e.g., Storm and Naastepad 2014; Regan 2015; Matthijs 2016; de Freitas 2017; Rubinić and Tajnikar 2019b) endorses the axiomatic fact of prevailing European core-periphery stratification. This binary cross-country tension was, among others, identified in geographical theory as a north-south divide, in financialization theory as creditor-debtor divide, and in varieties of capitalism theory as the divide between export-led and demand-led models. To fill in the existing literature gap, this study furnishes the two-tiered categorization of the European core-periphery centered around the paradigm of surplus and consequential exploitation-induced economic inequality.

The core-periphery categorization is performed in two comparable stages. The first stage

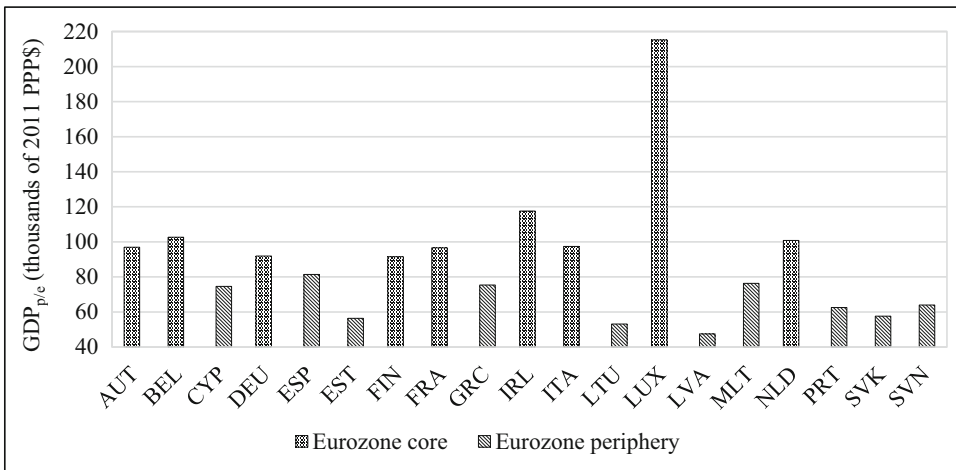
encompasses the Eurozone countries, while the second extends the research to the entire EU. In both cases, the research departs from the hypothesis that the grouping of the Eurozone countries can be performed by taking into account the net difference between the country's labor consumption and its realization within the GDP. The analysis, according to all parameters, is based on the averaged data for the period between 2003 and 2017. Such a method departs from Sraffa's metaphor of "instantaneous photograph" or "snapshot" (Sraffa unpublished notes D3/12/13), which depicts the economic system as frozen at one point in time.

The Eurozone (and later the EU) is treated as a closed economy whose aggregate GDP is considered to be entirely the product of the labor consumed within its member countries. However, regardless of the fact that the majority of the economic activity is the result of inner-group activity, the Eurozone countries also trade outside of the common currency area. In 2013, according to the World Bank (2017) WITS database, the GDP-weighted Eurozone across-the-board average extra-group export amounted to 19% and extra-group import amounted to 17% of total output. Given that this trade originates from the exchange of commodities constituting a part of the Eurozone's GDP which, in turn, results from the work invested within their member countries, it is self-evident that the international trade balance is mostly the result of labor invested within these same countries. From here it follows the assumption that the Eurozone's aggregate GDP is the result of the labor invested in its production. Once the commodity exchange has been completed, the Eurozone's aggregate GDP is distributed among the member countries in various ways. The latter forms the basis for cross-country value transfers that constitutes the prime concern of this study.

The starting point of the Eurozone's core-periphery disaggregation rests on the cross-country differences in the GDP per employee ($GDP_{p/e}$).

Figure 1 clearly depicts Eurozone core-periphery distinction. The grouping departs from the distribution of Eurozone aggregate GDP that averages 12.43 trillion 2011PPP\$ annually (Table 3). The core countries report above-average GDP per employee. These nine countries (Luxembourg, Ireland, Belgium, the Netherlands, Italy, Austria, France, Germany, and Finland) surpass the remaining ones in both categories with a group GDP of 9.98 trillion 2011PPP\$ (80% of Eurozone's aggregate GDP). Conversely, there exists a homogenous group of ten peripheral countries (Spain, Malta, Greece, Cyprus, Slovenia, Portugal, Slovakia, Estonia, Lithuania, and Latvia) that suffer through exchange. These countries have below-average GDP per employee and a group GDP of 2.44 trillion 2011PPP\$ (Table 3).

The Eurozone core-periphery grouping is performed on the empirical analysis that accounts for seven independent and intertwined factors. Apart from the GDP per employee ($GDP_{p/e}$), the clustering technique includes the following cross-country inequality determinants: the effects of the disequilibrium prices (GDP-to-GDP_{pc} ratio), the organic composition of capital (NV-to-GDP_{pc} ratio), and the economic efficiency (GDP_{pc}-to-GDP_u ratio). Ultimately the effects of all inequality determinants are manifested through the formation of wage rates (actual-to-equilibrium wage rates ratio; W/W_{pc}), the formation of profit rates (actual-to-equilibrium profit rates ratio; Π/Π_{pc}), and the social recognition of the consumed labor (GDP-to-NV ratio). Derived from these factors, the Eurozone member countries are classified in the following table.

The Eurozone core-periphery ranking builds on Fig. 1, by departing from the GDP per employee. Thereupon, the classification is influenced by the country's status, with respect to the utilization of the existing market disequilibria. The results indicate that the countries with above-average GDP per employee obtain above-equilibrium prices for the commodities they exchange, i.e., their actual GDP is higher than what would be the case in the equilibrium. This rationale does not hold for Finland nor France which, according to this category, fall into the peripheral group. Relatedly such rationale holds for Malta which moves to the core. Within Table 1, these "moving" cases are distinguished by their positioning below the dash-dotted line. The peripheral countries obtain below-equilibrium prices for the commodities they realize.


Political Economy of the European Periphery, Fig. 1 Eurozone cross-country gross domestic product per employee (2003–2017 average). Note: Countries are ordered alphabetically as Austria (AUT), Belgium (BEL), Cyprus (CYP), Germany (DEU), Spain (ESP), Estonia (EST), Finland (FIN), France (FRA), Greece (GRC), Ireland (IRL), Italy (ITA), Lithuania (LTU), Luxembourg (LUX), Latvia (LVA), Malta (MLT), the Netherlands (NLD), Portugal (PRT), Slovakia (SVK), and Slovenia (SVN). (Source: Authors' own calculations based on data from the World Bank (2019) and Eurostat (2019))

Given that the Eurozone's unequal exchange is seen as a *zero-sum* game, based on the peripheral exchange of commodities labeled with below-equilibrium prices with those of the core with above-equilibrium prices, the periphery experiences a loss of 379 billion 2011PPP$ annually (Table 3). If the latter was not the case, the peripheral aggregate GDP would be 2.82 trillion 2011PPP$ annually. More importantly, by the same token, these peripheral countries' deficits constitute the cores' surpluses.

The cross-country differences in organic composition of capital are reflected through profit income differentiation and the GDP per employee. If the Eurozone countries had the equivalent organic composition of capital, the actual GDP of all members would be proportional to the amount of labor consumed within them, i.e., it would equate to the new value created. With the exception of Germany, all core countries have GDP per employee higher than the new value created. Opposite is the case for the entire Eurozone periphery. This is to suggest that because of distinct cross-country capital-to-labor ratios, even in the equilibrium state, the Eurozone countries would not receive the entirety of the recognition of labor consumed within their

productions. Within the equilibrium state, the Eurozone's international trade would inflict value transfer from the periphery with low, to the core with a high capital-to-labor ratio. In quantitative terms, this transfer amounts to 300 billion 2011PPP$ annually and is the reason why the core countries experience positive difference between their equilibrium GDP and the new value created (Table 3). That having been said, it must be mentioned that the countries with low organic composition of capital reported comparably lower capital stock and lower profit incomes as a part of the GDP, as well as lower GDP per employee. However, generally speaking, these countries exhibited higher profit rates comparable to the core countries which gain through the exchange due to unequal transfer of value.

Similarly, with Luxembourg excluded and Spain included, the core countries' equilibrium GDP exceeds their efficient, equilibrium GDP. The opposite is the case with the periphery whose countries are, from the viewpoint of the equilibrium, inefficient, i.e., their levels of capital efficiency and labor productivity are below the Eurozone's across-the-board average. Due to this underperformance, all countries that do not reach the highest level of economic efficiency lose

approximately 125 billion 2011PPP\$ annually, in contrast to the core countries of Italy, Spain, and Finland which reach the highest efficiency level (Table 1).

The asymmetrical benefit distribution arising from the disequilibrium prices bears high explanatory power with respect to the determination of the cross-country labor income differentials. Namely, regardless of the above-average profit rates, because of the below-average prices of their commodities, the Eurozone's periphery suffers annual losses of 387 billion 2011PPP\$, which comes at the expense of the peripheral labor incomes (Table 3). The latter directly violates the EU's "...principle of equal pay for equal work or work of equal value" (Consolidated version of the Treaty on the Functioning of the European Union 2012: 118). These losses, in addition to the periphery, encompass Ireland, Italy, and Finland, which are otherwise considered the core. In the Finish case, the loss occurs alongside below-average price levels. The special position goes to France which, by taking the advantage of the high organic composition of capital, maintains above-equilibrium wage levels despite below-equilibrium prices. In contrast, Malta enjoys the benefits because their commodities reach above-equilibrium prices; however, these effects are not transmitted toward the labor incomes, which are below-equilibrium.

On the other hand, the asymmetrical benefit distribution arising from the organic composition of capital primarily externalized through the cross-country differences in the profit income,

but not through the cross-country profit rate differentials. The peripheral countries exhibited above-equilibrium profit rates regardless of the fact that they reported lower profit incomes as a consequence of the low organic composition of capital. Since the labor price is formed in accordance to the average value of labor power multiplied by the level of demand for labor (Cope 2019), the peripheral net status is understood as the consequence of the national labor markets relations, where the higher unemployment rate causes downward pressure on wages and creates higher returns to capital. The supporting evidence is presented in Table 2 where some of the core countries, as a consequence of somewhat higher labor incomes, fail to obtain average profit rates.

The empirical analysis thus confirms the Eurozone's divide. The peripheral countries have

less capital per employee, they are marked by significant, below-average labor incomes, and they obtain below-average (market) prices for their commodities and are lagging behind in efficiency levels. Relatedly, the core countries report contrasting trends, resulting in higher labor incomes and, to an extent, lower profit rates. With that in mind, it becomes evident that the core-periphery divide reflects through all determinants and their effects.

From the viewpoints of cross-country labor recognition, inequality, and exploitation, this analysis confirms that the GDP of the Eurozone countries does not mirror the labor consumed in their productions, i.e., the distribution of the Eurozone's aggregate GDP is not proportional to the cross-country labor consumption. Accordingly, the core countries obtain, through their GDPs, a higher labor recognition relative to the consumption of labor. Given that this is not the outcome of the core's labor employment, such dynamics favors the core with an estimated 574 billion 2011PPP\$ annually and constitute the value transfer that renders the periphery net loser with an equivalent loss of unrecognized labor (Table 3). These economic forces at play provide a basis for Lapavitsas' (2019) and Cope's (2019) leftist arguments against European integration. Inflicted by the Eurozone's cross-country unequal commodity (labor) exchange, this implicit value transfer differentiates the core from periphery and explains the root cause of the Eurozone's inequality.

The Eurozone core-periphery division becomes even more pronounced when the subject matter is investigated over a longer time by encompassing the entire economic cycle. This has been done by Rubinić and Tajnikar (2019b) for the period between 2003 and 2014.

Figure 2 displays a reoccurring pattern of the Eurozone core-periphery split. Core countries that exhibit higher consumed labor recognition are significantly more balanced with respect to the cyclical effects. This is evident from the lacking fluctuation effects of the Great Recession. Provided that the periphery reported a vastly different outcome, this perspective (in line with the dependency theory advocates) provides further arguments in support of the claim that the Eurozone's

unequal development rests on the asymmetrical benefit distribution between the developed core and the less developed periphery.

Moreover, the figure clearly shows that the convergence and divergence sequences are exclusively dependent on the movement exhibited within the periphery, while the core remained predominantly stable throughout the examined period. These trends must be investigated in light of the labor market influence largely induced by the cyclical fluctuations. The crisis-led increase in the peripheral unemployment, through the lesser labor consumption, resulted in the nominal increase of social recognition of the labor consumed that is being recognized within the GDP of the peripheral countries, i.e., the crisis has, as an outcome of the lesser overall labor consumption, decreased the cross-country labor force exploitation.

A similar motion holds when it comes to the post-crisis cross-country convergence regarding the influence of the organic composition of capital on the GDP per employee. The observed core-periphery differences were reduced with the onset of the Great Recession primarily as the result of a peripheral drop in the number employed. This is no surprise since the number of employed is the denominator of the organic composition of capital seen as the capital-to-labor ratio. Within the period of contraction, such effect alongside with the less intensive employment of the means of production has caused an increase in the peripheral economic efficiency and has reduced the core-periphery efficiency gap. Correspondingly, within the expansion phase, the differences in cross-country disequilibrium price influence have declined in a way that favored the periphery. However, with the crisis outbreak, this converging pattern was halted and evolved into cross-country divergence at the expense of the periphery. The Great Recession has undisputedly altered the peripheral countries economic performance and prevented any severe convergence toward the core, whose countries did not indicate severe crisis' influence. In other words, the crisis has forced the peripheral countries to structurally alter the organization process and the governance of their national productions

in order to enhance the competitiveness *vis-á-vis* the core. This, in turn, both directly and indirectly exacerbated the Eurozone's cross-country inequalities.

European Union (Extended) Core-Periphery Classification

The methodology behind the evaluation of the international value transfer limits the scope of this analysis to flow among countries encompassed by this study. Since, it is assumed that the Eurozone's aggregate GDP is the result of the labor consumed within its countries, hitherto the core's gains and the peripheral losses

reflect only the volume of transfers generated within the Eurozone.

With the acknowledgment of the former characteristics, it becomes evident that the geographical coverage expansion inevitably leads to the identification of the larger portion of the global value transfers. Thus, the inclusion of new countries discloses additional core gains and a larger section of peripheral losses, both of which are investigated through GDP shares. Consistent with the previous sections, derived from the international un-equivalent exchange of labor embodied within the traded commodities, the arising asymmetrical value distribution is prescribed to disequilibrium prices, organic composition of capital, and economic efficiency.
Political Economy of the European Periphery, Fig. 3 The European Union's gross domestic product per employee (2003–2017 average). Note: Austria (AUT), Belgium (BEL), Germany (DEU), Finland (FIN), France (FRA), Ireland (IRL), Italy (ITA), Luxembourg (LUX), the Netherlands (NLD), Denmark (DNK), the United Kingdom (GBR), Sweden (SWE), Cyprus (CYP), Spain (ESP), Estonia (EST), Greece (GRC), Lithuania (LTU), Latvia (LVA), Malta (MLT), Portugal (PRT), Slovakia (SVK), Slovenia (SVN), Bulgaria (BGR), Czechia (CZE), Croatia (HRV), Hungary (HUN), Poland (POL), and Romania (ROU). (Source: Authors' own calculations based on data from the World Bank (2019) and Eurostat (2019))

Once the core-periphery classification is extended to include the entire EU, the abovementioned issues become crucial for a precise interpretation of the empirical results received. Hence, this section builds upon the two-tiered Eurozone approach and amends the initial geographical coverage by nine EU countries, by departing from the category of the GDP per employee.

As can be seen from Fig. 3, the GDP per employee as the paramount clustering criterion defines the core countries as those with above-average performance and the peripheral countries as the remaining. Eurozone countries, without exception, retain their initial core-periphery status while, from the group of newly introduced countries, Denmark, the United Kingdom, and Sweden join the core (EU core extension), whereas Bulgaria, Czechia, Croatia, Hungary, Poland, and Romania augment the periphery (EU periphery extension). The figure points out another relevant detail. Since the EU periphery extension includes the comparably underperforming member countries outside the Eurozone, unlike the core's

extension which does not alter the group's homogeneity, the peripheral extension significantly interferes with the group's overall performance. By following well-established procedure, a detailed breakdown of the EU core-periphery clustering is presented in the subsequent table.

The core-periphery enlargement extends the scope of research, from the Eurozone's aggregate GDP of 12.43 trillion, to the EU's aggregate GDP of 17.36 trillion 2011PPP$ (Table 3). On this basis, the causes and consequences of the EU core-periphery relations are quantified in the following demonstration of the most relevant indicators.

From the presented table, one can conclude that the modified core, by receiving even more value in the GDP than the labor consumed, intensifies the exploitation of the periphery. The opposite is the case with the newly admitted periphery, i.e., less of the labor consumed becomes realized within the peripheral countries' GDPs. Consequently, as the difference between the new value created and the actual GDP, the total EU core-periphery value transfer is calculated to be 1.46

trillion 2011PPP\$. At the peripheries' expense, this transfer results from cross-country unequal labor exchange and benefits are reaped by the core. From this amount, the Eurozone's core appropriates 1.32 trillion 2011PPP\$ of the value produced by the EU periphery.

Table 3 demonstrates that the cross-country value transfer inflicted by the Eurozone's unequal labor exchange accounts for 5.7% of the core's aggregate GDP. The broader outlook of the EU core-periphery reveals that the core's appropriation of the value produced by the periphery amounts to 11.3% of the EU core's GDP. As can be observed from Table 3, the extent of the unrecognized, peripherally consumed labor was overestimated within the initial Eurozone core-periphery analysis. With the inclusion of the EU extended periphery, the losses experienced by the Eurozone's periphery decreased from the 574 billion 2011PPP\$ to 332 billion 2011PPP\$. This is to suggest that a portion of total value transferred toward the core indirectly flows from the Eurozone's periphery and originates from the EU's extended periphery.

Hence, the Eurozone's periphery comes as a mere intermediary that obscures the full magnitude of the existing exploitative relations. From this, it follows that a significant section of the core's GDP is the result of peripheral labor. This fundamental difference between the European core and the periphery is a straightforward confirmation of EU cross-country exploitation. It becomes obvious that the European periphery can be investigated as the Eurozone's periphery and the so-called EU extended periphery, which remains outside the single currency area. Such a divide finds its validity in the fact that as much as 77.4% of the total core-periphery value transfer (1.13 trillion 2011PPP\$ of the core's gains) can be explained through the losses suffered by the EU extended periphery. Provided that the vast majority of the Eurozone periphery and the entirety of the EU extended periphery is comprised of countries accessed from 2004 onward, the enlargement of the European integration and the single market expansion purposefully serves, instead the overall well-being of the EU citizen, as the project enriching the core.

The model presented allows for an in-depth investigation of the subject matter. With Sweden being the exception, the core countries of the EU (Table 2) obtain higher prices for the commodities they exchange (GDP-to-GDP$_{pc}$ ratio). However, the price effect on the core-periphery value transfer is smaller than that of the organic composition of capital. The price effect is responsible for 47% of the total EU core-periphery value transfer, whereas 66.2% of price effect value transfer occurs at the expense of the EU extended periphery. The countries of Cyprus and Malta, which are normally included in the periphery, reach above-equilibrium prices. Other than this minor deviation, the EU core represents a homogenous group that, from the standpoint of disequilibrium prices, dominates the unequal labor exchange and makes a clear distinction between the core and periphery.

The EU core-periphery classification solidifies the second cross-country inequality determinant, the influence of organic composition of capital (NV-to-GDP$_{pc}$ ratio), as the leading factor behind the cross-country value transfer. Thus, the set of countries whose GDP is higher due to the higher organic composition of capital match the set of countries of the EU core (Table 2). There are two exceptions to this rule. The first one is the United Kingdom, as a core country with lower organic composition of capital, drawing its un-equivalent labor exchange advantages based on the above-equilibrium prices of their commodities. The second one is Spain, as the peripheral representative with positive influence of the organic composition of capital on the un-equivalent exchange. This inequality determinant bears the highest impact with respect to the core's value transferring benefits (Table 3). The core's benefits inflicted by the organic composition of capital account for 60% of the total benefits, out of which 81.5% are derived as a consequence of unequal exchange with the EU extended periphery, which is in a disadvantageous position. Accordingly, losses resulting from lower organic composition of capital surface primarily through lower profit incomes and lower economic output of the peripheral countries.

When it comes to economic efficiency, the United Kingdom reached the highest level and Bulgaria the lowest (Table 2). All countries of the

EU extended periphery reported below-average efficiency levels. By considering the cross-country economic efficiency losses alongside the data from Table 3, it follows that the EU extended periphery, with a share of 11% of the aggregate EU GDP accounts for 26% of the total losses reported on the grounds of lesser efficiency. The core countries with a share of 74.9% of the aggregate EU GDP have experienced 15.3% loss on the grounds of lesser efficiency. The Eurozone's periphery, with a share of 14.1% of the aggregate EU GDP, has experienced 10.8% loss on the grounds of lesser efficiency. Thus, the economic efficiency determinant also confirms a clear division of EU countries between the core, the Eurozone periphery, and the EU extended periphery.

Finally, as core countries report above-average labor incomes and below-average profit rates (Tables 1 and 2), concurrent with the periphery reporting losses due to the combined effects of the described inequality determinants as well as the above-average profit rates, the resulting peripheral below-average labor incomes come as no surprise. In this sense, both the profit and wage cross-country differentials further strengthen the advanced EU core-periphery division.

Conclusion

European integration is characterized by a high degree of cross-country intricate dependence. The bonds that keep this transnational partnership nexus interconnected are primarily defined through the unobstructed international mobility of products, services, capital, and labor. Centered around the free market expansion which purportedly enhances cross-country cohesion through the allocative efficiency aimed at achieving Pareto optimality, the mainstream economics failed to recognize that the indispensable unity and shared prosperity of the European economies is, rather than systemic, superficial at best.

Fostering international trade has strengthened the ties between European countries. However, in contrast to the economic philosophy of free market capitalism, these ties were, instead of synergic benefit advancement, conceived on the countries' integration into the relations of unequal labor exchange, where spatial consumption of labor is disjointed from its geographical recognition. The European unequal labor exchange points out that the international trade inequalities distort the labor recognition within the GDP of a country other than the country where it was consumed. This is what forms a basis for the European core-periphery division. Consequently, this phenomenon allows the core to extract a part of the surplus value produced by the periphery thus generating the European cross-country value transfer and exploitation.

The EU core-periphery classification is determined by several factors. Among them the variation in the organic composition of capital bears the strongest influence. This is because, across countries, European laborers are equipped with distinct means of production. The latter distorts the cross-country competition and produces a transfer of value from the periphery with low capital intensity toward the core with high capital intensity. These cross-county differences in the capital stock are creating an uneven playing field that cannot be eliminated in the foreseeable future. This is a sign that the founding principles of the EU overlook the fact that their economies are, instead of an inequity-free single market, locked into capitalist relations of production. Furthermore, they neglect that the European markets are permeated by imperfect competition allowing the core countries to utilize advantages arising from the price disequilibria. The former is responsible for the second determinant that divides the EU between the core with commodities priced above equilibrium and the periphery with underpriced commodities comprised of comparably higher quantities of embodied labor. The last determinant causing the un-equivalent social recognition of labor is economic efficiency. Distinct cross-country capital efficiency and labor productivity differentiate the EU on the affluent, more efficient core and dependent periphery with less efficient economic performance.

The research confirms that the EU is a differentiated integration made up of interdependent members belonging to the core, the Eurozone's periphery, and extra-Eurozone, EU periphery.

This study suggests the moderate influence of the common currency on the subject matter, thus disproving a common belief that the euro is a dominant driver of the core-periphery divide. What seems to be fair international trade driven by the competitive logic of self-interest transmuting into the welfare maximization, below the surface, discloses a profoundly different substructure. The differences across core-periphery constituents become apparent through concealed forces of the cross-country unequal labor exchange (recognition) and inequalities in terms of international degree of labor force exploitation. These trade inequalities are causing a transfer of values that externalize through the profit and wage differentials. Due to its nature, such a reality exacerbates the cross-country inequalities which cannot be eradicated without a fundamental alteration of the EU's structurally flawed design.

The economic forces acting as the root cause of the unequal labor exchange are not constrained to integrational borders and are undeniably extending their influence outside the EU. On these grounds, in order to sustain their high standard of living, the core countries are compelled to exercise economic power over the periphery. Furthermore, due to the lack of a viable alternative, the periphery is economically adhered to these unfavorable conditions because their share of integrational benefits is conditional upon the core's performance, i.e., the peripheral benefits can occur only as the reflection of the core's development. Such motion generates an exploitative deadlock which incentivizes the periphery to advocate for the integrational enlargement that will include less developed countries of which they will be able to take advantage. In light of this, the European cross-country exploitation is a self-sustained institute because the existing power relations demand for its continuous expansion.

This challenges the conception of the EU as a fundamentally progressive force and questions the sustainability of the European integrational project. In addition to the abovementioned cohesive forces, the EU is also characterized by the forces of convergence. However, the EU institutional mechanisms proved incapable in promoting Cohesion policy, in terms of supporting cross-country harmonious development, and underperformed in terms of the targeted cross-country convergence. Nonetheless, since these detrimental tendencies stem from societal relations, they can be regulated by society. This negative pattern can be partially countervailed through the capital mobility enhancement. Theoretically, this should channel the capital from the core with low profit rates toward the periphery with high profit rates and may curtail the influence of distinct organic composition of capital. Similarly, improved capital flow may equalize cross-country GDP per employee and should balance out the existing efficiency differences. A much greater obstacle is being posed by the existing market (price) disequilibria. The data demonstrates high movement of goods and services and low movement of capital and labor. This distorted mobility is not adequate to cancel out the cross-country differences in the structure of exports and imports, nor is it sufficient for the elimination of differences in commodities intended to satisfy domestic demand. Therefore, it becomes obvious that the problem of EU cross-country inequality is not principally anchored to the effectiveness of national productions as it is to their structures, i.e., the problem is not how countries produce their commodities, but which commodities they produce and which prices they obtain, accordingly.

The EU core-periphery antagonism and resulting lack of economic and social cohesion produces a crucial macroeconomic dilemma. The cross-country initial factor endowments, through capital and labor incomes, hinder international trade as an essential part of the EU single market. Consequently, this calls for a systemic change and a certain degree of EU-level fiscal redistribution ensuring an adequate inner-country effective demand, fostering trade, and bringing European integration one step closer to the self-imposed ideal of optimality. Among abundant transnational technical solutions such as reform of structural funds, unemployment benefit reinsurance, collective wage bargaining, debt restructuring, coordination of economic policies, and tax harmonization, the fiscal redistribution aimed at equalizing the cross-country social labor recognition represents the most radical institute for

tackling the existing inequalities. The importance of these mechanisms is paramount, not only for the creation of an even playing field and restoring the national competitiveness but also for the revival of the European countries' national sovereignty, with a special focus on the periphery.

From this perspective, it is undeniable that the European unequal labor exchange, seen as the unrequited value transfer from the periphery to core, represents a disguised adaptation of the economic imperialism of free trade. Its triumph, through uneven recognition of labor power of formally equal European citizens, brings about denial of the European democracy that undermines the authority of disempowered national governments who may be in office but are effectively out of power. Needless to say, this violates the EU treaties and founding values, sheds light a new meaning behind the concept of the EU as a sui generis integration, and calls for immediate action aimed at re-institutionalizing European solidarity and protecting the admirable values that unified the European countries in diversity instead of inequality.

Synonym

Colonialism; Global South; Neoliberalism; Post colonialism; Poverty, Dispossession; Protest; Social movements

Definition

Across the regions of Latin America, Asia, and Africa a wide array of subaltern groups – peasants and landless workers, women, informal sector workers, slumdwellers, indigenous peoples, and marginalised youth – have come together in social movements that in a myriad of ways challenge dispossession and disenfranchisement and raise alternatives to a neo-liberal world order that is increasingly mired in crisis. This world of protest has a long historical lineage. In fact, properly understood, its origins can be traced to the post-colonial development project's unravelling (in the sense of protracted decay), and beyond to the anti-colonial movements that brought this project into being by vindicating the demand for national sovereignty and social justice against a world system in which populations, territories, and resources had been subjugated to Western imperial rule since the late 1700s. And it is for this reason that is useful to think of popular resistance in the global South in terms of postcolonial social movements. In the following essay, I delineate the two main axes of this unravelling: on the one hand, the emergence of new social movements and a resurgent Third World radicalism in the 1960s and 1970s; on the other hand, the eruption of popular resistance to neo-liberal restructuring in the 1980s. I then move on to discuss how these two axes of protest are fused in the collective oppositional projects of contemporary social movements in the global South.

To look at the global South in 2014 is to look at 'a world of protest; a whirlwind of creative activity' (Prashad 2012: 9). Across the regions of Latin America, Asia, and Africa a wide array of subaltern groups – peasants and landless workers, women, informal sector workers, slumdwellers, indigenous peoples, and marginalised youth – have come together in social movements that in a myriad of ways challenge dispossession and disenfranchisement and raise alternatives to a neo-liberal world order that is increasingly mired in crisis (Cox and Nilsen 2014; Motta and Nilsen 2011a).

This world of protest has a long historical lineage. In fact, properly understood, its origins can be traced to the postcolonial development project's unravelling (in the sense of protracted decay), and beyond to the anti-colonial movements that brought this project into being by vindicating the demand for national sovereignty and social justice against a world system in which populations, territories, and resources had been subjugated to Western imperial rule since the late 1700s (Prashad 2007; Silver and Slater 1999).

And it is for this reason that is useful to think of popular resistance in the global South in terms of postcolonial social movements. In the following essay, I delineate the two main axes of this unravelling: on the one hand, the emergence of new social movements and a resurgent Third World radicalism in the 1960s and 1970s; on the other hand, the eruption of popular resistance to neo-liberal restructuring in the 1980s. I then move on to discuss how these two axes of protest are fused in the collective oppositional projects of contemporary social movements in the global South.

Decolonisation and the Postcolonial Development Project

During the interwar years (1918–40) the politics of anti-colonial nationalism in Asia and Africa underwent an important transformation. Initially,

demands for national selfdetermination had been articulated by native elites who 'made little attempt to mobilise the mass of the population into the nationalist struggle' (Silver and Slater 1999: 200). This changed in the wake of the revolutionary upheavals in Mexico and Russia as nationalist leaders geared their efforts to mobilising peasants and workers into large-scale popular movements, and increasingly co-ordinated their political projects between countries and regions (Motta and Nilsen 2011b; Prashad 2007). As the scope of mobilisation broadened, so too did the substantive content of anti-colonialism: the imperative of national liberation was wedded to ideals of social justice and an end to poverty. Anticolonial movements, then, came to vindicate not just 'the liberty and equality of peoples', but also 'liberty and equality among the people' (Wallerstein 1990: 31).

As colonial rule came to give way to national independence for the Third World in the post-war era – first in South- and South-East Asia, and then in Africa – anticolonial nationalism was also transformed from a collective oppositional project to a nation-building project in which development emerged as the central ambition of newly independent states (Desai 2004; Patel and McMichael 2004). 'Every step in the government's power, both internally and in its external relations', declared Kwame Nkrumah, 'will be taken to further the development of the nation's resources for the common good'. And it is this endeavour that can be referred to as the postcolonial development project.

The postcolonial development project centred on strategies of 'national capitalist development' (Desai 2004: 171) in which agriculture and industry were to be modernised through the initiatives and leadership of 'the developmental state' (see Kiely 2007: 49–57). In order to provide a social undergirding for the postcolonial development project, the erstwhile leaders of anti-colonial movements sought to forge a network of horizontal alliances between dominant agrarian and industrial interests, and vertical alliances between these dominant groups and the subaltern masses that had rallied to the cause of anticolonial nationalism (Walton and Seddon 1995). Within the parameters of such 'developmentalist alliances'

(Cardoso and Faletto 1979), industrial and agrarian elites retained their property rights and privileged access to the levers of political power, while subaltern groups were offered greater access to expanded public employment and public services, as well as a minimal 'social wage guarantee' through various forms of subsidised consumption (Walton and Seddon 1995).

As Walton and Seddon (1995) have argued, this was a constellation of compromises and concessions that won acquiescence and consent from below to nation-building projects that were ultimately elite-led. However, it was also the unravelling of these projects that signalled the emergence of the long wave of popular resistance that can be designated as postcolonial social movements.

The Year 1968 and its Aftermath in the Global South

In 1968, the world erupted in a global revolt that 'cut across the tripartite division of the world system at the time – the West, the Communist bloc, and the Third World' (Wallerstein 2006: 6). The Southern moment of this global revolt was a profoundly multifaceted one, in which subaltern groups and popular classes came together in a multitude of anti – systemic movements that challenged both the contradictions of the postcolonial development project and the continued subordination of Third-World countries in the capitalist world system (Berger 2004; Prashad 2007; Watts 2001).

One significant facet of the 1968 revolt in the global South was the emergence of popular movements that targeted 'the nationalism and institutionalized elite politics . . . of the first generation of independent third-world states' (Watts 2001: 172). For example, in India – one of the leading 'first-generation Bandung regimes' (Berger 2004: 11) – the late 1960s witnessed the eruption of guerrilla warfare against the state in the form of the Naxalite movement that emerged in West Bengal to mobilise landless peasants against the semi-feudal rule of landed elites and the power of a state that was deemed to be a bridgehead of neo – imperial power in the country (see Banerjee 1984;

Roy 2012). Despite its brutal repression – ironically, at the hands of a state government run by the parliamentary left – the Naxalite movement constituted a political watershed in independent India. In its wake emerged a swathe of new social movements that mobilised social groups that had often been at the very margins of the postcolonial development project – for example, Adivasis, women, Dalits, and workers in the informal sector – and outside the domain of electoral politics. These groups challenged the ways in which this project centralised political power in an elite-dominated state apparatus which advanced a form of development that had dispossessed marginal peasants and subsistence producers, and had failed to curtail the gendered and caste-based violence to which women and Dalits were still subjected (see Omvedt 1993).

The Indian trajectory is only one of many instances from across the global South of how the late 1960s and the decade of the 1970s were an era in which subaltern groups struggled to develop new forms of collective action through which to challenge their adverse incorporation into the political economy of the postcolonial development project. Despite the fact that these movements were often met with fierce repression from above – most egregiously in the form of the state terrorism unleashed by Latin American dictatorships with US backing in the 1970s – their critiques of dispossession and disenfranchisement still echo in the politics of more recent popular mobilisations across the three regions of the South (see e.g. Nilsen 2010).

Another key facet of the Southern revolt of 1968 is the emergence of what Mark Berger (2004: 19) has called 'second-generation Bandung regimes' and the resultant radicalisation of Third Worldism. As a category, 'second-generation Bandung regimes' refers to an arc of regimes that ultimately stretches from Ahmed Ben Bella's Algeria (1962–65) to Sandinista rule in Nicaragua (1979–90). Other significant examples of this new generation of Third-World regimes would be Chile under Salvador Allende (1970–73), Samora Machel's Mozambique (1975–86), and Jamaica under Michael Manley (1972–80). And what these regimes had in common was 'a more radical,

more unambiguously socialist, Third Worldism than the first-generation Bandung regimes. Many of these regimes had emerged through protracted and particularly violent struggles against colonial domination – Algeria and Mozambique being cases in point (19–23).

The appearance on the world stage of these regimes coincided with a radicalisation of the Third-World project that had first crystallised at the Afro-Asian people's conference in Bandung in 1955. The first manifestation of this was the Tricontinental Conference that brought together national leaders and the representatives of liberation movements from Asia, Africa, Latin America, and the Middle East (see Prashad 2007: ch. 8). The tenor of the conference was marked by the militancy of the second-generation regimes: this was evident not only in the increased support for armed struggle as an anti-imperialist strategy against the backdrop of the ongoing war in Vietnam, but also in the various ways that these regimes 'attempted to radicalise state-mediated national development efforts in various ways in the name of socialism and national liberation' (Berger 2004: 21). Resurgent Third Worldism was also manifest in the global arena in the form of the call for a New International Economic Order (NIEO) that was put before the General Assembly of the United Nations in 1974, in which the Non-Aligned Movement (NAM) called for a radical restructuring of the international economy in order to enable the countries of the global South to break free from their subordinate and dependent position in the world system (see Prashad 2012: 24–34).

The resurgence of a radicalised Third Worldism eventually foundered – in part due to the intransigence of the global North, in part due to the erosion of internal solidarity among the states of the global South, and in part due to the onset of the international debt crisis in the early 1980s (see below). However, the indictment that the second-generation Bandung regimes levelled against the persistence of unequal power relations in the global political economy in many important ways foreshadowed the critiques of neoliberal inequality that have been articulated more recently by social movements across the global South.

Neo-Liberalism and Its Discontents

If the emergence of new social movements and radicalised Third Worldism during the late 1960s and 1970s constitute one axis of the lineage of postcolonial social movements in the global South, another equally significant axis can be identified in the eruption of popular resistance to neo-liberal restructuring in the 1980s.

During the 1970s, regimes across the global South sought to counter economic stagnation by borrowing large sums of money from an international banking system that was flooded with excess dollars. Whereas these loans allowed Southern states to offset stagnation in the short run, this was nevertheless a strategy that created significant long-term vulnerabilities. This became clear when, in 1979, the US Federal Reserve implemented a significant hike in interest rates as part of a strategy to lift the country out of recession. The combination of significantly increased interest rates on loans with a downturn in demand and terms of trade for products from the global South in world markets rendered debt-servicing an impossibility. And as credit in global financial markets evaporated, further borrowing was out of the question (see McMichael 2004).

The response to the international debt crisis came in the form of the Structural Adjustment Programs (SAPs) administered by the IMF and the World Bank. In return for fresh loans and debt rescheduling, countries in the global South had to carry out a number of reforms geared towards a profound alteration of their political economies: currencies were devaluated; public expenditure was downsized; prices and commodity markets were deregulated; public-sector companies and utilities were privatised and sold off, often to foreign investors (Walton and Seddon 1995). In short, the outbreak of the international debt crisis heralded the coming of neo-liberalism in the global South, and with it the unravelling of the postcolonial development project (Kiely 2007).

Neo-liberal restructuring through SAPs 'eroded national economic management, and, by extension, the social contract that development states had with their citizens' (McMichael 2004: 140). As I showed above, the postcolonial development project had been based on an alliance of social forces in which the consent of subaltern groups was gained by extending access to public-sector employment and various forms of subsidised consumption that came to constitute a social wage guarantee for these groups. Under the aegis of neo-liberalism, states in the global South withdrew from these arrangements, and – as is evidenced by the escalation of poverty and declining trends in social development that plagued Latin America and Africa in particular in the 1980s and early 1990s – this withdrawal in turn impacted adversely on subaltern livelihoods and living standards (George 1991).

The response to neo-liberal restructuring from below came in a form of popular resistance that has been referred to as 'IMF riots' or 'austerity protests', which Walton and Seddon (1995: 39) define as 'large-scale collective actions including political demonstrations, general strikes, and riots, which are animated by grievances over state policies of economic liberalization implemented in response to the debt crisis and market reforms urged by international agencies'. As many as 146 cases of austerity protests occurred across the global South from the middle of the 1970s to the early 1990s. These protests, which were an overwhelmingly urban phenomenon, rallied the urban poor, the working classes, and at times also segments of the middle classes in opposition to the distributional outcomes of SAPs (39–44).

At the heart of popular resistance to neoliberalism was a 'moral economy of the urban poor' that had been forged in and through the postcolonial development project (Walton and Seddon 1994: 48). The social wage guarantees provided by postcolonial states had come to be seen by subaltern groups in the urban centres of the global South as a legitimate bundle of rights that was owed to them in exchange for their active or passive consent to the elite-led postcolonial development project (48). Thus, when states, as part of the implementation of SAPs, phased out price subsidies and public services and cut back on public-sector employment, the urban poor experienced this as a violation of their rightful expectations: 'Protestors demanded that the state meet its

responsibilities to the people who, during the decades of patron–client politics, had upheld their end of the bargain' (Walton and Seddon 1994: 50).

The politics of the IMF riots were essentially defensive. In contrast to the new social movements of the 1970s, which had targeted the centralisation of political power in the developmental state, austerity protests were geared towards upholding facets of the state–society relations of the postcolonial development project that accommodated the needs and interests of subaltern groups (Motta and Nilsen 2011b: 14). However, this should not lead us to conclude that popular resistance to neo-liberal restructuring was simply a backward-looking form of protest. Rather, what austerity protests in fact articulated was an incipient opposition to the forms of 'accumulation by dispossession' (Harvey 2005) that have been at the heart of the neo-liberal project and central to the systematic transfer of social wealth 'from the mass of the population towards the upper classes [and] from vulnerable to richer countries' (Harvey 2007: 34). In doing so, austerity protests played a vital role in giving shape to the counterhegemonic projects of the social movements that are currently asserting radical claims from below in the global South.

Postcolonial Social Movements in the Contemporary Global South

If the unravelling of the postcolonial development project from the late 1960s onwards opened up a space in which novel resistances could be articulated, the end of the twentieth century and the beginning of the twenty-first century witnessed the consolidation across much of the global South of social movements that fuse and develop key aspects of these resistances in new oppositional projects.

One of the most significant manifestations of this development was the outbreak of the Zapatista uprising in Chiapas, Mexico in 1994. The politics of the Ejercito Zapatista de Liberacion Nacional was multi-layered in that it brought together a rejection of the political

economy of developmentalism – a political economy in which indigenous peoples in Mexico had been dispossessed in the name of national progress – with a trenchant critique of the structural inequalities – both national and global – that are intrinsic to neo-liberal globalisation (see Collier 2005; Harvey 1998; Morton 2011: ch. 7). Indeed, such twin indictments of both developmentalism and neo-liberalism are not unique to the Zapatistas – they have figured centrally, for example, in resistance to dispossession in India's Narmada Valley (Nilsen 2010) and indeed in the popular protests that have recently shaken the Arab world (Dabashi 2012) – and they draw their significance from the ways in which they bring together the two axes along which the unravelling of the postcolonial development project have been traced above. There are three particularly important manifestations of this tendency in contemporary social movements in the global South.

First, current mobilisation from below in the global South has continued to criticise the exclusionary and centralising tendencies of political decision making in postcolonial states. Furthermore, many movements have worked consistently to develop strategies that foster the emergence of more participatory forms of politics either in and through their activism – for example, by enabling subaltern communities to take control of local political arenas, whether through urban neighbourhood assemblies or by participating in local electoral processes – or by championing various forms of devolution of political power. Beyond the national level, social movements from the global South have been intensely vocal in articulating a critique of the plutocracy that reigns in transnational institutions like the World Trade Organisation, the World Bank, and the G7.

Second, resistance to dispossession has increasingly come to the forefront of the politics of social movements in the global South, both in rural contexts where natural resources are increasingly subject to commodification and in urban locales where financial crises have wreaked havoc on industrial manufacturing. However, rather than appealing for a return of the developmental state, social movements have increasingly turned towards developing alternative forms of

community-based collective ownership; for example, when the Movimento dos Trabalhadores Sem Terra in Brazil organise agricultural production through democratic co-operatives, or the Movimiento de Trabajadores Desocupados in Argentina occupy disbanded factories and operate them through systems of workers' management.

Third, the hierarchies of political and economic power that structure the capitalist world system are still a target of critique in and through the collective agency of Southern social movements. This is particularly manifest in the way that the politics of these social movements link the exigencies of localised struggles to the dynamics of global power structures and mobilise to achieve progressive changes across spatial scales. For example, the emergence of networks of transnational agrarian movements have been integral in linking the disparate struggles of rural communities across the South in opposition to a global 'corporate food regime' and in defence of the notion of 'food sovereignty' as an alternative to neo-liberal agricultural policies.

Ultimately, this raises the question of how to locate contemporary social movements in the global South in relation to the postcolonial development project. Some scholars – most notably, perhaps, Arturo Escobar – tend to see subaltern resistance as a form of collective agency that rejects development – understood as a discursive formation that enables the North to discipline and control social change in the South – altogether. On this reading, social movements in the global South are portrayed as the harbingers of a 'post-development era' (Escobar 1995). However, there is much evidence that suggests that this interpretation is problematic. Studies of social movements in the global South often uncover a more complex reality, in which the imaginaries and practices that are forged through the collective action of subaltern groups mobilise and draw upon idioms that were central to the postcolonial development project and at the same time – through this mobilisation – expand and transform their meanings (see e.g. Nilsen 2010; Rangan 2002). Thus, what these social movements contest is not so much development in and of itself as the direction and meaning that has been given

to developmental trajectories and discourses through the exercise of power from above. And, in extension of this, what might emerge from their resistance is a reinvention of development as a genuinely emancipatory project of social change.

Puerto Rico: Colonialism and Neocolonialism

Gibran Cruz-Martinez

Caribbean; Imperialism; Latin America; Small island state; United States

Description

Puerto Rico was a Spanish colony from 1508 to 1898 and has been officially an unincorporated territory of the United States (US) since 1898. Simply put, Puerto Rico is a colony of the US subordinated to the plenary powers of the US Congress under the Territorial Clause of the US Constitution. The three branches of US government, Puerto Rican politicians, United Nations, and academics around the world have confirmed the colonial status of the Caribbean archipelago. Puerto Rico cannot be considered a

neocolony because the US has direct control of the archipelago.

Introduction

A US Republican congressman from Arkansas recently stated, "I think it is time that America should stop colonising. (. . .) The great America of the United States has a colony, and I think it is time that we change that" (Young 2017). Colonialism is imbricated in Puerto Rican history. According to Dietz (2002), colonialism has imposed limits of action on Puerto Ricans and has established the "rules of the game." This is a historical fact and has been a reality during the Spanish and the US colonial rule of the Caribbean archipelago.

Puerto Rico's relationship with the US is openly described in the Territorial Clause of the Constitution of the United States of America (Article IV, section 3, Clause 2): "The [US] Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States." Throughout the US colonial period, the three branches of the US government have repeatedly confirmed the colonial status of Puerto Rico. In 2016 the three branches of the US government confirmed that Puerto Rico is not sovereign and is subjected to the US Congress, revealing the lack of political and juridical sovereignty of Puerto Rico (Denis 2017; Newkirk 2016; Wolf 2016). The colonial domination of the US Congress over Puerto Rico was recently reconfirmed with the imposition of an unelected financial control board, which has not only imposed an austerity program since late 2016 but also took control of legislation enacted by the Puerto Rican elected government, arguing that all new laws must be consistent with the board's Fiscal Plan.

This essay aims to briefly collect the historical context of colonialism in Puerto Rico since the Spanish era but primarily focuses on revealing the reasons to consider Puerto Rico as a colony and non-self-governing territory of the US – rather than a neocolony of the US. Later, the article addresses the three non-colonial options recognized by the

1514 United Nations (UN) Resolution and the results of the five referendums on the political status of the Caribbean archipelago held over the last five decades. The essay concludes that Puerto Rico is undoubtedly a colony and asks for the United Nations and the sovereign countries of the world to denounce this illegal colonial relationship that subordinates residents of Puerto Rico to the will of the US Congress where they have no voting representatives. The right to self-determination needs to be finally recognized to Puerto Rico and the remaining colonies listed and not listed in the UN roster of non-self-governing territories.

Brief Conceptual Framework

Chaturvedi clearly distinguishes colonialism and neocolonialism as two forms of imperialism – simply understood as the control of one country over another country.

> This can take the form of colonialism, the attempt to establish overt political control and jurisdiction over another country; neo-colonialism, control exercised through economic domination; or cultural imperialism, the destruction or weakening of an indigenous culture and the imposition of an alien one. (Chaturvedi 2006, p. 143)

Kohn and Reddy (2017), on the other hand, argues that individuals erroneously treat imperialism and colonialism as synonyms because of the shared implication of political and economic control of the imperial/colonial power over a dependent territory. These two researchers define colonialism as the domination of one people to another via subjugation, which involves the transfer of population to the colony as permanent settlers. However, imperialism refers to the exercise of power of one country over another through sovereignty, settlement, or indirect mechanisms of control.

Colonialism is understood in this article as a system of domination and hegemonic relationship involving a territorial control of an indigenous or native majority over by a foreign minority (Osterhammel 1997). A colony is a non-self-governing territory subject to the sovereignty of a foreign country.

Nkrumah argues that imperialism moved into a new stage, from colonialism into neocolonialism, in the aftermath of the Second World War. Under neocolonialism "the subordinate state is, in theory, independent and has all the outward trappings of international sovereignty. In reality, its economic system and thus its political policy is directed from outside" (in Higginbottom 2016, p. 553; Nkrumah 2002, p. ix).

The Historical Context of Colonialism in Puerto Rico

November 19, 1493, is observed in Puerto Rico as the day Christopher Columbus "discovered" *Boriquén* – the indigenous name used by the *Taíno* people to identify the archipelago of Puerto Rico – on the second trip of the conquest. However, Brau (1983) argues this first stop was a strategic one – to collect water and reorganize ships in their way to Hispaniola – and does not involve the colonization of the territory and the indigenous people living in the archipelago. In 1505, the Spanish crown granted a capitulation to Vicente Yañez Pinzón to colonize "San Juan de Boriquén" which was later officially named Puerto Rico (Moscoso and González Vales 2012, p. 93). Juan Ponce de León was in charge of the colonization of Puerto Rico. A first exploration voyage was conducted in 1506, where the *conquistadores* learned about the social structure, political organization, and the geography of the territory (Moscoso and González Vales 2012, p. 94). Two years later, in 1508, Ponce de León initiated the conquest in the chiefdom of the principal *cacique* Agüeybana – located nowadays in the southwestern town of Guánica (Blanco 1973).

For almost four centuries, Puerto Rico was a Spanish colony. The *Taíno* indigenous population was decimated. Estimates vary considerably, but Blanco (1973) refers to a reduction from around 5,500 in the early days of the conquest to less than 4,000 in 1515, 1,148 in 1531, and 70 in 1544. Previous estimates do not consider hidden communities of *Taínos* and were corrected in the late eighteenth century to around 2000 "pure indigenous" by the mid-sixteenth century (1973, p. 13).

A Captain General - a military title - ruled internally Puerto Rico since 1580, which "could do pretty much as he pleased" (Trias Monge 1997, p. 6). However, the Caribbean archipelago was part of the viceroyship of New Spain – nowadays Mexico.

Puerto Ricans had to wait until the end of the nineteenth century for their first legislature. Even though mayors were de jure elected positions, only five of them were de facto elected by the end of the nineteenth century (Trias Monge 1997, p. 7). However, as Trías Monge argues, in the short-lived Spanish 1812 Constitution, Puerto Rico and the rest of the Spanish colonies officially became Spanish provinces with full voting representation in the Spanish Cortes (Parliament). Right to universal male suffrage and Spanish citizenship was imposed to free Puerto Ricans, and the extension of human rights became a reality for the first time. These freedoms and rights only lasted for 2 years, and with some intermissions, the Spanish Monarchy ruled Puerto Rico with absolute power until 1869. Puerto Rico regained the right to send representatives to the Spanish Cortes in 1869, along with the Spanish citizenship, and the recognition as a *Diputación Provincial* with a local parliament in 1876.

In the first chapter of the *Economic History of Puerto Rico*, Dietz (2002) summarizes the economics of the Spanish colonial rule over Puerto Rico. The first three centuries resulted in a limited and unequal economic development. An eighteenth-century document highlights Puerto Rico as the poorest territory of Spanish America (2002, p. 27). Puerto Rico's national economy began to consolidate behind the sugar industry in the late eighteenth century and especially during the nineteenth century. The economic interest of the US over Puerto Rico was clear since the nineteenth century. By 1830, 49% of Puerto Rican exports went to the US – versus 6.8% to Spain – and 27.2% of Puerto Rican imports came from the US (Steward 1956, p. 52). According to Dietz (2002), the nineteenth century brought a relative economic and social progress to Puerto Rico. Although Spain tried to limit the industrialization of the archipelago with the prohibition of imports and credit restrictions, the manufacturing sector

P

grew, especially in sugar, rum, and cigars. Nonetheless, Dietz argues that the basis of the Puerto Rican economy continued to be primitive agriculture (2002, p. 33).

One of the paramount political achievements in the Spanish colonial era was the Autonomic Charter decree on November 25, 1897. It is considered as the "most advanced document of any Caribbean colony until after the Second World War" due to the degree of self-government granted to Puerto Rico (Trias Monge 1997, p. 13). What does the Autonomic Charter granted to Puerto Rico? First a local parliament of two chambers. The lower chamber was elected entirely by universal suffrage.

Meanwhile, eight of the members of the higher chamber were elected by universal suffrage, and the Governor appointed the remaining seven. However, the local Parliament was not able to sponsor a bill on his own, and the Spanish King was able to veto any local law.

Nonetheless, the degree of self-government with the 1897 Autonomic Charter was higher than the actual level in several aspects. The most significant concession from Spain to Puerto Rico was that only the Insular Parliament had the power to request an amendment of the Autonomic Charter. On the contrary, and as this chapter discusses below, Puerto Rico is nowadays subject to the plenary powers of the US Congress, which legislate directly on Puerto Rico without any Puerto Rican voting members in the US Congress.

The US colonial era started in 1898. McKelvey (2016) argues that the fear of economic crises caused by overproduction is the origin of US imperialist policies. This fear gave rise to a new US expansionist foreign policy. The "goal was to find new markets outside the US for the US manufactured and agricultural products" (2016, p. 756). US "capitalists hoped to solve the imbalance of production of demand through expansion into foreign markets" (Olson 2016, p. 771). The US government focused their efforts in Hawaii, Cuba, Guam, Puerto Rico, and the Philippines because of their strategic geopolitical locations in the Pacific and the Caribbean.

The Cuban–Hispanic–American War in 1898 is considered the first practical implementation of US imperialism, although the US justified the colonial character of their military interventions and territorial acquisitions in a new manifest destiny to expand the values of democracy, justice, and liberty to overseas territories (Arboleya 2008). The US bombed Puerto Rico and later invaded the Caribbean archipelago on July 25, 1898, during the Cuban–Hispanic–American War (González Vales and Luque 2012). Since then, Puerto Rico has been a colonial possession of the US.

Colonies are valued possessions. The US considered Puerto Rico, the Philippines, and other islands in the Caribbean and the Pacific as useful ports and coaling stations for US trading ships in their road to the Asian markets (Olson 2016). The idea of a Central American isthmus – which was later materialized with the independence of Panama and the construction of the Panama Canal – required possessions in the Caribbean for security reasons. Puerto Rico and the US Virgin Islands – former Danish possessions – fulfilled the geopolitical purposes for the establishment of US military bases. The US did not see most of these overseas possessions as potential future full members in the US Federation (McCormick 1967). The Insular Cases in the US Supreme Court established that Puerto Rico was a US possession and not part of the US. The US made a clear distinction between territories destined to become part of the US Federation (e.g., Hawaii, Alaska) and those territories that would remain as unincorporated territories (e.g., Puerto Rico, the Philippines, US Virgin Islands, American Samoa, Guam, and Northern Marian Islands) (Cruz-Martinez 2017c). US Senator Foraker told the US Congress in 1900:

> We understand that the effect of the treaty [of Paris] was to put the United States into possession of Puerto Rico. We do not understand it was intended or expected to make them a State or to do that which entitled them to be called even a Territory. We understand (...) that we have a right to legislate with respect to them as we may see fit. (Congressional Record 1900; in Fernandez 1996, p. 9)

During the first years of the US colonial era, a military authoritarian government appointed by the US ruled Puerto Rico. The military governors

dissolved the elected Puerto Rican Council of Ministers, threatened newspapers who demanded the end of military rule, appointed US citizens at the head of the insular police force, and suspended civil authority by dismissing mayors and local councilmen (Trias Monge 1997). The US Secretary of War was officially in charge of Puerto Rico – and it remained for several decades before passing the colony to the jurisdiction of the US House Committee on Natural Resources. This could be understood as if Puerto Rico was first valued as a military possession and now as a natural resource of the US.

The US transformed the Puerto Rican economy from a "diversified agricultural export economy (...) to a monoculture economy that was almost exclusively dependent on sugar production for US market" (Caban 1999, p. 70). Quintero Rivera (1980) argues that the monetary measures by the US during the first years of colonization were aimed at establishing the hegemony of US sugar corporations by replacing domestic producers and landowners (i.e., *hacendados*). Besides the use of tariffs with Spain and the rest of Europe, US President Mckinley decreed the use of US dollars and devalued the Puerto Rican currency to an exchange rate of 60% against the US dollar (Caban 1999, p. 75). The forced devaluation aggravated the situation of the local *bourgeoisie* by reducing the value of their savings and assets and making new loans relatively more expensive.

Puerto Ricans had to wait until May 1900 to have a civil government back in power, although not democratically elected. The 1900 Foraker Act was the first organic act imposed by the US. The Foraker Act implemented the Resident Commissioner (i.e., the nonvoting Puerto Rican member in US Congress); a limited number of residents in Puerto Rico obtained voting rights to elect the 35 members of the House of Delegates (i.e., lower chamber), while the US President appointed the Executive Council (i.e., higher chamber) and the governor (i.e., head of government). The US Congress had the power to annul any law approved by the insular legislature. Directly or indirectly, all members of the judiciary system were appointed by the US. All US

laws were extended to Puerto Rico, without the previous consent of Puerto Ricans.

US colonialism took away several rights to Puerto Ricans. Residents in the archipelago lost equal citizenship to the metropolis, representation in the legislature of the metropolis, right to universal male suffrage, a locally elected parliament, the right to establish its tariffs, and the right to enter into commercial treaties with foreign countries. As Trias Monge (1997, p. 43) eloquently pointed out, the most significant loss was "the right to government by consent of the governed." The 1897 Autonomic Charter was subject to the constituents of Puerto Rico and was only amendable at the request of the elected local parliament. On the contrary, since the US occupation until nowadays, Puerto Rico remains subject to the unilateral will of the US Congress under the plenary powers of the Territorial Clause of the US Constitution. The supposedly temporary act to provide Puerto Rico with a civil government has never been repealed, and some of its sections are still in place nowadays as the Federal Relations Act.

In 1917 the US enacted the second organic law for Puerto Rico: the Jones Act. The most significant modification was the imposition of US citizenship to all Puerto Rican citizens in the eve of the First World War, although there were discussions around this issue since at least 1910 (See Vazquez-Lazo 2017). Caban (2002) argues that the imposition of the US citizenship aimed to silence the growing expressions for sovereignty and to accentuate the interest of the US to retain Puerto Rico as a possession for an indefinite time. A local Senate replaced the Executive Council, although the effective decision-making power remained in the US-appointed governor. The Jones Act did not alter the US Congress's plenary powers over Puerto Rico, and the archipelago remained under the jurisdiction of the War Department. A bill of rights was included in the Jones Act, although US constitutional protection was not extended to the colony.

US agricultural trusts turned the archipelago into a monoculture plantation economy (Dietz 2002). Following the trickle-down ideology, Neveling (2016) argues US capital investors

P

asked for political and financial support from the insular Caribbean government (e.g., tax breaks) because, according to investors, they were bringing profitable investment and employment to Puerto Rico. In 1947, Puerto Rico became the first export processing zone – also known as a special economic zone or free-trade zone (Neveling 2016) (See Neveling 2015, 2017 for an in depth analysis of the role of Puerto Rico in the formation of global export processing zones).

The tax break scheme used by the US Congress was one of the essential ingredients of Puerto Rico's longtime "industrialization by invitation" model. The US Congress decided to industrialize Puerto Rico by attracting US capital and creating a kind of tax haven with multiple federal and national tax exemptions. The US Congress decided to take away the fiscal benefits of section 936 in 1996. In 2006 section 936 of the US tax code was eliminated entirely, the tax incentive disappeared, US firms stopped being able to relocate the income generated by subsidiaries in Puerto Rico as tax-free dividends, and the entire model collapsed (Cruz Martinez 2017). Caraballo-Cueto and Lara (2018) argue that the removal of section 939 „set the stage for the worst depression in the Puerto Rican economy in more than 100 years" by igniting a deindustrialization process with a sharp decrease in manufacturing employment, which led to an increase in government borrowing. The archipelago entered into a spiral of economic, fiscal, and debt crises, later accentuated by the global financial crisis – colloquially known as the Great Recession – and the subsequent destruction of the Hurricanes Irma and Maria (see the special issue by Cruz-Martínez et al. (2018) and Bonilla and Lebrón (2019) to explore the causes and consequences of the hurricanes).

In the aftermath of the Second World War and under the international agenda to eradicate colonialism, the US Congress passed two bills with relevant ramifications for Puerto Rico. The Elective Governor Act of 1947 allowed Puerto Ricans to elect the head of government for the first time. Public Law 81–600 established the procedures for an elective government with local autonomy although without sovereignty (i.e., still under the

plenary powers of the US Congress). Public Law 81–600 allowed Puerto Ricans to enact a local Constitution. Nonetheless, US Congress modified it before the final approval. The US used Public Law 81–600 and the 1952 Constitution, which officially established the Commonwealth of Puerto Rico – or Free Associated State as it is known in Puerto Rico – to take Puerto Rico out of the UN list of non-self-governing territories. However, the new invention (i.e., the Free Associated State status) kept Puerto Rico a US colony. David M. Helfeld eloquently argued that:

> Though the formal title [of Puerto Rico's status] has been changed, in constitutional theory Puerto Rico remains a territory. This means that the [US] Congress continues to possess plenary (. . .) authority over Puerto Rico. (. . .) Congress may repeal Public Law 600, annul the Constitution of Puerto Rico or veto any insular legislation which it deems unwise or improper. (. . .) the compact between Puerto Rico and the Congress may be unilaterally altered by the Congress. (. . .) Constitutionally, the most meaningful view of the Puerto Rican Constitution is that it is a statute of the Congress which involves a partial and non-permanent abdication of Congress' territorial power. (Statham Jr. 2002, pp. 34–35)

Following Torruella (2018), the establishment of the 1952 Constitution in Puerto Rico could be considered as one of the five experiments in US colonial governance of Puerto Rico. The authoritarian military government during the first years of US colonialism was the first experiment. Later, the Foraker Act started the second colonial governance experiment (1900–1917). The third period began with the 1917 Jones Act and lasted until the 1952 Constitution. With the Puerto Rican Constitution and the status as a Free Associated State, the Caribbean archipelago began the fourth long experiment of US colonial governance. The fifth period began when the US Congress approved the federal law "Puerto Rico Oversight, Management, and Economic Stability Act" (PROMESA) (US Congress 2016) in June 2016. The US Congress took away the fiscal autonomy of Puerto Rico and transferred it to an unelected Fiscal Control Board in charge of Puerto Rico's finance since then. In exchange, Puerto Rico was allowed to enter into a bankruptcy-like process to restructure the US$72 billion dollars in debt and over US$40bn in unfunded pension obligations. It

is of utmost importance to notice that until 1984 Puerto Rico was allowed to declare bankruptcy under chapter 9 of the US bankruptcy code. Since then the US Congress denied the archipelago of that right.

Why and Who Consider Puerto Rico a Colony?

César Ayala and Rafael Bernabe imply that the colonization of Puerto Rico, Guam, and the Philippines in 1898 inaugurated an era of US neocolonialism in the Caribbean and Central American region. "Cuba, Panama, the Dominican Republic, Haiti and other formally independent republics became de facto U.S. protectorates" (Ayala and Bernabe 2009, p. 7). However, the three branches of the US government have confirmed the colonial status of Puerto Rico. This section briefly addresses some of the most significant decisions by each of the three branches. See Puerto Rico Report (2011) for an extensive and updated list on the national and international statements over Puerto Rico's colonial status.

Judicial Power

The US Supreme Court was the first to confirm the colonial status of Puerto Rico. From 1901 to 1905, the US Supreme Court in the well-known and studied Insular Cases cleared out some controversies. The Supreme Court was debating whether to allow the US to become an empire and break the tradition of the eventual admission of territories as states of the US Federation or to condemn colonialism. The Supreme Court confirmed that the US could have two types of territories (i.e., incorporated and unincorporated). The former is considered part of the US, and the unincorporated territories are US possessions and not part of the US Federation. Maybe the most important decision from the US Supreme Court to understand colonialism in Puerto Rico is the 1901 *Downes* versus *Bidwell*. Because of a dispute over imports of oranges from Puerto Rico to New York, the US Supreme Court explicitly confirms that Puerto Rico is not and has never been part of the US in the domestic sense, the US Congress has plenary

powers over Puerto Rico, and Puerto Rico is indeed a colony of the US. Therefore, the Supreme Court of the US legally allowed for the formation of a US colonial empire. The US was allowed to hold territorial possessions for an indefinite amount of time and to discriminate colonies against states of the US. In the Supreme Court own words:

> The result of what has been said is that, while in an international sense Porto Rico was not a foreign country, since it was subject to the sovereignty of and was owned by the United States, it was foreign to the United States in a domestic sense, because the island had not been incorporated into the United States, but was merely appurtenant thereto as a possession. (US Supreme Court 1901, p. 182)

Later in 1922, the US Supreme Court confirmed in the Balzac case that the fact that Puerto Ricans are US citizens do not make Puerto Rico part of the US (US Supreme Court 1922). In a second circuit case, *Romeu* versus *Cohen* confirmed that a US citizen residing in Puerto Rico does not have the same voting rights as a US citizen living in any of the 50 states of the federation (US Court of Appeals 2001).

The US Supreme Court recently made a significant decision in 2016: *Puerto Rico* versus *Sanchez Valle* (US Supreme Court 2016). Two individuals were accused of selling a gun to an undercover policeman. Both Puerto Rico and US courts indicted them. They pleaded guilty to the US federal charges and asked for a dismissal of these charges in Puerto Rico on double jeopardy grounds (i.e., a person cannot be prosecuted twice for the same crime in the same sovereignty). In the US judicial system, a state has its sovereignty – different from the US federal government. Therefore, an individual can be prosecuted for the same crime in the US federal court and a US State Court. However, the US Supreme Court decided on a 6-2 decision that "Puerto Rico does not have independent authority to prosecute someone for the same crime that has been charged in federal court. The argument appears to diminish the constitutional stature that the Puerto Rican government thought it has had for nearly seven decades" (Denniston 2016). Therefore, this decision confirms that Puerto Rico lacks judicial sovereignty because

it is entirely subordinated to the US Congress under the US Constitution's Territorial Clause.

Finally, in *Harris* versus *Rosario*, the US Supreme Court decided that the US Congress can make all requiring "rules and regulations respecting the territory (. . .) belonging to the United States" (US Supreme Court 1980). Therefore, Puerto Rico could be treated differently from any actual state of the US Federation as long as the US Congress considers there is a rational basis for this discrimination. In *Torres* versus *Puerto Rico*, the US Supreme Court confirmed that Puerto Rico has no sovereign authority over its borders, contrariwise US federal officers control borders and customs (US Supreme Court 1979).

Executive Power

In the year 2000, US President Bill Clinton created a workgroup called "Task Force on Puerto Rico's status," which intended to assess the situation of the status of Puerto Rico. In 2005, under the administration of George W. Bush, the Task Force confirmed that Puerto Rico is a territory subject to the authority of Congress under the Territorial Clause. It was noted that the US Congress could revise or revoke the current status at its discretion and legislate directly on local issues. Furthermore, the report noted that Congress had the power to grant independence to Puerto Rico or even transfer it to another nation-state. The Task Force published two additional reports in 2007 and 2011. The latter set a deadline to solve the colonial status of the archipelago by 2012. At the time of writing, no concrete progress to decolonize Puerto Rico has been made.

US Department of Justice confirmed the territorial status of Puerto Rico and argued that the archipelago could overcome this status either by incorporation to the US Federation or via sovereignty (US Department of Justice 2015). Former Secretary of State Colin Powell confirmed in 2003 Puerto Rico's lack of sovereignty to conduct foreign relations without the consent of the US (Powell 2003). According to Raben (2001), Assistant Attorney General to former President Bill Clinton, the US Congress is entirely vested of legislative powers by the Territorial Clause of the US Constitution.

Legislative Power

In 2016, a US Congressional Task Force confirmed that Puerto Rico, along with Guam, American Samoa, US Virgin Islands, and Northern Marian Islands, are unincorporated territories of the US (Duffy et al. 2016). Therefore, the colonial status of the five territories was confirmed as all are subject to the US Congress's plenary powers and can be discriminated by the US Congress against US states. The best example is the second-class coverage provided by the US government in social welfare programs destined for its colonies. For example, in October 2018 the US confirmed their power to discriminate against US citizens residing in Puerto Rico by not extending the Supplemental Security Income Benefits – a targeted social assistance cash transfer program for income poor individuals (Figueroa Cancel 2018). See Duffy et al. (2016, pp. 95–111) for a list of US federal programs under which Puerto Rico receives a discriminatory treatment in comparison to the US states.

In a Congressional Research report from 2008, the US Congress confirmed that the status of Puerto Rico did not change with the 1952 local Constitution because US Congress did not cede its plenary authority over the archipelago (Garrett 2011). US Congress reminded us that not all constitutional rights are extended to residents of the territories. Puerto Rico remains a colony of the US subject to the Territorial Clause of the US Constitution. US Congress has the power to enact legislation on internal matters of Puerto Rico, as it recently did with the approval of the Puerto Rico Oversight, Management, and Economic Stability Act (PROMESA) (US Congress 2016).

The US Congress could be considered as an "almighty" institution regarding its power over Puerto Rico. If US Congress "chose to alter Puerto Rico's political status, it could do so through statute. Ultimately, the Territory Clause of the U. S. Constitution grants Congress broad discretion over Puerto Rico and other territories" (Garrett 2017, p. s1). The power of the Territorial Clause was also confirmed in a 1997 General Accounting Office report (GAO 1997).

Puerto Rican and International Actors

Local Puerto Rican politicians from all three main political parties have confirmed and condemned the colonial status of Puerto Rico. Former pro-statehood governor, Carlos Romero Barceló, equated the official territorial status to the more straightforward and widely known concept of the colony. "In constitutional terms, U.S. terms, [Puerto Rico] is a territory. In international terms, it is a colony. But it is the same thing to me, territory, colony, what the heck" (Fernandez 1996, p. 229).

A recent paper by Developments in the Law (2017) published in the Harvard Law Review confirmed that Puerto Rico is a non-self-governing territory under international law. In 1953 the United Nations wrongly misjudged the level of internal autonomy of Puerto Rico under the 1952 Constitution and took the archipelago out of the list of recognized colonies. This publication argues that Puerto Rico does not meet the United Nations standards of self-governance because (1) the PROMESA Oversight Board – colloquially known in Puerto Rico as the Fiscal Control Board – has extensive powers incompatible with the standards of self-governance and (2) recent judicial decisions confirmed the power of the US federal government to impose capital punishment even though it was abolished internally in Puerto Rico since 1929.

Since 1972, the United Nations Decolonization Committee has approved 37 resolutions demanding the inalienable right of the people of Puerto Rico to self-determination and independence according to the 1514 resolution from the UN General Assembly. The US Congressional Research Service acknowledged that: "Although the Constitution of 1952 provides for self-government by Puerto Ricans, US Congress ceded none of its own plenary authority over the islands" (Garrett 2011). This makes the 1953 approval of UN Resolution 748, which removed Puerto Rico from the list of non-self-governing territories, seems a little disingenuous. The last resolution by the UN Decolonization Committee was approved by consensus on June 2018 and requested the US to promote a self-determination process in Puerto Rico that indeed guarantees a non-colonial status. What are the internationally recognized options to decolonize Puerto Rico once and for all after over five centuries of colonialism?

Options for Decolonizing Puerto Rico

The United Nations recognizes three options for the decolonization of a non-self-governing territory. The first one is the emergence of the colony as a sovereign independent state, which has historically been the traditional option for decolonizing a territory. The second option is a free association with an independent state, and the third option is the integration within an independent state. The actual status – the Free Associated State – is not recognized under international law as a self-governing status. The status quo perpetuates colonial power of the US over Puerto Rico because the archipelago remains subordinated to the powers of the US Congress and subject to the Territory Clause of the US Constitution. This section briefly addresses the non-colonial options for decolonizing Puerto Rico.

Option 1: Independence

"Independentistas" – supporters for Puerto Rico's independence – have based their arguments for sovereignty on national identity and economic opportunities. Their first argument is simple; Puerto Rico is a Latin American nation with their language and traditions. Therefore, in order to maintain the Puerto Rican identity, the archipelago must not be annexed to the US as the 51st state.

The economic argument is based on political power. Pedro Albizu Campos – one of the leading figures for independence in the twentieth century – argued that "economic development was inextricably linked to, and based on, political power" (Fernandez 1996, p. 112). The political power would be used – according to the Independence Party – to integrate Puerto Rico in the global economy by creating bilateral and multilateral agreements, joining international organizations

and regional blocks (e.g., CARICOM, UN, CELAC), and by being able to use the monetary policy to control inflation and promote investment (PIP 2012). In addition, imported goods are expected to become up to 30% cheaper with the abolition of the Cabotage Laws that oblige Puerto Rico to use the US marine merchant to transport goods between the archipelago and the US (EFE 2014) (see Valentín-Mari 2014 for a detailed analysis of the Cabotage Laws and the impact on the economy of Puerto Rico). The Cabotage Laws (i.e., the Jones Act of 1920) have had an estimated negative impact on the Puerto Rican economy of US$ 29 billion during 1970–2012 (Telesur 2015).

Advocates for independence argue that electoral support for independence has been decimated during the last century for the repression and persecution of "independentistas" by the insular and US governments and by manufacturing consent in the Puerto Rican *psique* equalizing independence with poverty and communism (Denis 2015). According to the former president of the Independence Party, the government was able to indoctrinate political and economic fears to independence (Berríos Martínez 1983).

Option 2: Free Association with an Independent State

Free association is the second option for the decolonization of non-sovereign territories under international law. If Puerto Rico takes this path, it will become a sovereign state with a free and voluntary association with the US.

The main difference with the actual status of Puerto Rico is that free association does not subordinate the archipelago to the US Congress. This is instead supposed to be a relationship between sovereign states, where they establish an agreement that legally connects them in designated political, economic, military, monetary, or other areas (see below for a critical argument from Ramón Grosfoguel). The Republic of Palau, the Federated States of Micronesia, and the Republic of the Marshall Islands have established a free association agreement with the US. The US provides economic and programmatic assistance, and the Pacific Islands provide military bases for the US. Also, both benefit from a free movement of

people clause (Berríos Martínez et al. 2010, p. 172). Niue and Cook Islands are also examples of countries with a free associated relationship, in this case with New Zealand.

According to the "Movimiento Union Soberanista" (MUS) – political party in favor of the free association – there are numerous benefits for this non-territorial option. Residents in Puerto Rico would benefit from a dual citizenship (the US and Puerto Rico), free movements of people and goods between the US and Puerto Rico, and actual beneficiaries of the US social security benefits would be able to continue receiving these contributory benefits. Also, the MUS argues that Puerto Rico would be able to claim economic reparations for the damages suffered during colonial subordination and for the violation of human rights (MUS 2016). The free association compact would be signed by both sovereign states and could be terminated – after due procedures – unilaterally by any party.

Option 3: Integration Within an Independent State

Integration of a non-sovereign territory (i.e., Puerto Rico) into a sovereign state (i.e., the USA) is the third decolonizing option recognized by the United Nations. After integration, peoples of both territories should have equal rights and responsibilities without distinction nor discrimination, equal citizenship, and equal opportunities for political participation in all branches of government.

Advocates of statehood argue that this is the only non-colonial status that guarantees US citizenship and a permanent status with the US. Moreover, Puerto Rico would gain representation in US Congress and the right to vote for the head of state. There would be equal access to social assistance and social security benefits, whereas now Puerto Ricans contribute to Medicare but are not entitled to receive Supplemental Security Income in older age. Statehood advocates also argue that the political stability of the US will bring more inward investment.

US Congress would have to accept the incorporation of a Spanish-speaking Latin American country during the xenophobic administration of

Donald Trump. Not only would the new State come with an unsustainable debt of around US$72 billion plus over US$40 billion in unfunded pension obligations, but it would also have more representation in Congress than several less densely populated states. The US Government Accountability Office highlighted the high cost of statehood for Puerto Rico, adding US$2.3 billion in new federal taxes (Brito 2014; GAO 2014).

A 2016 public opinion report shows that support for Puerto Rico's statehood in the USA has risen from 35% in 2013 to 40% in February 2017 (Rasmussen Reports 2017). In addition, 39% disagree that Puerto Rico should become a state of the union and 21% are undecided. If we consider these numbers to be representative of the opinion of congressional representatives, there is still a long road to have an absolute majority favoring the incorporation of Puerto Rico. However, what is the desire of the residents in Puerto Rico toward the political status options and its relationship with the US?

Referendums

Trias Monge (1997, p. 12) duly notes the similarities of the public opinion in Puerto Rico and political organization in the late nineteenth century with the present, where three groups are identified in the archipelago: annexationists – formerly to Spain and nowadays to the USA – prosovereignty, and status quo devotees.

Puerto Rican governments have held five referendums on political status since 1967, but the US Congress has endorsed none of these despite being the only stakeholder with the constitutional power to resolve the colonial status of Puerto Rico. The options to date are presented in Table 1.

The Free Associated State option was favored in the first two referendums (1967 and 1993). In 1998 the pro-statehood New Progressive Party boldly added an extra option in the hope of dividing status quo voters, but ultimately it was the "none of the above" option which won out with 50.3%. In 2012 there were two ballots. In the first ballot, most electors voted to change the current territorial status, and in the second ballot, statehood was the preferred non-colonial option, though it received less than 50% of the ballots.

The last referendum held in 2017 was designed to have only non-colonial options recognized by international law in the ballot. However, the US State Department demanded the inclusion of the status quo option. The intromission of the USA on

Puerto Rico: Colonialism and Neocolonialism, Table 1 Options in the five status referendums to date

Option in the previous ballots	Description	Colonial or non-colonial status?
Free Associated State (commonwealth)	Mandate to develop the relationship between the USA and Puerto Rico to the maximum of self-government compatible with the common defense, the common market, the common currency, and the indissoluble bond of the US citizenship. Supporters of status quo portray it as an enhanced Free Associated State	Colonial; Puerto Rico gains autonomy but not sovereignty. It remains under the Territorial Clause of the US Constitution. International law does not recognize it as non-colonial
Statehood	A vote for the statehood is a mandate to claim the entry of Puerto Rico as a state of the union (USA)	Non-colonial; Puerto Rico will join the USA with the same rights and duties as all 50 states
Independence	A vote for the independence is a mandate to claim the creation of a new sovereign state	Non-colonial; Puerto Rico will become a sovereign state
Territorial commonwealth	Status quo; Puerto Rico will remain with the actual territorial (colonial) status	Colonial; Puerto Rico will remain under the Territorial Clause of the US Constitution
Free association/ sovereign Free Associated State	Mandate to become a sovereign state with a free and voluntary association with the USA	Non-colonial; Puerto Rico will become a sovereign state

A summary of the options available in Puerto Rico's five referendums
Source: (Cruz-Martinez 2017b)

the internal affairs of Puerto Rico provoked a call to boycott the referendum. The actual leading opposition party and pro-status quo supporter (i.e., Popular Democratic Party), the Independence Party, and a multiparty coalition supporting free association opted not to participate in the referendum. The Popular Democratic Party argued that the status quo option described in the ballot undermines their view of an enhanced Free Associated State. Supporters of Independence and free association, meanwhile, refuse to participate in a referendum that includes an extension of the current status.

Once again, the US Congress has not recognized the results of the fifth referendum. With a record high 76.8% of abstention, it is reasonable not to consider these results to be the will of the people of Puerto Rico. Nonetheless, Puerto Rico should learn from the disastrous experience of the Venezuelan opposition with the abstention in the 2005 legislative elections, which allowed the former President Hugo Chavez to take control of a large part of the government. Therefore, abstentionism might not be the most effective solution.

This is why the US Congress should sit down with social movements, political parties, and other groups of the Puerto Rican society to establish a set of non-colonial options for inclusion in a binding referendum. The second alternative is to call a national constituent assembly where the residents in Puerto Rico could establish a non-colonial set of options to be validated later at a referendum (see Pérez Soler 2016). See Table 2 for the results of every referendum since 1967.

In January 2017, Jenniffer Gonzalez, the non-voting US congressional representative for Puerto Rico, introduced the Puerto Rico Admission Act, which proposes January 3, 2025, as the date of incorporation if statehood was chosen in the last referendum (Gonzalez-Colon 2017). The bill was referred to the Subcommittee on Indian, Insular and Alaska Native Affairs on February 2017. The bill was never considered on the floor of US Congress.

The governor of Puerto Rico, Ricardo Rosselló, considers that because statehood won on June 11, 2017, he has the mandate to pursue

the unilateral "Tennessee Plan" followed by Tennessee, Michigan, Iowa, California, Oregon, Kansas, and Alaska to become states of the USA (Garrett 2011). However, it is the US Congress who would first need to incorporate Puerto Rico and then admit it as a US state. This might be one of the reasons why the nonvoting US congressional representative for Puerto Rico introduced in June 2018 the Puerto Rico Admission Act of 2018 (i.e., a second bill on the admission of Puerto Rico as a state of the US Federation, with a transition period as an incorporated territory) (Gonzalez-Colon 2018). The bill has been largely ignored like the 2017 admission act and has not been considered in the US Congress floor, and the last action was on July 2018 where the Committee on Natural Resources referred it to the Subcommittee on Indian, Insular and Alaska Native Affairs. The lack of attention and serious consideration by the US Congress on this matter is not a novelty; US actions over the last century have shown disdain for the idea of ending colonialism in Puerto Rico. A Democratic Representative for Florida, Darren Soto, introduced the H.R.1965 Puerto Rico Admission Act in March 2019. The bill ask US Congress to incorporate Puerto Rico into the US federation as the 51st state 90 days after the measure becomes law without the need for a new referendum because it considers the boycotted and non-binding 2017 referendum results as valid. At the time of writing, the House Committee on Natural Resources has made no concrete action with this bill.

Is Puerto Rico a Neocolony?

Grosfoguel (2008) argues that the two forms of sovereignty recognized as non-colonial status by international law (i.e., independence and free association) will produce a neocolonial Puerto Rican republic. According to Grosfoguel, any of these two decolonial options would allow the US empire to take away the "rights that have been won through much sweat and blood" using a strategy of neocolonial recolonization. The romanticized argument by Grosfoguel implies that the social and welfare rights of the residents

Puerto Rico: Colonialism and Neocolonialism, Table 2 Results of the five referendums on the political status of Puerto Rico

	Votes	Per cent
Referendum 1967		
Free associated state (status quo)	425,132	60,11
Statehood	274,312	38.78
Independence	4,248	0.60
Null votes	3,601	0.51
Referendum 1993		
Free associated state (status quo)	826,326	48.58
Statehood	788,296	46.34
Independence	75,620	4.45

Referendum 2017		
Plebiscite for the immediate decolonization of Puerto Rico		
Statehood	508,862	96.9
Free association/independence	7,981	1.52
Actual territorial status	7,048	1.34
Blank or null votes	1,247	0.24

Source: Official results published by the Puerto Rico State Elections Commission

in Puerto Rico would not continue (or improve) with a free association or an independent state. However, there is no evidence on this matter. Grosfoguel might be referring to the US federal transfers to Puerto Rico, which as expected would be reduced. In 2014 Puerto Rico received 17 billion dollars in US federal transfers. However, we need to distinguish contributory benefits (i.e., benefits received as a result of tax payment or service provided) and granted benefits

(i.e., benefits transferred without contributions or service). Almost 80% of US federal transfers to Puerto Rico in 2014 were contributory benefits, which residents of Puerto Rico receive after contributing and meeting the eligibility requirements (i.e., social security, Medicare, military pensions, among others). Residents in Puerto Rico contributed to these programs, and a sovereign Puerto Rico would necessarily receive a fund from the US to cover these welfare programs.

Grosfoguel argues for a radical statehood option as a decolonizing option for Puerto Rico. According to him, this will prevent Puerto Rico from becoming the new neocolony in the Caribbean of high-income countries. Moreover, he argues that statehood will introduce a Latin American country to the US empire, with full political rights and the power to transform it from the inside into "a truly democratic, anticapitalist, anti-patriarchal and anti-imperialist society" (Grosfoguel 2008, p. 7).

Puerto Rico is a colony and not a neocolony of the US as several academics and news media has confirmed. However, as Grosfoguel contends, a sovereign resolution for the archipelago, either as independence or free association, enables the possibility of Puerto Rico becoming a new US neocolony. Why? A sovereign Puerto Rico would be out of the direct control of the US Congress under the Territorial Clause of the US Constitution. However, as it was argued above, Puerto Rico could become a neocolony of the US – like many others in the region – if the economic system and policy decisions in the archipelago are directed from Washington DC. With this knowledge in mind, politicians and leaders of a potential sovereign Puerto Rico would need to take this with extreme seriousness when – and if – the time comes.

Conclusion

This essay presented a historical context of colonialism in Puerto Rico under the Spanish Empire (1508–1898) and the US empire (1898–present). Puerto Rico is a colony of the USA for two principal reasons: (1) Puerto Rico is subjected to the plenary powers of the US Congress under the Territorial Clause of the US Constitution; (2) Puerto Rico does not have the right to government by consent of the governed because sovereignty does not lie on the people of Puerto Rico but on the US Congress, which can annul or modify the insular Constitution and legislation unilaterally (i.e., without the consent of the governed) and without any voting representation in the US Congress. The three branches of the US government have confirmed this colonial relationship, as well as Puerto Rican politicians and international organizations. However, up to this date, the US has not shown or accepted a concrete solution to end colonialism in the Caribbean archipelago. Finally, it is of utmost relevance to point out the colonial status of Puerto Rico rather than referring to it as a neocolony. Puerto Rico cannot be considered a neocolony of the US because the metropolis directly excercise its control over the archipelago.

Racialization: Racial Oppression of Roma

Angéla Kóczé
Central European University, Budapest, Hungary

Synonyms

De-humanization of Roma/Gypsies; Discrimination against Gypsy/Roma; Inferiorization and stigmatization of Gypsy/Roma; Racism against Gypsy/Roma; Social exclusion of Gypsy/Roma

Definition

Racialization and racial oppression of Roma are discursive and structural mechanisms that place them in an imaginary hierarchical classificatory system based on phenotypical, cultural, and social markers and render them as "other"/sub-human. These oppressive discourses became articulated and solidified in concrete social practices, mechanisms, policies, and structures in Roma people's everyday lives.

"Roma" is a politically constructed identity used as a category to capture various ethnic groups throughout Europe, North and South America, and other parts of the world regardless of whether they are nomadic or sedentary communities who identify as Roma, Gypsy, Travellers (in Ireland), Sinti (in Germany), Zigeuner, Cigani, Gitano, Kalderash, Lovara, and so on. These ethnic groups are connected by related diverse cultures, traditions, and languages, as well as by a shared experience of racialization, racial prejudice, discrimination, and violence. Despite the negative connotation attached to the term "Gypsies," there are some communities, such as the English Romanichal Gypsies in the UK, who reclaim the name and attach an important historical and political significance to the term. The self-identification and identity construction of Roma by themselves are critical in their struggle for political recognition.

As a global diasporic racialized ethnic group, Roma are dispersed unevenly. Knowledgeable estimates suggest between 6 and 12 million people in Europe, two-thirds of whom live in Central and Eastern Europe (Ringold et al. 2004). It is difficult to gather statistically correct data because of the lack of or inaccurate official demographic data on Roma, as well as the reluctance on the part of Roma to identify themselves to state officials due to the historically well-founded fear of data misuse that can lead to discrimination and violence.

The origins of Roma are still debated in academia. According to one approach, Romani people were already present from the tenth- and eleventh centuries onwards and connected to a diasporic group from India whose occupation and character are attributed to the Romani people (Heng 2018, pp. 417–418; Fraser 1995, p. 33). The Indian origin theory is supported mainly by linguistic evidence (Hancock 1987; Fraser 1995; Matras 1995, 2002), which is confirmed by genetic studies (Gresham et al. 2001; Morar et al. 2004). This school of thought evolved from the ideas of two eighteenth-century researchers, Johann Rüdiger (1751–1822) and Heinrich Grellmann (1753–1804). Rüdiger, a scholar of comparative linguistics who later become a professor of

political economy, published his *Von der Sprache und Herkunft der Zigeuner aus Indien* [On the Language and Indian Origin of the Gypsies] in 1782 to prove the Indian origin of Romani language by comparing it to Hindustani. According to Yaron Matras, this was the "first concise grammatical description of a Romani dialect as well as the first serious attempt at a comparative investigation of the language, it provided the foundation for Romani linguistics" (Matras 1999, p. 89). Grellmann also advocated the theory of the Indian roots of the "Gypsies" in *Die Zigeuner* [The Gypsies] published in 1783 – which received wider publicity than Rüdriger's book – and became a point of reference for Roma in Europe (van Baar 2011, p. 78; Mayall 2004, pp. 118–120; Matras 1999). This linguistic approach focused on the Indian origins of the Romani language and distinctive (orientalizing) cultural and behavioral differences underpinned by the belief in inheritance and blood ties (Mayall 2004, p. 35).

The second main school of thought rejects and sharply critiques the legacy of eighteenth-century Gypsy studies which orientalized Roma and their alleged non-European origins, language and culture (Okely 1983). This new approach was most articulated by the "Dutch constructivists" Leo Lucassen, Wim Willems, and Annemarie Cottaar in *Gypsies and Other Itinerant Groups: A Socio-Historical Approach* (1998). Their central argument is that "Gypsies" are not the descendants of Travellers who came from India centuries ago. Rather, they are an indigenous population whose occupations rendered them wanderers and therefore stigmatized them in Europe whose distinct cultural traits developed as a reaction to resist and survive in an extremely hostile environment. According to Lucassen et al., using ethnicity and diaspora as the theoretical frame to conceptualize the situation of Roma "symbolizes a deathtrap." Ethnic identity is based on the assumption of having a common descent, a shared history and culture. Yet the social constructivist argument is inevitably connected to eighteenth-century modernity and the Enlightenment project that used repressive measures against Roma as an integral part of the nationalism and racism that

excluded Roma from the mainstream cultural canon. Huub van Baar provides a detailed critique: "Their central thesis builds on, firstly, a singularized and overly negative representation of Enlightenment thought and, secondly, on the suggestion that the 'core' of Enlightenment has been preserved in all later events, at least when it comes to how this supposed core has continuously reinforced Roma stigmatization" (van Baar 2011, p. 93). van Baar compellingly illuminates the limitations, challenges, internal contradictions, and differences of these two contested and still prevalent scholarly strategies, which continue to be reproduced to influence the development of political, institutional, cultural, and scholarly representations of Roma (Ibid., pp. 77–105).

These dominant scholarly approaches not only attempt to explain the origins but also contribute to the racialization of Roma. The first approach emphasized the distinctiveness, singularity, and peculiarity of Roma by constructing and reconstructing inflexible identity boundaries. David Mayall succinctly explains: "Their [Roma] separate racial identity was constructed around notions of foreign origin and distinct language, cultural and behavioural differences, their mode of earning a living and, lastly, but perhaps most centrally to the race concept, a belief in physiological distinctiveness" (Mayall 2004, p. 118). This kind of categorization is based on a perceptual saliency that racializes Roma in connection with their hierarchization, inferiorization, subjugation, and oppression. Moreover, it posits a racially defined, fixed, unchangeable, and permanent Romani culture. Conversely, the constructivists challenge the narrative of Roma as a suffering, homogenized, and continuously victimized ethnic group, assumed to be a counterproductive and homogenizing political claim (van Baar 2011, p. 87). By the same token, they dismiss the complex reality and relationship of Roma to knowledge production and completely underestimate the political agency of Roma that shapes, alters, or even subverts their own representation.

While the first language- and culture-centric approach (consciously or unconsciously) uses socially constructed racial categories that inevitably do form the basis of social identities, the second school of thought aims to eliminate any kind of ethicized or racialized term at the expense of neglecting and obscuring Roma identity and its interplay with structural racism. The social constructivist argument of the Dutch school of Lucassen, Willems, and Cottar (1998) has recently been rearticulated by Martin Kovats (Kovats and Surdu 2015) and Mihai Surdu (2016).

Alternative Epistemology on Race/ Racialization

In academia, the racialization of Roma has either been neglected or not theorized at the same level of detail as for other racialized groups, including blacks, Jews, Muslims, and others. Perhaps the negligence of Roma in mainstream race/racialization-related scholarship is merely a reflection of the tacitly enacted racial and epistemic hierarchy.

However, Roma have nonetheless been racialized and perceived and treated as a different Other and/or inferior under the rubric of culture and ethnicity. As Thomas A. Acton convincingly argues, scientific racism was a long-standing norm of international science, and despite its loss of legitimacy in academia, "it continued to influence both popular culture and academic discourse about Roma/Gypsies/Travellers" (Acton 2016, p. 1187). In the wake of World War II, when the Holocaust (Lewy 2000) became the primary reference point for race, in Europe, race became erased and denied (Goldberg 2006). However, its meaning and consequences never evaporated; rather, the concept of race solidified in social relations, practices, and structures.

Roma-related scholarship has found countless ways to talk about racialization without drawing on the category of race or the process of racialization. Terms include "Romani lifestyle," "otherized minority," "ethnicized poverty," "minoritized population," and so on. Recently, a new trend has emerged, mainly through the schools of critical race theory and feminist intersectional theory which use race as an

R

analytical category (besides gender, class, and others) and racialization as a process and condition to explore the situation of Roma (Kóczé 2018a). Bonilla-Silva (2015) suggests some new directions in critical race theory, including the imperative of new theoretical and empirical work which has to come from subaltern scholars. In academia, the widely shared assumption is that epistemology and knowledge production is neutral and detached from the social, political, and economic context. This belief has been challenged by feminists and black theorists. As a result of the influence of these innovative works, decades later, Romani feminist scholars have become the frontrunners in challenging racist and sexist epistemology and the notion of neutral knowledge production in Europe (Kóczé 2018a). Challenging Roma-related epistemology is a prerequisite for using race, racialization, and racial formation as analytical apparatuses to understand the enduring structural discrimination against Roma. By using intersectional theory and methods – termed and introduced by black feminist scholars – Roma feminist scholars have begun to expose intersecting race, class, and gender-based oppressions and also created a conceptual language and alternative explanatory framework. Charles Mills succinctly explains that alternative epistemologies must come from subaltern's perspective. He argues: "hegemonic groups characteristically have experiences that foster illusory perceptions about society's functioning, whereas subordinate groups characteristically have experiences that (at least potentially) give rise to more adequate conceptualizations" (Mills 1998, p. 28 cited by Bonilla-Silva 2015, p. 79). It matters how racialized experience is articulated, shared, and transformed into knowledge. Alina Lemon has made a similar observation on the importance of race-related knowledge that is socially mediated by people who are affected by the impact of systemic racism. "Moreover, white elites rarely sustain relations with white poor [...], however, even the most intrepid white elite investigators do not convey knowledge of material conditions in the same ways do those who know poverty by smell and by touch, by haptic means" (Lemon 2019, p. 20).

Historical Racialization of Roma

Most scholars who work on the concept of race as a classification and hierarchization of human beings argue that it derives from the late eighteenth century and the beginning of European colonization (see Omi and Winant 2014; Allen 1994; Hannaford 1996). Geraldine Heng (2018) challenges the common assumption that race, racism, and racial logic are the social, cultural, and political product of the modern era. She bravely analyzes Europe's encounters with various racialized groups including Roma (referred to as "Gypsies") from the twelfth to fifteenth centuries to trace the trajectories of Roma in medieval Europe. Her collection of excerpts from the medieval historical written record exposes the racial attributions ascribed to Roma which define their collective racialized identities. Heng points out that her representation is about how Europeans perceived Roma and not how Roma represented themselves, a subject that remains under-researched and under-theorized, not just in medieval but also in modern historical scholarship (Heng 2018, p. 417).

The first assumption is that Roma were represented by others in the tenth and eleventh century based on a few historical texts first presented by Angus Fraser (1995) and reused by Geraldine Heng to exemplify the prejudiced description of Roma. The Arab historian Hamza of Isfahan (c. 950) recorded the encounter of the fifth-century Persian monarch Bahrum Gur with the descendants of Roma, who are called the Zott. According to the text, Bahrum Gur decided that "his subjects should work for only half the day and spend the rest of their time eating and drinking together to the sound of music, encountered one day a group which had wine but no music [...] The monarch then persuaded the king of India to send him musicians – 12,000 of them – and they were distributed to the various parts of the Persian kingdom, where they multiplied" (Fraser 1995, p. 33 cited by Heng 2018, p. 418). Heng assumes that these people are the descendants of Roma. Fraser also explains that these musician migrants were called Zott by Hamza and Luris in Firdawsi's eleventh-century Persian

epic. He notes that both names Zotti (plural Zott) and Luli or Luri are Persian names for Gypsies. According to the Firdawsi's epic, the recent migrants from India were not praised and appreciated by the Persian people. The ruler of Persia generously offered some resources; however, the immigrants from India were described as spineless and ungrateful. They could not even commit to working long-term; rather, they opted for short-term satisfaction and were punished with enforced nomadism (Heng 2018, p. 419).

This very first medieval text sowed the seeds of the perennial, pervasive assumption about Roma as feckless, ungrateful, irresponsible aliens who do not possess wealth or any military, economic, or political power and influence, who rather use their portable skills and wits to survive. So, even this kind of description employs a racial logic and places them as inferior to the settled population. Heng meticulously examines several historical texts mainly used by Angus Fraser (1995) and Ian Hancock (1987) to show that Roma, by virtue of their distinctive occupations, skills, and diasporic existence, have been perceived as a different race. After a lengthy discussion and textual analysis, she succinctly explains: "Our sojourn into medieval race has made a practice of emphasizing how operations of race-making proceeded from the outside: how differences among humans were selectively essentialized in absolute and fundamental terms, and attached to a human group to characterize it definitively, positioning the group within a hierarchy of power relations" (Heng 2018, p. 447).

Heng also gives a full account of the practices of medieval anti-Gypsy prejudice, race-making, and sub-humanization, which provided full legitimization for the enslavement of Roma from the thirteenth to the mid-nineteenth century, as a "race during their centuries-long sojourn in parts of south-eastern Europe – in Wallachia and Moldavia, two territorial polities that later joined to become Romania in 1859" (Heng 2018, p. 436). Based on various researches (Gheorghe 1983; Hancock 1987; Beck 1989; Achim 2004), large sections of the Romani population became dehumanized, enslaved by the monasteries and the boyars (feudal masters, Romani slaveholders).

Their slavery contributed to the feudal economy both in the mediaeval period and later for Romanian nationalism and state formation until their emancipation in 1855 and 1856 (Ibid.).

In his revealing text, Sam Beck shows that: "Gypsies came to be seen as universally marginal sub-humans," and claims: "As is true today, Gypsies were to be found in a diversity of social and economic levels within society, even though" Gypsy "(Tigan) became synonymous with slave (rob)" (Beck 1989, p. 45). Beck makes an important point about slavery. Firstly, he states that slavery is a commodification of human beings which reflects not only the value of the human labor but which also reifies human relations. Aime Cesaire's seminal book *Discourse on Colonialism* (1972) introduced the theory of "thingification" that describes the transformation of the oppressed into objects functioning solely to satisfy the needs of the colonizer. Cesaire's "thingification" is related to the "commodification" that Beck discusses regarding the slavery of Roma. Secondly, Beck's bold proposal is that: "Gypsy slavery as a system of oppression was formative, generating a culture of prejudice" (Beck 1989, p. 54). In other words, the systemic and continued hostility to and persecution of Roma created a structural condition which reinvigorated and perpetuated the racialization of Roma. As Beck comments: "[...] certain groups of people are allowed to be dehumanized, while others are not" (Ibid.).

By the late eighteenth century – when science was used to justify and rationalize capitalist exploitation and colonialization by means of hierarchical classificatory system in which usually dark-skinned people were relegated to the lowest section of humanity compared to other, lighter-skinned populations – the Roma were already socially interiorized and dehumanized in Europe. White Europeans encountered Roma in Europe as an internal inferior long before the global discoveries from the fifteenth to mid-seventeenth century, when they encountered human beings in Asia, Africa, and the Americas who looked and acted very different from themselves. The literatures refer to this pseudo-scientific innovation as necessary tool to explain the social and cultural

R

differences in biological terms. This served to justify their efforts to colonize, exploit, enslave, and even exterminate certain groups. Although the biological idea of race, based on differences and hierarchization of human beings, has been discredited by academia, however race as a socially constructed category and racialization as social and economic process and condition still should be of continuing interest to social analysis. Regarding Roma-related academic scholarship, Beck critically notes: "[. . .] much work has been carried out on how Gypsies are marginal in specific societies. The origins of such marginalization, power relations in particular, historical processes in general, active resistance, or even active participating in the forces that dominate them have not been part of the scholarly discourse concerning Gypsies" (Beck 1989, p. 54).

Beck calls for a new research agenda that resonates with the meticulous analysis of Gypsy-related studies, which focuses on the conflicting and controversial process of both the formation and reproduction of Gypsy identities from the early sixteenth century until the present by David Mayall (2004). In his pivotal book, Mayall uses an expressive analogy to show the construction of Gypsy identity through various schools of thought. "The foundations of the *racial Gypsy* house are rooted nineteenth-century scientific theories" (Mayall 2004, p. 35, my emphasis). In fact, according to Mayall, post-1945 studies on Roma construct them as an ethnic group, rather than a racial group, in which nomadism and nomadic ancestry are replaced by migration and foreign origin. As he points out: "it very closely resembles the racial building, using the same bricks but in this case holding them together by the mortar of origin, culture and ancestry rather than racial science" (Ibid.). Mayall's suggestion is to critically interrogate the process and its significance in the use of different methods, approaches, and theoretical frameworks produced by various school of Roma-related studies; however, he does not offer a way out from the perpetual repetition and reproduction of the constructed perspectives on Roma. "The belief that the Gypsies constitute a separate racial group has long outlived the scientific discrediting of the classifications: although the

foundations of the racial house have been removed, the building remains standing largely as a result of the ideas and writings of certain individual authors and groups of writers contributing to the persistence of this particular construction through its repetition in various forms" (Mayall 2004, p. 36). I agree with Mayall's main conclusion about the continued repetition and his argument that despite the claim to objectivity, Roma-related studies should be read and understood as a product of their social and political time, one that is limited by the classification of peoples. However, what Sam Beck suggests is not just a critical reflection on knowledge production about Roma where positions and power relations are important but also an invitation to integrate and relate broader historical, social, economic, and political processes, as well as to provide space for Roma to participate and offer an alternative epistemology to shape and form the "forces that dominate them" (Beck 1989, p. 54).

Nicolae Gheorghe (1946–2013), a sociologist and one of the best-known Romani intellectuals, also participated in the construction of Roma identity. He attempted to contradistinguish the Roma "ethnic identity building" from the late eighteenth-century nation- and state-building efforts which significantly contributed to the exclusion, stigmatization, and criminalization of Roma. Gheorghe's agenda merged with that of pro-Roma international and human rights organizations who fought to transform the hated, inferior Gypsy into respectable and equal Roma. He explained thus:

> Why have I used the word 'transnational' from the array of concepts which are on offer to describe non-territorial or cross-stata [*sic*] or dispersed minorities? The idea, the meaning, is to indicate that we can evolve in a different way from nation states and national minorities. I wish to assert that we can build up an ethnic dynamic and a new image by reference to an interaction with non-national institutions or supra-national institutions. (Gheorghe 1997, p. 161 cited by Mayall 2004, p. 32)

Gheorghe admits that any identity is invented, constructed, and political. However, he conceived the Roma transnational identity as different from any other national identity and as a consequence

following a different political strategy. In 1997, he co-authored a paper "The Roma in the Twenty-First Century: A Policy Paper" with the prominent Roma anthropologist Andrzej Mirga, in which they elaborated some dilemmas and possibilities, including transnational identity building and other political projects that mark the future of Roma.

Global Capitalism: Deep-Seated Structural Racialized Oppression of Roma

The vast majority of Roma people have historically suffered from hostility, structural discrimination, violence, racialization, and accumulated socioeconomic disadvantages which prevented them through centuries to integrate in the institutional and social fabric of Europe. The perception of Roma has been historically framed in different ways: initially they were portrayed as vagabonds, criminals, and untrustworthy, and more recently, they are still depicted as inherently nomads and racialized others (Okely 1983). However, all the negative perception and representations of Roma became normalized and tacitly transformed into various social mechanisms and structures. The racialized perception of Roma provides an ample justification for repressive policies, legislations, and reinforcement of racialization and deep-seated structural discrimination and oppression at the transnational and local level (Kóczé 2018b).

In the era of post-structuralism and post-modernism, the grand narrative of imperialism is on the wane and is seldom discussed in relation to Roma exclusion and racialization in global hierarchies. While structural imperialism explains the persistent inequalities between imperialist and exploited countries (Galtung 1971), the world system analysis goes beyond the nation- or state-centered political structure. It provides an understanding on the imperialization of interconnected transnational political units entangled with world economy between and within countries at the centers, semi-peripheries, and peripheries (Wallerstein 2004). Most world system scholars recognize the significance of racism but tend to regard race and racialization as an ideology or

symptom of the global capitalist system (Balibar and Wallerstein 1991). In Wallerstein's understanding, both racism and sexism are ideologies that sustain and reproduce the global capitalist economy: "[racism] allows a far lower reward to a major segment of the work force than could ever be justified on the basis of merit" (Ibid., p. 34). Here, Wallerstein is mainly referring to the exploited and underpaid working class, which can be composed of "white" and racialized groups, but does not explain the racialized structural unemployment faced by many Roma in Europe. The recent EU Agency for Fundamental Rights report concedes that 20 million people in Europe are threatened by poverty and social exclusion by 2020 and that Roma are overrepresented in this population (European Union Agency for Fundamental Rights 2020, p. 9). Moreover: "80% of Roma continue to live below the at-risk-of-poverty threshold of their countries. Every third Roma lives in housing without tap water; one in 10 in housing without electricity; and [...] every fourth Roma (27%) and every third Roma child (30%) live in households that faced hunger at least once in the previous month" (Ibid.). The data shows that racialized Roma face structural unemployment, social exclusion, and political disenfranchisement in both core (Western European) and semi-periphery (East Central and South Eastern European) countries. Quijano describes the general law and mechanism of contemporary capitalist accumulation which reproduces and reworks racialized and gendered difference through the social and spatial hierarchies that exclude minimal wage work, hyper-exploited workers, racialized people, and segregated places from capital accumulation (Quijano and Ennis 2000). According to Marx, unemployed (unproductive) people are the "surplus population" created and perpetuated by capitalist conditions (Marx 1990, p. 794). They can be categorized into three categories: *floating, latent,* and *stagnant,* and he later added a fourth, *lumpenproletariat.* The last category is distinguished from the working class; it is described as the lowest stratum of society, including vagabonds, criminals, and prostitutes (Ibid., p. 797). During state socialism and the domination of

R

Marxist doctrine, Roma were associated with deep-seated stereotypes and prejudices based on the *lumpenproletariat*.

The point here is not to give a full critique of Marx's Eurocentric categorization, but rather to illustrate that in the logic of capitalist accumulation, the global hierarchical division of labor is reproduced in the localized economic system where the (unproductive) "surplus" population become differentiated in both social (racialized) and spatial (segregated) terms. Prem Kumar Rajaram persuasively argues that: "Capitalist modes of production do not simply create a racialized structure, a superstructure of ideology of racism. Capitalism is constituted by these histories (Hall 1996; Dirlik 2002)" (Rajaram 2018, p. 629). There is a dialogical relation between capitalism and racialization as processes of dehumanization and inferiorization constituted through the material grounding and epistemological, structural hierarchies of global capitalism (Quijano and Ennis 2000). As the 2020 EU report notes, 80% of Roma who continue to live under the poverty line embody the racialized surplus population, based on their accumulated structural disadvantages and permanent socioeconomic exclusion. Their marginalization must be seen through the lens of hierarchical global capitalism.

New Direction: Rethinking Racism and the Racialization of Roma

If we rely on social constructivist explanations, then any attempts to deal with identity formation and consolidation will inevitably essentialize and racialize Roma. One productive way out from this perennial race crafting is to deconstruct the existing literature on Roma by explaining the changes, continuity, and resistance of Roma in the various gendered and racialized orders. Moreover, this would relate, connect, and bring together various local histories, narratives, and struggles and create synergies and solidarities among other racialized and oppressed population.

At the same time, this will also serve to construct a new language and analysis to humanize a Roma population that has been humiliated, harassed, violated, discriminated, and, in the most extreme case, exterminated through centuries. During World War II (1939–1945), more than half a million Roma were systematically killed by the Nazis and their allies (Hancock 1987).

Besides the critical revision and reinterpretation of the archives of Romani studies, critical race theory provides an analytical framework, methodology, and language to elaborate the system of oppressions and racialization and to think about race not exclusively as an identity but rather an imposed and changing social hierarchy.

Yet the concept of racism has become a central focus in number of Roma-related studies focused on "racial prejudice," anti-Roma attitudes, "Romaphobia" (McGarry 2017), and "anti-Gypsyism" (Rostas 2019). These approaches are very important; however, they still downplay the significance of materiality. Furthermore, as they center around identity, and analyze racism as an ideology, a psychological phenomenon at the individual level, they understand racism as a moral and behavioral failure or simply function as a rearticulation of historical anti-Roma racism. Following Eduard Bonilla-Silva (1997), racism should be understood as social system embedded and reproduced in ideological, economic, and social structures which intersect with class and gender structuration in the society. Analysis must therefore expose the covert and invisible (color-blind) racial operation of institutions which sustain and reproduce systemic racial inequality. As Bonilla-Silva stresses: "we cannot go to post-racialism without first eliminating the racialism from our midst" (Bonilla-Silva 1997, p. 85). I would only add that we cannot transcend the analysis of racism, race, and racialization without showing the material social conditions and mechanisms in different historical moments that have enabled the discursive and structural racialization of Roma.

Definition

This essay begins with an introduction on the relationship between racism and imperialism.

The second section tackles the importance of ideology, using the examples of the British Empire, the Ottoman Empire, the Nazi Empire and the Soviet Union, the case studies utilized throughout this contribution. The third section examines the practice of racism within these entities, i.e. the ways in which ethnic and racial hierarchies operated, which, in the case of the short-lived Nazi empire, meant genocide. The final substantive section tackles the rise of racism and intolerance as a result of imperial collapse in which new nationalisms can lead to genocide and ethnic cleansing. The conclusion emphasizes the multifaceted links between racism and imperialism.

Racism has a complex relationship with imperialism. On the one hand, the rise of empire during the course of the nineteenth century played an important role in its ideological evolution as Europeans made contact with people in Africa and Asia and came to the conclusion that they had not reached the same level of economic, social, cultural, and religious development because they formed part of inferior racial groups. This type of inequality is found in pre-modern empires such as the Ottoman, in which those of the Muslim faith always remained top dogs in a religious hierarchy. Empires in the twentieth century have practised the most extreme forms of racism, epitomised by the actions of the Nazis during the Second World War, who carried out a series of genocides against those whom they had constructed as racial inferiors (Mazower 2008). However, some empires have also displayed diversity and even equality. While Turks may have found themselves at the top of the religious tree in the Ottoman Empire, elements of diversity existed within the system which they had created since the late Middle Ages. The best example of an empire practising equality consists of the system constructed after the Russian revolutions of 1917 in the form of the Soviet Union. This gave rights based upon nationality to peoples over the vast areas which it controlled. Some of the worst acts of racism and ethnic intolerance have actually taken place when empires have come to an end and when concepts of nationalism have replaced those of diversity, as the examples of both the dying Ottoman and Soviet Empires demonstrate.

We therefore need to see empire as a system of control in which some elements of diversity may exist, but in which a perceived ethnic, racial, religious, or political trait means that a particular group remains at the top of the hierarchy. While some empires might recognise diversity, all also practise exclusivity. Some are clearly more inclusive than others. On the one hand we might identify the Soviet Union as the most egalitarian while, on the other, we can point to Nazi Europe during the Second World War as the most racist. In this way we need to understand empire as a system in which one ethnic group controls a series of others, often before the others have any sense of national or ethnic consciousness but in which this control helps to bring such consciousness into being.

The racism which imperial regimes practise manifests itself in a variety of ways. In the first place, we can identify ideology, which varies from the fairly inclusive USSR to the overtly exclusive Nazis. In between we can identify, for example, the British and Ottoman Empires. Ideology manifests itself in a variety of ways including decisions upon who holds power. In the Nazi, Ottoman and British cases, this depended upon possessing the correct racial, religious, or ethnic credentials; in the Soviet case, ideological soundness played a determining role. Most empires carry out acts of persecution, often in the most extreme form of genocide. However, some of the worst cases of mass killing have taken place when nation states, with their exclusive nationalistic ideologies, have replaced more inclusive polyethnic entities.

Ideology

Empire may not have invented racial ideology, but racism became an ideology in the age of empire in the decades leading up to the First World War. The fathers of racial ideology, such as Joseph Arthur Comte de Gobineau and Robert Knox, created racial hierarchies in the middle of the nineteenth century at a time when Europeans increasingly came into contact with peoples throughout the world whom they found unfamiliar and therefore rationalised the differences which they perceived precisely by establishing racial hierarchies (see

e.g. Biddiss 1970; Lorimer 1978). However, while many European empires came into contact with people beyond Europe, others racialised those they found on their doorstep. The main focus of nineteenth-century British imperial racism may have consisted of the people it controlled in Africa, Asia, and the West Indies, but the subjected people of the colony on the British doorstep, Ireland, also found themselves constructed into a different race (Curtis 1971). Similarly, while the German Empire may have utilised the same racist ideology in the territories which it seized beyond Europe at the end of the nineteenth century, (Conrad 2011) German racial ideologues also began to racialise the people whom it controlled in Poland, seized by Prussia during the course of the eighteenth century (Broszat 1972).

Racial ideology played a central role in the classic colonial empires which emerged during the course of the nineteenth century. However, the most overt example of racism and empire consists of the self-appointed Third Reich, which controlled most of Europe during the Second World War. The ideas upon which it operated essentially put into action the views of Nazi ideologues, especially Adolf Hitler in *Mein Kampf*. At the top of the racial hierarchy stood the German Aryans, who essentially had the role of controlling the territories that the Nazis had seized because of their imagined racial purity and superior intellectual ability. In order to make Nazi dreams come true, the new masters of Eastern Europe had to utilise the power of the indigenous populations of the territories they conquered in the form of Slavs, whom they could work to death if necessary. In this new and perverted Garden of Eden, some groups would face expulsion (the unhealthy, the Roma and the Jews) because the racial ideology and hierarchy constructed by the Nazis meant that they should face extermination (for an introduction, see Burleigh and Wippermann 1991).

Other empires practised racism in less obvious ways. The Ottoman Empire controlled a variety of ethnic groups in the territories which it had conquered in the Balkans from the fourteenth to sixteenth centuries. Some of these would certainly have had advanced concepts of their own religious

and perhaps ethnic identity (at least in a pre-modern sense), including the Orthodox Serbs and Greeks. While the empire may have carried out acts of persecution when sweeping westwards, one of the reasons why these identities evolved into nationalism from the end of the eighteenth century was that the Ottomans recognised their existence through the millet system, which allowed different religious groups to continue functioning and practising their own faiths. This gave an element of multi-ethnicity to the Ottoman Empire, although this had its limits as Muslims remained at the top of the tree and multi-ethnicity only functioned as long as the controlling ideology did not come under threat. When it *did* come under threat, as the Empire began to collapse during the course of the nineteenth century, those who threatened the status quo would face the consequences (Quataert 2005).

One of the least racist empires was the USSR. While it does not always attract the label of empire, it operated in this way in many senses, being ultimately controlled from the central point of Moscow, and building on the foundations laid by its Tsarist predecessors who had expanded their domains from this point. While the decades leading up to the First World War had witnessed the implementation of a policy of Russification, which meant the suppression of a variety of ethnicities (Weeks 1996), the Soviet Union operated in a different way. In theory, no racism existed in the Soviet Union. Rather like the Ottoman Empire, the USSR tried to maintain control by recognising, perpetuating, and even creating ethnic difference (see e.g. Martin 2001), as long as it did not threaten the status quo. However, once it did, as happened during the Second World War, those who questioned the system would, like nationalists in the late Ottoman Empire, face the consequences in the form of ethnic cleansing, especially in connection with perceived and real acts of treachery which followed the arrival of German armies during the Second World War.

Imperialism and the Practice of Racism

The racial ideologies which form the basis of imperialism manifest themselves in a variety of ways, including the implementation of hierarchies and the practice of persecution. This is especially so when the established order expands or feels threatened by ideologies, above all modern nationalism, which threaten the status quo. Even in the case of the ethnically egalitarian USSR, the Empire carried out acts of persecution against those perceived as threatening it.

The millet system within the Ottoman Empire only functioned on the basis of the Muslims maintaining their position at the top of the tree, which manifested itself in a variety of ways by the end of the eighteenth century. While there was a certain equality in terms of the right to religious worship, clothing laws, for example, distinguished people according to social status and ethnicity. At the same time, while all law courts may have been equal, Muslim courts were more equal than the rest (Quataert 2005: 142–194).

As well as creating and perpetuating structures of ethnic exclusion, the Ottoman Empire also carried out acts of extreme persecution, especially during its rise and fall. The expansion of the Empire into the Balkans meant acts of extreme intolerance in the context of medieval warfare carried out against a series of groups which they conquered, including Greeks, Bosnians, and Bulgarians (Kinross 1977; Malcolm 1994: 43–50; Palmer 1992; Wheatcroft 1995: 1–22).

The rise of nationalism during the course of the nineteenth century fully revealed the nature of Ottoman intolerance as the patriarchal and dying entity came under threat from new and more dynamic belief systems which, by attempting to split away from the established Empire, appeared to threaten its very existence. While a variety of ethnic groupings faced the wrath of the Ottomans, those which would experience some of the most extreme persecution included the Greeks, the Bulgarians, and the Armenians. The reaction towards the rise of Greek nationalism in many ways set the scene for what would occur over the next century. The revolt of the Greeks in the 1820s instantly resulted in their repression, which included the brutal hanging of the patriarch of Constantinople. Ultimately, this act of vengeance, like many of those which followed over the next century, would prove futile with the emergence of the first Greek state in the 1830s

(Clogg 2002: 17–97). Similarly, the 'Bulgarian Massacres' of 1876 could not prevent the formation of 'large Bulgaria' (Crampton 1997; Jelavich 1983: 346–348). On the other hand, the late Ottoman Empire carried out its most extreme acts of persecution against the group, which did not ultimately emerge into a nation state until the end of the Soviet Empire in the form of the Armenians. They differed from most of those which would emerge into nationhood because of their location in core Anatolia, rather than the ultimately peripheral and dispensable Balkans. While the Armenian genocide, like the 'population exchange' between Greece and Turkey, happened at the end of empire, less extreme acts occurred against them before the final death throes of this entity in the First World War and its aftermath. For example, in 1894 3,000 Armenians were murdered in Sasun, while in the following September an Armenian demonstration in Constantinople led to the murder of thousands of Armenians. In August 1896, a further 20,000–30,000 may have been killed while another peak of late pre-War persecution occurred with the Adana Massacre of 1909 (Kevorkian 2011; Walker 1990: 136–242).

The British Empire overtly operated upon the principle of superiority of the white races. On the one hand, this manifested itself in the ideologies about conquered peoples which had emerged from the first imperial encounters of the seventeenth century and would become increasingly sophisticated during the 19th. At the same time, acts of extreme intolerance also occurred, especially against native Americans from the seventeenth century and indigenous Australians subsequently. Finally, as in the case of other empires, a hierarchy developed in which white Protestants held the upper hand in imperial administration, despite examples of local autonomy which emerged from the nineteenth century (see e.g. Daunton and Halpern 1999; Evans 1988; Rich 1990; Schwarz 2011; Trautmann 1997).

The most extreme example of an empire which practised persecution was the Third Reich. Born in an expansionist war aimed at acquiring territory in Eastern Europe, the Nazi regime implemented the hierarchy which had emerged in German racist ideology since the early nineteenth century. At the top stood the Germans, comprising both invaders and the millions who had lived in Eastern Europe for centuries, either as a legacy of the collapsed Austro-Hungarian Empire, or as a result of migration which had taken place eastwards. They would now find themselves a privileged ruling elite. Below them stood a range of racial undesirables who would face the twentieth century's worst acts of racism.

Nazi anti-Semitism meant the attempted elimination of all Jews on the European continent, initially through ghettoisation and consequent starvation; then though the actions of the mobile killing units (*Einsatzgruppen*), which carried out mass shootings and also utilised local anti-Semites throughout Eastern Europe; and, finally, by the use of the gas chambers concentrated in the Polish death camps. These formed part of a vast system of incarceration throughout Europe, which had initially emerged in the Nazi German homeland in the 1930s. In all, 5,933,900 out of 8,861,800 Jews in the countries occupied by the Nazis were murdered, meaning a death rate of 67% (for an excellent outline, see Dawidowicz 1987).

The outbreak of the Second World War meant that the Nazis also decided upon a 'Final Solution' to the 'Gypsy Question'. As many as 500,000 Roma may have perished as a result of this decision. The fact that the Nazis were not as focused upon exterminating European Gypsies as they were upon eradicating the European Jews meant that the former had a higher survival rate despite the Nazis using similar methods of extermination. Following the invasion of Poland, they initially found themselves concentrated in the ghettos. In November 1941 they were gathered in the Lódz ghetto with a view to their extermination, subsequently being sent to the death camp at Chelmno. At Auschwitz, a separate sub-camp was created for Gypsies ('B II e'), where they were subjected to the experiments of Josef Me ngele (see e.g. Lewy 2000).

While the Nazis implemented genocide against the Jews and Roma, the third major group which they came across in Eastern Europe, in the form of the majority Slavic populations, also had their role to play in the new order. Building upon racial ideology which had emerged during the course of the nineteenth century and which had

marginalised Eastern Europeans, they were now viewed as subhuman. Consequently, the invaders had no hesitation in killing either soldiers or civilians. The Soviet Union, as the homeland of both the supposedly racially inferior Slavs and communism, suffered particularly badly, resulting in the deaths of up to 20 million of its citizens and the destruction of around 1,700 towns and 70,000 villages. The invading Nazis commandeered agricultural produce, shot all communists, and brutally treated prisoners of war, meaning that about 3.3 million of the 5.7 million seized between June 1941 and May 1944 died, mostly due to starvation, although the SS may have executed about half a million (Förster 1986; Kumanev 1990; Mayer 1990: 259–275). The real role of the Slavic populations of Eastern Europe in the new Nazi order was as workers under the control of German masters. At the same time as utilising the labour power of the populations it came across on the ground, the regime also imported millions of Eastern Europeans to work in agriculture and in the armaments factories of mainland Germany (Herbert 1997).

A series of explanations presents itself for the level of persecution which the Nazis carried out. In the first place, the leader, the party, and much of the German population believed in a dynamic racial ideology which established and then implemented ethnic hierarchies. Just as importantly, the acts of genocide occurred in the age of Total War, when the killing of both soldiers and civilians became a central aspect of everyday life throughout the European continent.

While not quite on the same scale as the actions of the Nazis, the Soviet Empire also implemented acts of ethnic cleansing during the course of the Second World War against those regarded as having committed treachery. As we have seen, during the 1920s and 1930s this regime acted in some respects in a fairly egalitarian way in ethnic terms, even though it had murdered millions of people because of their social status.

Language policy provides an indication of egalitarianism, although it also indicates contradictions. The Bolsheviks believed in the equality of all languages and opposed the dominance of Russian. By the middle of the 1930s, native language schools had therefore opened in all regions of the country and textbooks were printed in 104 different languages. However, at the same time as native languages were extended, so was Russification, a process actively pursued from the late 1930s and continued after the Second World War. After 1945, the Soviet state pursued a policy of bilingualism, with an emphasis on Russian. Soviet language planning therefore had two clear but inevitable and contradictory results. On the one hand, minority languages survived and thrived in many cases, despite the disappearance of some. On the other hand, use of Russian clearly expanded. According to the census of 1970, the Soviet Union had 130 ethnic groupings which spoke 130 different languages (for an introduction to Soviet language policy, see e.g. Anderson and Silver 1992; Bilinsky 1968; Comrie 1981; Lewis 1972).

While nationality policy may have demonstrated elements of ethnic tolerance, religious policy did not, as the example of the fate of Muslims in the Soviet Union demonstrates. Islam experienced extreme repression during the early days of Stalin in the late 1920s and early 1930s, which meant the arrest and deportation of nearly all religious functionaries, the closure of virtually all of the 25,000 mosques which had existed in 1917 as well as Muslim schools, and the threat of dismissal of Soviet officials practising their religion. Some revival took place during the Second World War, although further repression followed under Khrushchev (see e.g. Bennigsen and Wimbush 1985; Pipes 1955).

One Muslim group, the Crimean Tatars, would face even more extreme persecution during the Second World War as a result of their perceived connection with the enemy. During the 1930s, a process of Sovietisation meant an attempt at assimilation and consequent alienation of the Crimean Tatars. During the Second World War, some fought on the side of the Nazis and, while others played a part in the Red Army, Stalin's vengeance was total. Immediately after the expulsion of the Nazis in the spring of 1944, all Tatars who had served in the German armed forces were executed. The rest of the population faced deportation to the Urals, Siberia, Kazakhstan and

Central Asia, mostly Uzbekistan. Of the 110,000 people deported, about 46% died in an action tantamount to genocide (Nekrich 1978).

The Soviet Germans suffered a similar fate because of their perceived connection with the Nazis. This complex ethnic group had resided throughout Russia for several centuries. In the early Soviet Union they had actually done quite well, as indicated by the establishment of the Autonomous Socialist Soviet Republic of the Volga Germans in January 1924. During the Second World War, as a result of accusations of acting as an internal front for the invading Nazi armies, the Soviets dissolved the Volga Republic and deported its German populations out of European Russia and into Siberia and Central Asia, a process which took several years. As a consequence of the expulsion of the Germans from European Russia, the numbers of Germans in the Soviet Union decreased because of movement out of the Soviet Union, either into Germany, or, in a few thousand cases, beyond the European continent (Pinkus 1986).

Imperial Collapse

Some of the worst imperial persecution of ethnic groups has occurred when empires collapse, being committed either by the regimes themselves or by those which succeed them as, in both cases, a move occurs away from any semblance of multiethnicity or diversity towards monoethnic nationalism. This has happened especially during the course of the twentieth century, as seen in the fall of the Ottoman and British Empires.

The end of the Ottoman Empire provides one of the best examples of such processes in action. As we have seen, the Turks became increasingly intolerant as they lost territory during the course of the nineteenth century. However, at the same time as they persecuted those they regarded as treacherous, Muslim populations which remained in territories lost by the Empire became victims of some of the earliest acts of what would become known as ethnic cleansing during the course of the twentieth century (McCarthy 1996). The worst

intolerance occurred in the era of the First World War, beginning with the Balkan Wars of 1912–13 and ending with the 'population exchange' between Greece and Turkey during 1922–23. These events occurred against the background of the death of the multiethnic Ottoman Empire, replaced by excluding nation states such as Greece and Bulgaria, which tried to eliminate their Muslim and other 'enemy' populations by deportation. At the same time, within Turkey itself, the Ottoman ideology, which had accepted diversity upon its own terms, now found itself controlled by a more dynamic and exclusionist Turkish nationalism which undertook the same acts of ethnic cleansing (but on a much larger and more ruthless scale) as those states which replaced it in the Balkans. As during the Second World War, the unravelling of the Ottoman Empire and its consequences for minorities took place against the background of Total War, when killing of soldiers and civilians became part of everyday life.

As a result of the Balkan Wars of 1912–13 involving Greece, Turkey, Bulgaria, Montenegro, and Serbia, populations with the wrong ethnic credentials found themselves living in areas controlled by governments with which they had no ethnic affiliation. The area acquired by Greece to the north of its existing territories included a minority of Greeks, with a larger percentage of Bulgarians and Turks, some of whom faced expulsion (Dakin 1972: 190–200).

The worst act of intolerance occurred during the First World War, in what has become known as the Armenian Genocide. Under threat from the Turkish authorities, it is estimated that between 1.5 million and 2 million people fled their homes in south-eastern Anatolia towards the Syrian desert, of whom about half died, while others fled westward as refugees (Melson 1992: 145–146). These events took place not only against the background of war and rising nationalism, but were rooted in the resentments which had characterised relations between Turks and Armenians over the preceding century. The spark for the genocide came from the idea that Armenians had fought with the Russians against the Ottoman Empire, which faced defeat at the

Battle of Sarikamiş in January 1915. At the same time, the Armenians differed from many of the national groups that lived in the Balkans because of their location in the heart of Anatolia. Ultimately, during the Ottoman Empire's collapse, its Balkan, Middle Eastern, and North African territories became dispensable as the newly emerging Turkish nationalists became determined to hold on to Asia Minor.

For this reason over a million Greeks, whose ancestors had lived on the Aegean coast of Turkey around Smyrna for millennia, found themselves deported to Greece in 'exchange' for several hundred thousand Muslims from Greece following the Greco- Turkish War of 1921–22 (Hirschon 2003). The new slimmed-down Turkey felt that it needed to eliminate all surplus populations with the wrong ethnic credentials, especially those perceived as having connections with internal and external enemies.

Other empires have also declined in similarly, if not equally, bloody circumstances. While Britain may ultimately have surrendered most of its possessions in a relatively peaceful way, reactions to rising nationalism often proved hostile. In India, we can point to examples such as the suppression of the Indian Mutiny in 1857 or the Amritsar Massacre in 1921 (see e.g. Collett 2005; David 2002). However, the worst acts of genocide in the case of British imperial decline occurred in the immediate aftermath of the retreat from India, as the newly emerged and dynamic nationalisms of India and Pakistan, mirroring similar nationalisms which had developed in the Balkans, ethnically cleansed themselves of over 10 million of their perceived Muslim and Hindu enemies (Talbot and Singh 2009).

At the same time as this 'population displacement' occurred, so did the ethnic cleansing of Germans from Eastern Europe, as the short-lived Nazi Empire collapsed. As many as 13 million Germans may have fled westwards towards rump Germany between 1944 and 1947. These included people who simply escaped the advancing Soviet armies. However, much of the migration occurred as a result of the movement westward of the Soviet border. In turn, the Polish border also moved further to the west, leading to an ethnic cleansing of German parts of Poland. Those nation states invaded by, but now liberated from, the Nazis (including Czechoslovakia, Hungary, and Rumania) also expelled their ethnic German populations, which had lived in these nation states before they had emerged as such entities in the fall-out from the collapse of the Austro-Hungarian Empire in 1918 (see e.g. Bethlehem 1982; de Zayas 1993).

Conclusion

Racism therefore characterises empires not only during their existence but also their aftermath. All of these entities produce some sort of racial and ethnic hierarchies, implemented in varying ways. At the most extreme, we can point to the genocidal Nazis, who had no pretence of equality of peoples in their imperial entity, but instead wished to create the racial hierarchies which had emerged in German right-wing thought over more than a century. At the other extreme we might point to the ethnically egalitarian Soviet Union, which, however, could carry out acts of persecution against those perceived as treacherous, illustrated by the fate of Germans and Tatars during the Second World War. At the same time, those who held on too strongly to their religiously based ethnic identity could also face persecution. In between the Soviets and the Nazis, we can identify empires such as the British and Ottoman ones, where a type of de facto ethnic diversity existed, but in which white Britons and Muslims remained top dogs. Those who threatened this hierarchy faced persecution.

However, some of the worst examples of ethnic and racial persecution have occurred as empires have declined and collapsed. On the one hand, the imperial powers have reacted badly to a change in the status quo in the systems they have established, as the example of the Ottomans in the nineteenth century illustrates. Yet the final unravelling of empire reveals new forms of intolerance, as the old order collapses. New nationalisms reject any concepts of diversity which may have existed, as they wish to create new ethnically pure entities.

Refugees

Refugees and Empire

Paolo Novak
Development Studies at the School of Oriental and African Studies, University of London, London, UK

Definition

Emerging in its modern form at the beginning of the twentieth century from the ashes of European empires, the modern refugee institution has functioned since then as a discursive and material cog for the assertion and upholding of key principles and practices in the international sphere, and of the hierarchies associated to them. The refugee is and has always been deeply implicated with the disruption, establishment and consolidation of international politico-institutional orders.

The Refugee and Institutional Order

Contemporary theorisations of imperialism and empire, in their disparate analytical approaches and political inclinations, share a particular concern with the figure of the refugee. This is not surprising, as histories of empires and refugeeing are inextricably linked to each other. Emerging in its modern form at the beginning of the twentieth century from the ashes of European empires, the modern refugee institution has functioned since then as a discursive and material cog for the assertion and upholding of key principles and practices in the international sphere, and of the hierarchies associated to them. The refugee is and has always been deeply implicated with the disruption, establishment and consolidation of international politico-institutional orders.

'Refugee' is the Anglicised version of the French term *réugié*, a term that had been used in France since the high medieval period to denote people fleeing religious persecution. The term derives from the Latin *fugere* (to flee) and the prefix *re* (back to, return), referring to a person fleeing back to safety (Soguk 1999). The

connotation of the refugee as a person who simultaneously escapes and returns, to safety in this case, is crucial for understanding the liminal character of the refugee institution as a figure in between politico-institutional orders, simultaneously an evidence of failure and a confirmation for such orders. Indeed, while in those days safety was primarily defined in terms of refugees' escape – the *fugere* – its contemporary usage is premised on refugees' re-turn to the 'protective' embrace of the inter-state system.

The most widely recognised definition of who is a refugee was delineated in the wake of the Second World War, and is contained in Article 1A(2) of the 1951 United Nations (UN) Convention on the Status of Refugees and Stateless Persons. The Convention establishes that a refugee is a person who can be determined to have a well-founded fear of being persecuted for reasons of race, religion, nationality, or membership of a particular social group or political opinion; who is outside the country of his nationality; and who is unable or, owing to such fear, is unwilling to avail himself of the protection of that country (UNHCR 2005). This definition evidences the nature of the refugee as an element of both confirmation and disruption of politico-institutional orders. On one side, the definition asserts and universalises state-centred interpretations of social life. A person is a refugee as a result of his or her escape from state persecution; a person can become a refugee only through the recognition of his or her claims by state authority. On the other side, the definition enables forms of inter- and transnational governance. Its normative content legitimises, in fact in many cases demands, the operations of inter-governmental bodies such as the United Nations High Commissioner for Refugees (UNHCR), and transnational and local non-state organisations; it generates global humanitarian discourses, regional programmes, and sectorwide 'best practices' for the protection and assistance of refugees; it engenders activities, propositions, critiques, and manipulations (Novak 2013).

The refugee has always been implicated in practices of state making and intergovernmental regimentation: refugee migrations are the product of crises or at least of profound changes in forms of government, while at the same time producing new forms of government (Soguk 1999). The refugee is a limit concept (Nyers 1999), a person inhabiting a liminal space (Malkki 1995) within accepted forms of institutional order.

The liminality of the refugee thus conceived makes it crucial to contemporary theorisations of empire and imperialism. The latter find a confirmation of their analytical propositions, by focusing alternatively on the *exceptional* character of the refugee, on its constitutive *force,* or on the material forces that shape and sustain refugee-related operations (Novak 2011 makes a similar categorisation).

The Refugee Exception

The author who more forcefully explores the institutional liminality of the refugee is Giorgio Agamben. Agamben's work is premised on Carl Schmitt's formulation that the sovereign is, at the same time, outside and inside the law. The simultaneity of this condition is what constitutes the paradox of sovereignty: the sovereign, possessing the legal power to suspend the law, puts himself or herself legally outside the law (Agamben 1995). Such a zone of indistinction between public law and political fact represents sovereignty's *limit,* understood as both its beginning and end: it represents the foundational moment of sovereign power; it includes through exclusion. This understanding of sovereign power is associated to the figure of the *homo sacer*, a condition or form of life described as bare, that is, naked or depoliticised. Excluded from both divine and juridical law, *homo sacer* similarly exists in a no man's land, at the threshold between the spaces of law (Mitchell 2006). *Homo sacer* is the excess of the process of sovereign political foundation: he is excluded from the normal limits of the state, yet as the limit upon which sovereign power is founded, he is also simultaneously an integral part of it (Kumar Rajaram and Grundy-Warr 2004).

The figure of *homo sacer* is, and has been, readily associated with that of the refugee. As the embodiment of citizenship and statehood

boundaries, in fact, the refugee reifies such boundaries, rendering their meaning concrete. As a residual (excremental, as Agamben would put it) subject who can be encompassed neither territorially nor in relation to the nation, however, the refugee simultaneously challenges that norm. The UN Convention definition above and more broadly refugee law re-encompass within the inter-state system what escapes from the trinity 'nation–state–territory', thus defusing such challenge. The refugee represents the 'exception' on which the norm relies.

It is the exposure of the political act hidden in the refugee definition – that of considering human life exclusively in relation to sovereignty and citizenship – which makes the refugee exception crucial for capturing, from this perspective, the imperial order of our times. On one side, the refugee represents a disquieting element in the order of the nation state, because it breaks the identity between the human and the citizen, that is, it conceives human beings exclusively by deference or reference to the nation state; the refugee brings the fiction of sovereignty to a crisis (Agamben 2008). On the other side, in a context like the contemporary one, where growing sections of humankind are no longer representable through nation state frameworks, the act of re-drawing boundaries of inclusion and exclusion signals the constitution of new forms of sovereign power. Indeed, one of the principal lessons of imperialism is that the historical and geographical specificity of certain spaces is linked to the specifiability of certain people (Reid-Henry 2007), and it is from this perspective that the refugee acquires analytical prominence in contemporary theorisations of empire and imperialism.

To transpose Agamben's reflections on the state of exception to our contemporary world, in fact, theorisations that follow this analytical perspective portray the events of '9/11', and the exceptional response that ensued, as the foundational moment in the constitution of a new imperial order. Through this optic, places like Guantanamo (Aradau 2007), or the exceptional geographies delineated by the 'War on Terror', can be seen as archetypical examples of the spaces of exception defining the political *nomos* of our contemporary world (Minca 2006). Similarly, detention centres for irregular migrants (Perera 2002) and refugee camps in Tanzania (Turner 2005) or Kenya (Jayi 2011), as much as, more broadly, the treatment of irregular migrants (Kumar Rajaram 2006), are portrayed as reconfiguring world spaces into a colonial present.

Agamben's concern with boundaries of inclusion or exclusion into the political space is at the centre of theorisations of imperialism premised on the exceptional power to define the realm of the political. The refugee, as a liminal body that exposes the self-contained institutional order between sovereignty, law, and the inter-state system, is thus a central figure of our time: it exposes those who hold the sovereign power to define the realm of the political. Indeed, the key insight offered by Agamben for understanding the contemporary world is his suggestion that democratic liberal governments are becoming totalitarian states through the powers of exceptionalism. No longer temporary or occasional, the state of exception has become the rule (Mitchell 2006).

The Refugee and Its Force

The relation between liberal governments and the refugee is also at the centre of a second strand of imperial theorisations, which, rather than focusing on the sovereign's act of exclusion, emphasises the enabling and generative dimension of the refugee institution, that is, its *force* in constituting new politico-institutional governance regimes. These contributions are mostly, albeit not exclusively, premised on the work of Michel Foucault, particularly on the concepts of productive power (Foucault 1981) and governmentality (1991), and thus emphasise the productive, that is, enabling and generative, nature of the refugee institution. Rather than seeing the refugee as a conceptual category at the threshold, and constitutive, of sovereign power, these contributions are concerned with the refugee as an object of thought and intervention, and on the discursive and material effects of contemporary refugee-related and humanitarian interventions.

Nezvat Soguk's account is exemplary in this respect because of the extreme depth and span of its research, as well as its theoretical rigour. Soguk (1999) traces the political rationalities and technologies of government that transformed the refugee into a practical field of governmental activity, through the identification of the refugee's three essential elements (a state-based territoriality, the establishment of a nationality–law nexus, its inter-governmental regimentation). These elements are associated to a centuries-long process of institutional transformation marked by three episodes of displacement – the displacement of the Huguenots, the French Revolution émigrés, and post-First World War displaced populations across Europe – that represent key moments for the definition of law-making practices in relation to territory, nationality, and inter-governmental regimentation respectively. By constituting refugee displacement as a problem of government, the refugee enables and defines the contours of a wide range of protection and assistance practices, an 'ensemble formed by the institutions, procedures, analyses, and reflections, the calculations and tactics that allow the exercise of a very specific albeit complex form of power' (Foucault 1991, p. 102): a form of power that attempts to shape and direct human conduct towards specific ends.

At its broadest, thus, refugee interventions are variously portrayed from this perspective as an expression of liberal rationalities of government (Lippert 1999), as forms of governance that stabilise, reconfigure, and reproduce world hierarchies (Nyers 1999) and that are geopolitical in their nature and intent (Lui 2002), despite their humanitarian justifications. Interventions in Iraq, Afghanistan, and Palestine thus enable the creation of an 'architecture of enmity', which reconfigures international relations into a colonial present (Gregory 2004, pp. 17–29).

Duffield (2001) most forcefully develops the link between so-called complex humanitarian emergencies and neo-colonial forms of liberal imperialism. Setting his analysis in relation to the so-called new wars characterising the context of globalisation, he questions the motives justifying humanitarian interventions, seeing them as a pretext to bypass the principle of sovereignty and to establish a global governance regime premised on liberal ideas. Such regime brings together governments, non-governmental organisations, military establishments, and private companies in complex and cross-cutting governance networks operating from the supranational to the local level. These networks are the vehicles of neoliberal governmentality, and attempt to impose a radical agenda of social transformation to which states are subordinated. This is part of a strategy that, establishing a link between security, development, and humanitarianism, attempts to spread Western liberal states' influence and control over illiberal regimes and so-called global borderlands, thus consolidating their external frontiers. Although premised on equality and democracy and the rights and freedoms of people, the effect of such form of governance is to institutionalise hierarchies among peoples and states (Duffield 2007).

Drawing from a far wider range of political and philosophical sources, and in more controversial, but also influential, ways, Hardt and Negri (2002) similarly premise their understanding of empire as a post-sovereignty and all-encompassing networked form of government, on the creative and generative power of refugees, understood here as part of a multitude. However, rather than seeing refugees as the enabling object of intervention upon which global governance regimes are premised, they see the multitude's constituent power as the best hope for a progressive transformation of the current socio-political order, as it is on its constitutive power that empire's rule rests. In their understanding, the humanitarian complex, that is, the ensemble of organisations, agencies, and principles informing humanitarian and developmental actions, is one of the pillars sustaining a new form of political rule, which does not possess any single locatable source, or any territorial centre of power. It is a global political order that accompanies the globalisation of capital, and that is premised on the establishment of flexible hierarchies and networks of command. Empire has no limits: it progressively incorporates the entire global realm within its open, expanding frontiers, and it operates on all registers of

the social order extending down to the depths of the social world. The refugee, the irregular migrant, and all those who compose the multitude are the expression of a counterimperial ontology that attempts to disrupt empire, by destabilising its foundation.

The Refugee and His or Her Material Forces

A third strand of theorisations concerned with the relation between the refugee and imperialism sets instead the refugee institution and refugee-related intervention in relation to historical and material contexts shaped by capitalism and geopolitics. Although engaging with the refugee as a conceptual category and as the object of concern of humanitarian interventions, these contributions tend to emphasise the geopolitical nature of the former, and the instrumentality of the latter in serving the interests of powerful states. This approach is sceptical towards the ontological concerns of the previous two strands, and reaffirms more traditional understandings of imperialism as a state project. Analytical attention is thus concerned with highlighting the *material forces* of production that shape the structure of society in any given historical moment. From this perspective, the refugee plays the role of a ruse, hiding the imperial projects of powerful states, most notably the US.

At their broadest, political-economy conceptualisations of the refugee reject residual understandings of this institution, that is, definitions that are based on the notion of lack of protection, such as that contained in the above UN Convention. Rather, they emphasise the historically evolving process of production of the refugee institution, the contextual and dynamic processes and practices of its social re-production, and the productive forces underpinning both. Such relational understanding of the refugee entangles both refugee migrations and humanitarian aid with national and international politico-economic structures (Novak 2013). Most notably, such narratives conflate the US's geopolitical interests with capital's endless accumulation drive. The dispossession of resources and environmental degradation, privatisation, and all those processes associated to the current bout of accumulation by dispossession (Harvey 2005) produce refugee displacement by crafting profoundly unequal and violent political and economic contexts; refugee-related interventions and their geopolitical rationales provide a convenient fig leaf for the re-production of such imperatives and rationales.

Through this optic, emphasis is therefore given to the strategic dimensions associated with refugee protection, as seen from the perspective of powerful states. The above UN Convention definition, thus, premised refugee protection on civil and political rights, as opposed to socio-economic rights, because it facilitated, in the context of the Cold War, the condemnation of Soviet politics against ideological dissent. It emphasised state persecution on the basis of religion, race, or membership in a social group, because these issues were historically problematic for the Eastern Bloc. Its selective and intermittent use, as much as the historically changing attitudes towards asylum at global level since then, function as a confirmation of the inextricable relation between the refugee and the interests of powerful nations (Chimni 2000).

Indeed, evidence supporting the materiality of such relation can be traced to the strategic deployment of the various principles embedded in the above refugee definition. The latter embodies and reproduces all the contradictions and tensions characterising modern international relations: the frictions between universality of human rights and territorial sovereignty; the compromise between individual and state rights; the contradictory principles aspired to by the Charter of the UN, such as state sovereignty, national self-determination, democracy, and respect for human rights. The emphasis on one or the other such principles, in different geographical contexts and historical moments, demonstrates how these principles are a ruse, and ultimately serve the interests of countries like the US in their attempt to deny sovereignty to countries such as Iraq (Bellamy Foster et al. 2008) or Afghanistan (McLaren and Martin 2004). Humanitarian interventions,

together with state-building and development policies and practices, transform international relations and reconfigure relations between non-Western states and their societies; they are an expression of imperial power, which acts by hiding its actors behind a language of democracy, human rights, and humanitarianism, thus denying the possibility of holding them accountable. Empire is in denial (Chandler 2006).

Of course, these same principles can be used to reach conclusions that stand in a diametrically opposite position vis-à-vis those put forward by the above analyses. Advocates of empire condemn human rights violations and lack of democracy, and highlight the threats posed by failed and rogue states, all of which are said to be causes of refugee displacement. Niall Ferguson's (2004) nostalgia for empire, as much as the call by Robert Cooper (2002) for a new liberal imperialism based on the principles of the UN Charter, mentioned above, was making headlines at the turn of the millennium. The seemingly systemic crises of the last decade, however, seem to have silenced these invocations – it is hoped for good.

Refugees and Institutional Incompleteness

The theorisations presented above offer alternative, albeit often overlapping, conceptualisations of the relation between imperialism, empire, and refugees. Whether focusing on the exceptional character of the refugee as a conceptual category, on refugee displacement as generative of networked forms of imperial rule, or on refugee migrations and interventions as a confirmation of more traditional understandings of state-centred imperialism, they substantiate the proposition that the refugee is a key political figure of our times. Indeed, the major insights offered by these contributions to the long tradition of theories of imperialism stem precisely from their ability to systematically and convincingly connect the figure of the refugee with the establishment of imperial institutional orders.

However, there are limitations to their analytical frameworks, which stem from the all-

encompassing nature in which they define those connections. Surely, the global reach and the extent of the forms of imperial power that these frameworks uncover beg for theorisations that capture these relations at its broadest. This is what makes the above analyses powerful, and analytically useful for the identification of imperial projects, their key agents and institutions, and their overarching power. Yet by starting their analysis from, and emphasising the decidedly global nature of, imperial politico-institutional orders, the theorisations explored above develop the connection between such orders and refugees *away from* the latter. Implicitly or explicitly, this connection is seen as unidirectional, unfolding in a top-down way: the multiple contingencies and contextual occurrences through which such connection concretely takes shape across the world are the result of the more or less resisted but nonetheless direct consequence of imperial projects, and the more or less coercive power of their key agents. Such contingencies and occurrences, in other words, are treated as 'parochial': they occupy a second-order rung in the analytical scaffolding of contemporary imperial theorisations (Novak 2011). All episodes of refugee displacement, protection, and assistance, thus, can ultimately be explained by an already existing imperial project, and identifying the most convincing of these theorisations becomes a matter of (intellectual and political) *faith*.

Put differently, while these theorisations make broad claims about how the world as a whole or a big part of it actually worked and work, most of these contributions evince little curiosity about the extent and limitations of the knowledge necessary to make those kinds of statements. The *naming* of empire as a form of power to be embraced or feared contributes little to political debate. Extracting a moral from historical context and trajectories, and turning it into a policy recommendation, diminishes politics as well as history. Thinking about the varied ways in which power has been exercised, constrained, and contested – within and beyond empires – may help to open the political imagination and focus the mind on the stakes and the consequences of political action (Cooper 2004, p. 272).

R

Examining the concrete operational mechanisms of refugee-related interventions in their historical and geographical diversity, on the contrary, foregrounds the wide variety of discursive, institutional, and material practices associated to the refugee institution, as well as refugees' own strategies and projects of engagement and interaction with them. Imperial 'orders' centred on the figure of the refugee do not respond to a singular logic, they do not completely fulfil the objectives they set themselves, and neither do they produce uniform outcomes. Refugee-related interventions unfold at a variety of scales and operate in multiple directions: they are seized, deflected, and manipulated by various humanitarian bodies and organisations, and by refugees themselves. Foregrounding the limits of such imperial politico-institutional orders, that is, the contextually mediated ways in which these 'orders' dynamically and concretely take shape in different contexts, renders the relation between imperialism, empire, and the refugee always incomplete (Novak 2011).

This does not mean denying the existence of empire or of imperial projects. Rather, grounding the arguably disembodied imperial theorisations presented above interrogates the imperial scale of analysis as pre-given and discrete from other levels of analysis; it attempts to capture the relation between imperial projects and refugees in an embodied way, by epistemologically situating and grounding cartographies of imperialism centred on the figure of the refugee. Such embodied epistemology may have the potential to subvert dominant geopolitical narratives, and may have concrete effects on the lives of people who are players in such events (Hyndman 2004). Indeed, focusing on the multi-scalar operations that define the connection between empires and refugees, *makes more visible the forces and agents that negotiate their existence around the refugee institution, and in so doing reproduce themselves* (Sinha 2008). From this perspective, then, the incompleteness of imperial politico-institutional 'orders' may well be a form of political rule (Bhatt 2007) as it reproduces the hierarchy of *material forces* brought together by the generative *force* of the refugee *exception*.

Imperialism

Definition

When Christopher Columbus, a representative of
King Ferdinand and Queen Isabella of Spain, landed
on the shores of Guanahani (now Watling Islands in
the Bahamas) in 1492, it marked the beginning of
Western European domination of the Caribbean
Basin, leading to the genocide of the indigenous
inhabitants of the region and the oppression of Afri-
cans and other Third-World people. While each var-
iant of colonialism was different, all the European
powers viewed the Caribbean islands as spaces for
exploitation of land, labour, and capital. Historically,
the region was divided into the English Caribbean,
the Dutch Caribbean, the French Caribbean, the
Spanish Caribbean, and the US Caribbean. However,
for the purposes of this discourse on Caribbean resis-
tance to imperialism, this essay focuses on the
English-speaking islands of the Caribbean. It exam-
ines Caribbean resistance to imperialism from differ-
ent time periods: post-emancipation to 1856–81,
1900–36, post-1936–1950s, 1960s–1970, and finally
from 1970–83.

When Christopher Columbus, a representative
of King Ferdinand and Queen Isabella of Spain,
landed on the shores of Guanahani (now Watling
Islands in the Bahamas) in 1492, it marked
the beginning of Western European domination
of the Caribbean Basin, leading to the genocide of
the indigenous inhabitants of the region and the
oppression of Africans and other Third-World
people. Initially, Spain enjoyed sole ownership
of all the islands, which was made possible

when Pope Alexander VI issued The Papal Bull
'Inter Caetera' in 1493. Subsequently, with the
Spanish discoveries of gold and silver in Mexico
and Peru, other European nations such as
England, Holland, and France – which had been
excluded from the Treaty of Tordesillas (1495) –
laid claims to the Caribbean in the 16th century.
The region, therefore, was divided into the
Spanishspeaking Caribbean, the English-
speaking Caribbean, the Dutch-speaking Carib-
bean and the French-speaking Caribbean. While
each variant of colonialism was different, all the
European powers viewed the Caribbean islands as
spaces for exploitation of land, labour, and capital.

The Caribbean consists of many large and
small islands and three countries in Central and
South America. These entities include the Baha-
mas, Turks and Caicos, Cuba, Cayman Islands,
Belize, Jamaica, Haiti, the Dominican Republic,
Puerto Rico, US Virgin Islands, Anguilla,
St Maarten, St Barthelemy, Antigua and Barbuda,
Saba, St Eustatius, St Kitts-Nevis, Montserrat,
Guadeloupe, Dominica, Martinique, St Lucia,
St Vincent and the Grenadines, Barbados, Gre-
nada, Trinidad and Tobago, Guyana, and Suri-
name. Historically, the region was divided into
the English Caribbean, the Dutch Caribbean, the
French Caribbean, the Spanish Caribbean, and the
US Caribbean. From the 15th century until the
enunciation of the Monroe Doctrine, European
nations enjoyed hegemony in the region. While
Great Britain enjoyed the 'Lion's Share' in the
region, its dominance waned at the end of the
Second World War when the US became the dom-
inant superpower of the capitalist system. How-
ever, for the purposes of this discourse on Caribbean
resistance to imperialism, this essay focuses on the
English-speaking islands of the Caribbean. It exam-
ines Caribbean resistance to imperialism from dif-
ferent time periods: post-emancipation to 1856–81,
1900–36, post-1936–1950s, 1960s–1970, and
finally from 1970–83.

The Post-emancipation Period, 1856–81

In 1833, the British Parliament passed an act that
abolished slavery; however, this measure did not

mean that the ex-slaves in the British colonies enjoyed complete freedom. In order to appease the powerful planter class, the authorities compensated them to the tune of millions of British pounds and imposed a kind of apprenticeship on the ex-slaves for a period of five years until the system was abolished in 1838. While some of the ex-slaves continued to work as wage-labourers on the plantations, thousands left and became independent peasants, and others moved into urban areas where they engaged in occupations. However, their material life did not change significantly in the years following emancipation.

In the post-emancipation period, the former slaves were subjected to the same political and economic conditions that had prevailed under slavery. Many ex-slaves were willing to remain on the plantations and work for wages; however, the planters were not keen on offering a living wage and proper working conditions. One of the earliest forms of resistance to British imperialism that occurred during the post-emancipation period took place in Guyana in 1856. John Sayers Orr, a colourful preacher, used his sermons to address issues that affected the black and coloured population. Faced with discrimination and competition from the Portuguese immigrants who came to the colony as indentured servants, Orr and his followers rioted from 16–17 February 1856 in Georgetown when the authorities tried to suppress their meetings. The riot was not confined to Georgetown but also spread to Demerara and Essequibo.

Resistance also occurred in St Vincent in 1862. In their attempt to suppress wages, the British authorities initiated a policy of indentureship whereby they imported East Indians from India to work on plantations in St Vincent. The arrival of these immigrant workers created much anxiety among the African labour force. A slump in sugar prices further aggravated the situation and resulted in the slaves taking direct action to protect their interests. In St Vincent in 1862, when the price of sugar fell and the first ship arrived with Indian indentured workers and the planters took cost-cutting measures to suppress wages, the ex-slaves rioted. The exslaves not only protested but were willing to become independent producers.

In Jamaica, the ex-slaves wrote a petition to Queen Victoria requesting land to grow their own food. Rather than affirm their request, the Queen replied that the prosperity of the colony depended not on them becoming independent producers but rather wage earners, which would guarantee the prosperity of the British Empire. This response evoked anger among the black population and eventually led to the Morant Bay Uprising in 1865. Led by Paul Bogle, a small well-organised group of men and women raided the police station on 11 August and stole muskets and bayonets. This insurrection caused much rioting and looting and lasted for three days. The British authorities sent the warships *Wolverine* and *Onyx,* troops, and enlisted the maroons. Declaring martial law, the British imperialist and its representatives in Jamaica seized the upper hand and crushed the insurrection. Almost 430 men and women were either shot or executed and over 600 persons were flogged. Both Boyle and George William Gordon were tried by court martial and hanged. Even though the authorities crushed the opposition, it did not stop ex-slaves from rebelling against British imperial rule.

In Trinidad, in 1881, the 'Jamette', a group of lower-class black Trinidadians who formed street bands and participated in the Carnival celebrations, organised a planned resistance and rioted in the streets of Port of Spain for the right to stage their own celebrations which the British authorities deemed vulgar. Additionally, East Indian indentured labourers used the Islamic festival of Muharram to protest against what they saw as restrictions to their expression of cultural freedom. However, they also protested against their working conditions on the estates and the passing of new regulations regarding the festival. On 30 October 1884, undaunted by threats from the authorities, the East Indians took their celebrations to the streets of San Fernando. There they were met with violence when the British troops opened fire, killing some nine people and wounding 100 others. These acts of protest were not isolated events but can be linked to global struggles waged by the working classes in Europe and North America. These struggles laid the foundation for more organised resistance that occurred during the 20th century.

R

Resistance, 1900–36

With the coming of the new century, the attitudes and policies of the British imperialist towards the British West Indies colonists did not change. However, the masses in the West Indies were not content to wait on the colonists to effect changes but took matters into their own hands. In 1905, fed up with the water situation in Trinidad, the people in Port of Spain rioted over a new Water Ordinance. This riot spread and resulted in some of the participants burning down the old Red House and destroying government papers and records. While not connected to the situation in Trinidad, sugar workers, stevedores, porters and other workers in British Guiana rioted during the period November–December 1905 to protest against low wages. The riots began on the Ruimveldt plantation but soon spread to other sugar estates on the East and West Banks of the Demerara. In Trinidad in 1915, a large contingent of cane farmers from the outlying towns of Princes Town, Chaguanas, Sangre Grande and surrounding areas staged a massive protest for higher cane prices. Furthermore, in March 1917, oil, dock, and asphalt workers in the southern part of the country took strike action against United British Oilfields and the American-owned Trinidad Lake Asphalt Company. This strike laid the groundwork for the massive strikes and further resistance by Trinidadian workers that occurred in 1919.

At the end of the First World War in 1918, Trinidad and Tobago faced increasing tensions as both the African and East Indian working class faced worsening economic hardships as a result of high inflation triggered by the war. In addition to high food prices, East Indians pressed for higher wages and repatriation to India. These issues exacerbated the tensions between the workers and merchant class, and drew the attention of the British colonial authorities who saw these issues as potential grounds for more social unrest. By 1919, the socio-economic conditions had worsened as a result of repressive management practices, low pay, arduous work, terrible working conditions, and lack of bargaining rights. Under such conditions, the anti-colonial forces came to the fore to defend the interest of the

working class. Consequently, during 1919, the dockworkers at the Port of Spain waterfront staged a strike for higher wages and better working conditions. This strike quickly attracted the attention of city council workers, female coal carriers, estate labourers, vendors, low-ranking civil servants, shop assistants and the Port of Spain mob comprising the black slum dwellers and city's unemployed, all of whom seized the opportunity to press for their own demands. In addition, workers from Cedros, San Fernando, Carapaichima, Couva, Chaguanas, Sangre Grande, Toco, and Tobago joined the strike. Because of a standoff between the representatives of labour and capital, a group of white businessmen led by George F. Huggins requested that the colonial secretary suppress the *Argos* newspaper, arm the white population, and station British troops on the island. The colonial authorities responded to the demands of the business elite by dispatching HMS *Calcutta* to suppress the strike and restore law and order. Moreover, they used the courts to impose punitive charges on the leaders of the strike. Furthermore, the colonial government passed the Sedition Ordinance on February 1920 that give it wide powers to arrest, fine, and jail alleged agitators and shut down the *Negro World* and *Argos*, two newspapers that it deemed were inciting rebellion. In the aftermath of the strike, the authorities deported Brutus Ironman, Bruce McConney, J.S. de Bourg and E.S. Salmon to their respective countries. The workers' struggle of 1919 had great significance because it laid the foundation of the working-class struggles that occurred throughout the English-speaking Caribbean in the 1930s.

Labour Resistance in the 1930s

The Great Depression of 1929 had brought the capitalist world economy to a grinding halt. While inflation and high unemployment had gripped the Western industrial countries, workers and peasants in the colonies faced severe hardships as a result of depressed prices for tropical products. Faced with deteriorating socio-economic conditions, the working class in the Caribbean took

direct action against colonial authorities for better wages, improved working conditions, employment and political reforms. Starting in 1933, the National Unemployment Movement (NUM) mobilised hundreds of unemployed people and organised several demonstrations in Trinidad. Two years later in British Guyana, sugar workers engaged in a series of strikes and disturbances. In Jamaica, port workers in Kingston and other areas and banana loaders engaged in strike action. These demonstrations, disturbances, and strikes were the beginning of militant protest and conflagration that spread throughout the entire British Caribbean. The small island of St Kitts figured prominently in this wave of militant protest. On 28 January 1935, sugar workers in Basseterre refused to reap the crop over and refused the payment offered by their employers. News of their action soon spread to other parts of the colony. This led to the authorities calling out the local military and reading the riot act. Several workers were killed and the next day the British government landed marines. In the ensuing days, workers were arrested and some were sentenced to prison terms lasting from two to five years. This militant action was very significant because it marked a serious political challenge to elite rule in St Kitts and demonstrated the organisational capability of the working class.

The struggle in St Kitts became a template for more militant action and soon spread to the island of St Vincent. Faced with rising food prices, workers rioted on 21 October 1935 in the capital of Kingston. They attacked government officials, invaded government property, and destroyed and damaged buildings and cars. Despite the arrival of a British warship and the declaration of a state of emergency that lasted three weeks, workers in other parts of the country defied the authorities to press their demands for land, better wages, and living conditions. News of the workers' militancy in St Vincent soon spread to St Lucia where coal loaders took strike action. However, the authorities, learning from the riots in St Vincent, dispatched a warship and landed troops on the island to quell the protest. On August 1937, another strike occurred when agricultural workers abandoned their jobs to protest for higher wages.

These events in St Kitts, St Vincent, and St Lucia garnered the attention of workers in Barbados.

Barbadian workers' resistance to British imperialism occurred as a result of the deportation of Clement Payne, a worker's organiser and member of the Trinidad Workingmen's Association. Payne returned to Barbados at the age of 33 and declared to the authorities that he was born in Barbados. On his arrival, he began to mobilise workers by organising a May Day rally on 1 May 1937. Payne used this occasion to educate the workers on the need to organise a trade union to protect their interests. In response to Payne's agitation, the governor arrested him for making a false declaration, fined him in the courts, and secretly deported him back to Trinidad. News of Payne's deportation reached the masses who took spontaneous action by taking to the streets and destroying pubic property. This conflagration affected workplaces where workers either went on strike or threatened strike action. In order to avert a national crisis, the authorities struck by using brute force to quell the disturbances. The security forces killed 14 workers and arrested some 500. News of Payne's arrest and the conflagration reached Trinidad where tensions ran high among the working class.

Unlike the smaller British colonies that were predominantly based on agriculture, the British had developed a very sophisticated oil industry in Trinidad. Oil had been discovered in 1857 and commercial production began in 1908. The industry attracted workers from Grenada, St Vincent, and other small islands. In addition to the oil industry, the sugar industry was very buoyant and used East Indian indentured labour. This mix of African and East Indian working-class people created a dynamic for agitation, with groups like the Negro Welfare Cultural and Social Association (NWSCA) and the British Empire Workers' and Citizens' Home Rule Party (BEW&CHRP) conducting political work among the workers. In both industries, and especially in the oil industry, workers faced meagre wages, inhumane working and living conditions, poor grievance procedures, oppressive management, racial discrimination, and lack of upward social mobility. These conditions created the conditions for a general strike in

the oil industry that also spread to the sugar industry, agriculture, port services, and the general working population. From 19 June–2 July 1937, the working class engaged in revolutionary insurrection that had the effect of paralysing the economy. In their attempt to protect their economic interests, the British authorities dispatched HMS *Ajax* and the HMS *Exeter* to Trinidad and violently suppressed the insurrection.

All these violent strikes, protests, and demonstrations contributed to the development of trade unionism in the Caribbean. Prior to 1937, the British had declared trade union activity to be illegal in the Caribbean. The General strikes and insurrection empowered the working class, and a number of powerful trade unions, such as the Oilfield Workers' Trade Union (1937) and labour parties, such as the Trinidad Labour Party, the Barbados Labour Party, the Jamaica Labour Party, and the British Empire and Citizens' Home Rule Party emerged throughout the Caribbean. Additionally, the events marked the entrance of the working class into Caribbean politics, especially in the aftermath of the Second World War.

Caribbean Resistance During the Cold War, 1945–1960s

The 1936 general strike and insurrection had propelled the working class into the vanguard for independence movements in the Caribbean. Because of the radical nature of the insurrection, the British authorities were forced to make concessions by way of the Moyne Commission that visited the British colonies. Emboldened by their ability to wrench these concessions, labour organisers, like Nathaniel Critchlow (1884–1958) from British Guiana, were instrumental in organising the Caribbean Labour Congress (CLC) in 1945. This group consisted of a broad coalition of labour leaders who espoused socialist ideals that ranged from Fabian socialism to Marxism. This confederation championed working-class control, regional economic planning, broader democracy for the Caribbean working class and masses, independence, and a socialist

Caribbean Federation. Formed, at the end of the Second World War, the CLC had to confront the harsh realities of Cold War politics as promoted by the US in the Caribbean. Being the leader of the free world in the post-Second World War period, the US pushed for markets and resources in the Caribbean. This meant that US multinational corporations like W.R. Grace, Texaco, and Reynolds among others became very visible in the economies of British Guiana, Jamaica, and Trinidad and Tobago. This economic thrust meant that the US felt compelled to target groups such as the CLC that advanced socialist ideas. In the larger theatre of the Cold War contest between the US and the Soviet Union, the CLC became a victim of that conflict. Originally a member of the World Federation of Trade Unions (WFTU), the CLS leadership began to fracture ideologically when Richard Hart and Grantley Adams fought over the political direction of the confederation. Hart insisted that the CLS should line up with the WFTU, whereas Adams felt that the body should affiliate with the International Confederation of Free Trade Unions (ICFTU). As a result of this conflict, the CLS was disbanded and replaced by the Caribbean Area Division of the Organización Regional Interamericana de Trabajadores (ORIT), a US-sponsored labour organisation that helped shape the American regional organisation of the ICFTU in 1952. This move paved the way for liberal politicians and parties to lead the push for constitutional independence from the 1950s onwards. While the nationalist rhetoric of these parties portended challenges to British and American imperialism, their programmes and policies ensured that neo-colonialism became entrenched in the Caribbean region until the 1970s when a younger generation embraced the ideology of Black Power.

Black Power Revolution, 1970

By the late 1960s, a younger generation of Caribbeans began to question the meaning of independence in countries such as Jamaica and Trinidad and Tobago. For many of them, independence did not put a stop to colonial exploitation, provide

much needed jobs, or end the practice of racial discrimination. Largely influenced by the teachings of Marcus Garvey, Franz Fanon, Walter Rodney, Fidel Castro, Che Guevara, Malcom X, Stokely Carmichael, Ho Chi Ming, Amilcar Cabral, the Black Panther Party and other radical ideas, these young people became attracted to the ideology of Black Power. Following the lead of young African-Americans who had become impatient with the moderate ideas of the Civil Rights Movement, the young Caribbean youths also abandoned the teachings of Eric Williams and Alexander Bustamante, respectively. Additionally, inspired by the actions of Caribbean students at the Sir George William University in Canada, who were charged and expelled for destroying university property, these young people began to adhere to an ideology that fused anti-imperialism, black nationalism, and Marxism to address the socio-economic conditions that confronted them.

In Trinidad and Tobago, the country where Black Power found its widest expression, the young people organised themselves under the banner of the National Joint Action Committee (NJAC), a coalition of groups comprising trade unions, youth groups, students and community-based organisations. Between 26 February 1970 and 21 April 1970, thousands of young people, united under the banner of the NJAC, converged on the main streets of Port of Spain and Tobago to demonstrate against the People's National Movement (PNM) Government. Additionally, the protestors were joined by officers Raffique Shah, Rex LaSalle, Mike Bazie, and David Brizan who led a small fraction of the Trinidad and Tobago Regiment in their attempts to overthrow the government. These Black Power protests and demonstrations in Trinidad and Tobago were not isolated events but were part of growing anti-colonial, antiimperialist movements that had emerged in the Third World. These massive protests and demonstrations, throughout Trinidad and Tobago, which continued for months and grew in their intensity, caught the attention of the media in the US, Britain, and Venezuela, and some commentators have suggested that the government sought military assistance from these three countries in its attempt to quell the rebellion. In order to limit and control the impact of the activities, the PNM Government declared a state of emergency on 21 April 1970, arrested and jailed scores of activists. and passed repressive legislation including the Public Order Act that sought to limit and control demonstrations.

Despite the repression of the Black Power Movement, the new opposition forced the PNM Administration to re-examine its Third Five-Year Plan and institute far-reaching reforms that sought to reorient the economy to address the pressing needs of the majority of the population. Moreover, Black Power was not simply an imported slogan but a movement that forced the PNM Government to develop the public sector to remedy years of inequality. The movement demanded nationalisation of the oil industry, the sugar industry, the banking sector and all other industries that were important to the country's economic security. More importantly, in the aftermath of the 'Revolution', a number of Marxist groups emerged throughout the Caribbean that would educate the masses on the need to transform the Caribbean based on socialism. This idea was not lost on a younger generation of Grenadians who would directly confront US imperialism in 'their own backyard' in 1979.

The Grenada Revolution, 1979

Early in the morning on 13 March 1979, the New Jewel Movement-led People's Revolutionary Army overthrew the Grenada United Labour Party (GULP) led by Sir Eric Gairy. They launched an armed attack on the radio station, police barracks, and key government buildings and installations. Grenada, a very small island in the eastern Caribbean, was ruled by Eric Gairy from 1967 to 1979. A former trade union leader, Gairy and the GULP to which he belonged had led a general strike in 1951 that demanded better wages and working conditions for agricultural workers. This strike cemented his place in the country's politics, and his party dominated Grenadian society afterwards. Over time, the GULP came to represent the Grenada elite and abandoned the interests of the working class. Grenada

obtained constitutional independence in 1974 and shortly thereafter the Government became very repressive, waging attacks on all forms of opposition, especially against the New Jewel Movement (NJM) which proposed an alternative Grenadian society. The NJM was an amalgam of two organisations: the Jewel and the Movement of the Assemblies of the People (MAP). Alarmed by the NJM's popularity and organisational capability among the masses and workers, Gairy, in 1970, established a secret police force known as the 'Mongoose Gang'. Similar in nature to the Ton Ton Macoute that had been organised by Francois Duvalier to repress the Haitian people, the 'Mongoose Gang' inflicted violence on the NJM leaders and their followers. On 21 January 1974, in the run-up to independence, the NJM and other groups staged a massive protest. This protest was put down violently and resulted in the murder of Rupert Bishop, father of Maurice Bishop. This murder and other incidents marked a turning point in Grenada's history, when, for the first time, in the history of the English-speaking Caribbean, the people took up arms and successfully overthrew the Government.

Following the overthrow, Maurice Bishop took to the airwaves and called upon the working people, the youths, workers, farmers, fishermen, middle-class people, and women to join the armed revolutionary forces to protect the revolution. Subsequently, the NJM formed the People's Revolutionary Government (PRG) and sought the support of other regimes in the region. Most in the wider Caribbean, with the exception of Cuba, denounced the revolution and called on the Reagan Administration to defend democracy here. The PRG also received support from various progressive organisations in the Caribbean, among them the powerful Oilfield Workers' Trade Union, which had developed a relationship with the NJM. Declaring that they would embark on building socialism on the island, the PRG Government began to reorganise the country and implement its programme. From 1979 until the revolution was aborted in 1983, the PRG, in its attempt to transform Grenada and broaden democracy declared that it would suspend the holding of general election and instead embark on promoting people's democracy. To achieve this objective, the PRG reorganised the country politically into community groups, zonal councils, parish councils, workers' parish councils, parish co-ordinating bodies, and community work brigades. These bodies were created to foster meaningful dialogue between the people and the PRG leaders and government officials. As part of its thrust to develop a socialist society, the PRG initiated a number of reform programmes concerning matters such as literacy and education, school repair, land distribution, free milk, school meals, and national house repair. A major highlight of the projected socialist reform was education.

Based on the Cuban model of literacy, the Center for Popular Education (CPE) programme commenced in 1980 with the goal of reducing adult illiteracy on the island. Based on the principle 'it was not too late to learn', hundreds of volunteers streamed out all over Grenada, Carriacou, and Petit Martinique where they tutored the residents. Moreover, the PRG developed phase II of the program with a stated objective of primary education for adults. The curriculum included basic English, Mathematics, Geography and Natural Science, and History, with an emphasis on Grenadian history. Other popular programmes included the establishment of the National-In-Service Teacher Education Program and the Community Day School Program (CDSP). The stated objectives of the CDSP-supported community school councils were to:

- Make the school the centre of the community, and so promote a sound relationship between the two;
- Involve the school and community in building the nation through joint work;
- Develop a work–study approach and so make students conscious of the relationship between theory and practice;
- Help with the formation of a new curriculum by linking school and community, using experimental new ideas and experience, and showing the importance of the new approach to study;
- Offer a different outlook on life and prepare students for more productive participation in the building of the nation;

- Awaken hidden talents in the students and community;
- Develop and encourage both quality and quantity towards greater production;
- Promote a keen sense of patriotism.

Furthermore, the government created scholarship programmes for Grenadian students to study overseas. The PRG sent students to Cuba, the Soviet Union, the German Democratic Republic, Czechoslovakia, and Bulgaria. Additionally, the PRG funded several programmes such as the Ministry of Education, Women's Desk School, and a uniform programme to assist families needing to purchase books and uniforms. While these programmes were aimed at fostering growth and development, the revolution faced serious internal and external attacks.

Internally, not all Grenadians supported the PRG. Centuries of colonialism did not eradicate strong allegiances to Great Britain. Moreover, the GULP maintained strong support among the Grenadian peasantry, who saw Eric Gairy as a 'Champion of the people'. The regime also faced opposition from the Committee of Freedom Fighters Against Tyranny in Grenada, which distributed a five-page document titled 'More News about Bishop and his illegal Communist regime in Grenada'. Furthermore, groups such as the Chamber of Commerce called on the government to hold 'free and fair elections.' Externally, the regime faced hostility from other Caribbean governments including those of Dominica, Barbados, Jamaica (under Edward Seaga, a rabid anti-communist)and Eric Williams of Trinidad and Tobago. Furthermore, the Reagan Administration declared the revolution a threat to its national security in the region. Seen as a proxy of the USSR and Cuba, the US declared its intention to defeat the revolution and defeat socialism in the Americas. This policy was part of the US Cold War policy in the Americas to maintain its imperialist designs.

These internal and external attacks created tensions within the PRG which led to internal divisions and eventually implosion. Within the party and the Government, a split emerged between Maurice Bishop and Bernard Coard over the ideological direction. Coard and his faction accused Bishop of being a reformist and not adhering to the principles of Marxism-Leninism. These internal ideological struggles led to deep fractions and eventually split the Government into two camps. Evidently, this struggle led to the staging of a military coup by Coard supporters on 16 October 1983. Bishop and his some of his cabinet members were placed under house arrest, and the army loyal to Coard instituted a state of emergency. This did not deter the Grenadian people from taking to the streets to defend the revolution and freeing Bishop and those arrested. In response, on the morning of 19 October 1983 the army unleashed a reign of terror on the masses, killing hundreds of people. Maurice Bishop and others loyal to him were captured and brutally executed. This attack was strongly condemned by Fidel Castro who, in a speech to the Cuban people, called Coard and his supporters 'The Butchers of St George's'. This internal political crisis led to the US invasion of Grenada in 1983.

On 25 October 1983, President Ronald Reagan issued the command for the invasion of Grenada, codenamed 'Operation Urgent Fury'. Almost 10,000 soldiers landed on the island and began to dismantle the 'Socialist project'. However, the Americans met stiff resistance from Cubans and Grenadians who took up arms to defend the revolution. After a week of fighting, the US military subdued the opposition and took control of Grenada. Shortly thereafter, a new regime was installed that pledged its allegiance to the US. The military invasion dashed the hopes, dreams, and aspirations of many people in the Caribbean, who saw the revolution as a beacon of hope for the working class. Although it lasted only four years, the Grenada revolution became a watershed in Caribbean history by demonstrating that its people had the potential to create a new type of society that challenged the imperialist paradigm which oppressed workers and peasants.

Definition

Born in Georgetown, Guyana, on 23 March 1942, Walter Anthony Rodney an icon of the Pan-African, Rastafari, and Black Power revolutions which culminated in the late 1960s. Rodney's

most famous and controversial book, *How Europe Underdeveloped Africa*, was published in Dar es Salaam in 1972.

Born in Georgetown, Guyana, on 23 March 1942, Walter Anthony Rodney won a scholarship to enter Queen's College in Georgetown in 1953. In the same year, he had his first political experience when he distributed leaflets calling for the victory of the Marxist-oriented People's Progressive Party (PPP) in the first general elections ever organised in the colony of British Guyana. Against the background of the early Cold War, the elections won by the PPP were cancelled after the British troops, with the support of the US and the US multinational corporations, landed in Guyana in order to save the people from a 'communist menace' (Prescod 1976, p. 114). Rodney grew up in a global environment and benefited from the experience of political activists and working people who had shown an early and deep interest in socialist and anti-imperialist movements.

In 1960, Rodney joined the Mona campus of the University of the West Indies (UWI) in Jamaica. There he actively supported the stillborn project to form a Federation of the West Indies to oppose the US hegemony in the Caribbean. Travelling to the Soviet Union and to Cuba as a representative of the UWI's students, Rodney returned from his trips with Marxist and anti-imperialist literature which, regarded as subversive, was seized by the Jamaican customs. From this moment on, he fell under the scrutiny of the Jamaican, Guyanese, and American services. In his own words, 'travelling to Cuba was also another important experience, because I was with Cuban students and I got some insight at an early period into the tremendous excitement of the Cuban Revolution. This was 1960, just after the victory of the revolution. One has to live with a revolution to get its full impact, but the next best thing is to get there and see a people actually attempting to grapple with real problems of development' (Rodney 1990, p. 17).

In 1963, he moved for doctoral research to the School of Oriental and African Studies (SOAS) in London, where he expanded his intellectual and social life. Under the supervision of Richard Gray

at SOAS, he studied the impact of slavery in West Africa; his research led him to explore the Vatican archives in Rome, and to visit research libraries in Spain under the dictatorship of Francisco Franco and in Portugal under the authoritarian regime of António de Oliveira Salazar. In Lisbon, he became aware of the ongoing struggle led by Amilcar Cabral and other prominent figures for the liberation of Africa from Portuguese colonial domination. Frustrated by the classic and bourgeois vision of African history at SOAS, Rodney became associated with a group of Caribbean students who were organising lectures on Marx, Trotsky, imperialism, and revolutions at the London home of the Trinidadian thinker C.L.R. James. Rodney, who had performed in academic and political public debates since his years at the UWI, joined his comrades at the Hyde Park Speakers' Corner, where they denounced the regimes of apartheid in South Africa, the remaining colonial powers in Africa, and the institutionalised racism that continued in England through the 1962 Immigration Act, and in the US with segregation.

After defending his doctoral thesis, which launched controversies on the impact of slavery and European trade on African societies, Rodney broke with the tradition of the typical Caribbean scholar graduating in England, who would go back home to inculcate in his own students the biased colonial British knowledge. After an unsuccessful application for a job in Senegal, he was recruited as an assistant lecturer in the department of history at Dar es Salaam University, established 3 years previously by Terence Ranger. Rodney arrived in a decisive period in Tanzanian political history: in February 1967, the Tanzanian president, Julius Nyerere, proclaimed the Declaration of Arusha, which urged the creation of an African form of socialism, known as 'Ujaama'.

This radical and progressive turn of the Tanzanian regime encouraged Rodney to develop new themes and methodologies in his teaching of African history. A subversive thinker, he contested the mutually accepted division of intellectual labour between historians working on the past, social and political scientists working on the present, and economists trying to predict the

future. In his mind, history, especially in Africa, should be oriented towards social transformation, and should not be relegated to the study of the past in itself. Because he was 'interested in the past not for its own sake but with intent to illuminate the neo-colonial plight within which Africa was engulfed' (Swai 1982, p. 44), Rodney strongly rejected the glorification of the African past which had become prominent in the historiography developed in the new African independent states.

The decolonisation of history in the context of the emergence of newly independent nations in Africa and the Caribbean required the writing of a social rather than a triumphalist history. In this way, Rodney 'also avoided what can be called the "great kings and queens syndrome", which measured a society's worth based on the existence and power of its royalty, the size of its army, its political structure, its literature, and so on. Rodney rejected this notion of civilization in favour of concepts that reflected the way in which people related to one other in a given society' (Austin 2001, p. 64). Thus historical research should stress the initiatives of the people instead of reflecting the life of the ruling class. Engaging with the masses, therefore, Rodney learned Kiswahili and started to give lectures away from the university, teaching Tanzanian peasants about labour history, the impact of colonialism on environment, and political economy.

In January 1968, Rodney, his wife Pat, and their son Shaka returned to Jamaica. Now holding a position as lecturer in African history at the UWI, Rodney took the initiative of teaching off the campus, coming into contact with Rastafarians and working people and setting up joint discussions of African culture. His most relevant talks were published later in *The Groundings with my Brothers* (2001). Rodney's social activism and political solidarity with every group which had been repressed by the authorities finally caused alarm bells to ring. The government, which was controlled by the Jamaican Labour Party (JLP), decided to ban him from the country while he was away in Montreal at the Congress of Black Writers, giving a lecture on Black Power and African history.

On 16 October 1968, after the news spread in Kingston that Rodney had been sent back to Montreal in the same aircraft, hundreds of students and academics took to the streets between the campus and the city centre to force the prime minister, Hugh Shearer, to change his position. As the march came close to downtown Kingston, the situation became increasingly violent. The students were joined by groups of youths who were familiar with Rodney's activities, and by crowds of workers and unemployed people who had just taken part in a protest against the rise of bus ticket prices and the decline in living conditions. The march turned into a series of riots, with urban groups burning motor cars and buses, looting the stores, and attacking every symbol of the capitalist authorities, causing several million dollars' worth of damage. The civil riots claimed two lives, several policemen were injured, and over 30 people were arrested. Known as the 'Rodney riots', they became a mobilising event and a turning point in the history of the Caribbean. They also became 'part of the permanent political experience of a large number of students and staff. They have been politically educated in a direct and unforgettable way into the arbitrary of executive power, the naked use of physical force, and the mobilisation of the media of communication behind this power to justify its use and encourage its repeated used' (Girvan 1973).

Rodney had spread the concept of Black Power throughout Jamaica, arguing for a radical break with imperialism, mobilszing the African masses in the conquest of political power, and calling for a cultural reevaluation of the African legacy. Taking the theories of C.L.R. James on self-emancipation to a higher level, Rodney's teachings on black empowerment resonated with the middle-class dissident aspirations of the students, the sophisticated and eclectic philosophy of the Rastafari movement, the disciples of Marcus Garvey, the youth, the working people, and the sub-proletariat living in the most depressed urban areas. From this connection of diverse branches emerged a new radical Afro-Caribbean culture which emphasised reggae music, literature, painting, and dub poetry (Morley 2007, p. 134).

In this way Rodney became an icon of the Pan-African, Rastafari, and Black Power revolutions which culminated in the late 1960s. At the Congress of Black Writers, while Stokely Carmichael defended the racist branch of Black Power which opposed attendance by white people, Rodney took the opposite position. In Rodney's mind, the situation in 1968 needed a critical reassessment of the conclusions of the 1955 African-Asian Bandung conference, emphasising a single alliance of coloured people. The defeat of several progressive Third-World movements and the overthrow or containment of some anti-imperialist regimes in the years before the world revolution of 1968 had changed the course of history. As Western people were contesting their own governments, broader alliances were needed to globalise the revolution, and to insist upon the priority of class over race. This position placed Rodney among the ranks of the Third-World internationalist groups.

After a short stay in Havana and London, Rodney returned to Tanzania, where he spent the most distinguished years of his career. Meeting members of African liberation movements based in Tanzania, living with Vietnamese and Cuban diplomats, and debating on nationalism, Marxism, and Pan-Africanism with East African scholars, he raised essential issues concerning the African revolution, the use of violence, solidarity with Vietnam and Third-World anti-imperialism, and so on. While writing in several African academic and leftist political reviews, he also gave financial support to African fighters and served as a referee for the US-based African Liberation Support Committee.

At Dar es Salaam University, Rodney taught colonial and post-colonial African history and the economic history of Tanzania. He also introduced the first course on the history of the black peoples in the Americas. Taking in Samir Amin, Andre Frank, and Immanuel Wallerstein's research on the global world system, his course on international political economy introduced to Tanzania the theory of dependency and the debate on the practical application of economic disengagement from imperialism and Euro-centrism. With a Marxist basis, his course on the English, French,

and Russian revolutions highlighted the historical formation of social classes and their role in the balance of power.

Rodney's most famous and controversial book, *How Europe Underdeveloped Africa*, was published in Dar es Salaam in 1972. After asserting his introductory thesis that 'African development is possible only on the basis of a radical break with the international capitalist system, which has been the principal agency of underdevelopment of Africa over the last five centuries' (Rodney 2012, p. xi), Rodney detailed the ongoing process by which Africa was disempowered by the Western capitalist system over a long period from the trans-Atlantic slave trade era to post-colonial and neo-colonial times. His book clearly pointed out the alliance between the African neocolonial elite and the local *comprador* bourgeoisie, which endorsed economic policies of development that deprived African peoples of the control of their own destiny. Challenging myths and stereotypes of Africa and tackling W.W. Rostow's theory of the stages of economic development, Rodney argued that Africa's under-development and poverty were caused by European colonial capitalist interference. Rodney's research was the first systematised study to raise the dialectical relations between the impact of slavery and colonialism, the source of the capitalist accumulation, and the concept of global reparations as a consequence of the denial of opportunity which prevented Africans from realising their own vision of social and human development. In a sense, 'Rodney tried to understand why the moment of independence was also a moment of recolonization. This was due not only to the strength of international capitalism and the Western political alignment in the years following the Second World War, but also to the weaknesses of the social forces in the ex-colonial countries and of their political elite' (Lewis 1998, p. xvii). With important references to Che Guevara, Fanon, Nkrumah, and Cabral, the book was translated into Portuguese, Spanish, and German in the following years, and it became an essential text in many antiimperialist circles.

The Tanzanian fusion of politics and academics attracted scholars from all over the

R

world. Under Rodney's banner, the Dar es Salaam school of historiography became 'the intellectual revolutionary hub of East Africa, Africa and the Third World generally' (Ngugi 1993, p. 166). However, in June 1974, in Dar, Rodney missed the Sixth Pan-African Congress for medical reasons. He also had been banned because of an undiplomatic paper that he had written for the congress. 'Aspects of the International Class Struggle in Africa, the Caribbean and America' (1975a) contains scathing critical attacks on several African and Caribbean regimes that had sent official delegations. Besides criticising his own government, the Guyanese authoritarian regime, Rodney expressly denounced the Brazilian delegates who had applauded the coup against Salvador Allende in Chile at an early stage. Rodney felt that his time in Tanzania had come to an end.

In summer 1974, the Rodney family, enlarged by the birth of two daughters, Asha and Kanini, returned to Guyana. However, Rodney's appointment as professor of history at the University of Guyana was cancelled by the authorities because of his political opinions; academic support and popular demonstrations in Georgetown, Washington, DC, and London did not improve his situation. Against all expectations, Rodney did not go into exile, and instead decided to engage with the political opposition while doing historical research on the social history of Guyana. Soon Rodney became the leading figure of a Marxist and multi-ethnic political party, the Working People's Alliance (WPA), which engaged in a political battle with the prime minister, Forbes Burnham. Rodney's desire was to become more involved in the revolutionary movements in the Caribbean, and to work and build lasting alliances with the progressive forces in Cuba, Trinidad, South America, and Central America. Writing of this situation, Wazir Mohamed (2007) emphasised that 'Walter anticipated the movements that are now flowering all over Latin America, the fusion of the struggles for collective land rights with the struggles for women's equality and human rights – represented by the horizontal and unemployed workers

movements in Argentina; the struggles of indigenous and black people, landless workers and trade union movements in Brazil; the indigenous Amerindian and water justice movements in Bolivia, Ecuador, Colombia and Peru; the Zapatistas of Mexico; and of course Chavez's Bolivarian revolution in Venezuela.'
